roomed bungalow, in which I immediately recognized the portraits of several well-known friends of the lepers. Framed texts, pictures, books and other evidences of a refined mind, filled the room, in which one of the most prominent objects was an organ, which affords Miss Reed the solace of music in her lonely life.

With regard to the condition of Miss Reed's health at the time of my visit, I may say that she was then conscious of the presence of the malady in many ways. She was suffering from the fatigue and overstrain of an exceptionally heavy year's work, during which she had acted as manager of works, accountant and paymaster for the building of the new church, as well as of the comfortable new bungalow of which I was the first occupant. When therefore, she told me she had never had clearer tokens of the presence of the disease, and added: "Can you not see it in my face?" I had to admit that her appearance had given me much concern. There were tingling pains in the fingers, together with other external signs, as well as internal ones, which corresponded with the outward symptoms. But, happily, these more alarming indications are not chronic. It is a common feature of the disease that it has alternate periods of activity and quiescence, regulated no doubt, in great measure, by the general condition of the system. The patient is frequently really ill for a few days, and then recovers a fair degree of health. Some of those who erroneously assume that leprosy, in all cases, speedily disfigures or mutilates its victims, have expressed surprise at the non-development (or slow development) of the disease in Miss Reed's case. But this arrestment is by no means a rare occurrence. I myself saw many cases in which the development of the disease had been arrested for years, even after mutilation had begun.

I am delighted to be able to add that at the present time (1908) Miss Reed is, on the whole, in marvelously good health. For the time being, at least, the disease is quiescent, and she is able to prosecute her beneficent work with efficiency and energy. Not only is the bracing climate of Chandag Heights unfavorable to the development of the disease, but Miss Reed's life is an active one, and in the main conducive to health. There can be no doubt that an attitude of morbid melancholy, however excusable it might be, would foster the malady and promote its rapid development, as it does in many cases.

But the tone and spirit of Miss Reed's life are the very reverse of melancholy. The fact that she has all along refused to take a gloomy view of her affliction has undoubtedly had an important influence on her health. Her intervals of depression are few and brief. The general tenor of her life for years past is expressed in a sentence from one of her letters: "I find so much help and blessing in song, and from day to day I prove that faith, hope, love, work and song cause sorrow to depart."

It was a great privilege to be permitted to coöperate with Miss Reed to some slight extent in her Christlike work. In many services with her lepers, in which I was allowed to take part, she proved herself a most sympathetic interpreter. I recall especially one or two which will serve as examples of the others. One Wednesday morning found us down at Panahgah the male settlement for what proved to be a very memorable service with the men. They sat on the open ground in the sun, just above the houses, and formed a very pathetic group. The more decided Christians sat in front. Anwa, who leads the singing, has a sadly disfigured face, though his hands and feet are as yet unaffected. Next to him sat a young man with really handsome features, but when he tried to find the text in his Bible, I was shocked to see that his hands were only stumps. This was Nankiya, a consistent Christian. Close to him sat poor little Rupwa, whose young face is so marred that it might be that of an old man. He seemed to listen with great interest, as indeed almost all did. Others of this sad and stricken congregation had noses that had fallen in almost to the level of their cheeks, and the eyes of some were sorely affected also.

Seldom have I felt a more real sense of the Divine presence than that which stole over us as we were led on to plead with these sad hearts to open and let the Savior in. Our text was Rev. 3: 20, and both speaker and interpreter were so helped by the Holy Spirit that, as the address proceeded, several could be observed quietly brushing away their tears. A definite appeal to the non-Christians to rise and say "I will open and let him in," was responded to with apparent sincerity by five—two or three of whom I had noticed to be listening intently.

On the Tuesday following we had two most interesting services in the new church. The first was for the workmen who had built it, and who listened very attentively to an address on "By their fruits ye shall know them," in which I endeavored to point out the contrasted motives and results of Hinduism and Christianity. They were urged to consider what the servants of Christ were doing even in their own remote corner of the world, at Chandag and Pithoragarh. Their sick were being healed and helped, their children taught, and even their lepers sheltered and cared for, without fee or reward by those who had left their own homes and kindred in distant lands. When I asked them *why* this should be, and paused for a reply, an old man in the front row said, "For merit." This answer afforded an opportunity for still further emphasizing the fact that the *love of Christ* is the constraining motive for missionary service, and that, not only were these temporal boons bestowed on them without money, and without price, but that eternal life itself is God's free gift through Jesus Christ our Lord.

Then followed our farewell service with the lepers,

men and women together. Almost all the women were present, and a good many of the men had come up from Panahgah. There was a solemn sense of God's presence, and many of us felt the power of the truth, as we dwelt upon some of the "precious" things in the Epistles of Peter, and especially on the most precious of all, viz., "Unto you which believe—*he is precious.*" I noticed among the women one little girl I had not seen before, and found she had only come in that morning, a child of ten with the disease already very pronounced. Her face was affected as well as her feet, slightly, while her voice was nearly gone! She is an orphan, both parents having died lepers—the mother at home and the father at a great shrine at Hardwar, to which he had made a pilgrimage in the hope of healing.

Although the noble work carried on by Miss Reed has features peculiarly its own, yet it should be repeated that in many other places in India, China and Japan, missionaries representing American societies are carrying on self-sacrificing work for the benefit of these suffering people. The body which directs and unites their efforts is the Mission to Lepers in India and the East, and it is interesting to note that that Society is now expending \$34,000 on work in connection with the Stations of American Societies. Moreover, the Mission is developing new work in several centers, thanks to the coöperation of missionaries from the United States. In the Philippines a worker supported by the Mission has recently been appointed to minister to the lepers in the Hospital of San Lazar at Manila. The need for someone to carry hope and comfort into this abode of suffering and disease, will be evident from the following incidents. A beautiful young Filipino woman, accomplished and refined, and of excellent family, married most happily for nearly a year to a young American business man, who loved her dearly, was taken by the Inspectors from a boat in the bay as a leper to the hospital. Her husband was just about to take her to China or Japan. Their entreaties were of no avail. She was about to become a mother, and a few days later a broken-hearted mother with a new-born infant were laid to their long rest.

A young leper mother with twins nearly a year old, begged and implored on the first visiting day after she had been received, when the aged grandmother brought them out to see their mother again, that she might be allowed just to lift them for one moment; she would not kiss them, and she would not hold them long, just to see if they had grown!

Then in Korea, a land that is opening rapidly to missionary effort, the pitiable condition of the lepers has awakened the compassion of the missionaries, and an asylum is just being established at Fusan. The need for it is made clear by the following quotation from a letter of appeal. The missionary writes: "In cold

weather they crawl into the fireplaces after they have sufficiently cooled, and the accumulation of soot does not add to their health, their comfort or their appearance. They are badly clothed, if clothed you can call it. They are truly outcasts, despised and shunned of all men."

For the lepers of Siam also a day of hope is dawning and the Mission is taking up their sad case. In response to the appeal of Dr. J. W. McKean, a first grant is being sent towards a temporary shelter for a few of the outcasts of Chiangmai, Siam. The attitude of the governing classes of Siam towards the lepers is expressed in the words of an official of high rank. When approached on behalf of the lepers of his own

country he replied, "Oh, they are all dead people. They are nothing to me."

Working, as it does, so extensively in connection with American missionaries, it is only fitting that the Mission to Lepers should be represented in the United States. An influential Committee has recently been formed in New York, with Mr. W. Jay Schieffelin as Chairman, and Mr. Fleming H. Revell, 156 Fifth Avenue, New York, as Treasurer. The Organizing Secretary for North America is Miss Lila Watt, B. A., Confederation Life Building, Toronto, Canada. Contributions in aid of this beneficent and much-needed work may be sent to either of the latter, or, if preferred, to the writer of this article, at 33 Henrietta Street, London, W. C., England.

## BEAUTY

Richard Braunstein

Beauty is the reflex of the inner life,  
What beauty hath the rich and gaudy flower?  
Or what delight the vernal landscape robe  
Of green, bedecked with variegated bloom;  
Or the pure, azure canopy of heaven;  
Or twinkling stars that nightly smile upon  
Us from their spacious dwelling place on high;  
Or purling streams meandering through rich meads,  
Or tuneful warblers; or the shady groves,  
To those whose inner life feels not the thrill  
Of harmony, in tint and tone, displayed  
In the vast realm of Beauty's fadeless spring?

The sky is curtained o'er with somberness,  
And all the brilliant tints and gorgeous hues,  
Shed by the glorious sunbeams' radiant light,  
Are blank and beautiful unto the mind  
That has no brilliant sunshine of the heart.

What multitudes but seek a hollow joy!  
Chase phantoms that elude the eager grasp,  
And while they lure, spread disappointment's thorns  
Along the pathway of their votaries,  
To pierce the weary feet, or grasping hands,  
And sting with bitterness the heart's bright hopes,  
Because they seek through Alchemy for gold,  
Instead of veins, where, hidden, lies the rich  
Productive ore, that pays the miner's toil.

Ah! if we would the beautiful secure,  
Awake the powers of mind, of soul, attuned  
To all the grand sublimities of life,  
So every heart pulse beats with Wisdom's laws,  
Perfecting in us beatific grace,  
Holiness, and eternal love divine,  
When the deep fountains of the soul well up  
With gushing streams of liquid beauty,  
And all is brilliancy within the heart,  
The bloom and fruitage of our inner lives,  
Then will the whole creation, smiling, shed  
The radiance of its beauteous spirit on

Our pure, appreciative minds, in halos  
Of inspiring power, and symphonies  
Refulgent with the glories of the blest.  
Then will each bud, each leaf and opening flower,  
Gain kindly welcome to our living hearts,  
Unfolding for us volumes of God's truth  
Securely treasured there for us to scan.

I love the beauteous works of the Divine,  
Omniscient architect of worlds unnumbered.  
Swarming with their myriad hosts of living  
Forms, fields of varied hues, instinct with  
Life and beauty: all of workmanship divine.

I love the Lord of life; Eternal Guide,  
And author of the soul immortal, formed  
To shine with heavenly light, and feast on  
Glories of bright spheres intrinsically pure.

There is a realm of harmony sublime,  
Where beauties blend with beauties, full of grace  
And loveliness, pervading every heart  
With cheerful pleasantness and blissful peace.  
Those who the inner life make beautiful  
By education and supernal grace,  
Will see the beautiful in all God's works,  
And feel that happy angels on their snow-  
White pinions, bear them blessings from the spheres  
Of beauteous bliss, and unalloyed happiness.

Then give the mind to understanding's rule;  
The soul to inspiration, that is found  
Alone in wisdom's school,—all beautiful.  
All-wise creator of the realms of light,  
Whose every thought is full of blooming grace,  
Whose breath is fragrant with supreme delight,  
And works unnumbered, full of harmony,  
The effulgence of eternal, sacred truth,  
Let me now offer at thy sacred shrine,  
Sweet incense of adoring gratitude;  
And worship with unfolded, graceful soul,  
The God of beauty who created all.

## Around the World Without a Cent

H. M. Spickler

### Chapter XI.

On a little steamer I crossed the Irish Channel and took the whole winter to ride completely around the enchanted island, enjoying the hospitality of the kindest people on the globe. Up till New Year's I picked blackberries from the hedgerows, and at Christmas time gathered periwinkles from the roadside and saw all kinds of flowers blooming in the woodlands. In the gardens were cabbage plants, some of them just set out, and others just heading out. The grass was growing as green as in summertime, and the cows, the farmers told me, produce as good and as yellow butter through the winter months as during the summer. It seems so queer to look through the woods and see the long grass, the climbing ivy, the dense foliage and the deep green of everything, in the winter. The peasant children were nearly all barefooted, but they looked blue and cold. In the city of Dublin the barefoot newsboys ran along the street at the top of their speed—the pavement was so cold—and when they stood still awhile, they would rest, now on one foot, now on the other.

Although it rained three times a day and five times at night, the weather was pleasant. Most of the smaller shops have no doors or windows but merely an open front, and when I stopped to write letters home I sat almost always in a cold, cheerless room, damp and dirty. The few fires that are found burning send off but little heat, and ninety per cent of this goes up the chimney. The Irish winter is like May and September mixed with April.

The roads for cycling are good over Ireland, but not so good as in most European countries, especially when they are repairing them during the winter months. But the scenery and the poetry of a cycle ride in Ireland is, in those parts of the mountains and lakes frequented by tourists, away beyond the average of the best countries of Europe. If a tourist had only three countries to see outside of his native land, and he were an American, I would suggest Ireland, Switzerland and the Holy Land, or Ireland, India and Spain, or Ireland, Switzerland and China.

I was riding down a long hill near Slane in the North to Ireland. Halfway down I came up to a donkey and cart driven by a woman on her way to market. In passing them the donkey shied at my wheel, backed around and ran the two projecting fells which stick out behind almost as far as they stick out in front, right into my wheel, throwing me off in the mud. The donkey is no larger than a Shetland pony, and the cart is very small, itself, with low wheels and narrow gauge.

Several Train Loads of Cow Turnips. Farm in Northern Ireland.

I had no sooner mounted my wheel again when looking back I saw a fat gentleman, walking on the road, about to accept the invitation from the lady to ride along to town. The peasant woman pulled on the lines of the donkey so hard that the jaws of the donkey were drawn down against his big knees. The fat pedestrian, too short to reach the projecting box of the cart, as low as it was, without jumping for it, backed up to the rear end, took hold of the little sideboards, made a spring, landed in the end of the box,—where he wished to land,—but not with the same effect. The donkey at

the other end was very light. He at the back end was very heavy. They did not balance. Up went the donkey. Down went the passenger. For a few times they see-sawed, back and forth, or rather vibrated like a horizontal pendulum, the man now in the air, now the donkey up. The gouty old man was too slow to get out when he came down, the donkey was too light to stay there. The woman tried to lend her weight to the "balance of power," by crawling back toward the fat gentleman. But she crawled too far. After her came the butter, the eggs and the vegetables, all on a pile, over the old gentleman, the woman also, in one common heap, crushing the man she had asked to ride with her, until he began to fight with his arms for his breath. There at the rear lay the frustrated market-woman, invited passenger, butter and eggs. There at the front, kicking and working his ears like a funny child's toy, away up in the air, was the elevated donkey. It was a sight worth fifty cents to see, and had it happened on Broadway or State, ten thousand people passing would have had their money's worth of fun.

The woman was the first to extricate herself, and she was loose from the debris when I rode back and asked if I couldn't lend her some assistance.

The donkey was still in the air, looking as if he had been hung for stealing sheep.

The fat man had been injured. One of his legs had been twisted under the box, and he was perfectly helpless, while his clothing had become fastened to a nail on the cart, where he was held as much a real prisoner as if he had been manacled with Russia's chains.

By this time the woman had come around to the front of the donkey, where she was coaxing him to come down. It was a funny sight. Everything had combined to make it so. No college boys could have planned, with most skillful ingenuity, such a series of combinations that would have fallen out with so much humor in every incident of the affair.

Seeing she could not reach the donkey's head, the woman went to the rear and picked up two of the butter tubs. On these she stood. She could reach him, but not quite overcome the balance that went the

other way. I wanted to help, but she flatly refused me, so excited was she.

Then she filled her apron with a lot of the turnips to give her more avoirdupois, jumped for the butter-tubs, and with a mad pull and a haw, brought the donkey's feet down to the earth,—just as I was releasing the clothing of the two-hundred-pound man from the snag on the cart.

Five minutes later, the outfit,—donkey, cart, woman, turnips, butter and fat man,—was rattling over the stones into Slane, in time for the Saturday noon market.

## ALPHABET OF AMERICAN AUTHORS.

G. FEGLEY.

### XVI. Francis Parkman.

FRANCIS PARKMAN was born in Boston, Mass., September 23, 1823.

He was the son of Rev. Thomas Parkman, for thirty-six years pastor of the New North Church. He was related to the old colonial minister, John Cotton through his mother, Caroline Hall Parkman. He was a descendant of Thomas Parkman, of Sidmouth, Devonshire, England, whose son Elias Parkman settled in 1633 in Dor-

The Kind of Cart that Tips Back when Donkey is too Light or Passengers are too Heavy. Western and Northern Ireland.

chester, Massachusetts.

Parkman prepared for college at Chauncy School Hall. Then he went to Harvard and graduated in 1844. While at college he showed signs of "Injins on the brain," which might have been inherited, as two of his mother's ancestors had preached to the Indians in their own language; however, it does not appear that Parkman either talked Indian or preached to them.

He spent his vacations wandering through forests, and having in mind a book to write on the Pontiac Indian war, after his graduation went to Detroit to secure everything he could on the subject. He entered the Dane Law School at Cambridge and graduated in 1846, but did not apply for admittance to practice. He had read so much that his eyesight was badly impaired, so he made a journey to the Northwest and lived a while in a village of Ogallallah Indians with a friend, Quincy Adams Shaw, sharing his tent with a chief, and then following the wandering tribe wherever

it went. The life was too strenuous for Parkman, as his health was ruined and eyesight made worse than ever. His account of the trip was written by dictation and published in 1849, under the name "The Oregon Trail." His "Conspiracy of Pontiac" was printed in 1851. "Vassall Morton," a novel, was printed in 1856. It is supposed that a part of this book is autobiographical.

He married Dr. Jacob Bigelow's daughter, Catharine, in 1850, and they lived very happily till her death in 1858. His shattered health and eyesight grew worse, yet he never lost sight of his history of the French in America. He did everything he could to keep himself alive. He turned to floriculture, and became famous for his roses and lilies. As soon as strength permitted him to do so, he again went to the Indians at Fort Snelling in 1867. Then he went to Paris several times to consult archives and doctors. In 1873 he visited Canada, and again and again went over the region between Quebec and Lake George.

He gave the title of "France and England in North America" to the historical series which appeared as follows: "The pioneers of France in the New World," 1865; "The Jesuits in North America," 1867; "La Salle and the Discovery of the Great West," 1869; "The Old Regime," 1874; "Count Frontenac and New France under Louis XIV," 1877; "Montcalm and Wolfe," 1884; "A Half-Century of Conflict," 1892.

It took him full fifty years to complete his stupendous work, battling against feeble health and partial blindness all the time, but he succeeded in completing it only the year before he died. He had thought of recasting the series and making it a continuous narrative, yet if he had succeeded in doing so, it might have been better in one way, and in another it might not have been so good. Honors flowed in upon him from academical and historical societies. Harvard conferred upon him the degree of LL. D. He helped to found the Archæological Institute of America, and was one of the founders and was president for the first six years, of the St. Botolph Club of Boston. He died at Jamaica Plain, Mass., November 8, 1893.

His style is admirably clean and graphic, and his treatment of the subjects is to be commended for its impartiality. His prodigious will-power and unequalled pertinacity carried him to success where many another would have disappeared in oblivion. "He who reads Parkman gets facts, eloquence, philosophy, besides no end of adventure, and for all this he pays literally nothing."

Worthy of mention: W. H. Prescott, history; E. A. Poe, poems and tales; J. K. Paulding, prose and verse; J. G. Percival, poetry; J. H. Payne, dramas and poetry; Thomas Paine, political; Rev. Samuel Peters, "General History of Connecticut;" C. J. Peterson, stories; Wendell Phillips, anti-slavery and

temperance; Rev. J. H. Perkins, the west; C. W. Peale, general economy; O. W. B. Peabody, biography; W. B. O. Peabody, sketches and poems; Elizabeth P. Peabody, education; Josephine Pollard, poetry; Ben Perley Poore, biography; G. D. Prentice, poetry and prose; Mrs. M. J. Preston, poems; Nora Perry, poems; Albert Pike, poetry.

*Bryan, Ohio.*

## THE BIG LITTLE THINGS OF LIFE.

WALTER C. FRICK.

### A Plea for Greater Thoroughness in Doing.

As a basis for a few remarks we wish to take that old proverb which reads, "Great oaks from little acorns grow." In our earliest years, when we were mere babies we gathered acorns by the pocketfuls and in our playhouses made them to play the part of cups and saucers and other dishes.

Later on in our youthful life when we were sent to school and father and mother had allowed us boys to have a jackknife, we made acorn baskets, etc., and with these small trinkets as a tribute of our childish love we tried to win some small and pretty school-girl's heart. Nor did we stop here, for even now in our years of man and womanhood as we perhaps pass thru the wood we gather handfuls of them to show one another what good workmen we used to be in our younger days.

Indeed, we grew up with the oak trees, yet how seldom we think of the small beginning each must have had and of the great possibilities stored away within the shells of its fruit. For within each acorn are contained the elements of every part of the great oak tree. Indeed had we the eyes of the naturalist we should see within every acorn a miniature oak tree, roots, trunk, limbs, branches, leaves, fruit, all. But the fact that we don't see these things, even in our mind's eye, only goes to show how thorough we are in our observation and thinking and how we fail to appreciate what may be the outcome of the numberless little things we do every day of our lives. We cite you to a few examples hoping we may all benefit thereby.

A man purchases a few bananas and eats them as he strolls down the street, thoughtlessly tossing the peels down upon the sidewalk. An expressman bearing a heavy trunk upon his back slips upon one of the peels and falling breaks a leg or an arm. A man is made to suffer for a month or more, and a large family perhaps is out of support. Quite a little matter to the first man but what a serious affair for the second. Further up the street a third man pauses long enough to kick from off the walk one of the peels which the first man carelessly dropped. A small deed indeed to do, but think of what it might have meant to some one else had he failed to do so. Gather here a practical lesson.

Don't be so thoughtless as to throw your fruit peels on the sidewalk and never be in so great haste that you can't stop to remove one that has been thrown there. You may save a life by so doing. By leaving it undone, who knows but that a life may be laid to your charge. Would you hesitate to remove some object destined to wreck a fast passenger train? Then why fail to do such a small thing?

The engine of an immense lighting plant was taken apart and reconstructed. In the course of the evening a misplaced pin became loose and the plant was put out of commission for several hours and a large city was in almost total darkness. Business was paralyzed for the time being and many crimes were committed, and all due to the carelessness of some workman who was paid well to be careful and accurate.

Referring to your earlier school days you have all said that if you had it to do over again you would do some things vastly different. Doubtless we have all suffered throughout our entire educational career simply because of our failure to learn some point in our earlier years. It seemed only a small matter then, but our education is somewhat the worse for it . . . In every neighborhood there is going about a great monster seeking those whose character he may destroy. You all know him—that defamer, Gossip. In every case he was only a very small fellow at first just a little bit of information, generally, tho not always true but becoming more and more magnified at each repetition until finally it destroys the character.

Have you never seen the man who always has "I thought so and so" as an excuse for his every mistake;

the "wait-a-minute"—or "in-a-minute" child and the "didn't-know-it-was-loaded" fellow? Do they not exhibit a lack of thoroughness in all that they do?

We will not have made the greatest point possible unless we speak of our personal influence. And don't you for a moment consider it a small matter when I say that the small things here are again often the greatest. For an illustration take yourself, a professed Christian. A dozen young men perhaps of whom you are entirely unaware have made your life the pattern for their own. But let them learn of you doing one un-Christian act and just so much of your previously good influence is gone. Confidence in you, perhaps the only person in whom they could have confidence, is shattered and a number of souls have begun a downward course in life. A brakeman by failing to close a switch may send a hundred souls into eternity, but you with your influence may send as many to heaven or to hell. And so I might go on with a thousand illustrations. An encouraging word and a pat on the shoulder has put life into many a man when before there was none, and has kept many a person from a suicide's grave. Many a soul has turned back to God under the influence of a song or a warning word spoken by some earnest Christian. All these seem like small deeds to do but how often they are attended by grand results.

My brother, sister, if you had improved every opportunity of your life to do an act of kindness, how many more stars would there be in your crown?

Do as many good things as possible but my plea is that we all be more thoro in our work, for "Whatever is worth doing at all is worth doing right."

## The Spirit of Seventy-Six

John H. Nowlan

MUCH is said and written about the spirit of Seventy-six, yet how many ever stop to think what it means.

Many, too many, look upon it as the cause of a long and bloody war against the English people. But in fact many of the common people and even some of the members of Parliament sympathized with America.

The Revolution did not begin in Seventy-six, nor was it started in the early opposition to the royal governors. Its origin was in England when the rebellious barons on the field of Runny-mede forced the Magna Charta from the unwilling King John. Then and there was the first decisive blow struck at the doctrine of the infallibility of kings, and the right of the taxed to a voice in taxation affirmed.

The uprising that placed Cromwell at the head of the government, and later the revolution that drove King James from the throne, were but successive

steps in the progress of the same fundamental idea later crystallized in the expression, "Taxation without representation is tyranny."

This struggle had long gone on in England and the Declaration of Independence was only the announcement of the transfer of the scene of action to the new world.

I earnestly wish that the teachers of this land would cease to teach this epoch of our history as the majority have been doing. Teach it as an opposition to an oppressive government, and not as a war against the people of England; they were not to blame for the acts of an insane king.

"Whatsoever a man soweth that shall he also reap" is no more true of individuals than of nations. The English rulers have sown a fearful crop—their centuries of misrule in Ireland, their encroachments upon

the native rulers of India, the opium traffic with China, and the conquest of the South African Republic are some of the things to be accounted for.

This is all true, but as the son of an Irish refugee I plead with you to place the blame where it belongs.

Washington and many of his associates were of English descent and were struggling for their rights as Englishmen.

Let us not hold ill will against the English people or the more unfortunate Hessians who were hired out like cattle and forced to fight against their will. Some of these very soldiers became citizens of this country and they and their children have done much for its upbuilding.

It is not for us to look at the past and ignore the present and the future. The convention of Seventy-six declared that "All men were created equal." If they are created equal what makes them unequal? Surely not God. If life, liberty and the pursuit of happiness is their inalienable right, who will take this right from them? Again I say, not the Creator. Then it must be fellow man. Are you a party to the deal?

The golden rule is as true today as when first uttered. The reverse is also true. What you would *not* have done to you, you should not do.

In the management of our natural resources are we taking into consideration our children and our children's children? Are we robbing the mines, impoverishing the soil, and despoiling the forests without thought of the future? Are we allowing pitfalls and death-traps to be placed around our youth and yet offer no word of remonstrance? Are we allowing public enterprises to be so conducted that thousands are annually slaughtered when proper precautions would have saved many, and yet we do not demand that these precautions be taken?

If the answer is "yes," then we stand convicted of breaking the great rule of life.

An act is either wrong or right. If right it should not be hindered, and if wrong no amount of money can make it right. If when we had an opportunity you did not use your influence against the license of an evil, you violate the spirit of Seventy-six by using your influence to deprive some of life, many of liberty, and multitudes of happiness.

Do you look at an act from a revenue standpoint only? Do you sanction revenue-producing laws that pave the streets with the life-blood of man? Do you sit supinely down and see your fellow man oppressed and even slaughtered in the efforts to add to the ever-increasing wealth of a few, and not utter a word of protest? Is the acquisition of the dollar your chief aim in life? When the dollar is weighed against manhood in your scales does manhood "kick the beam"?

Do you maintain two standards of morality—one for men and one for women? Is this line of action a true interpretation of the spirit of '76? Do you treat

woman as a partner and not as a servant? Do you admit her, though perhaps physically inferior, to be mentally your equal and perhaps spiritually your superior? The church membership is largely female and societies for the alleviation of suffering are almost wholly feminine.

He who lays violent hands on a woman is an arrant coward, but he who strikes the woman he has promised to love, cherish, and protect, stands convicted of perjury before the court of the Most High.

The spirit of '76 is not necessarily one of force and bloodshed, but rather of right and justice. We should respect a man for what he *is* and not for what he *owns*. We should accord to all the same rights we ask for ourselves.

When we carry the golden rule into our every daily act, then, and not till then will we live in the "Spirit of Seventy-six."

#### THE FUTURE OF DISTILLERIES.

DR. T. D. CROTHERS, of Hartford, Conn., one of the prominent speakers in the recent convention of the American Medical Association, held in Chicago, gave some interesting figures and made some very wholesome suggestions for the consideration of the public.

Dr. Crothers is the editor of the *Journal of Inebriety*, and has made a lifelong study of that branch of medical science.

Dr. Crothers stated that from 15 to 18 per cent of the doctors in the United States are addicted to the excessive use of liquor or drugs, 5 per cent of the merchants, 20 per cent of the lawyers, 80 per cent of the saloon keepers, and 90 per cent of the brokers are also addicted to the excessive use of liquors or drugs.

In speaking of the nature of alcohol and its place in science, Dr. Crothers said:

"Alcohol is a magnificent narcotic and anesthetic and the most treacherous and dangerous influence we can use as a stimulant.

"It is one of the greatest benefactors of humanity in the manufacture of ether, chloroform and other anesthetics, but as a drink it is a relic of barbarism. The day is not far away when all the distilleries of the country will be needed to manufacture it for purposes of light, heating and power. Today we are drinking it and killing ourselves. It will not be long before mankind has converted it to its true use."

NEW YORK'S public library furnishes more reading in more tongues than any other library in the world. In the Oriental department alone there are 10,700 books—enough to make a library by themselves.

If the crowns of all the kingdoms of Europe were laid down at my feet in exchange for my books and my love of reading I would spurn them all.—*Fenelon*.

# THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE, ELGIN, ILL.

Subscription price, \$1.00 per Annum, in Advance.

The Inglenook stands for material and spiritual progress. Its departments are: Literary, Editorial, Home, Cream of Magazines, World News.

Its qualities are: Good Sentiment, Moral Convictions, Inspiration.

Its purpose is: To safeguard home life by supplanting and counteracting bad literature.

Its scope of matter is: Scientific, Religious, Educational, Philanthropic, Economical, Sociological and Financial.

Its field is: The World.

Liberal commission given to agents. Sample copies are given upon request. When changing address give both old and new addresses.

Entered at the Postoffice at Elgin, Ill., as Second-class Matter.

## EASE OR LABOR FOR THE CHILDREN?

WE have known many parents who in their youth were compelled to labor almost beyond their strength, for their fathers and mothers had next to nothing and it took the efforts of all to keep the wolf from the door. Ask them to what they attribute their success, and many of them will say it was due to the labor and privations of early life; and we believe they are entirely right when they say so. Without having learned to overcome in the trials of life, they could not possibly have succeeded in life.

But get these same parents to talking about their children, and in most cases you will hear them express the hope that their boys and girls will not need to undergo the hardships and make the sacrifices which they had to. They seem not to see that they are at all inconsistent in what they have said about themselves and their children. Their success mainly due to the hardships of youth! and yet they don't want their children to endure those hardships! Don't they want them to succeed? Or do they think that in these days there is an easier road to success? We do not know, and if their attention were called to the inconsistency they might have difficulty in explaining their meaning.

Time and again we hear pity expressed for the child who is compelled to labor hard and long. In most instances the pity is wasted, for the child is developing, is learning self-reliance as he never would if he had an easy time, his parents relieving him of every burden they could. No, don't pity the boy who works with his hands, and at an early age and by his own experience learns just how much labor a dollar represents. That is one of the most important lessons in life, and there is little probability that any one will learn it too young. If you have any pity to spare, bestow it upon the boy who has an easy time and is kept supplied with money, of whose value he really knows nothing except that a given amount of it represents a dish of ice cream or some other thing which

gives him pleasure. He is not receiving the training which is necessary to make him a strong, self-reliant man. Some day he may fall just because he lacks the most necessary thing. Don't blame him too much, especially while he is young. If his parents had been wiser, wise enough to see what was for his highest good, they would not have indulged him so much, would not have weakened him by taking the hard things out of his path.

It does look hard to see the young child forced to labor, and when we do see it we involuntarily express pity for him. That is because we look only at the surface. The good soldier, the trusty man in any field, is the one who has learned to endure hardness. It is the used muscle that grows strong. So in the battle of life the do-nothings are crowded to the wall simply for the reason that others have done the fighting for them, and as a result they are not capable of putting up a good fight against hardship or temptation when it comes. And the result is not bad alone for the physical, but for mind and soul.

Necessity is the mother of more things than invention, and he who in youth was compelled to fight against great obstacles is a better man, a stronger man, than he who was shielded from the hardships of life by those who loved him well but unwisely. The coddling process cannot develop strength; it is like keeping one's arm in a sling for the purpose of letting it gain in power. Nature does not develop strength in that way. Hardship bravely met is a blessing, not a curse; and when we try to make things too easy for the young we are injuring instead of helping them.

Nearly all of the greatest men our country has produced, came up from the lowly walks of life. They knew what toil meant, and they later knew that it was the toil which fitted them for the higher positions. Besides this, God never meant that our life should be one of ease, but one of service. It was his Son who said, "My Father worketh hitherto, and I work." "To lay the firm foundations in ourselves, or even to win success in life, we must be drudges . . . Blessed be drudgery! For thrice it blesses us: it gives us the fundamental qualities of manhood and womanhood; it gives us success in the thing we have to do; and it makes us, if we choose, artists—artists within, whatever our outward work may be. Blessed be drudgery,—the secret of all culture!"

\*\*\*

## INDEPENDENCE DAY.

IN a few days we will be celebrating the day that gave us our national independence. The blessings that it brought give us a theme worthy of contemplation. In the observance of the day let us see to it that we do not surrender our independence by a slavish following of customs harmful in themselves, and that bear no relation to the event to be commemorated.

## LESSONS IN ESPERANTO. No. 9.

## CONJUNCTIONS.

A CONJUNCTION is a word used to join other words, phrases or parts of sentences. They do not require the careful study necessary for the prepositions, and need only to be memorized. The following is a list of the ones most used:

|                      |                        |
|----------------------|------------------------|
| Alie,—otherwise.     | Sed,—but.              |
| Aŭ,—or.              | Kaj,—and.              |
| Aŭ,—aŭ, either—or.   | Ke,—that.              |
| Ĉar,—because.        | Nek—nek,—neither—nor.  |
| Dum,—while.          | Se,—if.                |
| Ĉu,—whether.         | Sekve,—consequently.   |
| Eĉ se,—even if.      | Ol,—than.              |
| Ĝis,—until, up to.   | Por ke,—in order that. |
| Ja,—indeed, in fact. | Tamen, however.        |
| Tia—kia,—such as.    | Tia ke,—Such that.     |

## INTERJECTIONS.

Interjections are exclamatory words, usually more or less emphatic in meaning. The following is a list of words, some of which are always interjections, others frequently used as such:

|                   |                    |
|-------------------|--------------------|
| Adiaŭ!—Farewell!  | Ho ve!—Alas!       |
| Bis!—Encore!      | Hontu!—Shame!      |
| Bone!—Well!       | Hura!—Hurrah!      |
| Bonvenu!—Welcome! | Ja!—Indeed!        |
| Brave!—Bravo!     | Jen!—Behold! Look! |
| Certe!—Certainly! | Ne!—No!            |
| For!—Away!        | Nu!—Well!          |
| Ha!—Ah Ha!        | Ve!—Woe!           |
| He!—Hey! Hello!   | Vere!—Really!      |

“An,” suffix, a member of, an inhabitant, a partisan.  
Vilaĝo, a village. Vilaĝano, a villager.

“Il,” suffix, denotes a tool, an instrument.

|                 |                  |
|-----------------|------------------|
| Kombi,—to comb. | Kombilo,—a comb. |
| Haki,—to chop.  | Hakilo,—an axe.  |
| Razi,—to shave. | Razilo,—————?    |
| Kudri,—to sew.  | Kudrilo,—————?   |
| Pafi,—to shoot. | Pafilo,—————?    |
| Tranĉi,—to cut. | Tranĉilo,—————?  |
| Tondi,—to clip. | Tondilo,—————?   |

“Ing,” suffix, denotes that which holds or partially contains:

Plumo,—pen.  
Plumingo,—penholder.

“Uj,” suffix, denotes that which entirely contains, bears or produces, a receptacle.

|                 |                          |
|-----------------|--------------------------|
| Mono,—money.    | Monujo,—a purse.         |
| Kremo,—cream.   | Kremujo,—a cream pitcher |
| Piro,—a pear.   | Pirujo,—a pear tree.     |
| Pomo,—an apple. | Pomujo,—————?            |
| Turko,—a turk.  | Turkujo,—Turkey.         |

“Ej,” suffix, denotes a place used for a special purpose:

Dormi,—to sleep.

Kuiri,—to cook.

Dormejo,—a dormitory.

Kuirejo,—————?

Lernejo,—————?

“Ec,” suffix, denotes abstract qualities.

Amiko,—a friend.

Bona,—good.

Simpla,—simple.

Virino,—woman.

Lerni,—to learn.

Preĝi,—to pray.

Preĝejo,—a church.

Amikeco,—friendship.

Boneco,—goodness.

Simpleco,—————?

Virineco,—————?

## VOCABULARY.

Komenci,—to begin.

Dio,—God.

Krei,—to create.

Tero,—earth.

Ĉielo,—heaven, sky.

Sen,—without.

Dezerta,—waste.

Lumo,—light.

Profundo,—depth.

Animo,—soul.

Porti,—to carry.

Kuzo,—cousin.

Segi,—to saw.

Fosi,—to dig.

Sonori,—to ring.

Fajfi,—to whistle.

## EXERCISE 20.

Je la komenc-o Dio kreis la teron kaj la ĉielon. Kaj la tero estis senforma kaj dezerta, kaj mal lumo estis super la profund aĵ'o, kaj animo de Dio sin portis super la akvo. Kaj Dio diris: estu lumo; kaj far iĝ is lumo. Kaj Dio vidis la lumon ke ĝi estas bona, kaj nomis Dio la lumon tago, kaj la mallumon Li nomis nokto. Kaj estis vespero, kaj estis mateno—unu tago. La domo, en kiu oni lernas, estas lernejo, kaj la domo. en kiu oni preĝas, estas preĝejo. Ĝi edziniĝis kun sia kuzo, kvankam ŝiaj gepatroj volis ŝin edziniĝi kun alia persono. Per hakilo ni hakas, per segilo ni segas, per fosilo ni fosas, per kudrilo ni kudras, per tondilo ni tondas, per sonorilo ni sonoras, per fajfilo ni fajfas.

## EXERCISE 21.

I am loved. He has been seen. He has been drowned. They are to be named. You have been photographed. They had been blessed. He was (about) to be baptized. He was to be invited. The chair has been bought by me. When your house was being built, my house had already been built for a long time. When I shall come, tell to me the truth. The teeth of the lion are sharp. The dentist and the singer are in the forest. The lion killed the lamb. I have four young chickens. If you were wise, you would have many friends. To judge, a judge. A dog, a puppy. To trade, a merchant. A bird, a young bird. To steal, a thief. To sing, a singer. An ox, a calf, a cow. To burn or to be in flames, to light. To drown, to get drowned. Husband, wife. To wash, a laundry man, a laundress. To get married, to marry a couple.

ALLAN EISENBISE.

16 S. State St., Elgin Ill.

### GIVE US MEN,

Give us men! A time like this demands  
Great hearts, strong minds, true faith and willing hands.  
Men whom the lust of office does not kill;  
Men whom the spoils of office cannot buy;  
Men who possess opinions and a will;  
Men who have honor, men who will not lie;  
For while the rabble, with their thumb-worn creeds,  
Their large professions and their little deeds,  
Wrangle in selfish strife—lo! Freedom weeps.  
Wrong rules the land and waiting justice sleeps.

—Oliver Wendell Holmes.

### CHARACTER BUILDING.

MAGGIE ELLIS WADE.

Much has been written on child training, but there cannot be too much on this subject. The more it is before the people, the sooner better results will be obtained. As we study the best manner of training our children, we should practice self-training. That would solve the problem. Too many parents expect their children to overcome or abstain from faults or habits which they have and practice daily. Precepts are good, but examples are far better. The behavior of children away from home is nearly always an index to the home life. So if you would build the young lives aright, commence at the foundation and see that it is builded upon honest, God-fearing, loving supports.

Treat a child with kindness and the most vicious nature can be overcome, the harsh word or angry look brings forth rebellion, if not openly it can be seen in the countenance and the more as the child is driven to obey. Building character for future generations is the most important task that the fathers and mothers of this universe have before them today.

The first requisite for healthy children, both in mind and body, is a clean Christian life. Parents that are Christlike at home as well as abroad have the battle of raising children in the way they should go won before it is begun. Many children are lost thru the deception practiced by parents; pretended Christians at church and among outsiders, but railers, fault-finders and contentious in the home where everything should be peace and harmony.

Children naturally have a love for the beautiful. Talk about the beautiful flowers that come in the springtime and they are at once interested and enthusiastic about the rambles thru the woods, the birds and their nests with eggs in them. See the little faces

aglow with love as they recount something that they have seen. One little girl, over three years of age now, can tell about the wild strawberries, the hanging birds' nest and bunches of flowers gathered last summer. Let them have the dolls, toys and good books and keep them young as long as possible.

Do not send them to Sunday school and church, but go and take them. Set the examples, live them out and the children will grow up a blessing instead of causing trouble and heartache. But most of all, work, watch, pray and put your trust in God.

Littleton, W. Va.

### A SANITARY HOME.

DR. J. M. WINE.

ABOUT the best thing that can happen to anyone is to have a good family history. After being physically well born the power lies within himself (in a great majority of cases) to live to a ripe old age. Your late editor asked me to say something about sanitary measures as applied to the home. For your home, select a healthy site, and a beautiful one, if possible, for the mind must be satisfied, as well as the body kept free from disease. A slightly elevated spot with a sand or gravel subsoil is the best. This will be warm and dry and insure good drainage. A subsoil of clay is damp and holds all manner of filth, collecting cess-pools, etc., conducive to malaria, rheumatism, etc. The vault should be away a sufficient distance and located so that natural drainage be away from cellar or well.

Build your house, bearing in mind the extremes and unusual conditions of the air, for then is when you need it the most. Cellar walls should be well cemented to prevent seepage from without. The cellar should be under the entire house, and well ventilated. Coal bins dust tight if possible. A layer of roofing slate should be laid on the wall under the sills to prevent extension of moisture.

Dust is the great germ carrier, therefore avoid unnecessary corners in the house, weather strips to windows, and floors built so that carpets can be dispensed with. The main living rooms should face the south, insuring the maximum amount of sunlight. The dining room should be in the most cheerful place possible, thus aiding digestion and bringing happiness all around. The larder should be to the north, as it is

cooler; porches to north and west; however, awnings are better than porches, as they can be removed in winter, when you so much need all the sunlight you can get. Sleeping rooms should be large and corner rooms, with two windows at least to insure plenty of pure air. The toilet room should always have an outside window, and all plumbing should be open, so it can be easily gotten at.

Beauty, light, and cheerfulness should be always thought of in building your home. *Cleanliness* and *sunshine* are the two great allies to health. Where these two factors have their full sway, a large per cent of the disease to which we are subject would disappear. Think of three-fifths of our entire population dying from *preventable* diseases! No wonder cleanliness is next to godliness. Houses are built to *live in* and not to die in, and life, health and happiness should fill every room, and then will your children and grandchildren rise up and bless your memory.

Dayton, Ohio.

#### THE CRUCIAL YEARS OF LIFE.

To develop indoors, under glass, a race of men and women of the type that I believe is coming out of all this marvelous mingling of races in the United States is immeasurably absurd, says Mr. Luther Burbank, writing in the *Century* about the child. There must be sunlight, but even more is needed fresh, pure air. The injury wrought today to the race by keeping too young children indoors at school is beyond the power of anyone to estimate. The air they breathe even under the best sanitary regulations is far too impure for their lungs. Often it is positively poisonous—a slow poison which never makes itself fully manifest until the child is a wreck. Keep the child outdoors and away from books and study. Much you can teach him, much he will teach himself, all gently, without knowing it, of nature and nature's God, just as the child is taught to walk or run or play, but education in the academic sense, shun as you would the plague. And the atmosphere must be pure around it in the other sense. It must be free from every kind of indelicacy or coarseness. The most dangerous man in the community is the one who would pollute the stream of a child's life. Whoever was responsible for the saying that "boys will be boys," and a young man "must sow his wild oats," was perhaps guilty of a crime.

It is impossible to apply successfully the principles of cultivation and selection of plants to human life if the human life does not, like the plant life, have proper nourishment. First of all, the child's digestion must be made sound by sufficient, simple, well-balanced food. But, you say, anyone should know this. True, and most people do realize that upon the food the child is fed in these first ten years largely depends its moral future.

What we want in developing a new plant, making it

better in all ways than any of its kind that have preceded it, is a splendid norm, not anything abnormal. So we feed it from the soil, and it feeds from the air, and thus we make it a powerful aid to man. It is dependent upon good food. Upon good food for the child, well-balanced food, depends good digestion, upon good digestion with pure air to keep the blood pure, depends the nervous system. If you have the first ten years of a boy's or a girl's life in which to make them strong and sturdy, with normal nerves, splendid digestion and unimpaired lungs, you have a healthy animal, ready for the heavier burdens of study. Preserve beyond all else as the priceless portion of a child the integrity of the nervous system. Upon this depends their success in life. With the nervous system shattered, what is life worth? Suppose you begin the education, so-called, of your child at, say three or four years, if he be unusually bright, in the kindergarten. Keep adding slowly and systematically, with what I think the devil must enjoy as a refined means of torment, to the burden day by day. Keep on "educating" him until he enters the primary school at five, and push him to the uttermost until he is ten. You have now laid broad and deep the foundations; outraged nature may be left to take care of the rest.

The integrity of your child's nervous system, no matter what any so-called educators say, is thus impaired; he can never again be what he would have been had you taken him as the plant cultivator takes a plant, and for these first ten precious years of his life had fitted him for the future. Nothing else is doing so much to break down the nervous system of Americans, not even the insane rushing of mature years, as this overcrowding and cramming of child life before the age of ten. And the mad haste of maturer years is the legitimate result of the earlier strain.—*Selected.*

#### SKIM-MILK AS FOOD.

THE milk which is richest in cream is not the most nutritious, for the very simple reason that a rich milk is less easily digested and absorbed than a milk in which the fat percentage is low. As far as its other constituents are concerned, a milk poor in fat is as valuable a food as a milk rich in fat.

The fat percentage, the popular standard by which milk is judged, is most valuable, while the proportions of the albuminoids, sugars and salts, vary but little in the different samples of milk. In other words, while the energy-producing and heating qualities of the several kinds of milk may be great or little, the valuable proteid ingredients, which go to the building-up of the tissues—the prime property of any food—remain very much the same in all varieties of cows' milk.

Thus a "thin" milk is for all purposes, save the energy and heat production, as valuable a food as the so-called "rich" milk. Indeed, it not infrequently

happens, as the experimental breeding of young growing animals has shown, that a thin milk may prove in the long run, more flesh-forming than a rich milk, inasmuch as the former is less liable to introduce gastro-enteric disorders.

Let us consider what this means. It means, first of all, that the enormous quantity of skim-milk produced in this country could be turned to more economical use than the feeding of animals or the manufacture of "ivory" for table-knives and piano-keys. The despised skim-milk is a valuable article of food, capable of supplying many of the wants of the organism, and, from its lightness and digestibility, peculiarly suitable to those whose digestive powers are debilitated. It means, further, that buttermilk, which can be had for the asking almost everywhere in this country, is also a valuable food for men and women, although at present utilized only to feed pigs.

Surely, if he is esteemed the greatest benefactor to the race who can grow two grains of corn where only one grew before, in like manner honor should be paid to him who rescues a waste product and transforms it into a valued article of a nation's diet.—*Dr. J. A. Gilbert, in Medical Review.*

#### THE VALUE OF LOVE AND FRIENDSHIP.

OF all the flowers that bloom in the garden of life, the sweetest and rarest is the pure white lily of friendship and love.

Its impulses are of divine origin; its seeds are deeply implanted in the innermost needs of our being, its roots are watered and nourished by the soft dews of love and the gentle rain of sacrifice.

Beautiful as it is, redolent with perfume, one would imagine it an exotic or tropical plant; but under all skies and in all climes throughout all ages it sends forth its flower and foliage to purify and uplift mankind.

It is a delightful task to study its growth and analyze its well rounded and delicate consummation.

Happy the man who finds friendship.

Happier he who attracts friendship, while happiest of all is he who retains friendship.

Friendship is the magnetic influence that unites the positives and negatives of two lives, and complements the weakness of each with the strength of the other.

Friendship is the wireless telegraph of the soul, whereby kindred spirit poised and balanced to the faintest impulse of the other thought, may hold sweet communion one with the other, though separated by great barriers of time and space.

Friendship is a sweet-throated songster, with mighty, outstretched pinions that can bear our troubled and perturbed spirits far above the noise and the carnage of the battle of life.

Friendship is the spirit of the Eternal which, admitted into life, cherished and obeyed, makes of a life

a glad, sweet song; rejected, turns life into a parched and mocking desert, the only inhabitants of which are false hopes, lost ambitions and baseless dreams.

To profess friendship for a man is to make life's greatest profession! When one professes friendship, and is honest and sincere in his protestations, he is offering the secret treasures of his life, the depth of his heart's affection and the aspiration of his soul; therefore the profession of friendship is life's most sacred profession.

Happy the man who finds his soul affinity.

Unworthy the man who trades upon his friend with the sacred profession of friendship, and equally unworthy of confidence the man who accepts the profession in a sordid, selfish spirit, giving nothing in return, and who uses it in the marketing places of ambition to further his own personal and private ends.

When you have a friend bind him to your heart with hoops of steel, and be as true to him as you would have him be to you.—*Selected.*

#### THE QUAIL.

JENNIE TAYLOR.

There's some one sitting on the old rail fence,

Dressed in a speckled coat;

I know him well by the song he sings—

Such a cheery whistling note.

"Bob White! Bob White!"

Comes the call from his swelling throat.

"Bob White! Bob White!"

Bob White! Here's Bob White!"

Comes the call from his swelling throat.

There's a nest not far from the old rail fence,

Down in the waving wheat;

And eight small eggs are hidden there

By the birds in the garb so neat.

"Bob White! Bob White!"

Calls the quail, all the world to greet.

"Bob White! Bob White!"

Bob White! Here's Bob White!"

Calls the quail, all the world to greet.

There's some one watching from the old rail fence,

Watching the nest in the wheat;

Hear him call to his little red-brown mate.

Safe in some near retreat—

"Bob White! Bob White!"

When he thinks there is danger to meet.

"Bob White! Bob White!"

Bob White! Here's Bob White!"

When he thinks there is danger to meet.

Some one is gone from the old rail fence,

The plump little quail has flown;

Yet his cheery, whistling call comes back

O'er the silent wheat fields lone.

"Bob White! Bob White!"

Comes the call in a flutelike tone.

"Bob White! Bob White!"

Bob White! Here's Bob White!"

Comes the call in a flutelike tone.

Tipton, Iowa.

## OUR LETTER FROM AFRICA.

DEAR BOYS AND GIRLS:

I promised this time to tell you about twins in Africa. You who are twins will be especially interested. There are many questions upon which we as white people and Christians cannot agree with these people of Africa, and this is one of them. Christianity has changed many of their ideas and is continuing to change them, for which we are all thankful. No doubt twins are thankful, for a native thinks a twin is scarcely human. He thinks they are more animal than human. People do not like to talk about twins and if there are any in the family, the parents like to hide them. In olden days one of them was put to death, often both of them. Sometimes it would be the grandmother that would kill one, sometimes the father would put a lump of dirt in the throat of one to kill it and sometimes it was left out on the veld to be devoured by wild animals. Now that British rule has spread all over South Africa, the killing of twins is forbidden, though it is a custom that is extremely difficult to put down, for the matter is kept profoundly secret when possible, even from neighboring natives, and much more so from white men.

The following information was given by a chief's son in Zululand who was himself a twin and was spared because there were a number of white people living near. His name was "Hatred" which shows what his parents thought of him.

The child that is killed is given no name nor is the one left given a name until he is about sixteen. There is never any mourning at the death of a twin, for that would anger the ancestral spirits. If both live, as happens through their being hidden, then on the death of one, even though he were grown up, there would be no mourning, lest the other twin should suffer through sympathy, for it is thought he is one flesh with the twin. The grave of the twin is spread with ashes, and when the body is placed in the round hole in a sitting position, it is covered up with earth and with a second layer of ashes.

A boy who is a twin is not beaten by others, for it is said to be an unlucky thing to beat a twin. The parents say they know how to manage a boy, but not how to manage an animal; so when the boy is extra troublesome they do not whip him but put some ashes on the nape of his neck and make him drink ashes and water. Every time a twin has his hair cut, ashes are rubbed on his head. When he marries there is no wedding dance. Twins are not counted in the number of children in the family, for it would be unlucky. Do you see where the many things in America, that are considered unlucky, come from? Yes, from the heathen.

Twins are said to have no brains, and yet are thought to be unusually sharp and clever. Boys who are squabbling will often call up a twin and ask his opinion, which is regarded right, for he is so knowing.

A twin is expected to make songs for the people. He goes to a kraal, for example, where there is soon to be a wedding; sitting down, he takes in all that is going on at the kraal, without saying a word. He then goes to a waterfall, accompanied by an attendant, having sat down, he listens to the noise of the falling water in a dreamy way. He then begins to chant a song, and on the day of the wedding, teaches the people the song, which astonishes all the people. They say, "How did this boy get to know all these things to which he has referred and which he has woven into his chant? So clever is he thought to be that grown up people bring their quarrels to him for settlement, and consult him almost as though he was a diviner.

In war time a twin used to be hunted out and made to go right in front of the attacking army, some few paces in front of the others. He was supposed to be fearless and wild. His twin, if a sister and still living, was compelled to tie a cord very tightly round her loins during the fight, and had to starve herself; she was also expected to place the sleeping-mat of her twin brother in the corner of the hut which the spirits loved to haunt. This brought success in war. But the great Chief Tshaka stopped this practice, for he said that the wild twin did foolhardy things and brought the army into needless danger.

A man was one day walking along a path in GAZALAND when he met a native boy with two mice in a bag. The boy said, "Where is your cat? I have two mice for it." On being asked why he did not eat the mice himself as he had many times before, he said, "I cannot eat the mice because I caught them both in the

trap at the same time." On being asked why he could not eat mice that were caught in the same trap at the same time, he said that it was all right to eat mice caught singly but if he ate mice that were caught in couples there might come twins in their family.

If a twin wished to give a person two things he was not allowed to give them both at the same time. He must put one on the ground while giving the other. Thus you see that the trials of a twin are many and I presume you who are twins have been feeling, as you read these lines, that you were very thankful that you were not born in Africa. Yes, a Christian home, Christian parents, and a Christian land are no small things to be thankful for. I hope as you read these lines you will offer to God a prayer of thanks for his mercies to you and the blessings of Christianity, and that you will pray and think oftener about these little brown brothers and sisters of yours who know no other way than the ways of heathenism.

"The love of Christ constraineth us, because we thus judge that One died for all, that they which live should no longer live unto themselves, but unto him who for their sakes died and rose again."

Yours in his service.

(Miss) Nellie Reed.

## For SUNDAY READING

### GETHSEMANE.

RICHARD SEIDEL.

There was a garden where the Savior prayed  
In agony of soul. Dark was the night,  
The stars refused to shine, the moon to light  
The deep seclusion where the Master strayed,  
With throes of pain endured for truth and right.  
Our minds retire, night hides from us the sight  
Of God's blest Son by wicked man betrayed.  
And O our Father! bend thy listening ear  
When we to our Gethsemane retire.  
We agonize, we bow in reverent fear,  
Or satisfy our longing and desire.  
And in these hours send angel helpers near  
To lift our stricken souls to regions higher.

### SOME NEEDS OF THE CHURCH.

RICHARD BRAUNSTEIN.

FOR a great many years now, attention has been drawn to the unsatisfactory conditions of the spiritual side of the church and many thoughtful people regard the matter with apprehension. The fires are burning low. They are not extinguished. They must be fanned into a brighter flame by more activity and greater enthusiasm. Prayer, praise, personal work will ignite the dead-wood outside of our church edifice.

We are in need of a wide and far-reaching revival. One that will sweep the country, especially during the summer months when people think it is necessary to include non-church-going in their vacations.

The defects may be traced to the coldness and apparent deadness of spiritual life. Many of our ministers are in a lethargic state. The churches are strong in membership; there are funds in the treasury; there is good attendance. But in spite of all this, the congregations in nine churches out of ten are in a rut. There is a "come Sunday, go Sunday" feeling about it all. The Gospel is spread, but not enough. It is, as a rule, held in the narrow confines of four walls. We sit and listen to it every Sunday. We are content to have it so. Outside there is a sister or a brother who would like to hear it, in fact ought to hear it. Do we bring it to them? Do we invite them to hear it? No, we do not. Some do; but not all. There is a certain deadness about the whole matter.

I am not going to write an obituary, and I do not wish to take a pessimistic view about the present-day church system. A period of depression is by no means a novelty in the history of Christianity, and the condition of things may be vastly improved. The scope of this article pertains to remedies.

The first and best of remedies is giving attention to the evil by a vast body of well-intentioned and thoroughly loyal Christians who have hitherto more or less neglected religious work for reasons of their own, that have seemed sufficient, but are really altogether inadequate. Religious duties and interests are supreme; nothing should be allowed to interfere with them. The fact that multitudes of good people *do allow everything to interfere* with religious work is the first fact in the case. If such persons will look about them and note the general decay of church life, they will probably be started into activity. If in any church two score of such Christians would begin the treatment of the claims of the church, and zealously enter into all the work of God, a revival would almost inevitably follow; and by a revival here we do not mean the sensational, hysterical, psychological kind, but a revival, a resurrection of sleeping spirituality, a quickening of the pulse, and expanding of the soul. So long as large numbers of the influential members are irregular in church attendance, habitually absent from social meetings, and to be perfectly plain, spiritually useless to the church, there will be increasing dullness and deadness.

A special trouble in these days is our inappropriate intellectuality. The pulpit deals too much with opinion and too little with religious experience. Opinions, as a form of intellectual life, are too apt to encroach upon activity in all fields. It is one thing to desire knowledge; it is quite another thing to make intellectual life a study or a defence of opinions. What one knows is a very different matter from what conclusions he

has come to. It often happens that a man's strenuous opinions have no relation to his knowledge. He knows how to manage a farm; but his tenacious opinions concern free will and foreordination of which he *knows nothing*. As a Christian he ought to know his own heart and his own penitence, faith and love towards God.

The pulpit ought to press upon our attention the facts of inner knowledge, the aspects and possibilities of experience, the personal and spiritual divine life in man. This cannot be done by rote, by catalogue, and nomenclature. The preacher and religious teacher must think it out for himself, and present it in his own way. The Lord has need of a preacher's personality. We have been well-nigh outdone by orthodox nomenclature, by orthodox formulas, by careful and exact repetition of phrases and sentences which once had men behind them, and have become tedious and depressing by lifeless iteration. We need orthodox experience in living forms of speech. We need originality, naturalness, and modernness, in the verbal dress of spiritual things.

We also need a like freshness in methods of doing religious work. A bit of novelty is like a summer shower on a parched field. The monotony of a perpetual motion deadens the interest of the people; they grow weary of unchanging order and stereotyped system. It is not necessary to change everything; but give us now and then the refreshment of some small change, some bit of new method. Better still, *do not change anything*. Give us everything in a new way, in a new light and a stronger one. What we need is a mental interest in spiritual concerns. How to give or get is a proper subject for study by pastor and people.

It is very certain that an unvarying method becomes to most minds fatal to sustained interest. It will do the pastor a world of good to study himself out of *sameness*, and his people out of ruts of routine. When there is a quickened interest and earnestness in the work of God, a revival which shall thrill the church with divine life may be confidently expected. The preacher needs a devout rather than a theological mind. The layman needs religious experience rather than "opinions" about religion. We are plentifully stocked with theology and religious opinions; we ought to now lay in a store of sound, earnest piety. We have the skeleton but the bones are very dry; the dry bones must be stocked with spiritual life. They must be alive, and throb with vitality and animation.

"He is not wise and acts to no profit who seeks solitude for any purpose other than that of fortifying himself better to meet his fellows and do them good."

"The world's greatest benefactors have ever been those who were not afraid of being laughed at."

### WHAT IT COST.

A COLLIER came to me at the close of one of my services, lately wrote G. Campbell Morgan in the *British Weekly*, and said: "I would like to be a Christian, but I cannot receive what you said tonight." I asked him why not. He replied: "I would give anything to believe that God would forgive my sins, but I cannot believe that he will forgive them if I just turn to him. It is too cheap." I looked at him and said: "My dear friend, have you been working today?" He looked at me slightly astonished, and said: "Yes, I was down in the pit, as usual." "How did you get out of the pit?" I asked. "The way I usually do. I got into the cage, and was pulled to the top." "How much did you pay to come out of the pit?" He looked at me astonished, and said: "Pay? Of course I didn't pay anything." I asked him: "Were you not afraid to trust yourselves in that cage? Was it not too cheap?" "Oh, no," he said, "it was cheap for me, but it cost the company a lot of money to sink that shaft." And without another word the truth of that admission broke upon him, and he saw if he could have salvation without money and without price, it had cost the infinite God a great price to sink that shaft and rescue lost men.—*Home Herald*.

### THE CISTERN SYSTEM.

DR. FRANK W. GUNSAULUS, in addressing the teachers of an Indiana town not long since, expressed himself as follows:

"Too many of us are teaching what I call the cistern system. I remember that back in Ohio when we wanted to make a new cistern we went around the house and sought out the very driest place possible and there we made a vacancy and called it a capacity. That is the way that many teachers proceed. They carefully find the driest possible spot in a boy—his memory. There a nice large vacancy is hollowed out. It is then carefully plastered up for fear that some spring may well up within, and nothing is left but an opening through which to pour things. And then comes the rain and fills up this 'capacity' with rules, dates, paragraphs, tables, lists of towns, cities and things, and when the capacity is filled the lid is placed on so nothing can escape. The school trustees and the parents are called in on a day appointed and the lid is carefully lifted off for a moment. That is examination day, and when the lid is lifted all exclaim: 'What a "capacity" he has!'"—*Ohio Educational Monthly*.

Do not pray for easy lives! Pray to be stronger men! Do not pray for tasks equal to your powers. Pray for powers equal to your tasks! Then the doing of your work shall be no miracle. But you shall be a miracle. Every day you shall wonder at yourself, at the richness of life that has come in you by the grace of God.—*Phillips Brooks*.

## Echoes from Everywhere

The postoffice department has decided to have all street letter boxes painted a bright red, so that they may be more readily found.

The Chicago board of education has decided to bar all candidates for positions as teachers in the public schools who are over 50 years old.

The recent floods in Louisiana have rendered 2,000 persons in two parishes destitute. The government will probably render assistance, as it will be impossible for the people to make a crop this year.

Since Anniston, Ala., has gone dry, crime has been almost totally reduced. Recently, when it came time to call a grand jury, it was found crime had become so decreased, that there was nothing for a grand jury to do.

In Knoxville, Tenn., during the month of March, 1907, with open saloons, there were 8 murders, 17 felonious assaults, 85 cases of larceny, and 10 robberies. With saloons closed, in March, 1908, there were 2 murders, 7 assaults, 41 larceny cases and no robberies.

During the year ended on March 9 last, over 45,000 persons paid for admission to Shakespeare's birthplace, and 23,000 paid to visit Anne Hathaway's cottage, which possesses only twice reflected interest. The visitors' book contains the names of representatives of sixty nationalities.

By this time the people are familiar with the association of the names Taft and Sherman as the nominees for president and vice-president on the Republican ticket. Taft is a supporter of the policies of the present president, while Sherman is considered a conservative or standpat man.

What a financial flurry can do to immigration is shown by the fact that in the first five months of this year 311,000 alien laborers have left this country and 153,000 have arrived. In the same period last year the arrivals were 583,000 and the departures 114,000. The figures also give an idea of the facility with which the Atlantic is crossed in these days.

It is most surprising that with an increase of membership from 1,400 to 1,800, the bar sales in the Republican Club in the City of New York should have decreased from \$6,600 to \$5,700 in the first four months of 1908, compared with 1907. At the same time the restaurant charges for the club have increased by nearly fifteen per cent, and charges for rooms, etc., have increased by more than twenty per cent. These facts illustrate how temperance is being adopted in the greatest clubs of this country. It may be interesting to know also that the reduction in the sales of liquors at the Union League Club, one of the greatest clubs in this country or the world, have decreased by more than twenty five per cent in the last two years.

Taxicabs are rapidly being put into service in the eastern cities. They are automobiles intended to take the place of cabs drawn by horses. They have a meter showing the exact distance traveled and the fare. Their speed limit in the cities is twelve miles an hour, but they are capable of making twenty-eight miles an hour. It is claimed that New York has five hundred of these vehicles in use.

A single ship came recently into Boston harbor with 3,223 great logs from Central America—from Nicaragua and Honduras. The whole cargo weighed about 4,000 tons. All the logs were mahogany, and it would be hard to say how many fine tables and chairs and pianos were made from that one shipload. The largest logs were about 24 feet long, and from that down to half that size. The total value, uncut, was about \$140,000.

Portland, Ore., June 11.—As the result of the local option elections held in Oregon, this month, county prohibition will prevail in twenty-one of the thirty-three counties after July. There are from four to sixteen dry precincts in each of the other twelve counties, so that there is not a county in the State in which there is not some dry territory. Nearly 500 saloons have been closed in the State since the local option law was enacted.

The London press has begun to give considerable attention to the presence of Mormons in England, who are now said to number over 10,000. The principal Mormon stronghold is at South Tottenham, where Elder Peterson and half a dozen brother elders of Latter Day Saints reign supreme. They have purchased an enormous building, which was erected 12 years ago as a hotel, and are now negotiating for the possession of a run-down Baptist church near by.

Pittsburg bankers who during the past three years have been robbed of almost \$7,500,000 by dishonest employees, have decided on a Bertillon system, by which they hope to keep tab on all their employees. Each bank will insist on its employees having their photographs made and their measurements taken, and these pictures and measurements it is proposed to keep in one central place. In addition to the photographs and measurements, each employee will be expected to give his complete business pedigree.

The 1st of June saw the gold reserve of the Bank of France safely past the 3,000,000,000 francs. At the last balance the exact figures were 3,043,042,077 francs, or \$608,600,000. This is not only high record for the bank, but no such amount of gold has ever been accumulated by one institution, except the United States treasury, which is not a bank, but which held \$1,013,000,000 in gold, chiefly against outstanding gold certificates, last October. The Imperial Bank of Russia's maximum gold holdings, when preparing for monetary reform in 1898, were \$591,000,000, or less than the French bank's present showing.

In accordance with the wishes of the members of the recent conference of governors for the conservation of the national resources, President Roosevelt has appointed a national commission composed of congressmen and others of special fitness, to consider and advise him on questions relating to the conservation of the national resources. The commission is divided into five sections, devoted respectively to waters, forests, land, minerals and to an executive committee, of which Chief Forester Pinchot is the chairman.

The Canadian government has notified the government of Japan that the limit of emigrants allowed for one year has been reached, and that no more laborers should be sent to Canada before January 1 of next year. This is in accordance with the understanding reached last year, which provided that no more than 400 each year should be sent. Japanese aliens in British Columbia have returned a protest against discrimination against them in granting fishing licenses for Frazer river. They declare, as aliens are permitted to enter the country, they cannot be prevented from securing employment.

Reports from Indiana show that 594 saloons have been voted out of business in that State since January 1. Among the cities which have joined the dry column during the first five months of 1908 are Montpelier, Valparaiso, Hartford City and Portland. These results have been secured through the operation of the remonstrance law, which has been responsible for placing two-thirds of the territory of Indiana in the dry column. During 1907, the total number of saloons abolished was about 600. Thus it will be seen that the record of the first five months of 1908 has equaled the record of the entire twelve months of 1907 in the number of saloons abolished.

Hundreds of persons who had bought steerage passage for the Holland-American liner Potsdam were left behind June 18, when the vessel sailed from Hoboken, owing to the great rush caused by the reduction in the rate to \$22. It was intended to take 1,900 in the steerage, but accommodations were found for 100 more and several hours before the time of sailing there were 2,000 steerage passengers on board, and the order was given to admit no more to the pier. The would-be passengers kept arriving and hundreds fought in vain to get on the pier. More than 600 who were refused admittance camped out in Hudson Square Park until after the vessel sailed, when hotel accommodations were found for them by the steamship company.

The crop report given out from the bureau of statistics of the national Department of Agriculture indicates that every one of the summer harvested grain crops grown in this country is promising a yield not only much larger than that of last year, but better than the past ten-year average. The crops reported upon include winter and spring wheat, oats, rye and barley. The total wheat yield of 1907 was about 634,000,000 bushels. The increased acreage of the present year, together with the better averages of condition, when figured out, indicates an aggregate yield of the bread cereal that will exceed 700,000,000 bushels. Only twice—once in 1901 and again in 1906—has the wheat yield passed the 700,000,000 mark. The Agricultural Department report indicates also increases of many millions of bushels in the yields of rye, oats and barley. Corn is yet in the early stages—too early even for an acreage estimate—but the planting season for corn has been generally favorable.

In 1880, 25.5 per cent of the farms in the country were operated by tenants. In 1880, this percentage had risen to 28.4, and in 1900 to 38.3. This must not be taken as meaning that the number of land-owners is decreasing, as they have grown from 208,000 in 1880 to 3,713,000 in 1900. The growth in the number of tenants shows rather that agriculture has been invaded by an army of men without capital who have been obliged to start as tenants. As an indication of a tendency on the part of farmers' sons to stick to the farms, and of some of the millions of the city to return to them, these figures come as very welcome news.

The recent local option elections in the city of Denver, Colo., resulted in the voting dry of over half the entire residential section of the city. Six wards voted on the question and four of the six returned majorities against the saloon. As a result of these elections, twenty saloons and two social clubs have been compelled to close, and twenty drug stores have been prohibited from dispensing alcoholic liquors for beverage purposes. The victory in Denver, added to the Colorado victories of April, when twenty out of twenty-six municipalities of that State voted dry, is compelling the Colorado liquor manufacturers to "sit up and take notice."

Secretary Strauss of the Department of Commerce and Labor is taking a deep interest in the subject of the distribution of alien and other labor to sections of the country where it is most needed. The act of Congress authorizing the establishment of a bureau of information in connection with the immigration service is now being carried into operation. An office has been established on Ellis Island, another in Boston, and T. V. Powderly, who is chief of the service, is now in Chicago, where a third will be located. With a view to obtaining first-hand information of the needs of farm and other labor throughout the country, the department is now engaged in sending postal cards to the patrons of the rural free delivery service asking whether the farmer or other person receiving it is in need of labor and, if so, of what kind. Secretary Strauss has had printed one and a quarter million of the cards.

#### Meaning of "Candle Power."

In illuminating circles one hears a great deal about "candle power," and nearly every one, if asked, would instantly reply that a candle power was the light given by a single candle. But candles differ in luminosity as well as incandescent lamps, and candle power is not one thing, but several, according to the country where used.

In Great Britain and the United States the standard light unit is the amount given by "spermacti candle burning up at the rate of 120 grains an hour with a flame forty-five millimeters high," or 1.76 inches. In France the standard candle is made of stearine, and Germany's candle was, until a few years ago, paraffin. Now the latter country uses the so-called Hefner unit of light, the amount given by a certain form of lamp burning acetate of amyl. Another lamp standard, called the carcel, was used in France. In this purified rape seed oil is burned. Because of this unsatisfactory international chaos it is now proposed that our national bureau of standards at Washington take steps to establish a standard international candle which would be acceptable to at least nine countries.—June Electric News Service.

## CREAM OF MAGAZINES

### SALE OF IMMORAL BOOKS.

The bookseller's shop is a wellspring of wisdom and wickedness. Out of it flows all our learning. Out of it also flows all our folly and half our vice. Is there salt to heal the waters?

The American Booksellers' Association meeting in New York last week recognized the evil and in a measure the duty. They passed the following resolution:

"Resolved, That, recognizing the responsibility of the booksellers in distributing the literature of the community, this association feels called upon at this time to use its influence to discourage the publication and sale of books of pronounced immoral plot and tone."

We are afraid this does not mean much speedy reform. It is good, very good, and talk is cheap and resolutions cost nothing. The difficulty is to make people to live up to their resolutions, for associations can resolve annually to turn over a new leaf, but, like all birthday resolutions, these are the froth of the moment. Who is to enforce them? In an address before the association Dr. Hillis said:

"I don't see why four women in England should distill passion and sell it like whiskey. I'm a little bit inclined to think that all men who sell books of that kind ought to have the bottom of their feet basted right merrily."

But men will continue to sell passion and whiskey for the same reason that women write the one and distillers make the other, because people want them and are willing to pay good money for bad stuff. You can't stop the sale of whiskey till you make and execute a law forbidding its manufacture and sale; and you can't prevent women from writing erotic books, nor men from selling them, until you provide an efficient system under which the sale of such books is forbidden and punished; and that is no easy thing to achieve. It is harder than to stop the sale of whiskey.

Take newspapers. By far the larger number of newspapers are ethically decent. This is true of the entire rural press, and of by far the larger number of city papers. The strong papers, by which we mean the influential ones, are clean, on the whole, even if they are fouled with reports of the gambling at horse races. But there are in the larger cities a certain number of dailies that are utterly conscienceless and sensational, and have a large circulation in the class of people that like such rot. Equally there are a few weeklies that cater to vice, prurient and nasty. They also have their patrons, and we suppose they pay because they are wanted. It is impossible to prevent the exclusion from the mails or the stands of these journals that are not quite obscene. It is of little use to try legislation against them; we must appeal to the slower court of public opinion, taste and moral sense.

It is so with books. Dr. Hillis has spoken well; the American Booksellers' Association has spoken well. Such words help formulate public sentiment and have a certain slow and sure influence. It will come to be the rule by and by that reputable booksellers will not offer plots of passion for sale, and fewer women will find it pays to write them. Perhaps as valuable an agency as any will be the elimination of such books from public libraries, and then the

agreement of these libraries to let the public know what are the prohibited books, so that booksellers will take notice. Stop the sale of whiskey and you do much for thrift and morals. Stop the sale of bad books and you do much to cleanse the character of our people.—The Independent.

### PENNY AMUSEMENTS THAT ARE DANGEROUS.

The penny arcades and five-cent theaters made their appearance with no greater blare of trumpets than the noise of their phonographic horns and the throaty persuasion of their "barkers."

They came upon us unobtrusively in the still of the night. Every big city, and even the smaller ones, woke up to find them there by dozens. They have multiplied faster than guinea-pigs, and within a short time have attained to that importance where we may no longer snub them as one of the catch-pennies of the streets.

With but few exceptions, the pictures shown in these places are as bad as the police will allow. They are suggestive and descriptive of crime, largely presented in most alluring forms.

Months ago these theaters attracted the attention of the Chicago and Philadelphia authorities, and those interested in juvenile courts throughout the country have been raising their voices in protest against them. Jane Addams, of Hull House, frankly admits that they have not only become a force in the city life, but they are capable of developing crime to a very alarming degree. Judge Lindsey, of Denver, a friend of the homeless boy, has spoken strongly against them.

When a manager of one these penny arcades was asked why he allowed such pictures to appear, his answer was short: "Because the people like them."

Who are "the people," anyway?

As they exist today, the municipal authorities don't like them; the social settlement workers don't like them; you don't like them.

If you don't like these amusements, say so. In this case "say so" to the managers of the penny amusements, to the editors of papers and magazines, to the municipal authorities; and then get your neighbors to voice their protests too.

If we cannot have pleasure without bad example to our children, let us even forego the pleasure.

Don't you think so?—The Delineator.

### DRY BONES IN EDUCATION.

Our schools are groping about anxiously in search of more practical ways and means in education. In nearly all communities the older bookish subjects such as grammar and history and "reading" are being partially displaced or supplemented by training in such things as gardening, tree culture, carpentry, metal-working, sewing, cooking, etc. This is a wholesome tendency, but there is danger of making these "eminently practical"

subjects (as Dickens' Mr. Gradgrind would have called them) too theoretical and academic.

For example, taking the Washington schools, which are supposed to be among the most progressive in the country; here special teachers are employed to go from school to school teaching such subjects as sewing, etc., and the work is for the most part well done. But the other day one of the sewing teachers asked her class of little 8-year-olds: "What is sewing?" and she was astonished to find that though they had been sewing all the year, they were not one of them able to define the term. "Sewing" the teacher at length told them, impressively, "is taking stitches."

Now, what on earth does a child need to be taught the definition of "sewing" for? Isn't it enough that they should learn how to sew, and isn't that what the sewing teachers are employed to show them? How many of our grandmothers, who had to make all their family's clothes by hand, could have told this teacher what sewing is? How many accomplished dressmakers, if you would put this question to them, would be able to answer it? Probably not one. If you went into a tailor's shop and asked "What is sewing?" the chances are they would call the police patrol, thinking the heat had affected your mind. Think of poor needlewomen worrying their brains over dictionary definitions of their operations. Tom Hood, if he had imagined such a thing, would have added another verse to his "Song of the Shirt" picturing the miseries of overworked seamstresses who starved because they couldn't remember the definition for sewing on a button.

The temptation in every subject is to reduce things to form and rote. It makes work easier, but it should never be permitted. When any branch of education becomes so lifeless that it runs to "definitions" and such-like fruitless show, it is a sign that it needs pruning so as to put new vitality into it. The case of the sewing is merely referred to as one example; the same error of method runs through much of our school work. We all know that a child who can add, subtract, multiply and divide without much effort will often fail dismally over giving the "rules"—and it is a fact that not one person in a thousand after he goes out into the real world ever tries to remember any such rules, or has any occasion to state them.

We should let the dead bury their dead. Life is too short to waste on definitions, rules, dates, abstruse differentiations, etc., where they are not essential to the direct purpose, and now that we are beginning to teach our children useful things we ought to make sure that the methods employed are not allowed to become fossilized. Whenever a teacher finds that he is getting into a rut he should make it his first business to get out of it.—The Pathfinder.

#### POWER OF MIND OVER MATTER.

Those who take the most radical view of the power of the human will to control the processes and reactions of the organism, even those that have been regarded as subject wholly to physical and chemical laws, will read with interest of a series of experiments by Dr. Otto von der Pfordten described in the *Naturwissenschaftliche Wochenschrift* in an article entitled "Electricity and the Problem of Attention." The author has shown, as he thinks, that the action of electricity on the human body may be modified or even neutralized by the state of the mind. Aspinall has already noted that electricians who when asleep have touched dangerous live wires have suffered no injury ex-

cept a burn; and Jellinek found that an ordinary deadly current did not harm rabbits when they were chloroformed. Says an editorial writer in the *Evening Post* (New York, May 22), commenting on the German article:

"Of greater interest still are the cases he cites where the action of the current is neutralized by a man's strained expectation or attention. Electricians, he says, often touch parts of the machinery to ascertain if there is a current in them; and while this conscious and deliberate act results in no harm, unintentional contact with a less powerful current proves fatal. In experimenting on himself, Jellinek found that an unexpected shock of 350 volts was terrible, whereas an expected shock of 500 volts made little impression. But this was a bagatelle compared with the exhibition of courage given by Herr von Dobrowolsky, who broke a wire containing 30,000 volts and picked up one end of it in the presence of several dismayed experts, without suffering the least harm. 'To do such a thing one must be absolutely fearless of death, or else one must have the force of an engineer who has learned to control the powerful electric fluid.' This force, the writer declares, is will-power, and he adds sententiously: 'There is something imposing in this idea that the will-power in such a case opposes itself to death as an equal force and comes out triumphant.'"

The writer is of opinion that Dr. Pfordten's case would have been stronger had he mentioned the kind of current employed in these various experiments. The difference between the direct and alternating current, or the rate of frequency of the latter, is often sufficient to account for ability to withstand high voltage. Be this as it may, the philosophical part of Pfordten's article is by no means novel. Not to mention modern instances, the last work of the philosopher Kant was entitled "On the Power of the Mind to Master Morbid Feelings by a Mere Effort of the Will." Says the writer in *The Post*:

"He dwells with particular satisfaction on the benefit he derived from deliberately training himself to breathe through the nose only, and on his success in overcoming a morbid melancholy which sometimes tempted him to commit suicide. This had its source in a difficulty in breathing due to his too flat chest; a defect which, being corporeal, he could not overcome; 'but its influence on my thoughts and actions I have mastered, by averting my attention from this feeling, as if it did not concern me at all.' And thus he recovered complete composure and cheerfulness by a mere effort of the will.

"Such a therapeutic application of will-power Kant regards as the converse of the state of mind which makes many lay readers of medical books fancy they have all the symptoms described therein. Dr. Hufeland was convinced that most nervous disorders are caused by mental indolence and passiveness, a weak yielding to bodily sensations and impressions; and he cites Pinel, who found that during the excitement of the French Revolution a number of persons who had for years been weak and sickly became healthy and strong, this being true especially among the indolent members of the aristocracy, whose nervous troubles disappeared entirely. The Japanese have a special method of training the will from early childhood, and it has been plausibly argued that it was this sturdy will-power more than anything else that enabled them to overcome the Russians." *Literary Digest*.

#### THE LIQUOR TRAFFIC.

PERSONALLY, I have seen so much of the evils of the traffic in the last four years, so much of its economic

waste, so much of its physical ruin, so much of its mental blight, so much of its tears and heartache, that I have come to regard the business as one that must be held and controlled by strong and effective laws. I bear no malice toward those engaged in the business, but I hate the traffic. I hate its every phase. I hate it for its intolerance. I hate it for its arrogance. I hate it for its hypocrisy. I hate it for its cant and craft and false pretenses. I hate it for its commercialism. I hate it for its greed and avarice. I hate it for its sordid love of gain at any price. I hate it for its domination in politics. I hate it for its corrupting influence in civic affairs. I hate it for its incessant effort to debauch the suffrage of the country; for the cowards it makes of public men. I hate it for its utter disregard of law. I hate it for its ruthless trampling of the solemn compacts of State constitutions. I hate it for the load it straps to labor's back; for the palsied hands it gives to toil; for its wounds to genius; for the tragedies of its might-have-beens. I hate it for the human wrecks it has caused. I hate it for the almshouses it peoples; for the prisons it fills; for the insanity it begets; for its countless graves in potter's fields. I hate it for the mental ruin it imposes upon its victims; for its spiritual blight; for its moral degradation. I hate it for the crimes it has committed. I hate it for the homes it has destroyed. I hate it for the hearts it has broken. I hate it for the malice it has planted in the hearts of men; for its poison, for its bitterness, for the dead sea fruit with which it starves their souls.

I hate it for the grief it causes womanhood—the scalding tears, the hopes deferred, the strangled aspirations, its burden of want and care.

I hate it for its heartless cruelty to the aged, the infirm and the helpless; for the shadow it throws upon the lives of children; for its monstrous injustice to blameless little ones.

I hate it as a virtue hates vice, as truth hates error, as righteousness hates sin, as justice hates wrong, as liberty hates tyranny, as freedom hates oppression.

I hate it as Abraham Lincoln hated slavery. And as he sometimes saw in prophetic vision the end of slavery and the coming of the time when the sun should shine and the rain should fall upon no slave in all the republic, so I sometimes seem to see the end of this unholy traffic; the coming of the time when, if it does not wholly cease to be, it shall find no safe habitation anywhere beneath Old Glory's stainless stars.—*From Speech of Governor Hanly.*

#### BETWEEN WHILES.

##### A Dutiful Child.

The Youngs had unexpectedly dropt in on the Baileys just as dinner was about to be served. The hostess, considerably disturbed, called her little daughter Helen aside, and explained that there would not be enough oysters to

go around, and added: "Now, you and I will just have some of the broth, and please do not make any fuss about it at the table."

Little Helen promised to remember and say nothing. But, when the oysters were served, Helen discovered a small oyster in her plate, which had accidentally been ladled up with her broth. This puzzled the little girl, as she could not recall any instructions covering this contingency. After studying a few moments, she dipt the oyster up with her spoon, and, holding it up as high as she could, piped out:

"Mama, mama, shouldn't Mrs. Young have this oyster, too!"—*The Christian Register.*

Teacher—What is a straight line?

Boy—Shortest distance between two points.

Teacher—Yes, now give an example.

Boy.—The Roundabout railroad as shown on its own map.

Teacher—And a crooked line?

Boy—Same railroad shown on the map of the rival road.

#### Usually Both.

A young lady was recently visiting an editorial office and being shown around by the editor. Approaching a case of drawers upon one of which was the label "MSS.," she said, "Now, how would you pronounce that?"

"Oh!" said the editor, "sometimes we pronounce it muss and sometimes mess."—*Lippincott's.*

#### Fair Customer.

Fair Customer—"Is this color fast and really genuine?"

Gallant Shop Assistant—"As genuine as the roses on your cheeks, madam."

Fair Customer—"H'm!—er—show me something else!"—*Punch.*

"A lot of men who insist on labor-saving tools and sanitary conditions never give a thought to the wife broiling over a red-hot range in a stuffy kitchen on a summer day."

#### Mid-air Peril.

Mother Bird—"Run along and play, now; but be careful you don't get run over by any of those flying-machines."—*Metropolitan Magazine.*

The awful mine disasters of a few months past have led Congress to appropriate \$150,000 to be used in investigation as to the causes of mine explosions with a view to increasing safety in mining.

---

## WANT AND EXCHANGE

---

To accommodate some of our readers and bring them in closer touch with each other, we have opened this "want and exchange" column.

Rates, twenty-five cents per insertion, not exceeding four lines, including name and address. Five cents per line for additional lines. However, no "want" may exceed six lines altogether.

---

FOR SALE.—Ten acres in the fruitful Santa Clara Valley, Calif., one-half mile from the growing town of Morgan Hill. Address, Blanche Lentz, Elgin, Ill.

**TWO CROPS  
CORN  
SIX CROPS  
ALFALFA  
GROWN  
EVERY  
YEAR**

Fronting west on the Gulf of California for 350 miles with an average width of 80 miles inland, lies the State of Sinaloa on the West Coast of Mexico. It is the second State in Mexico south of Arizona. It is bounded on the North by Sonora, on the East by Chihuahua and Durango, and on the West by the Gulf of California.

## **SURFACE OR TOPOGRAPHY.**

Sinaloa is divided by nature into three natural belts running North and South through the entire length of the State.

## **THE COASTAL PLAIN.**

From the sea margin on the Gulf of California back to the foothills lies this wonderful level coastal plain. At the Southern end of the State it is barely 10 miles wide, but broadens constantly to the North until in the District of Fuerte, the most northerly District in the State—it is 50 to 60 miles wide. The area of this coastal plain is about four million acres (6,250 square miles), and nowhere on the North American Continent can today be found in a continuous body such rich, fertile and productive lands. **Its soil is deep, averaging 42 feet deep, and inexhaustibly rich:** (See analysis). It produces luxuriant crops of practically all of the products of the temperate, semi-temperate, and tropical zones. (See Products). It is crossed by 10 flowing rivers, many of them large streams. It has three principal seaports, Topolobampo, Mazatlan and Altata, in addition to several minor coasting ports, including Santa Maria, Manglon, Playon, etc. It is through the entire length of this coastal plain that the Southern Pacific is now building its main line from Guaymas to Guadalajara and Mexico City. These incomparable advantages of level lands, deep rich soil, good climate, ample rainfall, rivers in abundance, seaports, and railway facilities assure a future to this Coast plain which can hardly be overestimated.

## **THE FOOTHILL BELT.**

Lying immediately back of the Coastal Plain is the beautiful Foothill Belt of Sinaloa, averaging from 20 to 30 miles in width. This is, and always will be, the great

one-crop district of the State. Its topography naturally does not lend itself to irrigation, except in small favored valley spots, so that it must depend on rainfall for its crop production. Nevertheless this section has many distinct advantages. The surface is usually abundantly covered with fine hardwoods of such varieties as ebony, cedar, mahogany, lignum vitæ, etc., and always a plentiful supply of building, fence, and fuel woods. Little creeks, "arroyos" abound, as well as springs, and natural reservoir sites for storage of water can generally be found. This is unquestionably the best grazing district, being well supplied with natural grasses, and the browsing also being good. Here and there are small valleys containing level rich lands on which are raised excellent crops of corn, beans, pumpkins, etc. This, also, is a natural fruit belt growing practically all fruits, with an exceptionally fine flavor. Here grow side by side sugar cane and grains, pears and bananas, grapes and pineapples.

The climate here is unexcelled, the nights cool and delightful, the drinking water from mountain sources, clear and sparkling, and the conditions for living unusually good. In this belt also are located some of the best mines, silver, gold and copper, in the State.

## **THE MOUNTAIN BELT.**

The foothills gradually climb up into the mountains on the East or rear side of the State, these mountains reaching elevations of 5,500 feet. The entire Eastern side of Sinaloa is practically all mountainous. At these elevations are found large forests of pine and oak which, though at this time inaccessible by rail, form large timber reserves of great potential value which will come into the market in future years. Some fine grazing is also found in these mountain lands, and where soil appears crops grow like magic. Water falls are abundant, ready to furnish tens of thousands of horsepower for industries of Sinaloa. These mountains constitute a mineral belt of fabulous richness, there being already discovered and operating many mines, worth millions.

## **DISTRICTS (OR COUNTIES.)**

Sinaloa is sub-divided into 10 districts, in the following order from North to South.

| Districts        | Principal City | River            |
|------------------|----------------|------------------|
| I. Fuerte        | Fuerte         | Fuerte           |
| II. Sinaloa      | Sinaloa        | Sinaloa          |
| III. Badiriguato | Badiriguato    | Humaya           |
| IV. Mocorito     | Mocorito       | Mocorito         |
| V. Culiacan      | Culiacan       | Culiacan         |
| VI. Cosala       | Cosala         | San Lorenzo      |
| VII. San Ignacio | San Ignacio    | Piaxtla          |
| VIII. Mazatlan   | Mazatlan       | Mazatlan         |
| IX. Concordia    | Concordia      | Quelite          |
| X. Rosario       | Rosario        | Rio de las Canas |

The population of Sinaloa at the last regular census was 300,000.

## **RIVERS AND WATERCOURSES.**

Sinaloa is undeniably the best watered State in the Republic of Mexico. A glance at any map of Mexico confirms this statement. It is crossed during its length of 350 miles by ten rivers, flowing from East to West, emptying into the Gulf of California. These rivers have their sources in the high mountains of the interior in Chihuahua and Durango and are fed and renewed by the heavy rainfall and deep snows of these interior mountain ranges.

## **RAINFALL.**

The summer rains in Sinaloa usually begin in June and continue to October. From data obtained from the Government Station at Mazatlan, and from private data,

# THE INGLENOOK

the rainfall may be averaged at 30 inches per year. Usually showers occur also in the months of January and February, although not invariably. The following table of rainfall in the City of Culiacan (the State Capital) for the year ending Feb. 28, 1906, was recorded during a year of unusual and constant rains, there being a precipitation of 50.9 inches.

## WEATHER RECORD.

Of temperature, Rainfall, etc., in City of Culiacan, Sinaloa, Mexico, as per records for the year ending February 28th 1906.

|                                | Mar. | Apr. | May  | June | July | Aug. |
|--------------------------------|------|------|------|------|------|------|

| No. of Variable days in month  | 11   | 3    | 1    | 7    | 16   | 10   |

|                                | Sept. | Oct. | Nov. | Dec. | Jan. | Feb. |
|--------------------------------|-------|------|------|------|------|------|
| Highest temp. in mo. (Fahr)    | 95    | 90   | 85   | 76   | 85   | 90   |
| Lowest Temperature .....       | 75    | 62   | 62   | 37   | 37   | 48   |
| Average, all day .....         | 83    | 81.1 | 72.6 | 64.2 | 62.8 | 66.6 |
| Total rainfall for mo., inches | 13    | 0.5  | 7.5  | 5    | 1.0  | 1    |
| No. of clear days in month     | 17    | 24   | 14   | 28   | 26   | 26   |
| No. of cloudy days in month    | 9     | 2    | 10   | 3    | 5    | 2    |
| No. of Variable days in month  | 4     | 5    | 6    | 0    | 0    | 0    |

Average highest daily temperature over 12 months, 90.7 degrees.

Average lowest temperature, same period 61.3 degrees.

Average temperature, all day, same period 77.1 degrees.

Average number of clear days in month 21.2.

Average number of cloudy days in month 4.

Average number of variable days in month 6.3.

The highest temperature reached in any hour during the year was 99 degrees Fahr.

The lowest temperature in any hour during the year was 37 degrees.

The rainfall during the entire year was, 50.9 inches.

## CLIMATE AND SEASONS.

From October to June in Sinaloa weather conditions cannot be better anywhere. The days are bright and sunny, but not too hot, while the evenings are delightful and the nights cool enough to enjoy sleep. In June the rains begin and while the temperature does not rise to high figures, rarely going high in the 90s, nevertheless the humidity adds to the heat as registered by thermometer. Under the preceding heading of Rainfall will be found a temperature record which speaks for itself. The average temperature for the year ending Feb. 28th, 1906, was 77.1 degrees Fahr. Highest recorded point 99 degrees. lowest, 37 degrees. Those who have given the climate a fair test—through Summer and Winter—agree that it averages up well with Southern California, while its Winter climate is unquestionably superior. **It seems a favorable place for cases of catarrh and asthma,** those going there finding almost immediate relief from such troubles.

## SOIL OF SINALOA LANDS OF COAST PLAIN. ANALYSIS.

|                                                       |       |          |
|-------------------------------------------------------|-------|----------|
| Insoluble Matter .....                                | 72.74 | per cent |

| Phosphoric Acid, P <sub>2</sub> O <sub>5</sub> .....  | .25   | per cent |
| Sulphuric Acid, SO <sub>3</sub> .....                 | .06   | per cent |
| Carbonic Acid, CO <sub>2</sub> .....                  | .03   | per cent |
| Water and organic .....                               | 5.72  | per cent |

|                                    |      |          |
|------------------------------------|------|----------|
| Humus .....                        | 1.95 | per cent |
| Nitrogen of Humus .....            | 9.80 | per cent |
| Hygroscopic moisture at 16°C ..... | 3.22 | per cent |

The soil of the foothill belt is about the same, except coarser in grain, and with more iron in it. The soil in the valleys of the rivers naturally has more silt and alluvial deposit and is an easier worked soil, but no richer in food values for plants than the soil further away from the rivers.

No soil for agricultural, horticultural or gardening purposes need or can be richer or more productive than this. It contains, in large quantities, all the essential elements for plant growth.

## PRODUCTS.

It is not alone the great variety of products raised in Sinaloa that astonishes the newcomer, but the extra fine quality of many of them that attract the grower and investor.

Sugar cane here finds ideal conditions of soil and climate, approaching perfection. When you understand that in Louisiana the per cent of saccharine or sweet in the sugar cane averages about 7 per cent; in Cuba 9 to 10 per cent; in Hawaii, the Paradise of sugar planters, 10½ to 12½ per cent, rarely higher, then you will realize what it means **when we tell you that in Sinaloa sugar cane has tested as high as 17½ per cent.**

Alfalfa finds its natural home here, flourishing and producing **6 to 8 crops per year** of from 1¼ to 1½ tons per acre, and finding ready market at **\$15.00 gold per ton.**

Garbanzas, a yellow chick pea, highly prized as a food in Mexico and Spain, are produced here at a profit of \$75.00 per acre, the market being always good, and a strong demand.

**Corn yields well** and always brings good prices. It is the staple food of Mexico, as wheat is in the United States, being eaten in the form of tortillas, as daily food by fourteen million people. This year, 1907, corn has averaged in Sinaloa, over \$1.00 gold per bushel and has been as high as \$1.25 per bushel. **As two crops are raised per year (January and June planting) it can be seen that corn pays.**

## BEANS.

Beans (frijoles) are also a staple in Mexico, and always command good prices. They are as frequently planted with corn as above and are a good side crop. They invariably produce well and bring good prices.

## GRAINS.

There are good grain sections in Sinaloa, but the natives do not understand its cultivation very well and it is not raised on the scale it should be. Wheat, barley, rye, and other grains are grown in small quantities, but can be raised at a large profit by those understanding how and properly equipped to handle them.

## FRUITS.

Sinaloa can raise everything in the way of fruits. Its lemons and limes are fine. Its oranges, though native seedlings, are early, sweet and delicious. Its strawberries beat those of California. Its bananas are exceptionally well flavored. Its tropical fruits such as papaya, zapotes, etc., are perfect of their kind. Its grapes the best. With all this, there has been no effort in the past to grow fruit on any commercial scale, due probably to the lack of transportation facilities. The new railroads will give an impetus to the fruit industry, and one who plants fruit there now will reap a rich reward at maturity.

## LIVE STOCK—POULTRY, ETC.

Cattle are here, as elsewhere, big money makers, but this is not a grazing country in the sense in which we here in the United States know it. On the coastal plain, grass is scant and scarce, whereas browsing on bush and twig is plentiful. It is not uncommon to see large herds of cattle in good condition on tracts of land where practically no grass will be seen. They keep in good condition from browsing alone. As the country improves and pastures are made, cattle will be better fed and pro-

# THE INGLENOOK

duce more, but with the possible exception of some parts of the foothills, Sinaloa will never be a cattle country as we know it in the United States. In some foothill districts there is excellent grass and pasturage, but not enough to be called general throughout the State.

Hogs do well and get enormously fat. Both lard and pork are very high. Ham and bacon sell at fancy prices. Goats and sheep are first-class money makers in Sinaloa. Poultry thrives here as nowhere else. Chickens, turkeys, ducks and geese, all do very well and produce good results. Plenty of food for them.

## HORSES AND MULES.

Here is the best spot on earth for any man that knows his business to raise horses and mules. He will have one of the best markets on this continent for the next 25 years to sell good heavy work horses and mules. They are, and will be for years, in great demand at fancy prices. Any one bringing in a good jack and brood mares cannot fail to do well. Care should be taken however to bring them in during the Fall or Winter in order to acclimate them before the next Summer. Heavy farm work stock is in great demand throughout the whole State, and will sell for big prices.

## MARKETS AND PRICES.

A good market exists for every product now raised in Sinaloa. All crops and produce sell always at good prices and often for high prices. The opening up of the State by railway communication from several directions means the throwing open of all of northern and interior Mexico as a market for Sinaloa products, in addition to opening the markets of the United States for its fruits, fine winter vegetables, etc. **The question of over-production need not be considered,** at least within this generation. Northern and interior Mexico is comparatively dry and non-productive of agricultural products, being largely devoted to cattle-raising and mining, and these States will pay well for the products of Sinaloa's well watered plains and valleys. Prices for food products have always been high in Mexico, and will be so for many years to come. In addition, **Sinaloa has its own large mineral belt to supply with food** as well as a long line of Coast, north and south, along the Pacific Ocean, which draws, and will continue to draw its supplies, from this fertile, productive State of Sinaloa. **Corn at \$1.25 per bushel, beans at 7c per lb., alfalfa at \$15 per ton (all U. S. currency)** are prices and a fair sample of prevailing market prices.

## LABOR AND WAGES.

For the present, labor is reasonably plentiful, although the building of the Southern Pacific Railroad through the State has drawn about 10,000 of the best laborers to railroad work. However, the completion of the railroad within the next two years will at once relieve the labor situation by replacing these men throughout the State as agricultural laborers where needed. The laborer is the peon or Indian workman of Mexico. Average wages paid are from 62½ cents to 75 cents per day, Mexican currency, (31¼ cents to 37½ cents, U. S. money). On these wages the laborer boards himself and works from early morning until late at night. While not up to the standard of farm hands in the United States, Mexican laborers accomplish considerable in the long hours and steady pace they maintain. They are excellent woodmen and excel with an axe or machete. They are exceptionally good at cleaning land, rough planting and agricultural labor, and are also fine cowboys or "vaqueros."

## HARDWOODS, TIMBERS, ETC.

Many hardwoods and precious woods, including mahogany, ebony, cedar, lignum vitæ, amapa, mauto, etc., abound throughout the State. Almost anywhere, timbers for fencing, corrals, house posts, etc., can be had in abundance. Pine and oak are found only in the mountains. The foothills are all well wooded.

## RAILROAD TRANSPORTATION.

In Sinaloa today is presented to view the most remarkable railroad situation on the North American continent. The great Southern Pacific Railroad system is building its extension from Guaymas, Sonora, South through the State of Sinaloa as fast as men, money and materials

can build it. There are, at this writing, employed in the building of this one line alone, 6,400 workmen and 2,600 mules and scrapers, 2½ miles of railway being finished ready for use each day. The bridge that crosses the river Fuerte has been completed and the line will be pushed rapidly South through the State as fast as possible. This line is heading for Mazatlan which it is expected to reach before the end of 1908 and will then push on toward the city of Guadalajara, from which point, construction has commenced North to meet this railroad. The estimated expense of construction of this one line is \$40,000,000 in gold, it being aided by a subsidy from the Mexican Government.

## NATURAL RESOURCES.

Sinaloa is a bountiful storehouse of natural riches simply awaiting the hand of man to develop and display them. Its rich, level and irrigable lands of the Coastal plain; its beautiful valleys in the foothills; its pine and oak clad mountains, all call for utilization. Limitless quantities of water in the streams, prodigal wealth of gold, silver, copper and iron in the bosom of its hills and mountains are waiting for the farmer, fruit raiser, irrigator and miner to bring forth their wonderful potentialities of wealth. A second California, plus plenty of water and big rivers throughout the State. What better can you, Pioneer or Young Man, ask? Especially with a railroad situation confronting you, which is not paralleled on the North American continent.

## SAFETY OF LIFE AND PROPERTY.

Mexico is today one of the best governed and most peaceful countries in the world. Law and order reign supreme and justice is meted out with impartial hand. Today over eight hundred million dollars of United States capital are invested in Mexico, and tens of thousands of American citizens are making not only good livings, but fortunes in Mexico. It offers better opportunities now to enterprising Americans than any part of the United States.

## OPPORTUNITIES.

What can I do in Sinaloa? you ask. All that can be done in any new country. Help develop it. Go into stock raising, bring down some good breeding stock and raise mules and horses. There will be fortunes in it for twenty years to come. Go into cattle raising; nothing better. Every head of cattle doubles your money every two years. Plant fruit—grapes, oranges, lemons, olives, all big money makers in Mexico. Plant fibre, the million-aire maker of Mexico, that grows to perfection only in Yucatan and Sinaloa. Open stores, go into manufacturing, buying and selling of products, canning fruit and vegetables, ice-making, packing, all avenues are open to you, prices high and markets good. Grow alfalfa, fatten hogs, lard is high, scarce and much in demand. **There is room for all and a market for all you can produce.**

## TITLES TO LANDS.

There are probably more first-class perfected titles to land in Sinaloa than in any other State in the Mexican Republic. A series of surveying concessions have been operating in Sinaloa over a considerable term of years and thus titles have been brought into the courts and before the tribunals of Mexico until all points have been contested and consequently have been definitely settled. Excellent records can be referred to and usually good titles obtained. Competent attorneys are to be found whose advice is safe and reliable. "Clipped from a Los Angeles Publication."

Mr. Isaiah Wheeler of Cerro Gordo, Illinois, with his camera starts in a few days for a trip down through the State of Sinaloa, Mexico, with me. We will travel over the new line of the Southern Pacific Railroad to secure pictures for a Booklet similar to the one recently published, "A Record Without Parallel," on Northern California. Send for a copy, it will be MAILED FREE and will give you an idea how the new SINALOA BOOKLET will look. If you want this Sinaloa booklet FREE send your request in at once.

# ALBERTA

**¶ Of Alberta a distinguished writer has said:**

"North of the International boundary line and immediately east of the Rocky Mountains lies the Province of Alberta—a land blessed with all that is necessary to happiness and prosperity. Between the 49th and 60th parallels and between the 110th and 120th meridians lie 281,000 square miles of possibility. Here are mountains and plains, foothills and valleys, rolling prairies with wooded stretches between, dense forests and grassy meadows, clean, timber-girded lakes and winding brooks, cold mountain streams and navigable rivers, and a soil rich in the alluvial and vegetable accumulations of centuries. And as if not content with these outward signs of her favor, nature has hidden beneath the surface vast deposits of coal and other minerals; she has filled the subterranean reservoirs with gas and oil, and sprinkled the sands of the mountain streams with gold. That no living thing should go athirst, she gathered together the waters of the mountains and brought them to the plains, to be directed by the ingenuity of man to the use of the grazing herds and the planted fields. Then, to crown her efforts and leave nothing incomplete, she brought the chinook wind, warm with the breath of May, to temper the north wind."

**¶ In the Medicine Hat District we have a gently undulating prairie. The soil is capable of producing generous yields of all small grains and vegetables in abundance.**

**¶ The city of Medicine Hat, situated on the Saskatchewan river and underlaid with gas and coal, is destined to be a great manufacturing center.**

**¶ Why not join the colonies already there and enjoy some of the material benefits as well as help build up one of the largest and best colonies in the Canadian West.**

**¶ We have excursions every first and third Tuesday of the month.**

# **PURE COLD WATER**

is one of the many attractive features of

# **Miami Valley**

Mr. W. E. Metz just completed his well. He found a strong vein at only ten feet. The water is perfectly soft and pure and as cold as ice.

In addition to the incalculable advantage of good wells the water which flows in the irrigation canals is drawn straight from the pure, sparkling Rayado Stream and is perfect for all domestic uses.

Coupled with the abundance and purity of water supply are the advantages of soil, climate, scenery, good neighbors, school and church privileges, perpetual prohibition.

You can't afford not to visit MIAMI RANCH if you are seeking a home.

PRICES now 50 per cent lower than established market price of such lands but will soon be advanced. TERMS—One-fifth down and one-fifth annually—only 5 per cent interest on deferred payments.

Buy your ticket to Springer, New Mexico. Special reduced rates on the first and third Tuesdays of July.

Write for booklet "Wesward Ho" which will tell you more.

Residence of Mrs. E. M. Wolfe, Butte Valley. Arrived Oct. 29, 1906.

## Wonderful Achievements

The wonderful achievements in Butte Valley have not been accomplished by gross misrepresentations. It has been a phenomenal growth, due to the extraordinary natural resources and extreme low prices of land. Farmers do not understand why and how such valuable land can be purchased for such money in such a delightful climate and with such superb facilities for shipping, development, etc.

In many other fruit sections where possibilities are great and the future promising, the land sells for many times the price placed upon Butte Valley lands.

Orchardists are very profuse in their statements concerning the future of the apple industry in this section. Fruit and nuts will **grow** in many sections of the country, but the places where they will do their **best** and produce the very **fanciest grades** are not found just any place. The vast number of acres to be planted in apple orchards this season is indisputable evidence of the confidence the residents have in the outlook. Many persons are calculating to plant apple trees as soon as the summer crop is off the land. The excursions to be conducted to the valley in the near future, while the low rates are given, will no doubt double the present acreage; at least the present prospects indicate as much.

Nowhere in the history of the colonization is to be found a project with such an enviable record. When one thinks of only thirty months' time for a valley of sage brush to become a thriving bee hive of industry with town, numerous farm houses and thousands of acres of grain, it surpasses belief. Adjacent communities have already begun to wonder what there is in Butte Valley that has attracted so many people in such a short time, but when they make the journey to the valley and see the wonderful results that have been brought about by these people they no longer wonder that the community is building up so rapidly.

Macdoel is the halfway house between San Francisco and Portland, which will mean much to the future of the valley. These two Pacific ports are the gateways to the Orient. The Orient buys fruit from the western coast in great quantities. The new main line of the Southern Pacific, reaching both of these ports and penetrating the valley, will furnish the very best

of facilities for the exporting of the products of Siskiyou County. As the lumbering interests and mining interests have developed rapidly in the last few years, so may we expect great things from the general farming and fruit raising.

Mr. I. B. Luther has the rightly gained title of "The Sage Brush King." It is said "necessity is the mother of invention," but it seems that opportunity has something to do with it occasionally. Mr. Luther saw among the purchasers of land in Butte Valley a number who were not able to immediately move upon their land and improve it. Many were very desirous of having some responsible person clear the sage brush, plow and harrow the land, sow the grain, and prepare the soil for the planting of orchards the coming fall, so he accordingly provided himself with about 60 good horses and a number of men. This equipment has been divided into proper crops which are detailed to accomplish certain work, and it is simply wonderful the amount of land his force has cleared for those who cannot do so themselves. We mention this here so that those who cannot come immediately to the valley should feel no timidity in purchasing for want of care to the land.

# CHURCH MEMBERSHIP RECORD

The most unique, simple and practical system of record today is the card system.

There has been a demand for a complete practical and simple record system to be used by church clerks in keeping the membership of the local congregation. This demand has caused **Annual Meeting** to ask the Publishing House to arrange such a system. After investigating various systems of keeping church membership records, and getting the advice of many of our church clerks as well as pastors, we are now ready to offer what we consider the best outfit that can be furnished. This system provides for one card for each member and when filled out gives a complete record.

## Church Clerks

send for one of these sets and the question will ever be settled as far as a system of keeping your membership is concerned. It costs no more to start with than in book form and will last a lifetime with the exception of new cards, for new members, which will only cost you a trifle.

### No. 1. Church Membership Record.

A neat cloth-bound box, size 5x6 inches.  
A complete Index.  
100 Membership Cards.  
This outfit is ample for a membership to the number of 150. More cards will be needed when membership is above 100.

Price prepaid, .....\$1.25

### No. 2. Church Membership Record.

A neat cloth-bound box, size 5x9 inches.  
A complete Index.  
200 Membership Cards.  
This outfit is ample for a membership of 150 to 400. More cards will be needed when membership is above 200.

Price prepaid, .....\$1.75

Extra cards furnished for 50c per hundred prepaid.

A circular explaining how this record system can be utilized to the best advantage furnished with each outfit. Send your order today. If more information is desired write us.

**BRETHREN PUBLISHING HOUSE, ELGIN, ILL.**

# JERRY McAULEY An Apostle to the Lost

Edited by R. M. Offord

The new and largely revised edition of the book just published is neither biography nor autobiography but the happy blending of both. The editor gathered together the fragmentary accounts of the man's own life and with suitable explanations wove the entire into a most complete story of one of God's humblest servants and yet earth's greatest men. Jerry's own account of his sinful life is put in that language which shows he was keenly sensible of his awful guilt. And while the reader gets a clear insight into his life, it is in such a manner as not to feed the baser of human nature, but rather to rejoice that one should be saved from such lower and devilish depths.

To read his "testimonies" and to stop and ponder on them is to find the clew to his power. Here is one of them. "I have nothing to be proud of; I am proud of my Savior and not of myself. I was a notorious drunkard and gambler. Even my wife does not know of some of the sins I committed, and she never will till the Day of Judgment. I don't know what to say to express my feelings of thankfulness. I know I have been converted, that is, if conversion is ceasing to love that which is evil and loving that which is good. I know that divine grace saved me from a drunkard's grave."

## Kindle the Flame in Other Hearts

It is a good thing to write and print and spread the life of such a man as the hero of this volume. It may kindle the flame in many other hearts. Christians in other walks of life than he trod may be stirred to better living. And some poor, sinning soul, some wretched and sinking soul, some poor sinner, almost as bad as Jerry was, may read it in his extremity, and cry out with this ransomed prisoner, "Lord, save me, I perish."

## Every Church Worker

Should read this book, to get more inspiration and encouragement in Christian duty and privilege. Well bound in good cloth and stamped in gold. It contains over 300 pages. Price prepaid, \$1.00.

**BRETHREN PUBLISHING HOUSE, ELGIN, ILL.**

# LITERARY ACTIVITY OF THE BRETHREN IN THE EIGHTEENTH CENTURY

By Prof John S. Flory  
of Virginia

A book with the above title has just been published, and promises to be one of exceptional interest to all members of the Brethren church. The book contains nearly 400 pages, and is a marvel in book lore. We want to place this book in 20,000 homes of the Brethren within the next six months. In order to do this, we must have at once

1000 AGENTS

We want a live, energetic agent in each congregation, who will make a house to house canvass, for we are sure it will bring good results.

Write for Territory

Apply for territory at once, so you can begin canvassing before the cream has been taken.

# OVER 200,000 ACRES

of land has been filed under the CAREY ACT in the Green Falls District, Idaho, since April, 1907.

¶ There is still a large amount of land waiting for the settler in the above district. Also great opportunities are offered at American Falls, at Gooding and other points along the OREGON SHORT LINE RAILROAD.

¶ The Payette-Boise Reclamation Project under the U. S. Government is about completed and will be ready to furnish water to about 300,000 acres of new land in the spring of 1909. These lands can now be bought at reasonable rates and terms, by the settler, and are situated where the country is already partly settled, near good towns, railroads and electric lines.

¶ Rural mail routes and telephone lines are already established. Good schools and churches. No storms or cyclones. Farming is done by irrigation. No failure of crops by reason of too much rain or drought. Fruit crop is abundant every year. The people are happy because they are prosperous.

## Wonderful Possibilities

for homeseekers and investors. Climate Mild. Soil Very Productive.

¶ Alfalfa, Sugar Beets, and grains of all kinds are among the products that yield abundantly. Farm hands, carpenters, mechanics and in fact all classes of workmen will find plenty of work at good wages.

¶ Arrange your plans to go and see Idaho as soon as possible and secure some of this fine land.

¶ HOMESEEEKERS ROUND TRIP EXCURSION RATES are on First and Third Tuesdays of each month in 1908.

¶ WRITE NOW for printed matter and full particulars regarding this great country and how to get there.

## The Tale of Six Cities

O. H. Kimmel

### III. Vienna Democracy and Surviving Feudalism.

THE city of Vienna is the capital city of one of the most peculiar countries in the world. It is a country of all peoples, all languages, all beliefs, all sects and all sorts of controversies.

The sovereign, Franz Josef, is a member of the old feudal House of Habsburg and is the one person or mediator who holds all this vast and varied estate government together. Though an emperor, he is a most democratic person, and his cattle and gardens are open to the lowest subject in his empire. The entire government is considered by Franz Josef as his estate, and he is the real old feudal lord. Yet, in order to preserve this as an estate, he has exhibited, not the manner of a lord, but he has, through all his years, held them close to him by his modern democratic ways. Every subject loves Franz Josef, and he is frequently tenderly spoken of, by the people, as father or papa. He seems to mingle the days of the robber castles with the days of modern democracy, and apparently by so doing, has struck the happy medium which holds the vast empire together.

Here, conditions are altogether different from those in Russia. Let Franz Josef make one false step, or give one autocratic command, and the whole nation would stand up against him. The government is in no part an autocracy and it seems to be a mass of peoples and governments leagued together for common protection against the encroachments of Russia and Germany from the north.

In other words, if the fear of Russian and German encroachments were taken from the Austrian, it is hardly probable that this great Babel of languages and tribes of people could be prevailed upon to remain long under one head. The country is so located geographically that it is exactly between Russia and her coveted Constantinople, and it is also between Germany and that same goal. So, in order to live independently at all, the various peoples of Austria are clinging to Franz Josef as a drowning people would cling to driftwood.

The nation is not only divided politically, but it is divided socially also. Neighborhoods of one language will have no intercourse with neighborhoods of another language. Religiously the nation is strongly Catholic and Franz Josef is himself a devout advocate of that faith. However, in a nation of such varied peoples one religion could not exist unmolested, and so the varied denominations of Protestant and Jew are found there.

The Jew, as in all other countries, is aggressive in this nation, and has created quite a political following. This movement, in its own workings, has aroused the opponents of the Jew, hence a strong Anti-Semitic movement was instituted with the purpose in view of ultimately eliminating the Jew from all political and social influence in the Empire.

Other domestic troubles than these have long since manifested themselves also. As early as 1848, under the lead of Hungary's noble statesman and patriot, Louis Kossuth, a revolutionary movement against Austrian tariff was instituted and the *Vedegylet* or Protective Union the purpose of which was to league the people of Hungary together, to refuse to purchase any goods of Austrian manufacture until the duties were removed from them. This Protective Union was so well organized and so successful in its workings that many Austrian factories were compelled to move into Hungary to avoid ruin.

Growing out of this, Kossuth instituted a still more radical reform, and a delegation was sent to Vienna demanding, from the general government, a responsible ministry, the abolition of feudal burdens and taxes, the extension of the franchise, freedom of the press, complete religious toleration, and many other measures of such character.

These measures, the government, because of its inability to do otherwise, had to grant, and Hungary began to feel just pride in her political freedom. It may seem strange to the reader that Hungary and Austria should be so at combat with one another; it may seem strange that Austrian goods should be taxed

to support the Vienna government when goods are sent across the Danube into Hungary; but when we remember, that all this great area of empire, is really a league between several empires, which come together for mutual protection, among which empires Austria and Hungary are the greatest, we can understand why concessions are asked and granted, why duties are imposed, why national and international jealousies prevail, and why the central government must be wise in dealing and in compromise. Austria, an empire, has leagued itself to Hungary, a kingdom. It is really a dual government that we see existing here, each one practically independent of the other, but still united under the demo-feudal hand of Emperor Franz Josef.

Emperor Franz Josef's inheritance has descended upon him from the old house of Habsburg, which has figured so strongly in the affairs of Europe. We may trace this family back to the days when its old feudal castle stood, the leader among other feudal estates. This family outwitted its lessers and became all-powerful. When civilization and religion came, it embraced them both, and has since remained loyal to the church at Rome. At one time it dominated the affairs of central Europe, and all eyes were upon this great house. It seemed destined to extent its sway over all Europe and even into other lands, just as the Czar of Russia now desires to extend his sway. It was more autocratic then—this house was—and it was entirely unaccustomed to compromise.

But while it was thus enjoying what seemed to be the beginning of a greater career, but which was really the zenith of its power, another feudal lord, farther north, was beginning to attract the eyes of central Europe. This was the Hohenzollern family, which embraced Martin Luther's religious faith and thus set itself agoing against the Habsburg house, until now the Hohenzollern family rules the mighty and ambitious German Empire. From the day that the Hohenzollern family embraced the more modern and common-sense ideas of Martin Luther, and set itself about to build up this new faith in the German states, the Habsburg family has been on the decline until now, when it retains its powers because of its joined hands with Democracy.

Franz Josef is a masterful man. He is a man of high intelligence and great learning. He is master of every language spoken in his empire, and speaks these languages fluently. His palace is more like the home of a democratic president than of a feudal lord emperor. Any subject may meet him personally for redress, and the Emperor is able to talk to the personage in his own tongue. Thus the subject feels honored and satisfied with any argument he may receive from the diplomatic old Emperor. And so he rules and compromises an empire made up of Germans, Slavs, Bohemians, Poles, Ruthenians, Slovans, Italians,

Roumanians, Jews and Turks, in which each nationality jealously uses its own language, arts and religion. When an Austrian-German meets an Austrian-Pole, the German feels insulted if the Pole does not address him in the German language, and the Pole feels equally piqued if the German does not greet him in the Polish language. And so it is, throughout the Empire, each nationality carefully guarding his own nationality, for fear that he may disgrace himself and his people, by forming some habit common to the people of another language.

For this reason the Austrian-German is far inferior to the German in the German Empire, and the Pole is inferior to the Pole in Russia. The habits and traditions of the fathers are carefully kept and guarded, lest they be forgotten. The people are truly conservative, and say, "Our fathers' methods were good enough for our fathers and they are good enough for us,"—the real statement of the real conservative everywhere. Thus in Austria, radical jealousy has barred all progress, and kept its people in a very backward state. There seems to be no remedy for this unless these nationalists should all concede a half point and adopt some universal language not common to any sect or tribe now in the Empire. Of recent years the new Esperanto language, the invention of Dr. Zamenhof, has been suggested as a means of overcoming this difficulty.

How different is this government from Russia or Turkey! In those countries the people are brow-beaten by autocratic and despotic governments, where no personal right comes to the people. But in Austria the people make demands of the sovereign and the demands are granted. They go directly to Franz Josef with complaint and come away soothed. Democracy seems to be absolutely recognized throughout the Empire, yet it is not openly operative for any real good in general, because of the clannish racial jealousy that exists throughout the Empire. Yet the condition is better than in Russia or Turkey, for whatever the condition is, the people are themselves to blame for it. The responsibility rests with the people, and when they can be prevailed upon to put aside their traditional race pride and race jealousies and work for the common good of the Empire it will be seen that no hand either of despot or autocrat stands in the way of ultimate success. It is a show of democratic victory over feudalism of Medieval times, and in all probability, ere many more decades pass away some medium may be worked out which will unite this people socially and politically, if Austria is left alone to work this out.

Signs of such a change within the Empire are already beginning to manifest themselves. With all their factionalism and selfishness, a gradual trend toward less religious distinction but greater religious liberalism is beginning to be felt. Civic pride, espe-

cially in the cities and towns, is taking a hold upon the people, and the municipal affairs are being worked out with wonderful satisfaction. This spirit, showing itself as it does, in the cities and towns, can but creep gradually into the rural districts, where its effects will later be felt. If the people once seek to build up their cities, towns and villages, then patriotism will join hands with democracy, and traditional jealousies will vanish and a great progressive free nation will begin to wield its influence in the world, in place of the old spirit of selfish, racial pride and racial conservatism which now reigns. This civic pride spirit struck Vienna over twenty years ago, and within a short space of years, fine boulevards took the place of narrow, dingy streets, large well-equipped modern buildings have taken the place of dingy old buildings, great public parks and playgrounds have been built, public utilities of the latest modern invention have been installed, and so great has been the transformation, that Albert Shaw has said, "Vienna is the world's most notable example of a splendidly appointed metropolis rapidly evolved through the adoption of modern ideas and principles."

Among the wonderful improvements that have come to Vienna in these recent years, the traveler would note the Ringstrasse and its marvelous architecture, the Votive Church, the University of Vienna, the City Hall, the Imperial Theater, the Parliament Buildings, the Imperial Palace, the Museums and the Opera House. Not all of these buildings and places are of modern build, but they all belong to the wonderful achievements of the progressive and democratic citizens.

Budapest, the Hungarian capital, has also "blossomed out of its primitive and forlorn conditions into the full magnificence of a splendidly-appointed metropolis." The same progressive spirit has seized its people and the results are just as astonishing. Prague has not so distinguished herself in this line, but she is a haughty, proud city, the center of a movement toward the independence of Bohemia from the federated government of Austria-Hungary.

Austrian cities could teach American cities much, and one very noticeable thing that America could learn from them is the better moral life, and especially the drink condition. The Austrian may drink, but he does not do so under surroundings that foster viciousness and murder. The saloon does not exist there as Americans know a saloon. Through the sweep of changing events, America and Europe have attained much good, but in the evolution of the liquor question, it has remained for America to establish the saloon which fosters sin, crime and iniquities, such as no people, time or age has ever witnessed. Americans might learn from Venice how to solve the saloon question, if she were not up at arms herself deter-

mined not only to solve the question but to drive this infamous institution from the land forever.

The improvements made in Austrian cities may influence Austria into the patriotic spirit which shall mean a great national democracy, if Austria is left to herself to work out the problem.

But events of recent years seem to point out a rather dismal future for this nation's continued existence. Franz Josef is now old, and can at best live but a few years. Franz Ferdinand, the heir to the throne, has not the democratic spirit of Josef, and is entirely out of sympathy with his policies. He is autocratic, conceited, and somewhat contemptuous, and quite likely if he comes to the throne, the national federation of jealous states may be broken up. Then, Russia and Germany in their growing desire to reach Turkey, would each desire her separation, and also desire to be present with their baskets when the separation comes. Surely the future for the House of Habsburg is not bright, and the future national life of Austria-Hungary is in no sense an assured fact. This great spirit of world unrest is in Austria, as in every nation, and it seems that ere many decades pass, Austria-Hungary must contribute herself to the new arrangement of things, which the signs of the times say are coming to Europe and to the world.

### A MODERN LUMBER CAMP.

DALLAS B. KIRK.

NEATNESS, cleanliness, system and order are the four words that describe a modern lumber camp. With the passing of the nineteenth century has also disappeared the old way of running a lumber camp, with its countless bedbugs and other filth too numerous to mention.

A number of new things were ushered in with the twentieth century and among them was the improved lumber camp.

In the morning at 5:30 the chief cook takes a heavy sledge and hammers on an iron rail, which is hung from the side of the bake-room. This makes such a deafening noise that it always awakens the soundest sleeper.

The cook has several assistants to help him with the meals. In the kitchen there is both hot and cold water which is piped from the boiler room.

There are two large six-griddle stoves sitting end to end with roomy ovens for pies, cakes, etc.

On the table in the dining-room are both dainty and solid food, in fact almost anything that a man could think of in the eatable line is here and when you are through with your meal you can take a toothpick and make use of it. Some of the eatables are, good bread, the best pies, potatoes, beef or pork, turnips, sweet cakes, doughnuts, tapioca, buckwheat cakes, tea or

coffee, and the best of clear, cold mountain water to drink.

The dining-room seats comfortably two hundred men. In plain view from the tables can be seen such mottoes as, "Eat here, talk in the lobby," and "Eat more, talk less," signed by E. W. K.

The kitchen is in the rear part of the camp with a bake-room annex in which the baker can bake eighty loaves of bread at one time.

The assistants have a bedroom in the other end of the kitchen opposite the bakery. A storage-room is also joined to the kitchen close to the bake-room.

The eating room is steam-heated, thus giving an even temperature to the entire room. There are four rows of tables, two tables in a row.

A large lobby is close to the dining-room with hot and cold water for washing the hands and face before eating.

Although the lobby is a separate building from the dining-room, yet the men are not exposed to the weather when going to their meals as there is a roof over the passage-way.

The second stories of the lobby and dining-room, are equipped with iron beds, springs and mattresses for the sleeping accommodation of the workingman, which together with plenty of windows for light and ventilation make the sleeping apartments first class.

The boiler-room contains, besides a boiler, a wooden water tank of large capacity.

A railroad track is just outside of the rear of the boiler-room, and a car of coal can easily be unloaded into the coal bin.

Between the lobby and the boiler-room is a bath-room containing a large bath tub and you can either take a hot or a cold bath or neither one. But there is no need to go unclean there for any length of time with such modern conveniences as these.

Tacked upon the camp doors are large notices containing the rules of the camp, among them is this one, "No alcoholic liquor is allowed in or around these buildings."

Leaving the camp proper and going across a small but rapid stream we come to a long pig-pen. Here are pigs from only a few months old to full-grown fat "porkers" ready to kill. Thus fresh pork is always right at hand.

Coming back across the little mountain run, we come to an ice-house not far from the kitchen door. A room for meat is in the middle of the ice-house with ice nearly around the meat-room even over-head. Both beef and pork are kept here.

Close to the ice-house is the potato cave which last fall was filled with 1,100 bushels of potatoes. This supply is supposed to last until new potatoes grow again.

The building in which the men grind their axes has nailed upon the four sides of the room twenty-four coon skins; they belong to the jobber.

The bookkeeper's office is also a separate building and among its furnishings is a telephone.

There are two barns, each stabling twenty horses, both of them are two-story buildings with a feed entry running the full length of the building on the first floor. The horses eat bailed hay and are bedded with bailed straw. An overhead shoot is built from the near-by railroad track to a door in the second story and the hay, straw and oats which are shipped in by the carload are easily unloaded.

In each barn on the second story is a large oats bin holding a carload of oats at one time.

A short distance from the barns was standing a steam log loader. Take a handful of toothpicks and let them fall out of your hand upon the table, now bunch them together without any order and you will have a miniature log pile, like I saw close to the railroad track. But the steam loader picks the logs out of the pile as easily as you would pick the toothpick up, one by one.

The log trucks have iron rails running the full length of each car, and it is upon this track built on the log trucks that the steam loader runs and does its work. It begins at one end of a train of empty log trucks and loads the first car, then runs on to the next car and loads the second car and so on until the cars are all loaded and ready to be taken to the large saw-mill fifteen miles away at the mouth of the run.

There are two good dwelling houses within sight of the camp, one for the chief cook and his family and the other for the man who tends the horses and his family. These houses are both nicely papered but not painted.

At one time the camp jobber had a tame bear, but it finally got so mischievous they had to kill it. now a tame ferret is kept in one of the barns and will follow the stable boss all through the barn.

It has been said by old and experienced lumber men that these camps are the best of their kind in the United States.

At the mouth of the run there is a nice town. And nearly all of the houses have that new look about them. The sawmill here used to run day and night, but only a day crew works now.

This tract of timber, I was told, covers nine thousand acres and at the present rate of working it will take four years to complete the job of cutting and sawing this vast amount of timber into boards, etc., for the building world.

Reader, I have tried to tell you only what I saw and heard from good authority, thus helping you to take a peep into a twentieth century Lumber Camp.

*Pentz, Pa.*

## Around the World Without a Cent

H. M. Spickler

### Chapter XII.

I HAD been reciting the "Charge of the Light Brigade" by Tennyson in the various countries with some success. In the north of Ireland this was acceptable, for the Irish there are in favor of English rule. The south is bitterly opposed to the English, hate their landlords, and are ready to fight or die for the cause of Home Rule at any moment. Besides this, the hottest-headed Irish live in the south and west of Ireland. They are most lovely people, social to a fault, and will give away their last crust to the one who hasn't any, but they are fiery tempered, and among the uneducated ones, dangerously afflicted with combativeness on either of two questions,—land-holding or religion, for Ireland is the stronghold of the Catholic Church.

Wexford is a city of the south. In its market-square one Saturday night I gathered a mob about me and was reciting the "Charge," expecting afterwards to take up a collection,—amid the *applause!* Well, I got the applause,—a peculiar kind of applause. But I'm still waiting for the collection,—for instead of a collection, I got a *dispersion*,—and it wasn't a dispersion of the Jews, either. In the north of Ireland I was suspicioned as a *Scotch* insurance fraud! Here in the south the mob chased me down a back street because they thought I was an anti-Irish *Englishman!*

The Justice of the Peace, a wealthy merchant, influential citizen, and father of a fine family of pretty girls, just then passing, took in the situation, and the next morning when I happened into his church,—a

Methodist Church,—he invited me home to his palace, on New Year's day, with turkey and cranberry sauce, and English plum-pudding. Monday morning, when ready to set out, he presented me with one of his most beautiful—*pieces of gold!* to help me over his poverty-stricken island.

But I had been royally entertained, and it all came about because of my loyalty to the church. That morning, as I sat by the cold fireplace of the private lodging house which had sheltered me during the night from the mob, the home of an old man and woman,—thinking I had better cook the few silly vegetables I had with me on the slow fire and stay

"in" all day, for fear of more trouble if I ventured out, the memory of my old teaching about regularly attending upon divine service, influenced me to seek the sanctuary. How easy it would have been for me to stay at home that day. And how much I would have missed! What a different history my whole life would have. I would have left Wexford on Monday morning, doubtless with an ugly feeling in my

Irish Policemen—Called "Constabulary"—the Finest Police in the World. These Men Asked Mr. Spickler to Eat with Them at Their Barracks, which He Did.

mouth for the people I would have thought them all pretty much alike. Their palaces would have looked like so many prisons or arrogant dwellings of the haughty aristocrats. That feeling would have tainted my whole Ireland experience, and I would have been one-sided in my judgment of that noble race. But notice, please, you who think it is good to stay away from divine service, you who find pleasure somehow in absenting yourself from the Lord's house, you who are so selfish and neglectful and slovenly as to sit

around home all day, unwilling to go out in the storm, fearful of getting sick, charging your rheumatics to the weather when you ought to know it's your gluttony, telling people your headaches and pains and tired feelings have come about by overwork when you ought to know it is impurity or worry or envy and hate that makes you deplete in vitality and makes you crawl around like a torpid winter snake,—notice, you who think the preacher will not miss you, or if he does, what matter, you who are led by the devil to believe that you can just as well read a sermon at home while toasting your toes at the comfortable fire, notice! That beautiful palace set in a more beautiful park, surrounded by a stone wall with high gate, would not have opened her hospitable doors to me if I had "stayed at home." That New Year's dinner in the bosom of that delightful family, seated at the same table with those pretty girls, a guest of honor at the high official's table, would have all passed me. And just as I would have gone through life henceforth without that thrill of blessing, not knowing I had missed anything, and being led by old Satan to believe that I was getting everything out of life just like other people who went to church that day, so the man and woman who fail to attend services when they can just as well go and hear the sermon and help in the singing and help to fill up the seats, will never know what they are missing, or even suspect that they are missing anything. And these will be the grouchers. They will cavil at everything. When Monday comes it is blue, blue, blue! The clothes they try to make white could be blue'd with just the blueness in their spirits,—they could save the blueing bottle. There is no life in it. Gloom settles before the eyes. The water boils over, the babies bawl, the children chide. The horses are clumsy and seem balky. The store is cold and full of dust and the people slow about buying. Bills that must be settled at once come in the mails.

Yes, it all goes wrong, when the man stays at home on Sunday! And it ought to.

On Monday morning I rode away from that nice city with the good will of everybody, but especially of my own conscience. It was the easiest thing in the world to get on my wheel and ride on, and on, and on, into new and strange and sometimes barren country. I had food that they knew not of,—those who stay at home on Sunday. And all the way of my wayfaring life to this very moment that bright oasis stands out, that splendid hospitality of that sympathetic Irish family stands out,—their knowledge of me and of my adventure, their friendship and their warm handshake at parting,—all stand out in my horizon like an Alpine peak, glowing in the warm sunshine of a morning

that promises, for me and for the world I'm traveling over, a bonny good time and success in the end.

I was not a Methodist, but I was glad I went into that Methodist church, on Sunday, on New-Year's day, in Wexford, Ireland, the land of the shamrock. The answer to my prayer awaited me at the church that morning. God didn't intend to carry the turkey and cranberry sauce and plum pudding and sweet feminine smiles to that lodging house for me. Not much!

### WAMPUM.

WAMPUM is derived from the word wampumpeay, meaning white shells. They were of two kinds, the belt and the string, and were of two colors, purple and white, the purple ones having preference.

The genuine wampum were made of clam shells. The shells were cut into cylindrical beads about the size of an ordinary pipe stem, and one-fourth to one-half an inch in length and bored through so that they could be strung into strands, after which they were polished.

The practice of making wampum beads originated among the Indians that once inhabited Long Island. It became general among the Indians at the time the Europeans began to settle in the New World.

In 1627 the wampum began to be of commercial value. Of the two colors, the purple ones commanded the highest prices. Some time later the traders introduced an imitation of them and caused them to become almost worthless.

The wampum were used for various purposes. Of the two kinds, the belt and string, there were many styles, which indicated the manner in which they were to be used. Recording history, declaring wars, making treaties and paying tribute were done with the wampum. The red wampum, signifying war, were in charge of the chiefs, each of whom assumed the responsibility for one year, or "one night" as they called it.

At the present time they are extensively used by the Iroquois, or the six nations of New York State. Each tribe has its own strings of wampum. The wampum is used also as an ornament about the person. When the wampum of the six nations is put together to form a circle at a council, that signifies that the meeting is opened.

Owing to the many beads similar to those of the genuine wampum which are now manufactured at a very low cost, the industry of making wampum has died out. Consequently genuine wampum is now very scarce.—*The Arrow*.

# Getting Rid of the Timber

Grant Mahan

To be as small as it is and to have been settled as long as it has, there is still considerable timbered land in Cuba. In going through it for the first time one is likely to be greatly disappointed and to think that the dense growth will not be cleared away for many years. But when he investigates he learns that the trees are falling wherever there is timber; and if he does a little figuring he will revise his estimate of the length of time it will take for the forests to be cleared away. One is often made to think that there cannot be so much large timber close to the stations, where he sees so many saw logs, ties, etc.

The clearing process is not an easy one; that is, when men desire to get the land ready for cultivation. We Americans do not find it profitable to do the work for ourselves. A Cuban with his machete is at home

to go any considerable distance through a clearing. Long ago we cleared some farms in Wisconsin; but going through after all the trees and brush had been cut down was fun there. It is hard work here—that is the difference.

People generally try to do their cutting during the dry season, which lasts from about the first of December till April, usually. The trees lie on the ground for several weeks, and as there is no rain there is no growth of green shoots. When all is dry enough, about noon on a hot day the torch is applied all along the side where the wind comes from, and soon there is a terrific fire. The roaring of the flames can be plainly heard for a mile. The fire soon runs over the cleared space, burning the small stuff. But it does not stop burning then, for we have some kinds of timber

here which even when green will burn if the large end gets set on fire. There is no flame unless there is a strong wind, but the fire steadily eats its way along the trunk. The other day I stood on one of these trees which had been burning for three weeks, and only about fifteen feet was consumed. And the stumps of these trees will burn, roots and all. Often great holes are left where the stump stood. We saw one place where the main roots had run out and formed a nearly perfect five-point star. All was burned, and the snow-white ashes marked the star in the dark soil.

Lumber Deposit, Camaguey, Cuba. Logs and Hewn Timbers Are to be Seen all along the Line through the Timbered Section; but not many Places Have as Many as Are Here Shown.

in the woods, and it is surprising how much brush he will cut away in a day. I heard an American say—we are inclined to think we are the people and that we can do things better than others can—that he could take an ax and machete and go into the woods and do as much as a Cuban. He tried it for a time and then hired Cubans to do his clearing. It makes a great deal of difference whether we have been accustomed to a certain kind of work from childhood.

Men first go through with their machetes and cut the twigs and branches; then the smaller trees are cut, and lastly the large ones. All the limbs are cut so that they lie pretty flat. The heaviest trees being on top, the whole mass is held pretty close together. And it is a mass; it takes a long time and much effort

Sometimes these fires get where they are not wanted. The flames leap from the ground to the air plants in a tree, and from this tree to another one, and on and on. It is hard, and dangerous, too, to fight a fire when it is running in this way. It is best to keep at a safe distance and let it go.

But the prettiest sight of all is at night. The dry trees are not cut down, for they will burn anyhow. The fire lays hold of them, and in a short time they are real pillars of fire towering up for many feet. The smaller ones soon are destroyed and fall with a crash to the earth, sending their sparks in every direction. The larger ones stand longer, are a grander sight, and to see them crash to the earth reminds one of the fall of some mighty

giant who for many years withstood all the attacks made upon him by his enemies.

When all has burned that will burn of itself, then the hard part of the burning commences. The logs lie thick upon the ground. Some persons are content to let them lie and rot; they plant their corn and fruit trees among them, and they do about as well as on ground that has been well cleared up. But it is not an inviting field. Others pile and burn all but the largest softwood trees, which are left to dry and rot for a year. For this work, too, the Cubans are usually in demand.

Much timber, some of it valuable, is destroyed; and the time will probably come when the destruction of it will be regretted as the fast wanton destruction of good timber is much regretted in some parts of the States. But people will not learn by the experience. However, nearly every-

where much of the best timber has been taken out before the clearing. The land has been held in large tracts; sometimes the ownership was uncertain, for there had been little surveying done; and the men who wanted good timber for any purpose took it where they could find it, always being careful not to let the ones who claimed the land see them engaged in the business.

The clearing process is in full swing now; for most of the Americans who buy land want to improve it. The Cuban forest will in a few years be a thing of the past; and in its place will be fruit trees and cane fields and gardens, which we think are better. And so, though we love the forest, we are willing to see it go; for there probably will not come a time when people here will suffer for want of timber.

*Omaja, Cuba.*

## Inventions and Inventors

John H. Nowlan

CARLYLE describes a man as a tool-making animal, and when we give the subject a close study, we are bound to admit that he was correct in his description.

Without tools man is inferior to the beasts of the fields. With them he is master of all and is fast extending his dominion over all nature.

Like everything else, tools are the result of a gradual development. The stone hammer and chisel were crude and of little use, but by their aid other and better tools were made.

When man learned to make metal tools he made a great stride in the march of civilization.

When Capt. Cook visited the South Sea Islands, one of the most noticeable things was the eagerness of the natives for iron. A nail would buy a good-sized pig. On one occasion, he bought several hundred pounds of fish for a few crude knives, made of an old hoop.

Navigators found they could pay their way from island to island by means of iron scraps, as easily as they could at home by means of gold coins. No wonder, though, that they showed such a great concern for metal, for, "An Otaheitan chief," says Cook, "who had got two nails in his possession, received no small emolument by letting out the use of them to his neighbors, for the purpose of boring holes when their own methods failed or were thought too clumsy."

Except in a few places, the natives of America had not emerged from the stone age when Columbus landed.

But such has been the history of all people, since civilized and highly enlightened. A collection of ancient European weapons and instruments placed beside a similar collection from the South Seas were so

similar that they would have passed for the product of the same race and not for the handicraft of races separated by almost one-half the circumference of the earth and more than twenty centuries.

Canoes made of the trunks of trees hollowed by means of fire have been dug from the estuarine silt in the valleys of Scotland, where they have been buried for centuries. The counterpart of these rude craft, was in use in New Zealand when that land was first seen by white men.

The first metals to be used in tool-making were the softer and more easily fused metals. Iron, and of course, steel, were the last of the common metals to come into use, partly because it is so seldom found in a natural state.

Even after man learned the secret of smelting it was rare, because an intense heat is needed to separate it from the ores and reduce it to a condition suitable for working.

Gold is not suited for the manufacture of any edge tools, while tempered steel is for all. Hence many of the early nations formed the backs of their swords of gold or silver, and reserved the more precious steel for the cutting edge.

When and how the art of smelting iron became known is only a matter of conjecture. Like many other arts, it quite probably came from the East. That it was well known at an early age is well proven by the tools mentioned in 1 Sam. 19: 21.

With the use of iron came the invention of many and various tools. Every invention was the result of a want, and the want was often the result of conditions created by a previous invention.

One author says that it is the human race that is the true inventor. One man takes up a line of thought and pursues it to the extent of his powers. Another pushes the inquiry farther, and so on till at last one greater than his fellows, succeeds in collecting the knowledge of all and an invention is made to perhaps, in its turn be perfected by another.

The history of one man is the experience of the whole race. He begins life a helpless infant, but acquires strength and mental power with age. So do we succeed to the results of our predecessors' labors, using their tools, their machines and their structures as a foundation on which to build higher. Not only that, but we inherit their mentality as well. Mental dispositions are as truly and as really transmitted as physical ones, and we are the favored recipients of a long line of intellectual effort.

Inventors, as well as reformers, are often born before their time. The common intellect was not sufficiently advanced to comprehend them and their inventions dropped from sight, perhaps to be rediscovered centuries after and sometimes lost entirely.

A comparison of the comparatively new inventions with the old will illustrate. Steam was known centuries ago, but its application as a common servant dates little prior to Watt. The Chinese used the art of printing hundreds of years before Gatenberg or Koster were born. Lithography was known in Germany almost 300 years before Senefelder. Blascode Garay experimented with steam navigation at Barcelona in 1543. McCormick invented the reaper, but a book translated from the German, by Barnabee George in 1577, describes a reaping machine long used in France. It "was a lowe carre with a couple of wheels, and the frunt armed with sharp syckles, which, forced by the beaste through the corne did cut down al before it." The tunnel under the Thames was thought to be a new achievement, but the Euphrates was tunnelled at Babylon.

How could Friar Bacon, who lived in the thirteenth century, have anticipated the steam engine, hydraulic engine, diving bell, and flying machine, if he had not at least *tradition* of former inventions that had fallen into disuse? He says, "I will now mention some of the wonderful works of art and nature in which there is nothing of magic, and which magic could not perform. Instruments may be made by which the largest ships, with only one man guiding them, will be carried with greater velocity than if they were full of sailors. Chariots may be constructed that will move with incredible rapidity, without the help of animals. Instruments of flying may be formed, in which a man, sitting at his ease, and meditating on any subject, may beat the air with his artificial wings, after the manner of birds. An instrument will be fabricated by which one man may draw a thousand men to him and against their will; as also machines which will enable men to

walk at the bottom of seas or rivers without danger."

The old manuscripts of the monasteries are constantly adding to our knowledge of the learning of the early people. It is to be hoped that the art of printing will prevent the present discoveries again falling into disuse.

*Mulberry Grove, Ill.*

\*\*\*

#### FUDGE.

WHEN Mrs. Deggs pressed a box of fudge into my hands I said, "Thank you." I always say, "Thank you," when anybody gives me anything. It was a habit that was spanked into me while I was yet quite a child. Once, when I was about ten years old, my Aunt Rebecca gave me a slap on the ear and said, "Take that, now!" and I said, "Thank you."

So it was with Mrs. Deggs's gift; I accepted it, not because I wanted it, but because of my polite weakness. In the first place, I don't like fudge—it makes me sick; and in the second place, I don't like it done up in a shoe-box. This was quite a big shoe-box. It was labeled "Calf, 9½ D," and I judge it held about six pounds of this washy sweetness.

To be sure, Mrs. Deggs meant well. She was prompted by a kindly desire to repay me in a small way for my influence in securing a position for her son Ham in the street-cleaning department. I once asked her how she had come to give her boy such a name as that, and she told me that his real name was Hammond. Poor Ham! He will always be suggestive for the lunch-counter, whichever way you look at him. When I called on the commissioner at the City Hall and told him I had come to see him about Hammond Deggs he seemed a trifle surprised, but said he would be pleased to do what he could for me, as he was himself quite partial to ham and eggs.

I was very glad to be able to help the old lady and her Hammy, but I should have been better pleased had she not thought it necessary to go to the trouble and expense of making me a shoe-boxful of fudge. I couldn't hurt her feelings by declining it, nor did I like to suggest that if I was expected to tote that box home in broad daylight I should prefer to have it wrapped up. So I merely put on a smile of lively pleasure and said, "This is most kind of you, I am sure. And did you make it yourself?"

She said, "Why, yes, of course; and I made it especially for you. You like fudge, don't you?"

I said, "Indeed I do."

I always tell such bald-headed lies when I am driven into the field of gallantry. Of course I should have replied, "How can there be any question about my liking what you have made, Mrs. Deggs?" Unfortunately, however, I can never kindle these dainty prevarications at the proper moment. The only time I was ever inspired to give utterance to a sentiment overreaching the commonplace was when somebody's

grandmothter apologized for stepping on my toe and I said, "Pray don't mention it, madam; sweets to the sweet, you know."

Mrs. Deggs tied the box with a heavy cord. It looked like awning-rope, and I think it was made up of three or four lengths fastened together. At any rate, it was uncommonly knotty. I tried to forget to take the box with me as I was leaving; but Mrs. Deggs wouldn't let me. She said, "Dear me! you must n't go without your fudge!" and I gave a little jump of surprise and said, "Well, I should say not!" And accordingly I started homeward with this unsightly cargo of home-made confectionery attached to me.

I am not what you would call a proud man. I don't mind, on occasion, carrying home a modest package or even a basket of grapes or something of that sort. Once I carried home a watermelon. But when it comes to a naked shoe-box, and a shoe-box of abnormal dimensions, I can't but feel that my dignity is sore pressed, and particularly so when I happen to be attired in my afternoon apparel, including a cane.

It was useless to attempt to conceal the box anywhere about my person. The best I could do, after a painful effort to button my coat over it was to tuck it lengthwise under my left arm and press it hard against my ribs. To be sure, this gave me a decidedly stiff, not to say paralytic, appearance, and I believe it didn't do the candy any good.

However, I determined to get away from the candy as soon as I was safely out of Mrs. Deggs's affectionate sight. So, when I got to the end of the block I casually dropped the box down the basement stairway of somebody's house. I think this would have been all right if there had not been an idle colored woman in the basement, looking out of the window. In view of the fact that I walked on quite unconcernedly as the shoe-box clattered down the iron steps, she probably thought I was losing it and didn't know it. At any rate, by the time I was around the corner she came puffing after me with the shoe-box.

"Hi, mistah!" she shouted. "You done drapped yo' shoes!"

If there had not been a policeman sauntering down the street, I think I should have run. At least, I should have disputed the ownership of the box. As it was, however, I took back the box without undue parley; merely asking the black scullion if she was sure it was I who had dropped it. She said, "'Deed I is, boss. I done seed you drap 'em; an' 't ain't ebry pusson would take de trouble to fotch 'em back; 'deed, dat's de trufe; 'specially when dey's got a ole man home wot kin wear 'most any size shoe. I'm got a misery in de back, too, an' dose am pow'ful heavy shoes to run wif, dey sure is."

I gave her the dime she was bidding for and walked on.

This time I carried the box lengthwise, by its cord, and allowed it to swing carelessly by my side, as though I didn't think about it, meanwhile casting about for a place to forsake it. But there were too many persons on the street and the package was too amazingly big and suggestive to be chucked quietly to one side, *en passant*, without exciting comment. At one place I drew up to a fence and looked over into the garden on the other side. It was overgrown with rose-bushes and honeysuckle, and I thought this would be an ideal spot to unload. But no sooner had I stopped, under pretense of enjoying a view of the garden, than three or four other men came up to the fence and looked over, too, and an old gentleman passing by held up his cane and said to us, "Don't you pick 'em; don't you pick 'em!"

So I turned away and incidentally allowed the box to fall into a barberry bush outside the fence. Three boys and a bill-poster and two ladies saw me do it; otherwise, I believe I should have gotten away. The bill-poster and the two ladies held me up, while the three boys plunged into the barberry bush and fought for the honor of restoring the box to me. They did not ask for any reward, but as they had acted in good faith and had all scratched themselves to the point of crying, I handed them each a dime in return for the box. However, if the ladies had not been present, I am afraid I should have kicked them.

I am naturally nervous and quick-spirited, and all this was very disturbing. To be afflicted with a half-peck of unmarketable fudge is trouble enough, without the mortification of advertising its uncivilized envelope. Indeed, I could not help feeling greatly discouraged.

A little farther on, however, my prospects brightened. I came to an alley. Never before had a dirty alley appeared so balmy. I slid into it with the accustomed grace of a slop-man and beheld at once a backyard gate standing partly open. What more could I ask? I went up to the gate and peeped in. The first thing I saw—in fact, the only thing I saw—was a dog. It was a bow-legged dog, with the most distressing face I have ever seen on any domestic animal. I said, "Come here, Fido," and I think that is where I made my mistake. I don't believe that that kind of a dog is ever named Fido. Anyhow, he wouldn't let me put my fudge in the yard. In fact, he wouldn't let me put it anywhere. He bade me go back where I came from; which I did, without wasting any time or any remarks about it.

Then it occurred to me to give the box away. Perhaps, I thought, somebody might be very glad of a load of fudge. So, when I came upon a couple of painters in smeary overalls raising a ladder against the side of the house, I stopped and casually inquired if they ever indulged in confections. One of them said, "I don't know what you're talking about, broth-

er;" and the other one said, "Yank her up about a foot more, Jake;" and then, after tying the rope they both went clambering up the ladder without paying any further attention to me.

I judged from this that I had not been altogether tactful. It occurred to me, also, that it was a mistake to offer candy in this off-hand fashion to adults, especially strange adults. Accordingly I crossed over the street to where some boys and girls were jumping about on the sidewalk.

I sauntered up to them and said, "Hello! Playing hopscotch, are you?"

They all stopped and looked at me. Only one of them—a little girl—seemed to have any manners, and she said, "No, ma'am; it's hop-skip-and-a-jump."

I said, "Is that so? Well, well." Then, smiling like a Santa Claus, I held out the shoe-box. "Here," I said, "is a lot of nice candy for you all."

Evidently these children were not accustomed to getting candy by the box. A couple of peppermint sticks or a bag of gumdrops would probably have proved more home-like and inviting. At all events, this six-pound offering did not seem to appeal to them. It may have been the shoe-box that scared them. I don't know. They certainly did not take to it very cheerfully. In fact, they did n't take to it at all. As I advanced with it they all backed off, and one little fellow ran into the house.

Then the tallest boy of the group, his cheeks spattered with freckles, doubled up his fists and growled at me. I said, "See here, my boy, what's the matter with you? This fudge—candy—nice, home-made candy—a whole box-ful. Don't you want it?"

He gave his mouth a stretch to one side and said, "Aw, go on with your old fudge! You're crazy!"

This decided me to get on a car and go home with my fudge. I could give it to my mother, or feed it to the chickens, perhaps. I had walked these three blocks in the hope of losing it before boarding an avenue car, with its fashionable afternoon traffic; but it seemed to me now that it would be more wholesome to swallow my pride on a street-car than to be making a spectacle of myself on the open highway.

I was fortunate in getting on board with a number of others, so that I did not attract any special attention; and when I took my seat I managed to hide the box pretty well by placing it close beside me. I thought once of letting it fall out of the window, but the sash back of me was closed, and I did not venture to open it for fear of stirring up attention. Then, after a little while, a large man got in and came and sat down on the box. I did not see him in time to get it out of his way. The bursting of the lid made quite a noise and aroused general interest. The man was extremely apologetic as I pulled the deformed box from under him, and he said he hoped he had not hurt the shoes any.

I said, "Oh, that's all right! Have a piece;" and I tried to lift up a corner of the cracked lid.

He said, "No, thanks," and went out and stood with the conductor.

I retied the box into shape and found that it was not so badly damaged as it sounded. I held it on my lap, and everybody looked at it. If the passengers had laughed or even smiled a little, I should have felt comparatively easy. But they did n't. They were not that kind. They sat bolt upright, as serious as a congress of tobacco signs, and kept very quiet. I could feel them staring haughtily at the box and then at my feet. Nobody said a word, but the atmosphere was charged with contempt and frigid indifference. In return, I endeavored to assume an attitude of lofty *sang-froid* by drumming lightly on the box with my fingers.

Casting about for some means of relieving my embarrassment, I discovered that there was space under the seat, and after a moment or two I stowed the box down there, out of sight. It was evidently the right thing to do, for the passengers stopped looking at me and I quickly regained my composure.

When I got off I left the box behind. Only one man in the car noticed it, and he came after me with the box. He was a dilapidated, trampish-looking fellow, with a sad eye and a rubber collar, and when he caught up with me half way down the block he said, "Say, cap, if you don't want these here shoes would you mind passin' 'em on to a poor man? I seen you did n't take much 'count of 'em, and I thought mebbe they was old ones and you was goin' to chuck 'em away any how. 'Tain't nothin' to me if they is wore out some. When a feller's down on his luck, anything does, d'ye see?"

I said, "Keep the box if you like; it's all the same to me;" and I fished into my pocket and handed him a quarter.

He said, "God bless you, cap," and I said, "That's all right; don't mention it;" and then I gave him another quarter and walked off as fast as I could.—*Lippincott's*.

#### The Set of the Sails.

"I stood on the beach," said T. DeWitt Talmage, "looking off over the sea, and there was a strong wind blowing; and noticing that some vessels were going one way and other vessels were going another way, I said to myself, 'How is it that the same wind sends one vessel in one direction and another vessel in another direction?'"

"And I found out, by looking, that it was the difference in the way they had their sails set. And so does trouble come in this world. Some men it drives into the harbor of heaven, and other men it drives on the rocks. It depends on the way they have their sails set."

# THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE, ELGIN, ILL.

Subscription price, \$1.00 per Annum, in Advance.

The Inglenook stands for material and spiritual progress. Its departments are: Literary, Editorial, Home, Cream of Magazines, World News.

Its qualities are: Good Sentiment, Moral Convictions, Inspiration.

Its purpose is: To safeguard home life by supplanting and counteracting bad literature.

Its scope of matter is: Scientific, Religious, Educational, Philanthropic, Economical, Sociological and Financial.

Its field is: The World.

Liberal commission given to agents. Sample copies are given upon request. When changing address give both old and new addresses.

Entered at the Postoffice at Elgin, Ill., as Second-class Matter.

## ADVERSITY A BLESSING.

It is difficult to see, when undergoing the discipline of adversity, just where the blessing comes in. Its hard exactions make it impossible to view it with favor in any light at close range. If it carries blessings they are concealed by its unattractive appearance. And we believe it does carry blessings, though their disguise is impenetrable for the time. Our own experiences, studied in retrospect, have brought us to this belief and our observations of the experiences of others have confirmed it.

We might consider briefly the what and how of adversity's blessings to the end that in the future we may meet adverse conditions with better grace than in the past. Strength, of whatever nature, is essential to activity in its particular field, and strength is one of the gifts of adversity. It comes as a natural result of meeting adverse conditions. We not only do not know how strong we are until we are opposed, but we have no opportunity for increasing our strength until we put to the test all that we have.

Along with the acquiring of strength comes the development of resources. The man who has all his needs supplied, will scarcely become an inventor. Resourcefulness is not a gift, but the result of repeated challenges of an adversary to encounters which seem to demand more skill and tact than we at the time possess. The determination to do or die in the face of adversity's winds brings us the ways and means to do.

We cannot enumerate all, but must not pass by the crowning blessing of adversity. That is, its refining and purifying influence. If it gave nothing else to our character, we might still brave its trials and inconveniences for the sake of the gift of a chastened life. At no time are our weaknesses so apparent as when we are on trial, and at no time are we so willing to yield to a wisdom that is greater than our own. The greatest and most thorough reformatations and the

deepest religious life have come as the accompaniment or result of want and distress.

If we read the signs aright, the times are now ripe for a purging of this sort. It is true that the country is only recovering from a financial depression, but it has affected many of us not at all and very few of us in a reforming way. On all sides we hear the complaints of ministers of the Gospel because of the lack of zeal and low ebb of spiritual life among the members of their churches. And the debauching effect of prosperity's long reign is felt in other lines of activity also. A writer in the London *Saturday Review* recently expressed it as his belief that "a touch of adversity would improve the moral health of the citizens of the United States." While it is a bitter medicine which no one desires to take, yet if it can restore to us the moral health which is necessary for our highest usefulness, we should hope that it might not tarry, but do its work soon and well. If we are true to the One who created us, we will desire above all things to serve his purposes, however he may require.

## THE ANNUAL CONFERENCE AT DES MOINES.

SEVERAL weeks have passed by since the Brethren church met in their annual Conference at Des Moines, Iowa. Though time delays not for events good or ill, blest memory helps us to keep near these seasons hallowed by the association of those of the same faith. And though we are rushed relentlessly along into new scenes, we may have our strength renewed by recollections of these annual feasts.

In one respect the meeting at Des Moines stands alone, in that along with the regular program of an annual conference it included a program marking the two hundredth year since the founding of the church. This program was in keeping with a proper observance of the event, being given over to the reading of a number of papers covering the early history and development of the organization. These papers will later appear in book form, giving us a valuable addition to our library of history.

Another event, important in some respects in our history, was the change in our church name which was effected at this conference. German Baptist Brethren was as appropriate as any name that could have been selected at the organization of the church in Germany in 1708. But now that the church has grown and spread out, with congregations in different countries, the word "German" can no longer be applied to us as a body. For many years the need of a change has been felt. From its significance and from long association the word "Brethren" has become dear to us and we might have adopted it long ago had it not been that another denomination holds this name and more or less confusion, from which we were trying to escape, would thus be brought in. But we

could not agree on any other name. At this meeting a happy thought struck some one, that by a different arrangement of the words we might avoid being confused with the other denomination and still have our favorite name as our own. The suggestion met with a hearty support and almost before we were used to the sound of the new name it had become our own,—Church of the Brethren. It will take us some little time to become perfectly familiar with the name as *our* name, and the world will need a longer time still, but with patience and persistence we may come to be known by a name that fits us and suits us as well.

Besides the many events important alike to all members of the Church of the Brethren, there were many others important only to individuals or groups which will cause the meeting at Des Moines to be remembered as a notable one. No one attending the meeting with a heart open to the influences making for the higher life could have gone away disappointed.

#### NOTICE.

THE INGLENOOK will be sent to any address the remaining six months of the year for forty cents. That is considerably less than two cents per copy. We expect Mr. Spickler's articles, "Around the World without a Cent," to continue through this period and there will also be other features of value and interest.

#### LESSONS IN ESPERANTO.—No. 10.

##### Prefixes, Suffixes, Word-Building Method.

IN lessons 8 and 9 we had a few of the many prefixes and suffixes. These prefixes and suffixes give us a wide range of words. By taking the root for the central thought, these are used to express the variations of the central idea.

"Aĵ," suffix, the concrete, something made from or having the quality of: *Belaĵo*, a beautiful thing. *Bovo*, ox. *Bovaĵo*, beef.

"Ul," suffix, a person having the quality of: *Timi*, to fear. *Timulo*, a coward.

"Er," suffix, a unit of a collection: *Mono*, money, *Monero*, a coin.

"Em," suffix tendency or natural inclination: *Envio*, envy. *Enviema*, envious. *Laborema*, industrious.

"Ind," suffix, denotes worthiness: *Laŭdi*, to praise. *Laŭdinda*, praiseworthy.

"Ebl," suffix, possibility: *Permesi*, to allow. *Permesbla*, allowable. *Legebla*, legible.

"Estr," suffix, a leader, head of: *Ŝipo*, ship. *Ŝipestro*, a ship captain.

"Ad," suffix, continuation or continued action: *Instruado*, continued instruction. *Kanti*, to sing. *Kantado*, continued singing.

"Ek," prefix, denotes an action just begun: *Dormi*, to sleep. *Ek-dormi*, to fall asleep. *Ekkrii*, to cry out or exclaim.

"Dis," prefix, separation: *Disŝiri*, to tear apart. *Dissemi*, to throw about. *Dispeli*, to disperse persons or things.

"Ĉj," suffix, an endearment for masculine names: *Josefo*, Joseph. *Joĉjo*, Joe. *Paĉjo*, dear father.

"Nj," suffix, an endearment for feminine names: *Heleno*, Helen. *Henjo*, Nellie. *Panjo*, mamma, darling mother.

Note.—One or more of these may occur in a word, as: *Monto*, a mountain. *Mont-et-o*, a hill. *Mont-et-ar-o*, a chain or range of hills.

Many of these can be used as words alone: *Ind-o*, merit, worth. *Ind-a*, worthy. *Ebl-a*, possible. *Ebl-e*, possibly. *Ebl-ec-o* possibility. *Il-o*, a tool, an implement.

#### VOCABULARY.

|                                         |                                     |
|-----------------------------------------|-------------------------------------|
| <i>Ŝpari</i> ,—to spare.                | <i>Fulmo</i> ,—lightning.           |
| <i>Babili</i> ,—to chatter.             | <i>Frukto</i> ,—fruit.              |
| <i>Rakonti</i> ,—to relate.             | <i>Friti</i> ,—to fry.              |
| <i>Ago</i> ,—act.                       | <i>Voki</i> ,—to call.              |
| <i>Laŭdi</i> ,—to praise.               | <i>Krimo</i> ,—crime.               |
| <i>Sufiĉa</i> ,—sufficient.             | <i>Firmaĵo</i> ,—earth, dry ground. |
| <i>Eksplodigi</i> ,—to cause explosion. | <i>Aparta</i> ,—separate, special.  |
| <i>Pulvo</i> ,—gunpowder.               | <i>Malfeliĉo</i> ,—unhappiness.     |

#### EXERCISE 22.

*Lia frato estas tre laborema kaj ŝparema, sed estas tre babilema. Rakontu al mi vian malfeliĉon, ĉar eble mi povos helpi al vi. La ago de Joĉjo estas tre laŭdinda. Henjo ekdormis sur la seĝo. Unu fajrero estas sufiĉa, por eksplodigi pulvon. Du ekbriloj da fulmo tra kuris tra la malluma ĉielo. Mi vidas multe da homoj sur la strato. Mi donis al li la ĵrestaĵon da tiu kuko. Frukto, fruktaĵo. Friti, fritiĵo. Jeti, reĵeti. Voki, revoki. Krimo, krimulo. Ridanta virino. Kaj Dio diris: estu firmaĵo inter la akvo, kaj ĝi apartigu akvon de akvo. Kaj Dio kreis la firmaĵon kaj apartigis la akvon, kiu estas sub la firmaĵo, de la akvo kiu estas super la firmaĵo: kaj farigis tiel.*

*Kaj Dio nomis la firmaĵo ĉielo. Kaj estis vespero, kaj estis mateno—la dua tago.*

#### EXERCISE 24.

"In the beginning God created the heavens and the earth. And the earth was without form and waste, and darkness was upon the deep and the Spirit of God moved upon the waters. And God said: let there be light: and there was light. And God saw the light that it was good, and God named the light day, and the darkness he named night. And there was evening and there was morning—one day." The house in which people learn is a schoolhouse, and the house in which they pray is a church. She married her cousin altho her parents wished to marry her to another person. With an ax we chop, with a saw we saw, with a spade we dig, with a needle we sew, with scissors we clip, with a bell we ring, with a whistle we whistle.

### OUT OF DOORS WITH THE CHILDREN.

CHILDREN are never happier than when mother will play with them. "Let us live with our children," says Froebel, the founder of the kindergarten. The frolicsome little games that we play with them, such as hide-and-seek, will not soon be forgotten. Do not think you will lose control of your children by doing this; on the contrary, the bond of sympathy between you and the little men and women about you in the home will be strengthened.

In the summer, when everything is fresh, fragrant, and alive, the ordinary household duties should be suspended at least a short time each day, and we should live with our little ones, enjoying with them the wonders and beauties of nature.

Take your cardboard, needle, and thread out in the arbor; or walk to a stream a little distance away, and look for leaves. These can be traced, and afterward sewed or painted. There are such varieties of pretty leaves that a little book can be filled with them, also with the flowers that bloom in the month of August. The children should match the color of the blossoms or flowers, and learn to give the name of each by the feeling or smell. A little song used frequently in the kindergarten for strengthening the sense of feeling is:

"Though your little eyes are blinded,  
Your little hands can feel;  
Now take the thing I give to you,  
And quick its name reveal."

A child is blindfolded, and given a leaf. After the other children finish singing, the little one feels of the leaf, and tells its name. The words may be sung to any familiar tune suited to the meter.

We are also brought to another interesting phase of work, which Froebel teaches us under the head of grass-mowing. There is the gratitude to our Heavenly Father for sending rain and sunshine. We must also thank Peter for mowing the grass, and Molly for milking the cow and making the butter; for you know we eat the butter and drink the milk in order to grow strong and healthy.

The child should be led to see that many people have been busy that he might be fed, clothed, and made happy; and that if he takes, he must give in return. This teaches the very important lesson that nothing worth having comes to us without effort. The children should be taken out to see

the grass and clover, watch the machinery, and learn the names of the implements used. Let them help drive the cows from the pasture, watch the milking, and taste the warm milk; put some away in a shallow pan and have them skim the cream. Let them watch the process of butter-making, and work a little themselves to help make the butter they eat with their bread. A walk can be taken to the factory where large quantities of butter are made.

Mothers will find the following books well worth reading, and filled with many helpful suggestions:

"Nature," by Emerson; "A Barnyard Talk," by Emilie Poulson; "Farmyard Songs," by J. E. Trowbridge; "The Farmyard," by S. E. Wiltze; "The Farmer and His Sons," by Alsop.

The next subject may be on the honeybee. Let the children watch the bee as it lights on a flower, and thrusts itself, head first, down to the nectar and gathers the honey. Bees get something else from the flowers besides honey,—a yellow powder, called pollen. The pollen is packed in little baskets and carried to the hive, where it is mixed with honey. This mixture is called "bee bread," and is fed to the baby bees. The bee also has eight pockets on the under side of its body out of which it gets the wax to build the cells. These cells are white and of a very pretty shape—six-sided—and serve as storehouses for the honey and homes for the baby bees. Explain to the children that three kinds of bees live in every colony,—the workers, the queen bee, and the drones. The workers gather the honey and wax, make the cells and keep the hive tidy; the queen bee lays the eggs; and the drones protect the queen when she leaves the hive. Then the children may watch for some flower that the bee visits, and with a tumbler covered with netting capture a bee with the flower. In this way they will be able to see the pollen-baskets. After watching the flowers that bees visit, one can be perforated or sewed by the children. A charming writer on the subject of bees is John Burroughs, who has given us an excellent work entitled, "An Idyll of the Honey Bee and Pastoral Bee." Helen Keller has also written a delightful story, "Edith and the Bees." Other suggestions can be found in "Ants, Bees, and Wasps," by Lubbock; and "To the Humblebee," by Emerson.

These are but a few suggestions for summer lessons; and as mother and child take these strolls together, and learn of the wonderful provisions of nature, the bond of sympathy will be strengthened. The mother will more fully realize the worth of Froebel's motto, "Come, Let us Live with the Children."—*Farm Journal*.

#### COMMON-SENSE DIETETICS.

A WISE old people once had a proverb to the effect that "in the middle way lies wisdom"; in other words, that the safest and best thing in the world was moderation. In no respect is this more true, I think, than in the matter of feeding.

In all honesty let me confess at once that none of us really knows very much about this question. Theories about diet we have in plenty; and as for the theorists, their name is legion. I am inclined to think that the less a man knows about diet the more rabid he is in the promulgation of some pet theory on the subject. Some of these theories are really logical and convincing,—very interesting from a scientific and controversial viewpoint. Some are absurd. All are amusing. But none of them, not one, so far as I have been able to determine, is really practical. And in the last twenty years I have tried them all.

In considering these theories, we must remember several things. First of all, it must be understood that just as the plant has the power of selecting what it needs from the air, water, and soil about it, so the body has the power of absorbing from the various matters taken as food the elements it needs for its maintenance. Realizing this, we can more easily understand that exactly what we eat is not nearly so important a question as many well-meaning people believe it to be.

One of the most frequently discussed questions about diet is the "vegetarian theory." The vegetarians have a splendid array of arguments,—arguments that are, many of them, unanswerable. The vegetarians call our attention to man's structure, which they say puts him in the same class as the higher apes. The food of these amiable and interesting creatures consists of fruits, nuts, and fresh green leaves. Man is constructed much like an ape, say the vegetarians, therefore he should eat like one.

Then they display an impressive array of figures which go to show that a pound of beans contains as much nourishment as six pounds, more or less, of good beefsteak. They present other arguments, economic, humanitarian, esthetic; until, even though we are not converted, we are silenced. They assure us that the food problem is solved. The only right diet is vegetarian diet. Eat vegetable matters only, in any quantity, under any and every condition, and all

will be well. If vegetable food is right, any vegetable food is right. So say the vegetarians.

But the vegetarians forget several things. First, while a man's body resembles the body of an ape, his brain is quite different. His nervous system in proportion to his bulk weighs about six times as much as that of the ape. Again, his habits, his surroundings, his occupations,—all these weaken the case for the vegetarians.

After all, this question of a "meat or non-meat dietary" is not of prime importance. It is much better to eat good meat than some of the unnamable messes often taken and considered wholesome just because they are made of vegetable matter. No, the vegetarians have missed the point.

The advocates of the raw food plan have many pretty arguments; but their arguments somehow do not convince us. In any quantity, at any time, under any circumstances, the only right food is raw food, they say.

And then we have the fruitarians, who say we must eat only fresh fruit and nuts. Some of them are so liberal as to allow us an occasional leaf of lettuce.

Another sect of dietetic jugglers lay down the law or "one food at a meal." Make your whole meal on bread, or potatoes, or onions, or beefsteak. "Only do this and all is well," they say.

In addition to these are many other theories,—leave off breakfast, live only on wheat, drink no water, munch your food until it is reduced to powder and then discard the powder, and so forth. And there are theories even more far fetched and absurd than any of these.

Now where is the truth in this maze of conflicting theory? Is there a solution to the problem of feeding? Before taking up these questions, let me say at once that the fault with all these theorists is that they see only a part, and not even an important part, of the diet question.

A man or woman can live healthfully and comfortably on vegetarian foods, or raw foods only, or fruit only. He or she can achieve and maintain a high degree of mental as well as physical powers while omitting breakfast entirely. One kind of food at a meal is much better than ten kinds, if the one food is the right food. All these theorists are right, and all are wrong; for the point in diet is not to find the ideal food. There is no ideal diet; and if there was, it would not fit the very unideal men and women in the world today. The object of feeding is to give the body materials out of which to build and sustain itself. This it will do on vegetarian diet, on raw diet, on any diet, if that diet—and here's the point—if that diet be simple in selection, moderate in quantity, and taken under proper conditions.

A breakfast of fruit, cereal with cream, brown

bread and butter, and a glass of milk will fulfill any requirement. Or a morning meal of two raw eggs beaten up with milk, together with fruit and one or two slices of brown bread,—such a meal is equally nutritious and palatable.

For dinner, fresh meat, roasted or boiled; baked potato; plain salad dressed with olive oil and a few drops of lemon juice; perhaps another cooked vegetable, such as turnips, spinach, or parsnips; fruit; and brown bread,—will prove in every sense a wholesome and acceptable meal.

The third meal, if such be taken, may be similar to breakfast, or it may consist of merely fresh fruit and a glass of milk, with perhaps a cracker or a bit of bread.

These meals are not all vegetarian, or all raw, or all fruit; but they are simple, they are moderate, and, if taken in proper quantity, they will solve the question of diet, so far as it is ever likely to be solved by erring man.—*W. R. C. Latson, M. D.*

### THE LAUNDRY.

THE secret of giving pure linen a gloss and a very slight stiffness is in either drying and sprinkling it so as to be about as wet as when taken from the tub, or in wringing it from the last rinsing water as dry as possible and ironing immediately with very hot irons. It is important that the ironing be continued until the last trace of dampness is gone. Not less than a seven pound iron should be used for table linen.

Many housekeepers now agree that boiling table linen turns it yellow and sets any trace of stain. If washed by itself, as it always should be, it does not need sterilizing. Wash with any good soap, especially any of the various kinds that have naphtha in their composition; rinse well, blue lightly, and, if possible, dry in the sun, and the linen will be white and clean.

The high gloss which shows on one side of the linen sent home from steam laundries comes from the wet fabric being placed under great pressure in heated mangles. The folding of mangled linen, however, is execrable. In fact, table linen should be folded as little as possible, for a cloth lies much smoother if folded but once through the center, and then rolled or folded loosely without pressure. This is in direct contrast to the fashion so many home laundresses have of folding a cloth until when spread on the table it presents a series of ridges.

Napkins are now often folded but once and then rolled about large pasteboard tubes. When placed on the table they are folded again lengthwise, and once or twice across, but without pressure. The tubes for rolling can be bought large enough for half the width of tablecloths, and in some linen

closets all the cloths are kept on their respective rolls. Smaller tubes are especially convenient for keeping centerpieces and doilies from being rumpled and are more saving of space than boxes.

Some damage comes to table linen from being tossed while damp into a clothes hamper with other soiled clothes. Mildew results, and this is the most obstinate of all stains. When such a spot is found, dry and brush it, then dip into buttermilk or lemon juice, and after standing in the sun a while rub on a paste made of soap softened with a little water and a little dry starch rubbed in. Expose to the hot sun and persist in the treatment until the stain is removed.

Fruit stains are the most common, and are easily taken out before the linen is placed in soap and water. After washing they are more or less indelible. To take fruit, tea, and coffee stains out stretch the spots loosely over a bowl, allowing a little sagging. From a height of twelve inches pour boiling water in a fine stream. Continue until the color disappears, then the cloth may be laundered in the usual way. If cocoa and chocolate stains are soaked in a solution of borax and cold water for a while before the boiling water treatment they will disappear more readily.

Sometimes candles are allowed to drip on the cloth, making a troublesome spot unless it is handled in the right way. Lay a piece of blotting paper over and press with a hot iron; the wax will melt and be absorbed in the paper. Keep moving the paper and pressing until there is no trace of wax. The careless laundress will sometimes leave the impression of a hot iron on linen, or perhaps a good napkin is taken to lift something from the gas stove and a scorch results. This sort of mark will not come out quickly. The only cure is to place the spot in the bright sun and let stand there day after day until it fades, which it will do eventually if but slight. If the fibres of the material are broken there is no remedy.

Another accident results from some one bringing a bottle of ink into the dining-room for a moment's use; it is upset or the wet pen laid down. Dip the spot into cold milk, and as soon as this is discolored change it and repeat until the spot clears away. If the stain is overlooked and the cloth goes through a soap and water bath, then javelle water must be used. Mix one-quarter cup in half a pail of boiling water and soak the spot in it a few minutes. Then rinse several times, for the solution will destroy the cloth.

Danger of iron rust to table linen is not so great now as when steel knives were used; when such a spot appears scatter salt over, then drip on enough lemon juice to moisten, and lay the cloth in bright sunlight. Perhaps this will need to be repeated,

but it will take out the mark finally without injuring the cloth, like more powerful acids. Do not be in a hurry to get results, but lay it aside each day to work slowly.—*Selected.*

#### SELECTED HOUSEHOLD HINTS.

To clean a chicken for cooking: After picking off the feathers and singeing it, take half a dishpan of soft warm water and soap, and wash thoroughly, and see the dirt in the water, which clear water will not remove. Then rinse thoroughly, and see how nice and clean it will look.

COFFEE stains, even when there is cream in the coffee, can be removed from the most delicate silk or woollen fabrics by brushing the spots with pure glycerine. Rinse in lukewarm water and press on the wrong side with a warm iron. The glycerine absorbs both the coloring matter and the grease.

To prevent silver from tarnishing, place a few lumps of camphor in the box or drawer containing the silver articles. This will neutralize to some extent the gases which turn silver dark. If silver is to be stored for some length of time, it should be cleaned thoroughly, and placed in cotton flannel bags which can be closed tightly at the top. Then these bags should be wrapped in paraffine paper, or, still better, in beeswaxed paper. To make the latter—it cannot be bought—take ordinary manila paper, and lay it on a smooth surface covered by a white cloth. Shave the beeswax thickly over the paper, and then pass a hot iron over the paper, when the wax will be melted right into the paper.

TRY putting a few drops of vinegar in the water you drop the eggs in for poached eggs. It will keep the whites together and they will lift out easily.

SAVE your cold coffee to mix your ginger cookies with. It will give an extra flavor that is very palatable.

#### OUT IN THE FIELD.

JENNIE TAYLOR.

IDA BELLE BROWN sat near the kitchen window watching the scenes of the out-door world.

It was a bright sunshiny morning. The winds swept lightly over the grass and made the leaves dance gayly on the branches of the great trees. The birds were singing and the flowers were blooming, but Ida Belle noticed that many of the golden-topped dandelions had turned to silvery-white, and that the little

winged seeds were sailing away, away into the fields beyond.

"I wish I could go away to the field, too," said she. "I believe I'll go a little way. Nobody will care."

So she reached for her pretty pink sunbonnet and slipped out of the house.

Now, Ida Belle was a little city girl who was making her first visit to the country. She wanted to know what it was like out in that big green field. She felt very timid at first. But after she had crept through the great creaking gate she was no longer afraid. It was very still out there save for the meadow lark and the winds. Everywhere waved the pretty green grass which would ripen and make hay for Shaggy, the Shetland pony that she and her country cousins had learned to ride.

So Ida Belle wandered on. She found the home of the meadow lark that had just gone up toward the cloudlands, singing merrily as he went. In that home were some lovely eggs with little specks upon them. Fearing to frighten the mother bird, the little girl ran on farther into the field.

Suddenly she stopped and looked about. A big brown butterfly flitted past her and settled on a weed. Strange creatures were leaping aimlessly around among the waving grasses. And quite tiny ones were creeping very fast along the ground.

Ida Belle knew that the tiny ones were ants, and that the ones making such great leaps were grasshoppers. She had worked hard at school and had studied about them in her book. She did not like to think of having to sit all day in school but she did like that story of the insect people. She liked the big butterfly with its fan-like wings.

"I am very tired now, and hungry, too," thought the little girl, "but I believe I shall stay here awhile and watch the ants gather their harvest. Harvest? Yes, that was what the book said. And are not these ants busy carrying in some white seeds that look like tiny grains of rice?"

She saw more brown butterflies flitting about and heard the droning song of a big bumblebee down among the clover.

Then Ida Belle went to sleep and dreamed. She was no longer in the big field, but in a very strange world, peopled with wild things. Those wild things were butterflies, ants and grasshoppers. They seemed to be having a picnic, though no one brought anything to eat but the ants. The butterflies came dressed in many gay colors and made a very pretty showing. The grasshoppers came, too, and jumped about the playgrounds all the while. The merrymakers had a very nice time but the ants had to do all of the work. After the dinner was over a shower came up and sent the insect people to their homes, that is, the ants, for they were the only people who had any homes. The butterflies and grasshoppers had always been so interested

in their play that they forgot to build their houses. Then they wanted to go home with the ants, but the ants could not provide for so many. So the poor idlers had to go away very much disappointed and find some other shelter.

Just as the little brown ants had closed their house door to the grasshoppers and butterflies, Ida Belle was going to cry, but about that time she was awakened by real raindrops tapping on her face. Soon she heard voices and the sound of approaching footsteps. She turned to see who it was. Coming toward her were her country cousins who had been looking for her and they were bringing Shaggy, the cunning brown pony, with them to carry her home to a nice warm dinner.

*Tipton, Iowa.*

#### UNDER THE ROSE BUSH.

"OH, dear," sighed the little plant under the rose bush, "it is so sad to be a weed!"

The rose at the top of the bush bent a little in the breeze; then turned its face again to the sun.

"Why do you care, little chickweed," it asked, kindly "aren't you happy down there close to the ground?"

"Sometimes I am," said the chickweed, "but all the same I wish I had not been made a weed; no matter how well you grow, or how bravely you stand, if you are a weed it is all of no account. Every day when the gardener comes with his hoe, I crouch nearer to your root, so that his sharp eyes will not find me. Some day he will see me, and then my poor leaves will wither in a rubbish heap;—oh, dear!" The little weed bowed its head very low in its sorrow.

Just then the gardener's little daughter came running through the hedge. She stopped before the rose bush, and clapped her hands with joy.

"Oh, papa, here is a dear little chickweed plant, right under the rose bush! And oh, papa, may I pick this lovely rose?"

"Yes, dear, you may pick the flower," said the gardener, smiling, "As for the weed, pull it up quickly and throw it away;—I don't see how I came to overlook it."

At these words, the little weed shivered with fright; then a thrill of delight went from the top of its blossom to the tip of its roots, as the little girl said, pleadingly:

"Please, papa, let me keep the chickweed,—just this one little plant out of sight under the rose bush; Dickey bird does love it so, and I will pick him a bit every day. Do say it may stay, papa!"

"Well, well," said the good-natured gardener, "just as you like, dear."

Then the chickweed spread its leaves gladly, and nodded its little white flower in the breeze; for it found there was use in the world even for a weed.—

## For SUNDAY READING

### THE RELIGIOUS WORLD.

S. S. BLOUGH.

THE religious world, its past, present and future, is a large and important field and is well worth our careful consideration. By a close study of things as they are and have been, we may form a fair conjecture of the future.

The religious world is being affected to a degree, by the financial condition of our country. When times were good and work was plenty, and the whole country lived at high tide, churches and mission boards organized new work and sent new men into the field, which now become somewhat difficult to support. We are glad, however, to note that it does not have the effect upon church finances that might be expected. Church people realize to a large degree that these obligations are to God and should be fulfilled. Some building projects are being abandoned and some advance movements delayed, but, on the whole, people are supplying the Lord's treasury and the work is going on. This is as it should be, for surely the Lord will return, in his own good way, many fold.

The last year brought to this country 1,000,000 immigrants, of whom eighteen per cent were Protestant, twelve per cent Hebrews, and sixty-six per cent Roman Catholic. This leaves but four per cent who do not claim membership in a religious body.

This on its face looks well enough, but by associating with many of them, we find them not only illiterate but devoid of true Christ ideals. Their names are on the church roll, but their lives do not reflect the Christ spirit. There is often a marked regard for and adherence to set forms and methods, and a corresponding loss in spirituality. The real gist and center of religion is too often forgotten or neglected. Religious instruction for this class is very necessary and those who follow the truth wholly, become responsible. There should be a concentrated movement for instruction at once if the nation's equilibrium shall continue.

The religious world is passing through a period of conflict the outcome of which is as yet uncertain. Only when the smoke clears away, which may be in the still distant future, will we know the final results. Creeds were formed and strictly adhered to. From pulpits and in private argument men hurled anathemas at each other and decried all creeds but their own. All considered the Bible as the handbook of Christianity, and rightly so. Every denomination interpreted differently on some form of doctrine and could tolerate no other belief. From such a spirit grew divisions and schisms. Now science began to doubt

some Bible statements and higher criticism followed. This new foe threatened not only creeds but the handbook of Christianity itself. Here was a common enemy against which all must battle. The result was, less vituperation against each other and a more united stand against the common foe. The eyes of many were opened to see other common enemies against which they might unite. Today we have church union becoming a common term in the religious world. A number of denominations have united, others are planning union. The present indicates quite a movement in this direction. If all denominations could return to apostolic thought and practice, thus uniting all Christendom, what a power Christ's kingdom in the world would be!

There is in the world a great deal of free thought. The time was when a few men's opinions were received as conclusive, but today more have opinions and the common people are often slow to receive the teaching of the pulpit. Doubts have arisen and free thought suggests its own conclusions. There is danger of considering doctrine of no consequence and deportment the criterion. Even now there exists much doubt concerning the vital truths of the Bible. With less hurling of shafts against other churches, have come veiled thrusts against Bible truth. Belief in the future life and the conditions of it is changing. Future punishment and a place of torment for the wicked have become unpopular. These are dangerous tendencies. But there is furthermore a hopeful outlook. Instead of studying about the Bible there is more study of the Bible. More theological schools are using the Bible as a textbook. A demand is made for the Word. More people are making the Bible their daily study, and more men are preparing to teach the Word than ever before.

The temperance movement has been engaging the mind of many church adherents. Especially have the ministers been taking an active part all over the country. Prohibitionists have not changed their opinions but are for the present uniting with the local option people to win the first victory, hoping that prohibition will follow. In the words of Gov. Hanly, of Indiana, "We may lose a battle, but we will not lose the war." The time is coming when the church people of a community will control this great evil.

In the month of June were held two great gatherings of world-wide importance. The International Sunday-school Convention at Louisville, Kentucky, and the Ecumenical Missionary Conference, at Edinburgh, Scotland. In March, a very successful missionary convention was held in the city of Pittsburg, Pa. As the years pass, more conferences will be held and a greater union of church, missionary and Sunday-school work will be the result.

*Batavia, Ill.*

## GETTING THE UPPER HAND OF HARD TIMES.

HAND the tiller over to God.

Keep the quiet mind.

Line up to God's plan.

Cut out your neighbors' faults.

Not a wrinkle of worry.

Live inside your wage.

Make a square partnership with God.

Tie to it—"As thy days, so shall thy strength be."

Mix gray matter with gritty muscle.

Don't let your work lap over.

Keep your windows open toward the Throne of affairs.

Stand by your convictions, whether or not the crowd go your way.

As to burdens, share the least and last bothersome one with the Strong Arm that keeps stars in their beat.

Is your bench corner away from the glare and crowd? Look sharp! For God works alongside.

If you can not settle the problem on your feet, do it on your knees.

If your bank balance is dropping down zero-way, try filling in the blanks in "God's Check Book" with your "need."

Keep your life so cheery in its faith, the smile on your face will not only be the sort "that won't come off," but will brighten the way for other folks.

Give the Bible the handiest place on your book shelf.

Be on the square with God, and see he gets his tithe of the wage.

Hoe your own garden, but don't fancy it is the only one.—*James H. Earle, in Watchman.*

## THE DANGER POINT.

THERE is no hour when the Christian is in greater need of watchfulness and prayer than that of his spiritual triumph. George Adam Smith tells how he once, with the aid of two Alpine guides, climbed the heights of the Weisshorn which overlook the glorious valley of Zermatt. After many hours of laborious climbing they neared the summit of the highest spire, when the foremost guide stepped aside for the doctor to be the first on the top. In the exhilaration of his triumph, he leaped upon his feet and started with a bound to cover the short distance to be mounted, when his guide seized him and shouted, "On your knees!" He had been climbing on the leeward side, unaware of the forceful gale that was blowing on the other side. Had he stood erect he would have been blown from the heights into the unmeasured depths of a snowy grave.

Even so the spiritual heights, joyous, glorious, triumphant, can be held only by such as are "on their knees."—*Home Herald.*

# Echoes from Everywhere

Nicaragua must expect to go out of the war business. The government of the republic recently leased the entire navy, consisting of three gun-boats, to a company engaged in freight traffic. Good example for larger republics to follow.

The Democratic primaries of Texas will vote, July 25, upon the submission of a constitutional prohibition amendment to the citizens of that State. The liquor people are attempting to get the question of local option submitted along with that of State prohibition.

The success of the experiment made last year in sending out to work on farms thirty boys from the boys' high school in Brooklyn has resulted in a teachers' organization and the enrollment of 2,500 high school boys in Greater New York who desire to go to the country and engage in farm work this summer.

The report comes from Paris that Premier Clemenceau is making a determined campaign against the gambling evil in that city with the purpose of wiping it out. Particularly is he interested in suppressing the "mixed clubs" where men and women gamble together and where great fortunes are lost. The French premier is a man of strong will and has the ability to get results.

Wednesday morning, June 24, Ex-President Grover Cleveland died at his home in Princeton, New Jersey. Mr. Cleveland was twenty-second and twenty-fourth president of the United States, and was the only surviving ex-president. Heart failure, complicated with other diseases, was the cause of his death, the extreme heat at that time hastening the end.

The German emperor has a well-equipped pottery which brings him in \$50,000 a year. The king of Wurtemberg owns two large hotels which yield him a yearly income of some \$40,000. The king of Saxony owns the famous porcelain factory at Meissen, and the regent of Lippe Detmold runs a large model farm from which he sells butter and milk and eggs. The king of Servia is said to own a barber shop and an apothecary shop, in addition to which he holds an agency for motor cars.

A parcels post agreement between the United States and France has been signed by Postmaster-General Meyer and Ambassador Jusserand, of France. Under the terms of the convention, which is effective August 15 next, packages up to four pounds and six ounces will be carried at the rate of twelve cents a pound. Later the maximum weight of packages which can be sent by mail to France at the rate of twelve cents a pound will be increased to eleven pounds. A parcels post agreement has also been made with Italy, beginning Aug. 1, whereby merchandise may be sent from one country to the other at the rate of 12 cents a pound in amounts up to 11 pounds.

Russia has made a great progressive step in its preparation ready for settlement—through the colonization department of the Ministry of Agriculture—of 7,500,000 acres of land for the colonists whom it will send to Siberia. Opening up the land to the poor of the cities and the peasantry will do more than any other one thing, unless it be the granting of religious freedom, to develop contentment among the Russian people.

Berlin is said to be the quietest city in Europe. Railway engines are not allowed to blow their whistles within the city limits. There is no loud bawling of hucksters and the man whose wagon gearing is loose and rattling is subject to a fine. The courts have a large discretion as to fines for noise-making. Strangest of all, piano playing is regulated in Berlin. Before a certain hour in the day and after a certain hour in the night the piano must be silent in that musical city. Even during the playing hours a fine is imposed for mere pounding on the piano.

The Brewers' Institute of Berlin, Germany, which is an institution of the German Brewers' Association, will celebrate its twenty-fifth anniversary next October and has issued a call for an international conference of brewers to meet at that time to initiate an international movement "to combat the exaggerations and encroachments of the teetotal movement." Particulars as to the strength and growth of this movement, especially as affecting beer and brewers in various countries are being collected by a special committee.

For penalties due the State for violation of the anti-trust laws the State has seized property and garnisheed funds of the Security Oil Company, the National Oil Company, the Waters-Pierce Oil Company and the Navarro Refining Company. Judgment has been rendered against the Standard for violation of the anti-trust laws and penalties aggregating \$6,016,250 imposed. Writs have also been issued against the Santa Fe, the Southern Pacific and the Missouri, Kansas and Texas Railroad for amounts aggregating nearly \$300,000 which they owe the Standard Oil Company. More than 1,000,000 barrels of oil in the Texas field owned by the Standard has also been seized.

In Buenos Ayres they have a new holiday—animal day—which was celebrated on April 29. The Herald of that city, in describing the celebration, says: "The extensive grounds of the 'zoo' presented an animated appearance and were crowded with thousands of people, who had assembled in response to the efforts of the Society for the Protection of Animals to arrange that this day be celebrated annually." Dr. Figueroa Alcorta, president of the republic, delivered an address, and 10,000 commemoration medals were distributed among the children. One of the features of the celebration was the liberation of 500 pigeons.

Manila, June 29.—Within the last forty-eight hours there have been 107 new cases and 65 deaths from the cholera plague in the Philippines. There are only three suspected cases in Manila.

Friedrichshafen, June 29.—Count Zeppelin's airship today stood brilliantly the longest and most searching test it has yet undergone. It remained in the air for six hours and three quarters, attaining an average speed of thirty-four and a half miles an hour throughout, although for a short period the speed reached thirty-eight and a half miles, the highest rate yet accomplished. The airship carried fourteen passengers.

Under orders from Mrs. Grover Cleveland, work has been begun on memoirs of the late president, consisting of clippings from newspapers and periodicals on his death and funeral. The work will require six months to complete. As planned there will be several volumes, consisting of editorial notices, news dispatches, illustrations and cartoons, each bound in Russian levant leather and lined with purple moire silk. Already material enough is in hand to make up 600 pages.

Seventeen years ago the first colored girl to enter into the employment of the bureau of engraving and printing was appointed, but the number has now grown to 200 in that one bureau. The number of negroes in the government service today is about 5,500, of whom more than 2,700 are in Washington, that is, one out of every nine government employees is colored. The salaries of most of them are less than \$900 a year, though two or three draw \$4,000; and 12,000 outside the District are getting more than \$1,000.

The liquor question at Stanford University has at last been settled and the indications are that it has been settled for all time. The trustees of the university recently adopted the following resolution: "The academic council is instructed to prohibit the use of liquor in fraternity chapter houses, student clubhouses and other student lodgings." The action taken by the trustees and the specific instructions given to the university authorities practically end the controversy on the liquor question at Stanford.

Worcester, Mass., with a population of approximately 140,000, entered the dry list of Massachusetts cities, May 1, 1908. The police court records for the first twenty-five days tell practically the same story as that of other cities which have recently voted dry. The total arrests for drunkenness under license, from May 1 to 25, 1907, was 356, while the total arrests for drunkenness under the no-license regime from May 1 to 25, 1908, was 73. On May 26, 1908, there was only one arrest for drunkenness recorded, while on the same day in 1907, there were 22 arrests for drunkenness.

PARIS, June 25.—The statue of Lafayette, presented to France by the school children of the United States, has been a long time making its way from the sculptor's studio to the marble pedestal in the court of the Louvre, but at last it is there—almost. It arrived today and will probably be hoisted to the place of honor tomorrow. It is almost ten years since Paul W. Bartlett set his genius in motion to evolve the heroic conception of the statesman, soldier and patriot, and the result from an artistic point of view evidently justifies the time he has devoted to the work. Alexander H. Revell of Chicago, acting president, and Robert J. Thompson of Chicago, treasurer of the

Lafayette memorial commission, were present today in the inclosure surrounding the pedestal. Both expressed the opinion that the Lafayette statue was an artistic masterpiece that would eventually be classed among the greatest equestrian figures in the world. No decision has been reached regarding the final ceremony. The statue is now practically in the possession of the French government, which may express preference for an official ceremony or suggest that there be no formalities.

Twenty-four companies manufacturing manila wrapping paper were fined \$1,000 each by Judge Hough, in the United States Court June 22. They pleaded guilty to maintaining an illegal combination in restraint of trade. They were members of the Manila and Fiber Association. In imposing the fines, Judge Hough said that the combination of paper manufacturers was a clear violation of the Sherman anti-trust law, but because of extenuating circumstances he would impose a fine only. The companies arranged to pay their fines through their counsel. The case against the companies was instituted through the instrumentality of the American Newspaper Publishers' Association, for which John Norris, of New York City, acted as agent. The companies composed almost the entire membership of the combine of wrapping paper manufacturers which was organized by John H. Parks in 1906.

In the big, intercity spelling contest which opened the annual convention of the National Educational Association at Cleveland, Ohio, that city won the contest from Pittsburg, New Orleans, and Erie, Pa., each of which cities sent a team of fifteen to the contest. With 1,560 chances to err, fifteen of the eighth grade schoolchildren of Cleveland misspelled only forty words. The victory was a personal triumph to Marie C. Bolden, thirteen years old, daughter of a negro mail carrier of Cleveland, who spelled every word correctly, both in the oral and written tests. The little girl was congratulated by hundreds, even members of the New Orleans spelling team shaking her hand when President Francis H. Haserot of the Cleveland board of education pinned to her dress the gold medal which denotes the championship of American public school spellers.

The claim of a sugar planter on the island of Trinidad that he has discovered a practical method of making paper from the stalks of sugar cane after the juice has been extracted, has attracted attention. Papermaking from sugar cane was discovered some years ago, and a fortune has been awaiting the man who could make the invention a commercial success. The increasing scarcity of spruce, which is the wood most used for papermaking, is well known. Active search is being made in many parts of the world for materials to take the place of pulpwood. Enormous quantities of ground sugar cane go to waste at the sugar factories. Some of it is used for fuel under the boilers, but a very large part of it is left to rot. From time to time experiments have been made to convert the bagasse, or cane refuse, into paper, but with limited success commercially, unless the Trinidad planter's claim is well founded. He is confident that he has made a valuable discovery and has built an \$85,000 paper-mill as an adjunct to his sugar factory. He claims to have turned out paper worth \$24 a ton. About 1¼ tons of cane make a ton of pulp. It is reported that the process of manufacture is comparatively inexpensive. The planter claims that it will pay to grow cane for paper alone, leaving the sugar as clear profit.

## CREAM OF MAGAZINES

### PROGRESS OF THE BLACK MAN IN SOUTH AFRICA.

One of the most remarkable things in the history of the human race is the advance in civilization made in the last fifty years by the African aborigines, declares Sir Godfrey Y. Layden in *The Fortnightly Review* (London). Sir Godfrey is an experienced Africander, at present a resident of Johannesburg, and has spent many years in the service of the British Government in Africa. He knows well the theme on which he speaks, and proves that if the Ethiopian cannot change his skin he can radically improve his manners and customs. When Africa was first opened to the white man, the Bushmen lived in caves. There were a few nomadic tribes, but the majority of the African people were "found to be living closely packed together in a raw or savage state." Polygamy, murder, and robbery were considered normal conditions of life. Trade was unknown, there was no systematic cultivation of the ground, and what religion prevailed was cruel and oppressive. The establishment of magistrates and the work of missionaries brought about the first steps toward civilization. The dawn of enlightenment came to these naked barbarians through external agencies, principally "through the influence of magistrates and other officers, who by their characters for justice and good faith won over the untutored savages as men with such attributes will always do." But the Christian missionaries also did their part. "They taught their pupils to distinguish right and wrong." They gave them education, trained them in mechanical arts, and made them realize the advantages of industry. Thus we read:

"By attaching them to agricultural pursuits, which demanded frequent attention, their warlike instincts became moderated, with the result corresponding in the history of all nations, that succeeding generations lost not only the inclinations but the physique of their forefathers. They retained the condition of health, but, by disuse, lost much of the knowledge of the art of war and with it the faculty of confidently taking the field with a shield presented to all comers.

"Finally, the depletion of big game, and restrictions imposed by Government upon the killing of what remained, removed the chase from their list of dangerous pursuits, thus tranquilizing the course of their lives."

The things which are now bought and sold in country places in South Africa afford a good idea of how conditions are improved. This writer remarks:

"Of the many illustrations which can be given of the progressive movement, few are more striking than a comparison of the contents of nowadays country stores with what they formerly were. The writer can recall the time when the stock-in-trade consisted almost entirely of such things as Kafir hoes, cotton blankets, beads, copper wire, and matches. Any casual visitor to those stores in modern times would find a widely different assortment of wares, of which the following are samples: Carpenters' tools, plows, and other agricultural implements, cloth

clothes of good make and shape, crockery, leather and fancy goods, furniture, linen fabrics, hats, bonnets, shoes, and perfumery. The use of beads as an article of dress, and of wire as a cumbersome ornament to clog the arms and legs, were abandoned largely as clothing became habitually worn, the girls winning admiration more for their general quality than for the variety of colored trinkets which formerly made them attractive-looking."

He summarizes the results of European influences in Africa in the following terms:

"Within the space of comparatively few years, the natives of South Africa (have) advanced from a state of utter barbarism to one in which they are clothed, fairly industrious, peaceful, and progressively inclined; in which education and Christianity have been felt by them, their condition of life vastly improved, and the path of evolution made accessible.

"It was a great accomplishment, for which we may look in vain through the pages of history to find a parallel in point of the time expended upon it, seeing that but a few years ago some of the tribes were almost at their worst.

"That the natives themselves were in some degree willing agents for conversion cannot be doubted. But, to the governments, to the magistrates, and the European races, notwithstanding deep prejudices, must be awarded the credit, where credit is due, for a remarkable achievement, tho, as before stated, a large share of the inspiration emanated from that fine missionary effort which enveloped the Subcontinent in a network of Christian labor."—*Literary Digest*.

### THE MENACING MASS.

It stands to reason that the only plan for disgorging city population and breaking up congestion is to send the people back to the country whence they came. This is not merely an economic movement, but a sentimental. We have got to create a country sentiment, and a taste for the simpler methods of living, that are brought about by putting every human being in contact with Nature's storehouse. When the American people first knew Massachusetts and New York it was not Boston and New York City, but a wilderness to be turned into farms. Each family made its way almost unhelped. It was understood that any one who could get possession of a fertile piece of land could clear off the trees himself, build his own house, and then raise his own food, including meat, fruit and vegetables; and after that shear his own sheep and weave his own cloth from the wool, as well as make his own shoes from the hide. This sort of life is just as possible today as ever—only that the land tiller has every advantage of machinery which his progenitor did not have.

But we are confronted with a state of affairs which is creating a vast mass of people unable to do any of these things, and dependent for daily food, lodging and clothing upon the public. Our cities contain a congested mass of human beings that are a shame to themselves and to the age in which they are bred. While we can boast of

magnificent architecture, art, music, etc., we have to allow that the word city covers a sort of humanity that was not dreamed of when the Erie Canal was dug, or even when the Pacific Railroad was built. This congestion was brought about by the enormous development of manufactures in proportion to agriculture. What produced this disproportion we need not just now discuss, although history will tell us. In 1855 agriculture was still 10 per cent ahead of manufactures in the annual output of products; but in 1895 manufactures were 40 per cent ahead of agriculture in the market—a change of 50 per cent in fifty years. This was certainly not brought about by undisturbed forces.

However, the problem now is how to reverse this tendency, and get rid of the consequences. A good deal can be done by legislation in the way of preventing the depths of slum life, and the schools can do more in the way of leverage upon the young; still we have our astounding congestion, which can only be described by the word masses. The individual is being lost. Religion, social amenities, even common morals, pass out, and we are compelled to face the question. Is it a hopeless problem? Is this sort of thing to go on forever? The Socialist comes to us with the proposition that we pool our resources, and distribute under governmental control. If anything should come from this proposition it could hardly be anything better than a sort of universal Russian village life. There they have communism complete; the trouble already being that the individual is lost, and with the individual is lost the family. There is no salvation for human kind apart from family life. As a family we have made all of our headway from the deepest barbarism upward.

We believe that Mr. Booth is right, and that he is the best qualified man now living to pronounce on this subject. He has settled down to the conviction that colonization is the only remedy for our new barbarism; that we can only get rid of city congestion by moving the masses outward, and creating a new sort of home life. There is room enough in the United States easily to place five times the present population, giving to each family land enough, under scientific culture, to produce food, besides a large part of raiment.

We do not say that this can be done by devitalized and degenerated stock, such as constitutes quite a percentage of the dreadful slum world. It is true, however, that nine-tenths of the crowded herd is in a condition, with no more compulsion than that which takes their children to school, to earn their own living, and earn it well on the land.

The demand for help is astounding, and the wonder is that it is not promptly filled. That wonderment is greatly lessened when we study the component parts of our poorest class. They have been herded until they simply cannot stand the country. It is dolefully lonesome beyond endurance. They know nothing of trees or shrubs, and have not an acquaintance among the birds or beasts. To move these people into the country as individuals would not be worth the while. They would get back again as soon as possible. It is only possible to move them in families and groups of families. To do this is found quite possible, according to the testimony of the Salvation Army and of the German Government. Several of the other European governments are at work on the problem, and all report favorably.

This should become a national problem and a State problem, and the quicker the better. We cannot stand this congestion much longer. It is affecting the most sacred of all social convictions, the family; it is destroy-

ing morals; it leaves no place for economy, and none for betterment; it is making country labor impossible in harvest time; it is fouling politics, by creating a vast number of salable votes. If the State Legislatures would turn their attention in this direction, rather than to the importation of foreign laborers, and if they would legislate vigorously to dissolve rather than to increase the size of our cities, they would certainly be working on the right line.

We have got to have a social readjustment. The city has become a menace. Its bulk is no longer needed. The country gives all the privileges of a refined and progressive life. Every one of our starving thousands might be in possession of a competence. Slum life is Hell; it is intolerable as an adjunct of civilization. We must do more than believe; we must abolish. N. O. Nelson says, with pith and wisdom, that "the only solution of the city is to transport it to the country."

A holy impatience is on us to see this accomplished. Out with the shops, with the publishers, with the factories, and out with the people.—The Independent.

#### THE INSECT ENEMIES OF BOOKS.

More books and manuscripts have been destroyed by insects than by fire, water, rats and mice combined.

For many centuries librarians had observed depredations due to insects without knowing their precise cause. In 1721 Frisch of Berlin found in a crust of dry bread the larva of an insect (probably *Anobrium*) which bored holes in books, manuscripts, and paintings. In 1742 Prediger suggested methods of protecting books from the ravages of insects, and in 1754 the *Gentlemen's Magazine* of London recommended dusting the shelves and the fly-leaves of books with pepper, pulverized alum, and other insecticides. These palliatives proving insufficient the Göttingen Academy of Sciences, twenty years later, offered a prize for the discovery of injurious species and methods of destroying them. The subject has been thoroughly investigated by modern entomologists but no universal remedy has been discovered.

One of the most formidable of the insect pests is the bread borer (*Anobrium paniceum*) which is found in all climates, not only in libraries but in rye bread, whence its specific name. The beetle is one-twelfth inch long, downy, light brown, and striped lengthwise. The eggs are laid between the edges of the leaves, in scratches in leather bindings, chinks due to imperfect pasting of backs and flyleaves, etc. They hatch in five or six days, in summer, and the larvæ at once bore through the bindings, following the lines of paste. The worm is brownish white, cylindrical, slightly arched and has thirteen segments. The head is brown, scaly, and armed with mandibles which "only cast iron can resist," according to one naturalist. The worm bores long, narrow tunnels through paper, leather and wood, leaving a trail of sawdust mixed with white excrement. Growing rapidly and molting repeatedly, the worm finally enlarges its tunnel. Pupation occupies twenty days and takes place in enlargements of the tunnels very near the surface so that the perfect insects have to bore through only a thin shell, leaving the large round holes so common in old bindings. Pairing takes place in early summer in the tunnels which are not abandoned until the supply of food fails, when other quarters are sought. Sometimes not a single worm or beetle is found in a volume riddled with holes—a fact that has puzzled many a librarian.

Of the various methods that have been recommended

for ridding libraries of borers the only effective one consists in exposing the infested volumes to the vapor of carbon disulphide, by putting them in an airtight metal-lined box with a saucer of that liquid. Thirty-six hours of this treatment suffices to kill beetles, pupæ, larvæ, and eggs. The unpleasant odor of the disulphide disappears after a brief exposure to the air and the only objection to the use of the substance is its inflammability and the explosive character of its vapor when mixed with air. Hence the fumigation should be done in the daytime in a well ventilated room and the box should not be opened near a flame. On the other hand, the process possesses the merit of cheapness, as the disulphide costs only 9 cents a pound and an ounce suffices to fumigate a box of 70 cubic feet capacity.

Another species of *Anobrium*, the striped borer, found commonly in houses, bores through the shelves and furniture of libraries but does not injure the books directly, unless they are bound in wooden boards.

The larva of the *Dermestes*, on the other hand, has a particular fondness for bindings of leather and parchment. In May or June the females enter the library and lay their eggs, usually, on the edges of books in contact with the wall. As soon as the larvæ are hatched they begin their work of destruction, not making long regular tunnels like the borers but going in all directions and gnawing and disintegrating the bindings in an extraordinary manner. Sprinkling with benzine and fumigation with carbon disulphide have been recommended for their destruction.

Dr. Hagen, of the Museum of Cambridge, Mass., has found traps baited with cheese very efficacious.

Another beetle, the *Anthrena*, is occasionally very destructive to books, though it prefers skins, furs, and "stuffed" animals.

Far worse is the *Lepisma*, or "silver fish," so-called from its shape and shining scales. It is a little wingless insect of the order *Thysanura*, which undergoes no metamorphosis, and infests wardrobes and kitchen pantries as well as libraries. The most destructive species may often be seen scurrying away from a book suddenly opened in summer. It has a large head, from which the body tapers to a pointed tail, terminating in three bristles. Its favorite food is paste or glue, to obtain which it destroys titles, labels, and heavily sized paper, respecting only the parts that are covered with ink. It may be caught by cutting notches in the edge of a small box, and inverting the box on a plate containing paste spread on paper. This trap should be placed in the darkest corner of the room. The insects enter through the notches and are easily surprised and destroyed at their banquet. Pyrethrum powder also destroys or stupefies them, but perhaps the best way to get rid of them is to move and air the books frequently, and kill every insect discovered.

Psoques or book-lice are often dislodged from old books kept in damp places and may be seen on library shelves in summer. They are almost omnivorous but especially fond of paste and mold, in search of which they perforate bindings. Their depredations are often erroneously laid to the charge of bookworms. Pulverized camphor has some effect in driving away the book-lice, and they have a natural and formidable enemy in the *Cheyletus eruditus*. This blind acarion, or mite, which Latreille unjustly denounced as a bookworm, has an oval body, a soft skin, relatively large jaws, and long legs terminating in hooked claws. It swarms in old volumes but it destroys the book-lice, not the books.

The familiar cockroach attacks and devours in its nocturnal raids the paper and bindings of books as well as

flour, sugar, and other provisions. The species best known in Europe is the Oriental cockroach (*Blatta orientalis*) of Asiatic origin. In the male the true wings are well developed but the wing cases do not cover the abdomen. In the female both wings and elytra are rudimentary. The head is short and bent sharply downward. As in all *Orthoptera* the larva closely resembles the perfect insect, but is wingless. The female lays her eggs in April or May, and then dies. The larvæ grow slowly, undergoing six or seven changes of skin. Although the cockroach produces only one brood a year it increases rapidly, especially in the tropics. In the State library at Albany, N. Y., the bindings of a hundred volumes were destroyed by cockroaches in a short time.

Another species, the American cockroach, has become acclimated chiefly in hothouses and well heated dwellings in France and England, but it has long ravaged libraries in Brazil, Peru, and Mexico, where its depredations were mentioned by a missionary friar as long ago as 1654.

Among substances inimical to cockroaches we may mention, first pyrethrum powder. The powder, in as fresh a condition as possible, is strewn on the shelves. In the morning the cockroaches are found paralyzed, and may be swept up and burned. In Germany the gases produced by the combustion of gunpowder are used. The process, as described by Pergaude, consists in compressing slightly moistened gunpowder into cones like those used for Bengal lights, and igniting them, when dry, in the fireplace—a favorite resort of cockroaches. The poisonous gases drive the insects out of the cracks in which they pass the day, and suffocate them, so that they can be gathered and cremated. The process was devised for the purpose of destroying the cockroaches that infest fireplaces and chimneys, but it has also been applied, with excellent results, to libraries with cracked walls.

Traps for cockroaches have long been in use. They are of various forms but all are based on the same principle. The simplest is a glass tumbler or other vessel with smooth vertical walls, baited with a little flour. The insects easily reach the edge of the vessel from the floor by crawling up inclined flat strips of wood, placed there for that purpose. Then they fall into the vessel, from which they cannot escape by climbing its smooth walls. In the south of France regular cockroach traps are used. These are square boxes about two inches deep with the outside painted roughly to facilitate the ascent of the insects, the inside finely polished, and the edge curved inward. A saucer of flour and sugar is placed in the box as bait, and a hole in one side, closed by a cork, permits the game caught during the night to be emptied into the fire or a bucket of water in the morning. The destroyers of books that we have described have been selected, as the most important, from the sixty species which, according to Dr. Houlbert, live upon the productions of the human brain.—Scientific American.

## WANT AND EXCHANGE

---

To accommodate some of our readers and bring them in closer touch with each other, we have opened this "want and exchange" column.

Rates, twenty-five cents per insertion, not exceeding four lines, including name and address. Five cents per line for additional lines. However, no "want" may exceed six lines altogether.

---

**FOR SALE.**—Ten acres in the fruitful Santa Clara Valley, Calif., one-half mile from the growing town of Morgan Hill. Address, Blanche Lentz, Elgin, Ill.

# **PURE COLD WATER**

is one of the many attractive features of

# **Miami Valley**

Mr. W. E. Metz just completed his well. He found a strong vein at only ten feet. The water is perfectly soft and pure and as cold as ice.

In addition to the incalculable advantage of good wells the water which flows in the irrigation canals is drawn straight from the pure, sparkling Rayado Stream and is perfect for all domestic uses.

Coupled with the abundance and purity of water supply are the advantages of soil, climate, scenery, good neighbors, school and church privileges, perpetual prohibition.

You can't afford not to visit MIAMI RANCH if you are seeking a home.

PRICES now 50 per cent lower than established market price of such lands but will soon be advanced. TERMS—One-fifth down and one-fifth annually—only 5 per cent interest on deferred payments.

Buy your ticket to Springer, New Mexico. Special reduced rates on the first and third Tuesdays of July.

Write for booklet "Wesward Ho" which will tell you more.

Neat, handy garments for  
romping, playing or sleeping.  
Made in red, blue, brown and  
gray chambray, dainty con-  
trast trim. 2 to 6 years. 50c

**TROUSERED  
PLAY FROCKS, No. 2**  
Adapts itself to many uses.  
Has contrast belt, three at-  
tractive panels down front.  
Strongly made of silk-finished  
chambray. Red, brown, blue,  
gray. 2 to 6 years. 75c

**TROUSERED FROCKS  
No. 3**  
Rich looking; fit for any wear.  
Has contrast belt, two wide  
plaits. Cannot be matched for  
the price. Extra quality cham-  
bray. Red, blue, brown, gray.  
2 to 6 years. \$1.00

**TROUSERED  
PLAY FROCKS, No. 4**  
A novel Russian-belted effect,  
contrastingly trimmed and  
made of extra quality cham-  
bray. Very handsome. 2 to  
6 years old. \$1.00

**HANDY DANDY, No. 1**  
Makes the darling cute and  
comfortable. Wide contrast  
trim down front, on sleeves,  
on pocket and trousers. 2, 3,  
4 and 5 years. 75c

**FOR SAILOR BOYS  
3 to 8 years**

White Hyde-grade galatea, with  
blue collar handsomely set off with  
large anchor buttons. Cut in latest  
yachting style, and can be in-  
stantly changed into a jackie suit,  
giving the child two suits for the  
cost of one. \$2.50

## BUNNING'S TRI-SUITS

PATENTED DECEMBER 24, 1907

A new departure in garment making that dispenses  
with drawers' waist, suspenders and other supports

The only practical garments made that can be  
worn without any underclothing in warm weather

Made all parts in one piece, self-supporting, as nature  
intended, with no buttons to hurt, no annoying hooks,  
no unsanitary, foul air-retaining strings to interfere  
with health-circulation of air and blood, no uncom-  
fortable lumps or thicknesses, no irritation, and  
they are so easy to put on and off that a small child  
can dress itself — they appeal to parents at a glance

We guarantee Bunning's Tri-Suits will  
cut the youngster's laundry bill in half,  
and that at the price of one costly gar-  
ment children can be neatly, comfortably  
clothed with Tri-Suits an entire season

When you see them you will wonder  
how they can be sold at such low cost

IF YOUR DEALER CANNOT SUPPLY YOU, WE  
WILL, POSTPAID, ON RECEIPT OF PRICE

### THE BUNNY COMPANY 89 LINCOLN STREET, BOSTON, MASSACHUSETTS

Mention this publication and we will send  
you a handsome souvenir for your trouble

**FOR ROUGH RIDERS, 3 to 8 years**

Khaki Hyde-grade galatea, regulation army cut  
with 12 large, showy eagle buttons. Has belt,  
four useful flap pockets, and can be worn on all  
occasions. This suit will instill pride and patriot-  
ism in every youngster's heart, and is a genuine  
value at the price. \$2.00

**HANDY DANDY, No. 2**

For 2, 3, 4, 5 and 6 year boys.  
A labor-saving, comfort-making  
cover-all that quickly wins a  
mother's heart. Two handy pock-  
ets, and long pants to prevent  
stockings wearing. Just the thing  
for boys to dig and play in. 75c

**FOR SOLDIER BOYS  
3 to 8 years**

Fits for a Raja Prince. White Hyde-  
grade galatea, with blue belt and  
strappings trimmed with red  
worked braid. Has two pockets,  
and is finished with large, brass  
buttons. \$2.00

**FOR INDIAN BOYS  
3 to 8 years**

Better than ordinary kinds. Brown  
Hyde-grade galatea, full cut, two  
large pockets, brass buttons, and  
an abundance of brown and red  
feathered trimmings. You won't  
regret the price as they outwear  
three other suits. \$2.50

**HANDY DANDY, No. 3**

For 2 to 6 year old boys. The only  
pajama made having two cover-  
ings over chest, lungs, kidneys,  
stomach and bowels. Extra quality  
flannellette. Prevents uncovering  
and colds, and should be in every  
child's wardrobe. \$1.00

Our Price, per set of 7 volumes, f. o. b., Elgin,.... 3.50

Will send, express prepaid, for 75 cents extra.

## Mr. World and Miss Churchmember

By W. S. Harris.

It is a forcible allegory, somewhat after the style of Pilgrim's Progress, but in no sense an imitation of it. Fathers and mothers, it is the book that you should get for your son and daughter, and at the same time read it yourself. You will be stronger for the church after having read it. It illustrates vividly how Satan lures the church member, step by step, from the pure Gospel,

until finally he is lost forever. Send in your order at once and you will never regret it. Cloth only.

Our Price, Prepaid .....\$ .75

# ALBERTA

---

**¶ Of Alberta a distinguished writer has said:**

"North of the International boundary line and immediately east of the Rocky Mountains lies the Province of Alberta—a land blessed with all that is necessary to happiness and prosperity. Between the 49th and 60th parallels and between the 110th and 120th meridians lie 281,000 square miles of possibility. Here are mountains and plains, foothills and valleys, rolling prairies with wooded stretches between, dense forests and grassy meadows, clean, timber-girded lakes and winding brooks, cold mountain streams and navigable rivers, and a soil rich in the alluvial and vegetable accumulations of centuries. And as if not content with these outward signs of her favor, nature has hidden beneath the surface vast deposits of coal and other minerals; she has filled the subterranean reservoirs with gas and oil, and sprinkled the sands of the mountain streams with gold. That no living thing should go athirst, she gathered together the waters of the mountains and brought them to the plains, to be directed by the ingenuity of man to the use of the grazing herds and the planted fields. Then, to crown her efforts and leave nothing incomplete, she brought the chinook wind, warm with the breath of May, to temper the north wind."

**¶ In the Medicine Hat District we have a gently undulating prairie. The soil is capable of producing generous yields of all small grains and vegetables in abundance.**

**¶ The city of Medicine Hat, situated on the Saskatchewan river and underlaid with gas and coal, is destined to be a great manufacturing center.**

**¶ Why not join the colonies already there and enjoy some of the material benefits as well as help build up one of the largest and best colonies in the Canadian West.**

**¶ We have excursions every first and third Tuesday of the month.**

# President Roosevelt Says:

**"WORDS ARE GOOD ONLY WHEN BACKED UP BY DEEDS."**

The volume of praise spoken by thousands of cured ones who have testified to the healing virtues of that grand old household remedy,

## DR. PETER'S BLOOD VITALIZER

Is backed up by a record of actual cures extending back over 100 years. Contains no dangerous drugs or mineral poisons, but is made from pure medicinal herbs, leaves and barks which act directly upon the blood. This powerful vitalizing tonic was first used with wonderful success by old Dr. Peter Fahrney in 1780, and the formula has been handed down through four generations to the present proprietors, the grandsons of the originator.

### It Relieves and Cures

**Skin Diseases  
Malaria  
Rheumatism  
Stomach Troubles**

**Blood Poison  
Constipation  
Catarrh  
Bowel Troubles**

**Dyspepsia  
Kidney Diseases  
LaGrippe  
Liver Troubles**

#### A HAPPY WIFE.

Newark, N. J., July 6th.

Dr. Peter Fahrney & Sons, Chicago, Ill.

Dear sirs:—We have now had your Blood Vitalizer in our home for over ten years and I must say it has done a great deal of good. My wife was obliged to keep her bed continually. She has been a sufferer for many years with some form of stomach trouble. Since we have had your medicine in the house she is happy and recommends it to all sufferers. She says your remedy is better than anything she has ever come across.

Yours truly,

J. C. Ruschenberger.

#### SAYS IT IS A BLESSING.

Beresford, S. D., Oct. 19.

Dr. Peter Fahrney & Sons, Chicago, Ill.

Dear Sirs:—Please fill the enclosed order for Blood Vitalizer as soon as possible as we are all out at the house.

I was completely knocked out with stomach trouble and could hardly eat anything, but am now as well as ever. The credit of my cure is due to blood Vitalizer. It has been a blessing to me.

Yours truly,

L. P. Frieberg.

#### CURING THE LITTLE ONES.

Huffman, Minn., April 16.

Dr. Peter Fahrney & Sons, Chicago, Ill.

Dear Sirs:—Allow me to thank you for what the bottles of Blood Vitalizer which we have used have done for us. It has simply been wonderful. We had a little boy who was very weak and sickly, but since taking the Blood Vitalizer he has become so big and strong that it is a pleasure to look at him.

Yours truly,

P. R. Peterson.

#### A GRATEFUL WOMAN

Waco, Tex., Feb. 18th.

Dr. Peter Fahrney & Sons, Chicago, Ill.

Dear Sirs:—Had it not been for your Blood Vitalizer, I know I would have been confined to my bed. I was afflicted with rheumatism and extreme nervousness, which at my age, 65 years, made life almost unendurable.

My wonderful improvement I owe, next to God, to your Blood Vitalizer. My neighbors who have used it are also full of its praise.

Yours truly,

Louisa Mohr.

Not a ready-made drugstore medicine. Sold only through agents or direct from the laboratory.

# CHURCH MEMBERSHIP RECORD

The most unique, simple and practical system of record today is the card system.

There has been a demand for a complete practical and simple record system to be used by church clerks in keeping the membership of the local congregation. This demand has caused **Annual Meeting** to ask the Publishing House to arrange such a system. After investigating various systems of keeping church membership records, and getting the advice of many of our church clerks as well as pastors, we are now ready to offer what we consider the best outfit that can be furnished. This system provides for one card for each member and when filled out gives a complete record.

## Church Clerks

send for one of these sets and the question will ever be settled as far as a system of keeping your membership is concerned. It costs no more to start with than in book form and will last a lifetime with the exception of new cards, for new members, which will only cost you a trifle.

### No. 1. Church Membership Record.

A neat cloth-bound box, size 5x6 inches.  
A complete Index.  
100 Membership Cards.  
This outfit is ample for a membership to the number of 150. More cards will be needed when membership is above 100.  
Price prepaid, .....\$1.25

### No. 2. Church Membership Record.

A neat cloth-bound box, size 5x9 inches.  
A complete Index.  
200 Membership Cards.  
This outfit is ample for a membership of 150 to 400. More cards will be needed when membership is above 200.  
Price prepaid, .....\$1.75

Extra cards furnished for 50c per hundred prepaid.

A circular explaining how this record system can be utilized to the best advantage furnished with each outfit. Send your order today. If more information is desired write us.

# JERRY McAULEY An Apostle to the Lost

Edited by R. M. Offord

The new and largely revised edition of the book just published is neither biography nor autobiography but the happy blending of both. The editor gathered together the fragmentary accounts of the man's own life and with suitable explanations wove the entire into a most complete story of one of God's humblest servants and yet earth's greatest men. Jerry's own account of his sinful life is put in that language which shows he was keenly sensible of his awful guilt. And while the reader gets a clear insight into his life, it is in such a manner as not to feed the baser of human nature, but rather to rejoice that one should be saved from such lower and devilish depths.

To read his "testimonies" and to stop and ponder on them is to find the clew to his power. Here is one of them. "I have nothing to be proud of; I am proud of my Savior and not of myself. I was a notorious drunkard and gambler. Even my wife does not know of some of the sins I committed, and she never will till the Day of Judgment. I don't know what to say to express my feelings of thankfulness. I know I have been converted, that is, if conversion is ceasing to love that which is evil and loving that which is good. I know that divine grace saved me from a drunkard's grave."

## Kindle the Flame in Other Hearts

It is a good thing to write and print and spread the life of such a man as the hero of this volume. It may kindle the flame in many other hearts. Christians in other walks of life than he trod may be stirred to better living. And some poor, sinning soul, some wretched and sinking soul, some poor sinner, almost as bad as Jerry was, may read it in his extremity, and cry out with this ransomed prisoner, "Lord, save me, I perish."

## Every Church Worker

Should read this book, to get more inspiration and encouragement in Christian duty and privilege. Well bound in good cloth and stamped in gold. It contains over 300 pages. Price prepaid, \$1.00.

**BRETHREN PUBLISHING HOUSE, ELGIN, ILL.**

# OVER 200,000 ACRES

of land has been filed under the CAREY ACT in the Twin Falls District, Idaho, since April, 1907.

¶ There is still a large amount of land waiting for the settler in the above district. Also great opportunities are offered at American Falls, at Gooding and other points along the OREGON SHORT LINE RAILROAD.

¶ The Payette-Boise Reclamation Project under the U. S. Government is about completed and will be ready to furnish water to about 300,000 acres of new land in the spring of 1909. These lands can now be bought at reasonable rates and terms, by the settler, and are situated where the country is already partly settled, near good towns, railroads and electric lines.

¶ Rural mail routes and telephone lines are already established. Good schools and churches. No storms or cyclones. Farming is done by irrigation. No failure of crops by reason of too much rain or drought. Fruit crop is abundant every year. The people are happy because they are prosperous.

## Wonderful Possibilities

for homeseekers and investors. Climate Mild. Soil Very Productive.

¶ Alfalfa, Sugar Beets, and grains of all kinds are among the products that yield abundantly. Farm hands, carpenters, mechanics and in fact all classes of workmen will find plenty of work at good wages.

¶ Arrange your plans to go and see Idaho as soon as possible and secure some of this fine land.

¶ HOMESEEEKERS ROUND TRIP EXCURSION RATES are on First and Third Tuesdays of each month in 1908.

¶ WRITE NOW for printed matter and full particulars regarding this great country and how to get there.

## "Addition By Subtraction"

Mary E. Canode

PARADOXICAL expressions are always striking and instantly set one to examining their content in order to determine their full force of meaning. The term, "Addition by subtraction," here used as a theme of discussion was one of many impressive ideas presented in a lecture recently delivered by a prominent Chicago minister and lecturer.

The physicist tells us that nature abhors a vacuum. By means of the air pump he displaces the air from a bell-jar and then tells us that the jar is now filled with an invisible something which he calls ether, and that in its effort to rush in and again fill the space it has lately vacated, the air is exerting heavy pressure upon the outer surface of the jar. He removes water from a vessel and is able to prove to us that air has taken its place.

The twisting, whirling cyclone sweeps around a building and with its intense power draws the interior air from the building and at once Nature tumbles in the walls in its effort to fill up the vacancy. We dig a hole in the ground and at the earliest opportunity nature fills it with water, dust, snow, leaves, crumbling earth or anything available for its work. We plant the vegetable or flowering stalk or seed and remove and keep on removing the weeds and other obstructions to growth and the plant will have growth added to it. And so one might present an indefinite number and variety of examples illustrative of the fact that wherever we subtract, Nature adds. Indeed this seems to be Nature's way and God's way of helping us in everything of life. We to do the subtracting and it and he to do the adding.

Let us take for example one of a life's larger desires or aspirations. Let us say it is the desire for an education. The most apparent hindrances would doubtless be distance from a desirable school and lack of necessary means. Spurning the thought of moping and idly lamenting his seeming misfortune, the educational aspirant subtracts the distance in miles and by diligence and economy removes the other hindrance

and finds the opportunity for education right at hand. With opportunity added he starts on his desired course and day after day, month after month, year after year keeps on subtracting the naturally arising hindrances; impulses toward giving up the work, alluring events in the social world or occasional disinclinations to study, and he finds that education is added to the mind in proportion to the amount of subtracting of hindrances.

As in all vegetable life and growth, the tree, the shrub, the vine must be freed of its unnecessary or objectionable branches that Nature may add better and greater things, so likewise must we keep subtracting from our natures the objectionable things that are of riotous, uncultivated growth. Evil tendencies must be subtracted and good tendencies will be added. Wrong thoughts must be ejected and right thoughts will take their places. We must cut out the unkind words and kind ones will suggest themselves. Cut off, reject, expel, subtract anything and everything of an objectionable nature. Trim off, rub off, polish off the knottiness and the naughtiness from within and without and the better things for life will be added.

Subtract pain, and pleasure will be added. Subtract the tendency to eat and drink what is harmful to us, and add the desire for wholesome things. Subtract the inclination to read trashy literature, and the desire for good reading is added. Subtract the tendency toward Sabbath desecration and attending improper places of amusements and feel the addition of a desire to keep holy the Sabbath day and an inclination to go to proper places. The one self must keep up a continual warfare against the other self. We are living, active beings and cannot rest content with inactivity. The negative life is no life at all and is never met with in the absolute sense of the expression. Few, if any, persons advocate such an idea as that of doing nothing in order to avoid doing wrong. The impulse to *do* is ever with us and every one will admit the fact that it is right and proper to do in the line of getting rid of the objectionable things

rather than to do nothing and thus allow the objectionable things to continue.

The work of the teacher, the preacher and the philanthropist—of all workers in good causes, is to teach the various members of society how to subtract those things that hinder the addition of better things. The teacher shows children and youths how to subtract indolence and illiteracy that knowledge and intelligence may be added. The preacher and Sunday-school worker teach old and young the importance of subtracting evil works and tendencies that good works and tendencies may be added. The proper philanthropist advocates the removal of laziness and want that industry and plenty may be added.

It is always right to do the right and no one really deserves any particular praise for doing right because it is his duty to himself and to his fellow-men. But on the other hand it never harms any of us to praise or commend a good deed. It is good for us to grow enthusiastic over the knowledge that some individual, class, city, state or nation has put himself or itself on record by having successfully added to the cause of justice and righteousness by subtracting an evil that has perhaps long stood as an opposing force. To this end we may well congratulate the police force of Chicago on its recent stringent rules which are intended to cut out profanity from the language of its members. The ruling for punishment by expulsion from the ranks, made by decision of the members, shows how in earnest they were about the matter. It had been their duty to arrest citizens for profanity and the inconsistency was too apparent for them to arrest others for that in which they themselves indulged. On account of some other inconsistencies might many more vices be lopped off. At any rate, their action, if made practical, will mean the subtraction of a great and highly offensive evil not only from their body but largely from the entire city. The addition will be purer speech, more gentlemanly language and a somewhat more refined class of police and people.

At last! Our people as communities and states have awakened to the fact that we must subtract the saloon and all its associated evils from our midst. This once done, which means the subtraction of drunkenness and all its attendant vices, will add to our country sobriety and all its attendant virtues, just as truly as the subtraction of slavery from our land resulted in the addition of full freedom.

The kind of resultant addition always depends upon the subtraction. The addition of good is more natural than the subtraction of bad. For this reason the removal of the bad is of first importance. Where good is in place it is never safe to subtract that good lest bad take its place. For example, if the best institutions of our land, the churches and schools, should be subtracted we so well know what would be the horrors of the added conditions that we do not care even to dwell

upon the thoughts of such a possibility. France as a nation once decided to subtract all religion from its national existence. Infidelity with all its horrors in the form of the awful "Reign of Terror" was the addition to its experience and history.

Some of our greater cities have allowed Romanism, Judaism and various isms to so far dominate their laws as to rule out from their public schools the Bible and all Christian allusions from their text-books. (Or is it in the main the result of the schemes of some grasping book concern?) By this infamous act of subtraction of the only safe guide to righteousness, must the good people of the present see the children of the present and the future law-makers of our cities and our nation gradually turned to following after the lop-sided, half-way righteousness of those isms, or worse still, to the adoption of the things of infidelity? If such are not the resulting additions it will be because the evil results have been counteracted by the additional labors of the preacher, the Sunday-school teacher and the mission worker.

It is a peculiarity of our subject that it will not well bear reversion. We can easily grasp the idea of addition by subtraction but we cannot well think of subtraction by addition. The mind grows weary of trying to think it out. We sometimes have the crowding out process suggested,—that of forcing out a wrong by forcing in a good. But the experiment is never completely successful. It is much better, easier and more natural to think of first removing the evil and thus make way for the natural addition. The physician removes the cause of the illness that natural health may restore itself. We cannot expect to add a virtue by crowding out a vice by that virtue, but rather by removing the vice that virtue may take its place. The choice of addition is always with ourselves just because ours is the choice of subtraction. Generally speaking, that which we earnestly desire we in time can have. If we are in earnest about our desires we will strive toward them and that necessary strife is the subtraction of oppositions.

Our acquisitions are not so much the result of reaching out and grasping for them as they are the result of removing the hindrances that keep them from coming to us. The good things of life are God's gifts to men and are free, plentiful, boundless, always present and always ready to flow to and around us. What we need to do is to ever strive to subtract from our own lives and as much as we can from the lives of others, the wrong, the evil, the objectionable, the interfering things, and all good things shall be added.

THE child is God's unspotted jewel given to parenthood. It is impossible for it to defile itself from within. Defacement, if it takes place, must come from us—the parents.—*Adolph Zhan.*

# The Oregon Trail

M. E. Bruce

THE famous Trail, the original line of emigration to the Pacific Northwest, may be said to date back to the discovery of the South Pass of the Rocky Mountains in 1822 by Etienne Provost, although sections of it had been traversed by hardy adventurers in the early part of the seventeenth century.

This great roadway was trodden a distance by Lewis and Clark; Whitman and Spalding, missionaries, accompanied by their wives, bound for Oregon, and by many noted trappers and adventurers.

It was this great trail which the Mormons in 1846 followed for more than a thousand miles, as did the great gold-seekers of California in '49. So great has been emigration that in many places the trail is ten feet deep, and the wheels sink to the hubs in the deep ruts.

The Oregon Trail is without its parallel of picturesque sceneries.

Its tragedies and legends of heroism, that some say will lend a theme for an imperishable epic to go down into the history for all ages, as the physical marks have already been preserved along the way to point to the spots where the multitudes passed, suffered and died.

The Oregon

Trail began, as did the Santa Fe Trail leading to the Southwest, at the town of Independence, on the Missouri River. Practically, St. Louis was the eastern terminus, emigrants going up the Missouri River and there taking the "prairie schooner" and setting out either for the Northwest or the Southwest.

The two trails were the same for forty-one miles, when, as the historian Chittenden remarks, a simple signboard was seen which contained the roughly-painted words, "Road to Oregon." That signboard today with its lack of ostentation and epigrammatic clearness, would be worth more than its proverbial weight in gold to any State historical society.

There were branch trails that came into the road from Leavenworth and St. Joseph, striking it above the point of departure from the Santa Fe Trail; but

the Oregon Trail proper swung from this fort running steadily to the Northwest, part of the time along the Little Blue River, until it struck the Valley of the Platte, so essential to its welfare. The distance from Independence to the Platte is about three hundred and sixteen miles, the trail reaching the Platte about twenty miles below the head of Grand Island. The course thence ran up the Platte Valley to the two fords, near the forks of the Platte.

In these old days at the forks was a point of departure. If one chose to follow the South fork of the Platte, he might be led into the Bayou Salade, within reach of the Spanish settlements at the head of the Arkansas, or he might take the other arm and come out on the edge of the Continental Divide, much farther to the north.

The Oregon Trail followed the South fork for a

time, thence swung over to the North fork, at Ash Creek, about five hundred fifteen miles from Independence. It was six hundred sixty-seven miles to Fort Laramie, which was the post on the eastern side of the Rockies. Thence the trail wound its way up the Platte, keeping close as it might to the stream, till it reached the ford of the Platte, well up

Section of "Old Oregon Trail," Sweetwater, Wyo

towards the mountains, and 794 miles out from Independence, nearly the same distance from that point as was Santa Fe on the lower trail.

A little farther on, the trail left the Platte and swung across to the valley of the Sweetwater. The famous Independence Rock, eight hundred thirty-eight miles from Independence, was one of the most noteworthy marks along the trail. It marked the entrance into the Sweetwater district and was a sort of register, holding the rudely carved names of many of the hardy Western adventurers. By the Sweetwater the Oregon trailers were taken below the foot of the Bighorns, past the Devil's Gate, and up to that remarkable crossing of the Rockies, known as the South Pass. This is seven hundred ninety-four miles from the Missouri River.

Starting now down the Pacific side of the Great Divide, the traveler passes through lands which look as they did fifty years ago—unsettled, inhabited by coyote, elk, deer, bear, and the mountain goat.

Fort Bridger, the first resting point west of the Rocky Mountains, was a delightful spot in every way, and always welcomed by the Oregon trail-ers.

The trailers on reaching the Bear River, crossed over the height of land between the Bear and Port Neuf River, and reached the very important point, Fort Hall, the post established by Nathaniel Wyeth. This was the first point at which the trail struck the Snake River, that great lower arm of the Columbia, which came dropping from its source opposite the headwaters of the Missouri to point out the way to travelers.

At the Raft River was another point of interest;

across Iowa and Illinois to his Indiana home. Says Mr. Meeker, "I want to save the Oregon Trail from oblivion. Although the fathers and the grandfathers of the present helped to make it, the past was in a fair way to be forgotten." Between Puyallup and Omaha nineteen monuments have been erected. Thus after a year's travel, commemorating the Oregon Trail, Mr. Meeker reached his Indiana home.

After he left his Washington home, more than two thousand people contributed to the erection of Oregon Trail monuments. "At various places along the way," said Mr. Meeker, "with the aid of the people, we erected monuments—a huge stone boulder here, a cairn of stone there, a signboard or post in another place."

Mr. Meeker spent much of his time talking to public school children. "In Baker City, Oregon,"

for here turned aside the arm of the transcontinental trail that led to California. Working as best it might from the Raft River, down the Great Snake Valley, touching and crossing and paralleling several different streams, the Oregon Trail proper ran until it reached the Grande Ronde Valley, at the eastern edge of the Blue Mountains, then the ruts struck the Umatilla, and shortly thereafter the Columbia River.

It was one thousand nine hundred thirty-four miles to the Dalles, one thousand nine hundred seventy-seven to the Cascades, two thousand twenty miles to Fort Vancouver, and two thousand one hundred thirty-four miles to the mouth of the Columbia, though the trail proper terminated at Fort Vancouver.

Now the old trail, which was one of the great roadways of the nation more than a half-century ago, has been rescued from oblivion and marked with stone monuments, and is better known than ever before. This fact we owe largely to the work of one man, Ezra Meeker.

Mr. Meeker, starting from his home in Puyallup, Wash., on January 29, 1906, retraced his march of fifty-four years before, back along the Oregon Trail to the Eastern terminus on the Missouri River, then

said Mr. Meeker, "a monument was erected by the contributions received from eight hundred school children, all of whom were present when it was dedicated, and at Boise, Idaho, one thousand two hundred school children contributed to purchase a granite monument, which will mark the place where the old-timers passed through what is now a thriving city."

The Governor of the State and other State officers insisted that the monument be erected on the State House yard, and it was dedicated in the presence of more than three thousand people.

Such has been the Oregon Trail, blazed and tramped by traders, trappers, gold-seekers, missionaries, and colonists,—a mighty highway across which surged the advance tide of a nation's traffic. Years passed, and railroads supplanted the old Oregon Trail; its very whereabouts was forgotten; disputes arose. Then an old man, almost eighty, with his grandchild clambered into a prairie schooner, made in part of the one in which he had journeyed westward in 1852, and drawn by an ox team, and the Oregon Trail was retraced and marked with monuments, that a people and a nation may not forget.

*E. St. Louis, Ill.*

## WILD BERRIES AND BERRY-PICKING IN SOUTHWESTERN OREGON.

HOWARD D. MICHAEL.

IT may interest the readers of the INGLENOOK to know of the many kinds of wild berries growing in Southwestern Oregon, in the district known as the Coos Bay Region, or Coos County, so I will endeavor to give you their names and a short description of some of them.

There are blackberries, black-capped raspberries, salmon berries, thimble berries, black, blue, and red huckleberries, two kinds of elder berries and two kinds of gooseberries. But the red elder berries are poisonous and one kind of the gooseberries is covered with briars so they are not used for food.

Then there are service berries, sallale berries, blueberries, and a species of berry that is named the "Oregon Grape."

The above-named berries are all good to eat, with the exception of the red elder berries.

Then there are wild currants that are not used for food although they are not poisonous.

So there are several kinds of wild berries here, but we cannot boast of a good variety of wild nuts like there are in some of the Eastern States.

Hazelnuts are the only edible wild nuts, as the myrtle nuts and acorns are too strong to eat.

Returning to the subject of berries, the blackberries are the first to ripen in the early summer, and then may be seen pickers from small to great and from young to old, going toward their favorite place in some old logging woods or some place where there is small brush, for it is there that the blackberries grow the best.

The first pickers usually come back with their buckets about empty, as it is usually the case that they start going after berries about a week or two before any are fully ripe.

But after the berries are plentiful, crowds may be seen going in buggies or sometimes on an old hay rack, starting soon after daybreak to be the first on the scene of action, for although there are plenty for all, each crowd wants to carry off the honors for the largest pick.

Of course there is a picnic dinner near some nice creek or spring and a general good time is assured.

When those of another party come within hearing distance, it is easily told there are some jolly pickers out, as their hearty laughter rings thru the woods, and echoes and reëchoes, for everybody is happy.

It is a treat to be out with nature among the hills where there is nice green grass, large ferns as tall as a man's head, and small ones too, and beautiful flowers blooming all around, while the birds are singing sweetly in the trees near by.

But occasionally there is heard a cry of fear instead of the joyous laughter or singing, for although some

of the berry pickers are good at finding the best berries, they occasionally find a bear there picking when they come in sight. Then there is usually a scramble to get away as fast as those interested can run, though the bear runs in one direction and the berry-pickers in another.

The crowds usually get from four to five gallons of blackberries to the person, if it is a favorable season at all, and later in the fall they often get from two to five or six gallons of huckleberries to the person, in a day's picking, for the black and blue varieties grow in great profusion.

The writer has often picked from one to one and one-half gallons in an hour's time of an evening after a day's work.

The bushes of the black and blue huckleberries usually grow from five to seven feet tall, but those of the red variety often attain a height of twelve to fifteen feet.

The salmon berries are of a rich yellow color when ripe and a very nice-flavored berry. Thimble berries are a pretty red color when ripe and are a fine-flavored berry. They are well named, as the core inside is so large (the core is like that of a tame raspberry) that they are very thin and not of much importance.

The blueberries grow on small vines among the sand hills along the ocean beach.

The Oregon grape, Oregon's emblem, grows on a small tree-shaped shrub from two to five feet tall with one or two clusters of dark blue grapes or berries in the center of the top of the plant. Although they are very sour, they are fine to eat if plenty of sugar is used in cooking them.

The wild raspberries are about the same in size and looks as the tame black-capped ones and are of a very fine quality.

The sallale berries are very plentiful in some districts in the mountains here, and in the fall the bears feed on them while they last, then go to the oak woods to finish fattening, preparatory to hibernating for the winter.

*Myrtle Point, Ore.*

## OUT OF THE PAST (A FANCY).

RICHARD BRAUNSTEIN.

JUST through the forms of the majestic oaks that have stood their guard on this knoll of a century and more, one can catch a glimpse of the weatherbeaten and veteran mansion. The shingles crowning it are dark in the center and framed about the edges with rich moss, while here and there in open places, where the wind and storms of years had stolen, these shingles grow tiny patches of lichen, living and thriving on daily decay.

The curious little panes have lost the crystal sparkle

of their youth, and now give forth dull lights of blue, green and yellow, like the dimmed glaze of an old man's eyes.

From below the many-eyed windows, on each side, little streaks of light brown, tinged with red, made delicate imprints like the path left on the cheek by tears. The row of colonial pillars, though their pure whiteness has long ago gone and their formerly erect bodies are slightly bent, still proudly support a roof under whose protection had often been seated in gay groups the wits and beauties of the colonial days.

Under the eaves now live a colony of bats, and in the evening, with the southing of the wind in the trees, one can hear the solemn hooting of an owl.

The side balcony still retains some of its quiet dignity, even though suffering the loss of more than half of the quaintly-carved pillars, though the roses and jasmine bloom as of yore and smell as sweet.

The once clear path, leading to the old mansion, is completely choked with weeds of rank and rapid growth, which, proud of the quiet ground in which they are given life, raise their foul heads so that they might better watch the two old rocking chairs so closely placed together on the wide porch. A porch whose paving had served as ballast, tradition tells us, for the bold little ship that had dared to sail the sea to the new world—the ship of our forefathers. Now a lizard may be seen sunning itself in a decayed crevice, or a toad blinking in comfort and peace in the glare of the noonday sun.

The wind had whispered it oft to the oaks—and they in turn trembling repeated it, through their messengers the falling leaves, who told it to the weeds—that the old house is haunted, that at dusk the two rockers are never still, but that they sway to and fro, as they creakingly sing in time with the changing tone of the wind, "Past Glory Gone, Past Glory Gone," and that the two chairs are occupied; one by a lovely dame, with her silver hair just peeping from out a lace cap, while a dainty kerchief thrown over a gray shining silk embraces her shoulders; her delicate white hand rests on the arm of the other chair, in which is seated an officer of the Continental Army.

His face is cleanly shaven, his head adorned with a spotless powdered wig; close by his feet rests the three-cornered hat of the period. A sword in scabbard lies across his knees. The silver buckles shine on his shoes, like two eyes peering into the gathering gloom. A little red stream flows from his temple down the right side of his face, dyeing the high lace ruffle about his throat, but the colonial dame does not see it.

This was the story the wind told the trees, and the trees the weeds, and they in turn told the dreamer as he lay, dreaming dreams, and his imaginings dwelling on the glories of the Past and Dead Romance.

## ALL RIGHT.

Waste of time to whimper when you see things going wrong;

For that's the time a fellow should be coming good and strong.

And it's not wise to be sobbing if your plans cease going right—

That's the time to roll your sleeves up and proceed straightway to fight.

Everything that's worth the winning is worth fighting for to get,

And if you will keep on fighting you'll be happy yet, you bet.

Every somber cloud that hovers has its silver lining bright,

So just keep agoing, brother, confident that all is right.

Rainy days may cause you trouble, but don't waste your time in sighs;

Just recall the bow of promise God has set upon the skies. Meet reverses in your fortunes with a strong man's cheerful laugh,

And you'll find them shrink before you till they measure less than half.

Only cowards sit repining when they fail to win the game; Only cowards try to shoulder on the world the weight of blame.

Roll your sleeves up to your elbows, then pitch in with all your might

With determination steady that you'll win out yet, all right.

Don't you try to trouble trouble till old trouble troubles you,

Then just face it fairly, squarely, and to trouble say, "Skidoo!"

Don't fret over opposition—kites must fly against the wind—

You will win out if on justice all your hopes are safely pinned.

Do the duty lying nearest, and be sure you do your best, Yours is but to do your duty, God will take care of the rest.

You may think success is often hidden far away from sight,

But the doing brings the winning—everything will come out right.

—The Commoner.

## PRESIDENT ROOSEVELT ON THE BIBLE.

"EVERY thinking man, when he thinks, realizes what a very large number of people tend to forget that the teachings of the Bible are so interwoven and entwined with our whole civic and social life that it would be literally—I do not mean figuratively, I mean literally—impossible for us to figure to ourselves what that life would be if these teachings were removed. We should lose almost all the standards by which we now judge both public and private morals; all the standards toward which we, with more or less of resolution, strive to raise ourselves. Almost every man who has by his life-work added to the sum of human achievement of which the race is proud, of which our people are proud, almost every such man has based his life work largely upon the teachings of the Bible."

## Around the World Without a Cent

H. M. Spickler

### Chapter XIII.

It was somewhere in the Wicklow mountains, on the coast road between Dublin and Cork. The hour was noon, the day cold and rainy. My only lunch was a half loaf of English bread, tied to the saddle. I leaned the wheel against a picturesque, tumble-down sod fence, and on the easy hospitality of the Irish, was admitted into an Irish woman's cottage.

I had paid a certain definite respect to the only other BIG inmate of the house,—a long, razor-back hog, with a nose three feet long,—that came out (the nose) as I went in.

For some pictures which I carried I wished to obtain some bacon and potatoes, a kindness never failing among the Irish, no matter how poor they may be or how scant in food, little thinking that the hog, whose rough, wriggling back I had so affectionately stroked at the door, had also the same delightful pain of hunger gnawing at his vitals, and was so soon to satisfy it, in part, at my expense.

"From America," said she, when I told her about my mission,—“whare yez hiv ivrything to ate and dhrink and whear on yer back and yer come iver here to stharve in this divil's land, when our boys and ghirls are all goin' to yer country,—there's nothin' doin' here for them what's got any backbone—what yer sez yer doin'?”

I had been listening and looking. The small chunk of peat lay on the open fireplace, smoking, but as usual, not giving forth any heat. A pair of tongs and a worn-out hand-bellows lay near by. In the center of the room stood a three-legged stool by a puddle

of water. An old clock that hadn't run for fifty years and a cheap crucifix were the only ornaments on a heather-bordered shelf by a dusty chromo of the Virgin.

“Yous look loike yer wuz big and sthrong, why isn't yer not home with the folks, rootin' the praties and raisin' your own hog-pig?”

I then told her more in detail about my mission,—that I was going to travel around the world to see how the people lived and learn the—

“To see how they lived! And hasn't yez any houses in Ameriky?”

I told her we had, that my parents lived in one just like her own, though I felt the absurdity of the comparison.

Then she crossed herself and gave the tongs a little kick, as a rooster, sporting a solitary tail feather, followed by two old hens, promenaded through the sole window of the cabin and down the log placed in position for them.

“Yes,” I said, “I am to study the customs and habits and sights and people and animals and laws and

mountains and rivers and lakes and churches, clear around the globe.”

“The globe! Now, what's that?”

“Why, you see, Mrs., I mean to go clear around this earth. I am going to travel to all the big cities and see the interesting people, like yourself. I am going to Rome to see the Pope! And I'm now on my way to see Cork!”

“To see Cor-k-k-k! And yez are goin' ter ride all the way jis ter see Cor-k-k-k? Can't yez see it *on the m-a-p!*”

Irish Man and Wife. House and Barn with Oats Stack Topped with Reeds. Notice White Cap Worn by the Good Lady.

There are some people who never see anything or get any place except *on the map*.

She had never learned of the value of travel. Her vision of the earth was limited to the wild hills around her cabin and a few "spots" on the map in the little old geography she once looked into when a girl.

Little did she prize that wonderful camera, the eye, made that we might see the beauties and wonders of creation, that human lens that photographs more in ten seconds that the human mind can comprehend in ten years!

Though I received no food from the Irish woman, I have no censure for her. Like many others, of superior advantages, she was content, though her head be as empty as her house, to find out things and to get to places, *on the map*!

Discouraged in spirit and hungry in stomach, I said "good-bye," and came out, to find that the hog had found my bread, upset the wheel, and was swallowing great portions of it,—the bread,—with the oilcloth wrapping.

"Can't yez see it *on the map*?" I was more than half inclined to believe that that was the best way to see Cork, or any other place. And often, in my lonely, dangerous and difficult touring, when the hours of night were dark and chill and late, I have been haunted by that raw but witty suggestion of my Irish lady, "Can't yez see it *on the map*?"

### BATS.

JOHN H. NOWLAN.

WHEN twilight falls the birds and dragon-flies cease from their labors. True, the toad is then in his glory, and the shrew and the mole may assist him; but they are terrestrial, and insects may circle a few feet above them with perfect immunity.

Are they then to have a free field? Not yet. See that bird flying and tumbling around in such an erratic manner. It is not a bird at all—it is a bat.

Bats (chiroptera), are generally insectivorous, although in other lands some are not, the flying fox for example being a fruit eater.

They are true flying mammals, the body being adapted to flight. The arm and fingers are prolonged to sustain a thin membrane which forms a wing. The thumb is free, enabling the bat to climb, though when at rest it suspends itself by its hind feet.

It hides by day in caves, lofts, hollow trees, etc., and ventures out in the twilight.

Its eyes are small and of little use, as it flits among bushes and intricate passages when blinded.

In capturing insects it uses the membrane extending from tail to hind legs as a net. Its flight is uncertain and awkward, and in taking the insect from the net it often turns a complete somersault.

The wings of the bat are free of hair, but the body is covered with hair like that of the mouse.

When winter comes they congregate in sheltered places, suspend themselves by their hind feet, and pass the winter in this position.

*Mulberry Grove, Ill.*

### COST OF ACCIDENTS.

THE street *Railway Journal* says of the prevention of accidents:

"The cases are not rare where the amounts paid in damages annually equal from 4 to 5 per cent of the gross receipts. One cannot expect the casualties ever entirely to disappear. Human nature will continue fallible, and accidents are one of the prices which are paid for the enjoyment of the benefits of modern civilization, which include rapid transit. Nevertheless, in the last analysis all accidents, or practically all, are caused by negligence on the part of the public or the employé, or both. The pedestrian on the street will take chances about getting across the track before the approaching car reaches him, or will forget that another car may be coming in the opposite direction. The passenger will jump on or off the car while it is in motion and fail to do so safely. The motorman will start his car too soon or fail to stop it in time, the conductor will give the wrong signal, and so on down the list. These things are bound to occur, even under the best conditions, but there is no doubt some good will accrue from careful work in endeavoring to lessen them.

"A certain amount of instruction in the proper way of boarding and leaving cars can be given the public, but the principal remedy so far as the public is concerned is in making everything as nearly fool-proof as possible. It is for this reason that the Minneapolis gate has proved successful in reducing accidents from boarding and leaving cars. The same advantage is claimed for the pay-as-you-enter car, because the conductor remains on the rear platform and sees that passengers do not injure themselves. The possibilities of instruction, so far as the train crews themselves are concerned, are more favorable, because these men can be brought together and told explicitly what to do under different conditions to avoid accidents as well as how to manipulate the controller or collect fares. For this instruction the services of the claim agents of the company are most useful, because they are constantly dealing with accidents and know under what conditions most of them arise. This plan is being followed by several companies with satisfactory results."

JOSH BILLINGS once said: "My son, consider the postage stamp; its usefulness depends on its ability to stick to one thing until it gets there."

# Liberty Enlightening the World

Richard Seidel

It is the mission of Liberty to enlighten the world, to bear aloft her blazing torch, piercing through the darkness of error, leading the nations from shadows of ignorance to the perfect glory of righteousness and truth. And the people of these latter days, who have felt the inspiration of her presence, and shared the benefits of her blessing, did well in joining hands even over the great waters, to raise an illumined statue in her honor, an emblem of the future fraternity and peace of the nations.

But let us see, in part, in what our liberty consists. America has been justly eulogized "the land of the free and the home of the brave." It is true, we live in a free country, wrested from monarchical power and

We are free from God in the Constitution; free from the Inquisition, free from fanatical bigots who propagate new faiths by the sword; but alas! we are as far from right when in our independence we skip the bounds of conscience; too many irreverent, irreligious and infidel run the broad open road of wickedness to ruin. Oh that God might reign in the soul and his laws be written in the hearts of his people!

We have no curfew that tolls the knell of parting day, making retirement at that time absolute; but left to individual choice, we have allowed ourselves to be the slaves of pleasure, and to revel in midnight orgies regardless of consequences to life and health.

We are free from present civil strife, but not from standing armies, who only wait for the summons of action; but still the voice of Peace is in the land constantly entreating the nations to learn war no more.

From one thing we can boast but little freedom, and that is the dire curse of drunkenness; morbid appetite, insatiate, has usurped control and disease, quacks, poverty and death have followed in its wake; but behold the grand and noble army of Prohibitionists, they will yet conquer this terrible enemy.

O Liberty, lift still higher thy immortal light, shine abroad over the whole earth; let thy rays enter the dark places of voluptuous sin and habitations of evil; illumine the hearts of the people, and relieve from the shackles of false living and consequent care and crime; go to high places and destroy the insidious foes of God, and goodness; shine on, reign eternal, O beautiful Goddess, through the long twilight; nor will thy perfect work be finished before the dawning of that day when all will be free in truth.

THERE is one crop that will always be harvested in time, no matter what the weather may be—wild oats; and nobody ever yet was satisfied with the yield."

released from despotism, in a glorious Republic, formed and maintained by the people, and all the laws of the land passed and executed by the same.

We have a wonderful free press, truly the world's liberal education; but the terrible immorality of the matter which often passes through it is greatly to be regretted, the tendency of which is not to elevate in truth, but to enslave in evil. When will be uplifted a higher standard in literature by which all will abide? Not until there is universal goodness in the hearts of the people.

We have no feudal system of lords and serfs as in the tenth century; but we have the millionaire and many poor, the landlord and tenant; not until the giant god, Mammon, is slain shall we have justice and equity ruling in the land.

## SONG OF THE SOUTH WIND.

I am the breath of the summer days;  
 I lengthen the buds into leafy sprays;  
 I rock the fledglings in the nest  
 And rouse the old woods from majestic rest;  
 I roll the white clouds thro' the depths of blue  
 And shake from the flowers the lingering dew;  
 On my breath the murmuring bee I bear,  
 And lightly I toss the maiden's hair;  
 I send into smiles and dimples the stream,  
 Then fly to fields where the flowers teem,  
 Where thousands of odors sweet arise,  
 Breathed up by blooms of a thousand dyes.  
 Rustling and whispering thro' leafy bowers  
 I scatter like snow the catalpa flowers;  
 On my tremulous wings I bear along  
 The merry notes of the wild bird's song.  
 The plash of fountains, the lilt of the stream  
 That curls along with crystal gleam;  
 I breathe o'er the green earth, sweet and strange,  
 All sounds and scents from Nature's wide range.  
 And far, far out on the waves I play,  
 Roughening their crests and scattering spray;  
 I swell the sails as the white boats glide  
 Over the ocean's restless tide;  
 Spirit am I of the blossoming year,  
 When days are long and skies are clear.  
 But when the shortening days portend  
 The verdant year is near an end,  
 I bid farewell to bower and brook,  
 Of the birds and flowers I take one last look,  
 And breathing low thro' the fading grass,  
 Silently from the earth I pass.

—Anna J. Roberts.

## "AN ARRANGEMENT."

THE coast line between Canada and the United States, from the St. Lawrence River to Lake Superior, is about 2,000 miles, says the Philistine.

In the year 1812 there were 46 forts, big and little, on the United States side, and about the same number frowned at us from Canada.

At Fort Niagara alone there were at one time 6,000 troops. Altogether we had on the Great Lakes over a hundred craft devoted to the art of fighting—this in the interest of peace. In one little battle we had with our British cousins, on Lake Erie, Commodore Perry, a rash youth of 27, captured six British ships and killed 300 men. A little before this the British destroyed 10 ships for us and killed 200 Americans.

After the war of 1812 was ended and peace was declared, both sides got busy, very busy, strengthening the forts and building warships.

At Watertown, Conneaut, Erie, Port Huron, Cleveland and Detroit were shipyards where hundreds of men worked night and day, building warships. Not that war was imminent, but the statesmen of the time said there was nothing like "preparedness." In Canada things were much the same, and there were threats that Perry's famous message, "We have met the enemy and they are ours," would be reversed.

Suddenly, but very quietly, two men in Washington got together and made an agreement. One man was

acting Secretary of State, Richard Rush of Philadelphia. The other was Charles Bagot, minister to the United States from England. Rush was of Quaker parentage, and, naturally, was opposed to the business of war.

Bagot had seen enough of fighting to know it was neither glorious nor amusing.

Rush wrote out a memorandum of agreement which he headed "An Arrangement."

The document is written on one side of a single sheet of paper and is dated April 28, 1817. Here is a copy:

"1—The naval forces henceforth to be maintained upon the Great Lakes shall be confined to the following vessels on each side.

"2—On Lake Ontario one vessel, not to exceed 100 tons burden, carrying not more than 20 men and one 18 pound cannon.

"3—On the upper lakes two vessels of same burden and armed in a like way.

"4—On Lake Champlain one vessel of like size and armament.

"5—All other armed vessels to be at once dismantled, and no other vessel of war shall be built or armed along the St. Lawrence River or the Great Lakes."

This agreement has been religiously kept for 91 years. Its effect was to stop work at once on the fortifications and cause disarmament along the Great Lakes.

So far as we know, the agreement will continue for all time. Both parties are satisfied, and, in fact so naturally has it been accepted very few people know of its existence.

Here is an example that our friends at The Hague might well emphasize. If those forts on the frontier had been maintained, and had the ships of war continued to sail up and down, it would have been a positive miracle if there had not been fighting.

Probably they would have forced us into a war with England before this. We have had several disputes with Canada when it would have been very easy to open hostilities if the tools had been handy. Men who tote pistols find reasons for using them, and the nations that have big armies will test their use when excuse offers.

If two countries can make an "arrangement" limiting the matter of armament, and this arrangement holds for 100 years, cannot nine countries do the same? All that is then needed is a few soldiers to do police duty.

Nations cannot afford to be savages any more than individuals.—*Exchange*.

I do not care what his clothes or his talk may be, he who is kind to all dumb brutes and birds, with a kind word for the old, is a gentleman.—*Davis*.

**WHAT BECOMES OF WORN-OUT MONEY.**

HAVE YOU ever wondered how long a five or a one-dollar bill stays in circulation, and what becomes of it after it is too much soiled to be handled, or has become torn, or worn into shreds?

Every bank has, or should have, a special section of the cash drawer, at the teller's window, where every piece of currency unfit for circulation is put aside from the clean, perfect money. After a certain amount of this "unfit" money has accumulated, say five hundred or a thousand dollars, it is made up into a package and shipped to the United States Treasury at Washington. Here it is sorted, and the national bank notes kept separate from the gold and silver treasury certificates. At regular intervals this money is taken into a room where a machine known as a macerator, first grinds this money into shreds, and then reduces it to a pulp, and new money issued for it.

Some banks are careless of, or uninterested in the subject of clean, perfect money. At our bank there is a strict rule compelling the discarding of every piece of currency that is badly soiled, or that is mutilated in any way. Only "fit" money is allowed to go out of our vault. Aside from the satisfaction of handling only clean, perfect money, the danger of contact with germ infected money is greatly lessened by receiving currency of this kind.—*The Savings Journal*.

**THE TALK ABOUT BOYS.**

IN the school there are a few boys who attract attention by their innate manliness; they are ambitious to improve their opportunities; they are industrious, orderly and respectful to their superiors, grateful for assistance given them, quick to accept advice or yield to admonition.

They are not goody-goody boys. They do not go around saying how good they are, comparing themselves with others, and reporting every trifling delinquency of their schoolmates to the officers; nor do they spend their time embroidering sofa cushions or doing drawn work.

They are earnest and hearty in play as in work. They are generally among the leaders of the foot-ball and base-ball teams and in all legitimate fun and frolic that may be going on. But they have the self-respect and self-control to behave themselves when the time and occasion calls for it. They may have many of the little failings we expect to find in a boy; their hair may not always be smooth or their clothes brushed, and they sometimes commit the heinous crime of putting their hands in their pockets; but there is no surly scowl on their foreheads; their minds are clean and in the right place. Boys such as these win the respect and affection of their teachers and of the great majority of their schoolmates, and when they graduate leave a gap that is felt for years.

Opposed to these are a few boys who appear naturally vicious. They are neglectful of their work, disrespectful to their officers and teachers, coarse and vulgar in speech and in thought and action. They consider it an evidence of smartness to disobey the rules and create disorder. They learn little themselves and do what they can to prevent others from learning. They bully the small children, quarrel with the older ones, and make themselves a nuisance to all about them. When such boys are retained in the school it is because there is no other place where they can get an education, and experience has proved that in many cases they can be reclaimed and made useful men. If, however, they are incorrigible and finally leave us, it is a disagreeable incident in the history of the institution.

Between these two small classes are the great body of boys, who are not especially inclined to good or evil. Their characters are in a state of equilibrium and may be overbalanced one way or the other by some trifling incident or condition of things. It is these who need to be carefully watched that the opportunity may be seized for directing them into the right path. In no way can it be better done than by bringing them under the influence of manly boys and by creating in them indifference to the friendship, and contempt for the actions of those who would persuade or bully them into wrong-doing.—*Mt. Airy World*.

**ANIMAL MEMORIES.**

KARL HAGENBECK, the famous lion tamer, insists that the power of memory is as well developed in animals as in human beings, and that wild animals are better endowed in the matter of remembering events and persons than are domestic ones. The story is told that he at one time visited a "zoo" to which he had sold some animals, and entering the lion house on tiptoe, he exclaimed, "Halloa!" in German; the larger lion jumped to his feet at once and it was but a moment before both lions and two tigers were greeting him and licking his hands in joyful recognition, although he had not seen them for twenty months.

Dr. W. T. Hornaday, director of the New York "Zoo," is very highly regarded by the tenants of the monkey house, and never enters, even when the place is filled with sight-seers, without receiving a hearty greeting and the outstretched hands of chimpanzees and orang-outangs. Last spring after a long absence on account of sickness, he walked slowly to the outer circle of spectators and said "Hello, Polly," and instantly there was a rush for the bars and a shout of welcome that could be heard a long way.—*The Circle*.

# THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE, ELGIN, ILL.

Subscription price, \$1.00 per Annum, in Advance.

The Inglenook stands for material and spiritual progress. Its departments are: Literary, Editorial, Home, Cream of Magazines, World News.

Its qualities are: Good Sentiment, Moral Convictions, Inspiration.

Its purpose is: To safeguard home life by supplanting and counteracting bad literature.

Its scope of matter is: Scientific, Religious, Educational, Philanthropic, Economical, Sociological and Financial.

Its field is: The World.

Liberal commission given to agents. Sample copies are given upon request. When changing address give both old and new addresses.

Entered at the Postoffice at Elgin, Ill., as Second-class Matter.

## A MODERN HERO.

THE heroes are not all dead yet; neither have they all received Carnegie medals, nor had their names inscribed in the Hall of Fame. To be sure, many of the deeds of heroism are enacted in private life and the doers of them never will be known beyond their immediate neighborhood. But some of them belong to public life, among them the one we now have in mind, and the hero worshipers need not turn to the dim and distant past to find subjects worthy of their homage.

We have kept our readers somewhat informed on affairs in New York, where the reform governor, Charles E. Hughes, has been conducting a fight against race-track gambling. In the regular session of the Legislature the two anti-gambling bills were passed in the House by a large majority, but were defeated in the Senate, the vote there being 25 to 25. At the time the vote was taken there was one vacancy in the Senate owing to the death of the Senator from the Niagara Falls district. Governor Hughes ordered an election in the district, the people there were appealed to, and a Senator favoring the bills was elected. Then the Governor called a special session of the Legislature. But now another obstruction loomed up. Senator Otto Foelker, from one of the Brooklyn districts, had just passed through a perilous operation for appendicitis and his physician said his condition was too critical to allow of his being moved. Senator Foelker had voted for the bills in the regular session, and as there was no hope that any of the Senators had changed who had previously voted against the bills, Foelker's vote was necessary to their passage. It was a trying time.

But the hero was there and the day was saved. Senator Foelker said he would go to the Senate and cast his vote if it cost him his life, as his physicians said it would. He was confined to his bed at Staatsburg, sixty miles from Albany. On the day previous

to that on which the vote was to be taken "against his physician's advice, he was carried to Albany and lodged in a friend's house near the Capitol. That night he was very ill. But in the morning he rallied, and at noon he was borne to the Senate chamber, arriving just in time to vote on the first of the roll calls. His physician and a clergyman were by his side. The final proceedings consumed nearly an hour and a half. At times the Senator was extremely feeble and in imminent danger of collapse. But on the last roll call his vote was given distinctly. Then they bore him back to bed."

One is eager to know more of the man whose sublime courage secured the victory to a righteous cause, and when we do learn something of his history, we find that the hero has been in the making for a number of years, as heroes generally are. Senator Foelker is thirty-two years old. Penniless he came from Germany in his boyhood. While earning his living by serving as a baker's apprentice, he studied at night. It was by night study also that he prepared himself in later years for admission to the bar. His physicians now say that his visit to the Senate chamber did him no harm, and it is to be hoped that he may be spared for many years of usefulness.

We have already commented on the noble character of Governor Hughes, but we cannot let this subject pass without another word. It is to be doubted whether we have another man in public life who has so little regard for the influence his present acts may have on his future when he knows that these acts are toward the right and in harmony with the will of the people whom he is bound to protect. In all his relations with the forces of corruption, from the insurance investigations to race-track gambling, he has worked steadily and relentlessly toward one end,—the establishment of truth and righteousness. And in his work he has ever fought fairly and openly. In the words of the New York *Sun* on his recent fight, "he forced a legislature hostile to him and to any change in the racing laws to adopt the measures he advocated, and he did this without bribing, bullying, or influencing Senators or Assemblymen in any improper or questionable way."

It is worth much in these times to know that we have men of this sort to whom we can trust the issues of our national life.

## THE ESPERANTO LESSONS.

THE series of lessons in Esperanto closes with the twelfth lesson which appears in the next issue. The lessons have been followed by a number of readers. In order that the good received from the study may be permanent and practical it will be necessary for those following the lessons to continue in the use of the language in some form or other. Let us have your names for a post card exchange.

# LESSON IN ESPERANTO--No. 11

## Independent Words

Most of the words in Esperanto are taken from living European languages. There are a few original words,—forty-five pronouns, adjectives, adverbs and conjunctions. These words are so nicely correlated as to render most of them self-defining. These words have five different significations as indicated by the beginnings: "I," indefinite, signifying *some* or *any*. "Ĉ," distributive, or collective, signifying *each*, *every*,

*all*. "K," interrogative or relative, signifying *what*, *which*. "Nen," negative, meaning *none*, *no*. "T," demonstrative—*that*.

The nine different endings have nine different significations: Ia, ial, iam, ie, iel, ies, io, iom and iu.

The words given in the table can be readily translated after having learned the meanings of their thirteen elements.

### TABLE of CORRELATIVE WORDS.

|                                              | <i>Indefinite</i>                                        | <i>Collective<br/>Distributive<br/>General</i>      | <i>Interrogative<br/>Relative</i>                 | <i>Negative</i>                              | <i>Demonstrative</i>                                   |

#### MORE HOURS OUT OF DOORS.

AN eminent physician has declared that there is but *one disease* and *one remedy*. That the former is simply retained waste, in the form of broken down tissue, undigested food, etc., and the latter is a four-fold compound whose constituents are Light, Air, Water and Food.

He might truthfully have added, "And the greatness of these is air."

Prisoners have passed half a lifetime in underground dungeons where noon was indistinguishable from midnight, and while mental decay supervened in most instances the bodily functions were only impaired by slow degrees.

Prolonged fasts for remedial purposes are by no means uncommon in these days when the world is beginning to realize that nine-tenths of us eat too much and too often. Man has demonstrated beyond dispute that he can live without food for a number of weeks. Deprived of water, life can be prolonged for a shorter period, albeit at cost of intense suffering; but let respiration cease for a few moments only, and the vital spark will have fled beyond recall.

Air, then, being vitally essential to existence in the body, and one of the very few commodities on which the market has never been cornered, so that the pauper may share equally with the plutocrat, it seems a pity that through thoughtlessness or indifference, the majority should limit themselves to a tiny fraction of their birthright.

Over and over again we hear people say, "I know I don't get half enough fresh air, but dear me! I'm so busy I just *can't* take time to go outdoors!" Yet by the exercise of a little ingenuity many of these same individuals could arrange to spend a generous portion of every twenty-four hours in the open air.

Housewives are the worst offenders in this regard, despite the fact that a large number of the necessary household operations can be performed quite as well outdoors as in—and with far greater comfort and enthusiasm. Washing dishes, for example, when conducted on a cool back porch is quite a different matter from the same operation performed in a sweltering kitchen. Even if the meals are served within doors, the dishes can be piled upon a large tray and carried outside with very little trouble, and when the table itself is transferred to the porch, not only is the work of clearing away minimized, but a gain of at least three

hours daily is effected in that single item. At his beautiful summer home, the famous peot, Edwin Markham, has a delightfully arranged open air dining room on the broad veranda, where he and his family practically live during warm weather. There are few who cannot adapt this idea in some fashion, even if it be only to hold frequent picnics in the back yard.

The drudgery incident to the preparation of the meals can be rendered less taxing; first, by increasing the proportion of fruits and uncooked or ready prepared foods in the daily dietary, and, second, by constructing a camp stove in the yard. This consists of a firebox of brick or rock, the interstices filled with mortar or clay, and an opening left in front. Upon this is set an old stove top purchased from the junk man, with a single length of stove pipe attached to direct the smoke upward. Any man or boy can build it, and I have seen a very creditable specimen constructed entirely by a woman. Portable camp stoves can also be purchased from camp outfitters for from three to eight dollars. The addition of an oven such as is used on gas or oil stoves enables the housekeeper to do every variety of cooking. Another useful adjunct is one of the modern fireless cookers which can easily be contrived at home, and will effect a saving in both labor and fuel.

From eating it is only a step to sleeping out of doors, and numberless are the devices for enabling all sorts and conditions of men—and women—to enjoy this privilege. The poor who sleep in the city parks which are thrown open for that purpose whenever a hot wave manifests itself, have an incalculable advantage over the exclusive rich, unless the latter are sufficiently progressive to desert their silk-hung chambers in favor of specially constructed sleeping balconies, as is occasionally done.

When one has once tried the experiment of couching directly upon the earth, with blankets for mattress and coverlet, and the spangled heavens for a canopy, he will be reluctant ever to return to even the most luxuriously appointed sleeping room, which will seem unendurably stuffy by contrast. The modern treatment for tuberculosis, whose distinctive feature consists in keeping the patient in the open air day and night, has been practiced with increasing success for several years. But how much better to forestall the doctors by adopting the open air mode of life in

season to maintain and promote health, rather than as a last resort after disease has secured a foothold!

Folding cots equipped with pneumatic mattresses are luxurious but expensive. The time-honored camp bed of spruce boughs is an agreeable substitute when living in the woods, but for the home veranda yard, or roof, a hammock answers every purpose, preferably a sailors' canvas hammock, which is swung from the four corners, and sags less in the middle than the ordinary type.

Possibly the theaters—in the effort to secure patronage during the heated term—were responsible for the invention of roof gardens. If so, their example was speedily followed by hospitals, and by fashionable hotels, which spared neither pains nor expense in the endeavor to outdo rival establishments in conveniences and attractions. Apartment houses and private residences of the flat roofed type soon fell in line, and by means of awnings, hanging baskets and potted plants, hammocks, and rustic furniture, the areas, formerly sacred to clothes-lines, are gradually being converted into ideal open air living-rooms. Here the older children play and babies nap peacefully in their go-carts, far above the dust and din of the streets.

Writers, artists and others who follow sedentary pursuits can easily fit up studios on the roof, veranda, or in the back yard, and the number of those who do so is rapidly increasing. One noted author has a delightful little "den" in a corner of her wide back porch. Bamboo screens baffle prying eyes, without interrupting the free passage of air. A writing table of generous proportions holds typewriter, ink bottle, reference books, and other impediments, and a hanging corner shelf supports a tea service of old Canton Blue, a five o'clock tea kettle of burnished copper, and a rotund teapot fitted into a padded Chinese tea-basket, which retains the heat. A revolving office chair and a cozy wicker rocker for the chance visitor complete the equipment of this inviting little nook.

Even more unusual is the tree-top study of a New England clergyman. A spiral stairway winds about the trunk of a giant chestnut tree behind his house, and gives access to a little platform perched high among the branches. A rustic chair and desk furnish this airy retreat, which commands an extensive view of the surrounding country side, with wooded hills rimming the western horizon, and the sparkling blue Atlantic melting in the eastern sky.

Yet another important problem of outdoor life remains to be considered. Thousands are condemned to spend from eight to ten hours a day at desks, in factories and behind counters, as a means of livelihood. These do not have the housekeeper's and writer's privilege of taking their work out into the open. In such cases there is all the greater necessity of making the most of limited opportunities. It is usually possible to walk at least a part of the way to and from one's

work, and to spend a portion of the noon hour in the open air, instead of idling it away in a superheated store or stuffy workroom. Better still, adopt one of the numberless outdoor ways of earning a living. Duck farms, chicken yards and turkey ranches have all proved winning investments when rightly handled. So have the raising of aquatic plants and gold fish. Early vegetables make money for those who have the enterprise to get their products on the market ahead of their competitors, and to pack them attractively. Bee-keeping is another lucrative industry to which women are particularly well adapted, since it requires little physical strength, and but small capital at the start. A special and particularly profitable branch of this work is the raising of queen bees.

Flower growing and preserving seem essentially feminine occupations, though men have made fortunes at both. Here again it pays to specialize. Devoting *all* one's energy to growing *one* species of bulb or blossom, or putting up a *single* kind of preserve or jelly—and doing it a little better than anybody else—will bring bigger results at less cost of materials and labor, than the attempt to handle a large variety.

Nearly every operation connected with preserving can be carried on outdoors, from the gathering of the fruits and berries, to the final sealing of the jars. The camp stove is, of course, utilized for the accommodation of the big preserving kettles.

Landscape gardening, canvassing, selling real estate, commercial traveling, surveying, fruit growing, and silk-worm culture, are all industries which enable a worker to spend a large portion of his time outdoors, and these are but a few out of a long list. All of which goes to prove that "where there's a will there's a way," and that the delights and benefits of a free, open air mode of life are to some degree within the reach of each one of us, if we will but set ourselves seriously to the consideration of ways and means with that end in view, and determine to make the most and best of every opportunity.—*Health*.

#### DAWN'S RECOMPENSE.

He begged me for the little toys at night

That I had taken lest he play too long,  
The little broken toys—his sole delight.

I held him close in wiser arms and strong  
And sang with trembling voice the even-song.

Reluctantly the drowsy lips dropped low,  
The while he pleaded for the boon denied.  
Then when he slept, too dream content to know,  
I mended them and laid them by his side  
That he might find them in the early light  
And wake the gladder for the ransomed sight.

So, Lord, like children at the evenfall,

We weep for broken playthings, loath to part,  
While thou, unmoved because thou knowest all,  
Dost fold us from the treasures of our heart.  
And we shall find them at the morning-tide  
Awaiting us, unbroke and beautified. —Selected.

### THE OLD-FASHIONED GARDEN.

Do not deny yourself the delight of a flower garden simply because you cannot afford or cannot give the necessary time and care to rare or the more exacting flowers and shrubs. What, after all, is so charming as an old-fashioned garden wherein are found in harmonious companionship the sweet clove pink, sweet william, phlox, stock, golden glow, poppies—the gorgeous ones that run the gamut of the reds as well as the golden California variety—sweet alyssum, mignonette, heliotrope, verbenas, dahlias, cannas, gladiolus and asters, with the shadiest nook—perhaps where the porch joins the house or in the crook of the bay window which keeps the sun from a small plot of earth—the shadiest nook given over to a riot of ferns? Even the hothouses of the great city parks, with their rare exotics and tropic beauties, have found a rival in the old-fashioned garden which every park that would fill the wants of its frequenters must possess. Here, in this old-fashioned garden, you will find those who come and linger for the very love of the flowers, not from curiosity. Here, you will notice, the children love to come on little journeys of discovery, because here you can, you know, watch the bumble bee, the butterfly and the humming bird flit from honey cup to honey cup in search of golden plunder. And here, in this old-fashioned garden, you will perceive the elder folk who find it sweetly reminiscent of the days of their youth when such a garden was found in nearly every dooryard, or are drawn here, perhaps, because the old-fashioned garden, void of formalism, with its fragrant atmosphere, its very abundance, is suggestive of those gardens they are so rapidly nearing, those gardens on the Hills of Day.

A sprinkling of cold tea every four days is beneficial to ferns.

Do you realize the beautifying virtues of woodbine? Properly trained it will yield a profusion of greenery that will add greatly to the charm of the house over which it runs. As a cover for a shabby building it has no equal.

Drenching your flowerbeds thoroughly every three or four days is better for the plants than the slight daily sprinkling that is ordinarily given. The more infrequent but thorough drenching is more like nature's showery method.

Flies are said to hate mignonette, and a few of these fragrant plants in a room will answer all the purposes of fly paper and be much less objectionable in every way. Seeds may be sown early in the summer, and plants for every room in the house obtained at a very small expenditure.

The women of England have taken up market gardening in earnest and are making a great success of it. The French way of planting in a small space and nursing the plants under frame covers has met with much favor, and many women are studying the particulars of the work under the direction of the pioneers in this sort of work for women in Berkshire County.

A small bed of lavender will yield sufficient sprays to supply your linen chest with sprigs that are unsurpassed as a perfumer of sheets, pillow cases, towels, and even wearing apparel. Our grandmothers appreciated the dainty refreshment it imparted, and our grandmothers, you know, had a few ideas worth while, in spite of the vaunted superiority of the new woman.

The blossoms of the peony are so heavy that a gentle shower often beats them to the ground; therefore, such a mishap should be provided against when the buds are formed. To do this, drive four stakes—more if the bush is a very large one—into the ground about the plant, being careful not to run them into the roots. Use these as supports for a stout cord bracing the stems in an upright position. The foliage will soon obscure the supports.—*Home Herald*.

### SELECTED HOUSEHOLD HINTS.

A LITTLE sugar added to beets, corn, squash and peas either during or after cooking, will improve their flavor, particularly if they are not quite fresh.

Do not leave fresh meat wrapped in paper; it absorbs the juices. Put in a deep dish and turn a plate over it before putting it in the ice chest.

THOUGH love is supposed to enter a man by way of his heart, it often leaves him by way of his stomach, if his wife serves him too many poorly-cooked meals.

A GOOD way to get rid of ants is to hunt them with something they like to eat, and when you have a lot captured, drop the whole thing into the fire. A piece of sweetened bread is good to catch them with. You can soon clear your pantry in that way.

RASPBERRY and blackberry jams are much finer if the seeds are strained out with a sieve. Cook first, then run through a compound flour sieve; return to the fire and put in the sugar. Two-thirds as much sugar as fruit is the best proportion and the one most commonly used.

You can make better, clearer jelly, and with less trouble, by not straining the fruit, which is unpleasant

work, and makes the jelly cloudy besides wasting the fruit itself. After the fruit has begun to cook, remove the surplus juice, as it forms, with a shallow ladle, and make it into jelly; use the fruit for jam or marmalade. You will not miss the juice that has been taken out and it makes fine jelly.

ALWAYS make starch with soapy water, which will give better gloss to the linen and prevent the irons from sticking.

#### A SWIFT ANT EXTERMINATOR.

MANY flower gardeners and housewives are annoyed by ants. Here is a remedy, which, used according to directions, will never fail: Place two sheets of fresh, poison fly-paper in a shallow dish. Cover thinly with water and set aside for an hour or two until the water is well charged with the poison. Now stir in a teaspoonful or less of strained honey or sugar syrup; find where the colony of ants is located and set the dish on the ground nearby. If the weather is very warm, shade the dish to prevent rapid evaporation. If there are apiaries nearby or many honey bees about your premises, place a net-covered frame over the dish having a mesh large enough to permit the ants to pass and small enough to exclude the bees. Add a trifle of water from time to time, just to keep the paper slightly immersed. The ants will soon discover the sweet stuff and go at it with frantic haste. They will drink their fill and carry it down to their burrows to feed to the queen and the half developed larvae. In from one to two days the whole colony will be dead, root and branch. You can prove this by scraping the dirt aside with your foot or digging into their nest with a trowel. There you will find a mass of dead ants and larvae. Not one will escape.—*Floral Life*.

#### WHERE DO THE FAIRIES DWELL?

JENNIE TAYLOR.

"Oh, dusty Bee, on restless wing!  
We pray you stop and tell,  
Have you seen that place of wondrous charm—  
The land where the fairies dwell?  
Have you heard them sing  
While the blue bells ring  
In the woodlands wild and free?  
Did you ever chance  
To see them dance  
In the moonlight on the lea?  
We've searched the garden through and through,  
We've roamed the fields of green,  
But the cunning little fairy folk  
We never yet have seen.  
We've climbed the hill  
Beyond the mill.

And looked through leafy dell.  
Among the flowers  
In summer bowers,  
Where they are we cannot tell."

"Oh, Sunshine fair, on your shining way!  
Have you found where the fairies dwell?  
Have you seen the home of the fairy queen?  
Bright Sunbeam, stop and tell,  
Have you seen her afloat  
In a sea-shell boat.  
Where the sparkling waters play?  
Are the coral caves  
'Neath the deep sea waves  
The place where the fairies stay?"  
Then the dusty bee and the sunshine fair  
Each made the same reply,  
As we watched for a sprightly Brownie band  
To go tripping lightly by.  
"You children dear  
All wish to hear  
Where the charming fairies dwell;  
Were I to say  
Where the fairies stay,  
'Tis a secret. I must not tell."  
Tipton, Iowa.

#### MOLLY'S PLAN.

"WHEN I get big I'm going to be a general," said Ted.

"And I'll be a nurse and take care of the wounded soldiers," said Dora, pinning a piece of red flannel on her arm.

"I'll be a great doctor and help sick soldiers," said Herbert.

"Children," called mamma from the kitchen, "which one of you will run to the grocery for butter for my cake?"

"You go, Molly," said Ted and Dora together. "You don't mind doing errands."

So the little girl ran off with her basket, and the talk went back to what the children would be when they grew up.

"Mamma, which one has the best plan?" asked Ted, when the cake was finished and they all sat together in the sitting-room. "Addie wants to be a great singer, and all the rest of us but Molly are going to war to help people. Molly says she is going to stay at home and help you always, so tell us which has the best plan."

There was a queer little light in Mrs. Kile's eyes as she took the baby on her knee and said: "You have all chosen good work for when you grow up, but I will let you decide which is best. While I was baking cake I noticed that the Red Cross nurse was too busy to untangle baby's foot when he caught it in the rug, and the famous general never saw the puppy upset him in his rough play. You know this general said he would help any one in trouble when he grew up, so the baby called loudly for aid. The general marched right past without ever noticing him, and the

doctor stepped on his fingers as the army retreated. After that the famous singer was too busy to sing 'Rock-a-by' for the baby, and he had a hard time generally."

"You left out Molly," said Dora, when her mother paused a few moments. "You didn't say anything about her."

"I thought you all knew what Molly did," said Mrs. Kile. "She picked up the poor baby and put medicine on his bruised fingers, she ran several errands, and then had time to sing 'Rock-a-by' for this little man. You see, she is working away at her plan right now, instead of waiting till she gets big."

"Molly's plan is the best," cried all the other children together. "We will try to begin now, too."—*Children's visitor.*

### THE SKY ROAD.

SOME time since a lover of children told a touching story of meeting three little urchins in a city suburb who, ragged, hatless, and shoeless, but quite unconscious of any deficiencies, were bubbling over with bits of knowledge picked up at the public schools, from which fragmentary lore their busy brains had wrought quaint deductions. They had been hearing scraps of Grecian mythology, and were full of the wonderful story of Pegasus, the winged horse, who, as the legend runs, first touched the earth on the Acropolis in Corinth, and finally flew back to heaven. The smallest of the trio explained that Pegasus couldn't travel on the dirt road because he was made for the sky road. Looking up at the lady, he said with a sly little nod: "We are made for the sky road." Dear little, ragged fellow! One cannot help wondering if he realized the marvelous, far-reaching truth of his own words.

The sky road! Another little one caught a glimpse of the beautiful, upper realm of living where child souls, in their sweet innocence, ought to be especially at home. A group was happily playing on the broad door stone, under the protecting shade trees.

"I'm the mother," cried the largest little girl. "There always has to be a mother, and I'm it."

Black-eyed Ned sat next. "I'm the father," he asserted sturdily. "Nellie and Rob can be the children, but I'll be the father, and, of course, I'll see to things."

A little blue-eyed tot of a girl saw a very good chance of being left out of this pretty family game.

"What am I?" she asked, a little pitifully.

"There has to be servants," said the self-elected father and mother. "That's all that's left that we can see."

"Well," remarked the wee girlie very sweetly, "I'll be a real nice one, then. Somebody has to do something for the rest, and it's just as good as anything if you do it nice."—*Exchange.*

It is not the profession of religion which creates the obligation for the performance of duty; for that existed before any such profession was made. The profession of religion only recognizes the duty.—*Albert Barnes.*

## For SUNDAY READING

### THEIR OWN COMPANY.

WHEN Peter and John were released from custody in Jerusalem—having been put into prison because they *would* preach the Gospel—"being let go," we read, "they went to their own company"—that is, to the set and circle of praying people in one of the wards of the city where they had been accustomed to worship. They went where they would feel at home. They were irresistibly drawn into the company of the faithful and believing, for they had persistently cultivated a love for Christ's people, and Christian fellowship had become habitual with them.

Every man has his "own company" for good or for evil, to which he is constantly attracted as by a kind of spiritual gravitation, and which he finds congenial to his taste. Each act of life makes another act of the same kind easier; each hope or ambition cherished, re-duplicates itself in a similar experience; habits are gradually formed, and thus great lifelong currents and tendencies are generated, which unless checked or reversed by some cataclysmic upheaval, such as conversion, finally fix the destiny of the soul in hard, fast lines.

It becomes then of great importance to influence the young as early in life as possible, to form such habits of holiness and to frequent such places of Christian assembly as will give them a lifelong trend Godward and churchward, so that wherever they are, they will be naturally drawn "to their own company," and find their chiefest pleasure in the society of the Godly.

The need is for such a deeply cultivated piety as will constantly revert to type—fall back upon itself, and carry within its own resources of joy—and thus be untempted by the competing allurements of the world. It is entirely possible for any one to get into the habit of having "a good time" in the society of Christian people.

Beyond this life there is also a particular place where each one severally belongs. Judas went to "his own place"—and so did Paul. Souls are sorted out in the other world, and go then to the company either of the lost or the redeemed—which amounts to saying that they go where they feel at home. Happy indeed are they who cultivate now and forever the circles of Christian fellowship, and who, adopting and adapting

the language of Ruth to Naomi, say, "Thy people shall be my people, and thy God my God!"—*American Messenger*.

#### HOW THE CUP WAS KEPT SHINING.

THE rocks rose steeply at the sides of the road, and, through a cleft, the spring bubbled out. The very drip of the water was music in the ears of travelers driving by on a hot day. And, however intense the heat, however parched the meadow, the spring trickled out to refresh the thirsty, as cool and delicious as if it came from some sunless cavern in the heart of the earth.

One day a passer-by drew his horses and stopped, not to drink, but to look and wonder. For a small girl, with a cake of scouring soap, was scrubbing away energetically at the tin cup which had been hung beside the spring for the convenience of travelers. She looked up and flushed under the man's scrutiny. "Do you want a drink? I'll hurry and finish."

"No, I'm not particularly thirsty," said the man. "But what are you doing?"

"Why, I'm cleaning the drinking-cup. It gets dirty and rusty standing here, so every few days I come over and give it a good scouring."

The man stared. "You don't get anything for it?"

"Why, no, of course. But thirsty folks enjoy the water so much better if the cup is shining."

"Why don't you leave it for somebody else to do? It's as much their work as yours."

The girl laughingly replied: "And it's as much mine as theirs. Besides, there's lots of things I can't do, but I can keep the cup shining."

The man took up the lines and his horses moved on. But he looked back over his shoulder at the slight figure busy with the self-appointed task, and in his heart he was thinking that it would be a better world if more people acted on that girl's principle.—*Girls' Companion*.

#### LIGHT-RUNNING MACHINES.

ONE of the commendations of certain sewing machines is that they are "light running." They move very easily, and require little strength or labor. A little girl said, "I like to sew when there is no thread on the machine—it runs so easy."

There are persons whose religion seems to be of the "light running" order. There is nothing difficult about it; no burdens, no heart-breakings, no "strong cryings and tears," no "groanings that cannot be uttered," but lightness, ease and airiness; a pleasant, comfortable way of putting things, which holds all orthodox opinions, but never loses any sleep over them.

Machinery runs easy when no work is being done. A belt upon a loose pulley runs easily, but accom-

plishes nothing; but when that belt is thrown upon a fast pulley, then at every turn machinery is moved and something is accomplished.

We need to get rid of this easy-going religion, these sewing machines which sew without thread, these faiths that are without works and are dead, the systems and creeds which stir no emotions in the hearts of saints, and work no conviction in the minds of sinners, and which produce no change in the lives of their professors. We need to come down to the facts, the realities, and the duties of a Christianity which is a reality as well as a faith, and a fact as well as a theory.

Life is short. We have little time for dreaming and dozing. With God's help, we are to do work for him for eternity—work which will require effort, sacrifice and zeal in the Master's cause, and which will tell on human welfare now and evermore. Let us be workers together with him, that when he shall appear we may appear with him in glory.—*The Christian*.

#### THE EMPTY HAND.

THERE is an old Arab proverb which says, "The empty hand is soiled." The empty hand is soiled because it is bare and open to all the dust that flies. Palm and fingers not closed about anything in fervent clasp may well collect the soot and grime ready to lodge wherever space offers. Friction is often a good cleanser, at least it prevents undesirable accumulations. The hand that is plunged into honest work and is kept busy has an advantage over the idle fingers. A good deal may be rubbed off by toil, where indolence but gathers soil. The hand that carries a gift is proof against contamination that might otherwise befall. There is no protection for one's self like service for others.

A Bible blessing is pronounced upon "clean hands." It is worth while to "wash them in innocence" and to keep them clean. To keep them clean, see to it that they are not empty. Again and again we find that the marginal reading for "consecrate" is "fill the hand," and God says, "None shall appear before me empty." But the question is, "Who, then, is willing this day to 'fill the hand' unto God?" It is to him that the consecration must be made. It will not do to load the hands with what he disapproves.—*Good Work*.

THE longer I live the less I think and fear about what the world calls success; the more I tremble for true success, for the perfection and beauty of the inner life, for the purity and sanctity of the soul, which is as a temple. As I grow older I feel the need of getting at the root of the matter—of being sure of the nearness of God, of being free from all the mistiness and doubts, and of throwing the increasing cares of life on him.—*Samuel Chapman Armstrong*.

# Echoes from Everywhere

Last year the Suez Canal had a total revenue of \$24,000,000, and paid \$14,000,000, a 28 per cent dividend, to stockholders.

The trustees of Wesleyan College at a recent meeting passed a resolution requesting all persons using tobacco connected with the college, to cease to use it, and that its use be prohibited about the buildings and grounds.

A convention of Esperantists is to be held at Chautauqua, N. Y., the last week in July, and all interested in the new international language are urged to attend. Courses of instruction will be carried on. It is hoped that the fifth "tutmonda kongreso" or "whole-world congress" will be held in this country next year.

The Supreme Court holds that a board of education has no right to bar a child from the public schools for failure to comply with the dictations of the board as regards vaccination. The decision is handed down in the case of the People ex rel Louise Jenkins vs. the Board of Education of Chicago.

The State Superintendent of Schools of New York declares that the value of New York school property had increased nearly \$2,000,000 in the last few years, owing to the improvement from the trees, shrubs and flowers planted by pupils and teachers on successive Arbor days. The total value of the State's school property is \$88,000,000.

The sum of \$148,902,130 was given away for the good of mankind during the year 1907. Of this amount, educational institutions received over \$70,000,000; religious institutions, over \$9,000,000; museums, art galleries, public improvements and libraries, \$20,000,000. The heaviest donors were John D. Rockefeller, Mrs. Russel Sage, and Andrew Carnegie, in the order named. Over \$30,000,000 were contributed by women.

Bermuda, July 2.—The act prohibiting the use of automobiles in Bermuda passed the local parliament by a majority of one and the council by a majority of two. A petition was subscribed to unanimously by American visitors last winter begging for prohibition. This had more to do with killing the automobile in this country than anything else. Owing to the Islands being small and the roads very winding they are unsuitable for auto driving.

The marked unrest and commercial depression which lately has characterized the territory of South China has been intensified recently by the sufferings of the bulk of the population in the lowlands surrounding Canton and along the rivers, caused by the biggest flood in three decades. A vast area has been inundated and many thousands of persons rendered homeless and starving. Great numbers are joining bands of brigands and pirates. Officials and the people in the unaffected parts are liberally donating food and supplies, but difficulty is experienced in distribution.

Jacob Sleeper, the American secretary of legation and charge at Caracas, Venezuela, and the attachés have gone aboard the gunboat Marietta, and sailed away from Venezuelan waters, thus virtually breaking off diplomatic relations. While the immediate occasion of this action is the admitted existence of the bubonic plague in the port towns, it is pursuant to a studied policy of ignoring President Castro since he refused to submit the question of American asphalt claims to arbitration last winter.

The Illinois Prohibition Chautauquas have begun with great enthusiasm in the southeastern part of the State. It is the plan of the State Committee to have the Chautauquas follow a general direction northeast of the Illinois River, taking five towns each week and reaching Chicago about August 1st; then proceeding north and west to Freeport, thence through western Illinois in the month of September, covering all the territory from Winchester south to Cairo. It is now planned to hold Chautauquas in at least one hundred and twenty-five towns before November 1st.

Brewers and wine growers are complaining of the falling off in the consumption of their goods in Vienna, and particularly the brewers. From figures recently published it appears that the Viennese in 1907 drank 1,750,000 gallons less of beer than in 1906 and 40,000 gallons less of wine, and this in spite of the fact that the population increased by 40,000. About twice as much beer as wine is drunk, there having been 27,860,000 gallons of beer consumed in the year, against 13,458,000 gallons of wine. The falling off in the quantity of beer consumed is relatively much greater than in the case of wine. The decrease is said to be due not so much to the growth in the temperance movement as to depression in trade and consequent reduction in the spending capacity of the working classes.

Starting only seven years ago, the new irrigation movement has already twenty-four projects in progress and has taken \$37,000,000 from the sale of lands, to be devoted to reclaiming other lands now useless. The government now owns 150,000,000 acres of irrigable land, by which is meant land that is not now cultivable, but may be made so by the introduction of water. Under treatment at present are 4,000,000 acres, capable of supporting 100,000 families. The settler pays 50 cents or \$1 per acre for this land and \$20 to \$60 per acre for perpetual water rights, the latter payment being divided over a period of ten years, so that the land itself earns it. Every forty acres of these new-made farms will support and probably enrich from five to ten people. The 4,000,000 acres now in process of redemption will be a more valuable addition to the national wealth than a hundred times that area of foreign conquest. The 150,000,000 acres to be redeemed will within a generation give homes and prosperity to a population as large as that of the United States two generations ago.

In the great cotton belt of the South are 848 mills engaged in crushing cotton seed for its oil and other products. In these mills are 2,608 presses and in connection with them 2,752 ginstands and 3,126 linters. It is estimated that in the production of cotton seed oil and by-products more than \$85,000,000 is invested. The mills annually use about 4,000,000 tons of seed, costing about \$60,000,000. When made into oil, cake, hulls and linters and other products, its value is about \$90,000,000. At the present time but little more than half the total seed product of the country is crushed.

The Alaska-Yukon-Pacific Exposition, which is to be held in the City of Seattle, Wash., next year, will be unique in more ways than one. No intoxicating liquors of any kind will be sold on the grounds, and no such liquors can be offered for sale or disposed of within two miles of the place where the exposition is to be held. The large, unoccupied campus of the State University of Washington is the site chosen for the exposition grounds, and, under the State law, no liquors can be sold within a radius of two miles of the university. At the time this site was being considered by the exposition board of managers, the liquor forces of the State of Washington urged that some other site be chosen, but the members of the board were practically unanimous in agreeing that the prohibition of the sale of liquors on the grounds or near the exposition would be a splendid advertisement feature, and this site was accordingly chosen. It is possible that the liquor forces may endeavor to secure a repeal of the two-mile limit law at the coming session of the legislature in Washington, but it is practically certain that such an effort will be unsuccessful, since the business interests back of the exposition would actively oppose any such attempt.

With the ice trust manipulating prices to suit itself and the iceman dealing short weight or sometimes ignoring the housewife altogether, it is strange that some form of making ice at home has not come into general use before this. In France there has recently been patented a machine which is said to be cheap and simple while it is at the same time very effective. It may be operated by power or by hand. Chemicals are sealed up in a cylinder and they do not require renewal, as they last about as long as the machine does. This cylinder revolves in the water and produces the ice. Probably the simplest ice machine is made use of in the German army. A five-gallon, double wall tin vessel is required, the space between the walls being about an inch across. Carbonic acid is gradually introduced into this space through an opening at the bottom and is allowed to enter the vessel proper through a tube. Ice can in this way be formed in about a minute, and in less time than that meats, fruits, and beverages may be chilled. This is caused by the rapid expansion of the carbonic acid, which reduces the temperature very quickly.

In these times of great drains on the timber supply, caused by the heavy demand for forest products of all kinds, Americans may see in Japan an example of what can be done in growing wood on small plots. That country contains 21,000,000 woodlots, about three-fourths of which belong to private persons and one-fourth to communes. The average size of the plots is less than 9-10 of an acre. They usually occupy the steepest, roughest, poorest ground. In this way land is put to use which would otherwise go to waste, and if unwooded would lose its soil by the wash of the dashing rains. From Japan's

woodlots, the yearly yield of lumber is about 88 feet, board measure, an acre, and three-fourth of a cord of fire-wood. In many cases the yield is much higher. More than 500,000,000 trees are planted yearly to make up for what is cut for lumber and fuel. Assessment for taxation is low, averaging for the 21,000,000 lots less than \$1 an acre. With all the care in cutting, and the industry in replanting it is by no means certain that Japan's forests are holding their own. If the preservation of the forests is doubtful there, it is evident that depletion must be alarmingly rapid in other countries which cut unsparingly and plant very little. On the other hand, it is encouraging to see what can be done with rough, steep and poor land. The United States has enough of that kind, without touching the rich agricultural acres, to grow billions of feet of lumber.

New York, July 1.—On Monday Commander Robert E. Peary's steamer, *Roosevelt*, will start from this port on another effort to find the north pole. Commander Peary will not leave New York with his ship, but will see her safely started and, after remaining a few days here perfecting his final arrangements, will go by rail to join his party at Sydney, Cape Breton, where the *Roosevelt* will stop to coal. The explorer had planned to have his ship leave New York today, but the uncertainty of raising the \$50,000 necessary to finance the expedition caused the slight delay. All but \$5,000 of the funds required has been obtained, and he is hopeful of raising the amount before he leaves the city.

Peary's plan for this expedition, aside from his expectation of placing the Stars and Stripes at the north pole, includes researches into the north coast of Grantland and Greenland. He will follow practically the same route as he did on his previous trip, but his tactics will be different, and he will utilize the "drift method" so that the moving ice will not carry him beyond the line of his goal. He has planned carefully to overcome many of the obstacles which were encountered in former expeditions, especially the "big lead," or open water, which nearly caused his death and that of his little band on their return from the "furthest north." Eskimos and dogs will be used.

Preparations for taking the next census have been put under way. The work will be different from that in the past. Since the census bureau became a permanent institution it has relieved some of the decennial work as to manufactures and the like. The mortuary statistics will be much reduced, since past results have not been satisfactory, and it is hoped to get the entire report into ten volumes and distribute them in time to be of more service to the people than has been the case of late. Statistics which are old lose much of their value. One innovation is that the census shall be taken in April instead of in June. So many persons leave the cities in June for Europe or the seashore that the results are not wholly satisfactory. Secretary Wilson is working hard on a five-year enumeration of agriculture. He feels that in the past the farmers have hardly been represented properly by a single year's computation and that a schedule covering five years would better illustrate the agricultural wealth and growth of the country. It will take an army of 70,000 men and women to do this work, and the cost will be about \$13,000,000, but it is a task worth doing and cheap at the price. Apparently, we shall number in 1910 more than 90,000,000 souls, not including any of our insular possessions. The richest and happiest people on earth. Who would not be an American?

## CREAM OF MAGAZINES

### IGNORANCE OF NATURE'S WAYS.

That the average boy or girl—and indeed the average man—is in surprising ignorance of the simplest physical processes and facts of every-day life, and that the prevailing mode of teaching is largely responsible, is charged by Willard Pyle, of the Morris High School, New York City, in a paper read before the New York Physics Club and printed in *School Science and Mathematics* (Chicago, June). The reason is, he believes, that most of our high-school teachers are pursuing the mistaken course of laying stress on the abstract or mathematical side of physics and mechanics, while neglecting the practical applications and illustrations. He emphasizes his conviction that the most effective, interesting, and profitable way of getting a high-school boy or girl to comprehend the significance of a physical law or principle is by studying the illustrations and applications of it in things more or less familiar, Says Mr. Pyle:

"Our pupils come to us with a surprisingly vague understanding of natural laws even though qualitatively express. What few definite notions they have about physical phenomena are often most erroneous. They all think that smoke settles on a humid day because the atmosphere is heavy, that the chimney draws air from the kitchen into the stove to make the draft, that an engine does work, that bodies in motion come to rest of themselves, that a horse pulls harder upon the wagon in drawing it than the wagon pulls upon the horse, that a body floats because it is lighter than the liquid or gas it floats in, that dew falls, that steam is visible, that ice is never colder than the freezing-point, that water boils because the heat continually drives air out of it, that a perpetual-motion machine is a most reasonable thing, that ice keeps a refrigerator cold because the ice itself is cold, the melting of it being a most unfortunate thing, that opening a door in winter lets in the cold, etc., etc. There seems no limit to it when we study these third-year boys and girls well enough to appreciate their actual state of knowledge. They are without exaggeration almost as ignorant of the true nature of common physical phenomena as the Irish servant who in the morning opened the shutters to let out the dark."

What is the matter? It is, according to Mr. Pyle, that we are "misplacing the emphasis" which should be laid more upon the illustrations and applications, and less upon pure science, exact relations, and physical constants. He goes on:

"It is generally admitted that the best-trained minds in this country today are the men who have been graduated from our engineering schools and schools of applied science; they are no longer the classical men. . . . We are influenced too much by the colleges, and we are doing too little to make physics of practical value to the great majority who will never go to college. . . . It is a disgrace, for instance, the way we slight electricity. Considering the age in which we live, it deserves twice the time at least. Year after year pupils come to us eager-

ly looking forward to the electrical applications, only to quit physics sorely disappointed. Physics as taught today is a fine example of a subject taking precedence over the claims of pupils."

The modern pupil, Mr. Pyle says, though he may be able readily to solve mathematical problems in physics, finds it impossible to tell why an elevator cable pulls more than the weight of the car and occupants while gaining velocity going up, and less than the weight of the car and occupants while gaining velocity going down; or why a falling body on striking the earth exerts a pressure in excess of that due to its weight. This, he says, is because the student has no real, vital, permanent understanding of the relation of force, mass, and acceleration. He was taught in a way to delight the college professor, but he "largely missed the idea." Passing on to another illustration, the writer says:

"I maintain that it is more valuable from the standpoint of intelligent citizenship for the average boy and girl in our high schools to understand refraction of light in a qualitative way, and be able to explain the rainbow, its circular shape, and the order of its colors, the illuminating of dark basements by pavements composed of glass prisms, the use of lenses for near sight and old sight, the accommodation of the lens of the eye, and the common optical instruments than it is to be able to do such things as define index of refraction, describe a method of determining it, and tell where errors are most likely to creep in.

"It is more important, for instance, that we teach expansion and contraction of gases in a qualitative way, and the applications of it in convection (drafts, methods of ventilating a room, sea-breeze, trade-winds, etc., together with a thorough study of the why and wherefore of the principal features of some direct or indirect method of heating a home or schoolbuilding) than it is to determine the coefficient of cubical expansion of gas and then solve problems involving the absolute zero. I do not advocate technical or engineering physics, but rather a study of those common applications that illustrate best the principles we are attempting to teach. What could be more interesting and valuable than a careful study of the whole process of manufacturing the rectangular slabs of ice that we all see everywhere about us in the city? . . . We deliberately slight that, however, while capillary tubes and floating needles are made prominent.

"Nothing should be retained in the physics course solely on the ground of mental discipline. If a topic is of no practical use or of small practical use, and at the same time does not furnish information that an intelligent citizen should possess, let us cut it entirely out of our teaching." —*Literary Digest*.

### BLESSED BE THE BUILDERS.

If I were going to write a new series of Beatitudes—which is the aim of every ambitious scribbler—I should begin it thus:

Blessed be the Builders.

Blessed be the Builders; the men who have conquered the wilderness, and put the mountains under their feet, and set their watchtowers in the midst of the sea. Blessed be the Builders; for they are the salt of the earth.

We have had enough of warriors. The only good end they ever served was to protect us from other warriors. We have had enough of bigots, trying to fetter the world with the gyves of dogma. We have had enough and to spare of the gilded fools of royalty. But we have never had enough of the Builders; and we never can.

When we trace the progress of human kind from its raw beginnings in the Mid Pleistocene to the twentieth century, we are mainly occupied with the work of the Builders. When we trace the periods in which the race went backward, we are largely busy with soldiers and kings.

Blessed be the Builders.

They have tamed the wild beasts; and taken tribute for man from the rocks of the earth.

They have broken the lightning to harness; and made fire and water lie down together that men might be served.

They have made gardens in the desert; and habitations for men in the sandy wastes.

They have cleared the forests, and drained the swamps, and gathered food from the land that brought forth pestilence.

They have pierced the mountains for their highways; and taught the rivers to walk in unaccustomed paths.

They have bound the continents with bands of steel; and the oceans with webs of copper.

They have given us temples instead of creeds; homes instead of thrones; cities in place of deserts.

They have had their faults, I know. They have spared neither themselves nor others. They have counted life less than work. But they have got the work done, and it was our work. They have paid themselves from the treasury of the earth, and have not stinted. But they have labored, and they have labored for us.

They have builded up faster than kings and warriors could tear down; and the gain is civilization. They have said to the bigot: "Thou shalt not!" and to the sluggard: "Thou shalt!" They have made houses of justice that kings might cease from troubling; and they have tied the warrior's hands with golden thread.

Whatever their cost, they have earned it a thousand-fold. Blessed, thrice blessed, be the Builders!—George L. Knapp, in July Lippincott's.

#### THE INTERCOLLEGIATE PEACE ASSOCIATION.

The Intercollegiate Peace Association consists, technically, of forty-seven colleges and universities of the Middle West, united for the promotion of organized activity among students and educators in support of the International Arbitration and Peace Movement. The organization had its beginning three years ago in a convention of college men, embracing both students and professors, initiated by President Noah E. Byers, of Goshen College, and held at Goshen, Ind. Eight colleges and universities, all of which were controlled by religious denominations fundamentally opposed to war, were represented.

The following college year, 1906-7, twenty-eight more institutions were added to the association, none of which were opposed to war on fundamental religious principles. Oratorical contests among students on International Arbitration and Peace were promoted, in which more than one hundred students took part. The best eight manuscripts were selected and their authors allowed to participate in an interstate oratorical contest held at the

University of Cincinnati in connection with the second annual convention of the Intercollegiate Peace Association, in May, 1907. During that year local prizes were offered for orations and essays in twenty-one institutions. Essays or orations were prepared by students in twenty-two institutions. Peace bibliographies were added to the libraries of thirteen institutions. A memorial representing 22,968 students and 1,668 professors was sent to the Hague Conference. Two thousand one hundred and sixty-nine dollars and thirty cents was raised for the work.

This year eleven institutions have been added to the association. The plan of holding oratorical contests has been enlarged upon. In Illinois, Indiana and Ohio, State contests, as well as local contests, have been held. In Pennsylvania and Michigan special arrangements were made whereby these States were represented in the Interstate Contest, together with the States of Illinois, Indiana and Ohio.

The third annual convention of the association was held the 15th and 16th of last month at De Pauw University, Greencastle, Ind. The program consisted of the Second Interstate Oratorical Contest on International Arbitration and Peace, a business session, a meeting of college men and women, addressed by educators, including Dean W. P. Rogers, of the University of Cincinnati Law School; Acting Dean Roscoe Pound, of Northwestern University School of Law; Prof. Amos Hershey, of Indiana University, and others, and a public mass meeting addressed by Rev. Jenkin Lloyd Jones, of Chicago.

The work of the association has been considerably enlarged this year. State committees are now being organized in the five States above mentioned and in Wisconsin. These committees will control the work of their several States next year. The chairmen of the different State committees, together with the president and secretary, constitute the executive committee of the association. The policy of the association is to promote local peace societies, consisting of both students and professors, in the institutions where this is feasible; where it is not, to have existing students' associations, such as history and political science clubs, foster the local interests of the association. Each institution is represented in the association by a vice-president, who is required to be a member of the faculty. Several local students' peace societies are now in existence. Others are being planned for next year. These are being affiliated with "Corda Frates" International Federation of Students, an organization of European students. This organization was founded at Turin, Italy, in 1898, and now has branches in sixty-three of the principal university centers of Europe, with a total membership of about fifteen thousand students.

The Intercollegiate Peace Association, through its local societies, is being affiliated with "Corda Frates" with a view to putting the organized student movement for international arbitration and peace on a truly international basis. The leading articles of the constitution of "Corda Frates" read as follows:

"The principal object of the International Federation of Students is to protect and promote the idea of solidarity and of fraternity among the students. . . . Each member, upon his entrance into the Federation, pledges himself upon his honor to employ unceasingly such means as his social position, his intelligence and his activity afford to promote the spirit of international union among the youth, and to second all the manifestations which he may believe useful in order to dissipate from any class of persons whatsoever the prejudices and hatred which render states reciprocally hostile and always on a war footing. The International Federation of Students proposes also to second by all the means in its power the work of

peace and arbitration between nations. It is also the object of the Federation to put in correspondence the students themselves, and in particular those who devote themselves to the same branch of learning, in order to facilitate means of information and scientific research, of which they may eventually have need, both before and after the doctorate; to insure reciprocally hosts and friends in the large cities, distantly located, upon the occasion of travels, individual and collective, in foreign lands—travels which will thus be more easily undertaken and accomplished."

Six international congresses of the Federation have been held, as follows: At Turin, 1898; at Paris, 1900; at Venice, 1902; at Liege, 1905; at Marseilles, 1906; at Bordeaux, 1907. The next international congress of the Federation will be held at The Hague in July, 1909. A special appeal will be issued to the students of every university in the world to attend this congress.

It is a coincidence that the students' peace organizations sprang up in Europe and America independently of each other, and neither knew of the existence of the other until their representatives met at The Hague during the Second Hague Conference. It does not seem idle to predict that these organizations have not sprung up and grown to their present extent to die a premature death. Neither is it unconservative to believe that their possibilities are practically unlimited.—The Independent.

### THE TENEMENTS OF TRINITY CHURCH.

Trinity Church is the holder of one of the greatest estates in New York or in the country. It owns in the city property worth, according to different estimators, from \$39,000,000 to \$100,000,000, from which it draws an enormous revenue, the amount of which is never made public. For many years no investigator has been able to obtain any more definite knowledge of these matters than that this is the wealth of Trinity which she holds for good purposes.

What? Expressed in wretched, rotten, old tenement-houses? Yes. Expressed in hundreds of such tenement-houses.

Some of these houses are brick, some are wooden. Very few of them are fit under any circumstances for any human habitation. Not one of them is fit for human habitation as at present it is inhabited.

Tastes differ. I know that the vestry of Trinity would be terribly shocked at a suggestion that the corporation should make money by administering arsenic to people, or carbolic acid, or deadly nightshade. But the vestry of the standing committee that represents it in these matters has no objection whatever to making money for the corporation by maintaining poisonous tenements.

As between tuberculosis and arsenic, where lies the choice?

And what kind of people are these that dwell in such quarters? "Foreigners, likely, only lately recruited from the hives of Naples or Palermo, and finding even these habitations not much worse than those to which they have been accustomed." So you think. But these are not foreigners. These are Americans; respectable and industrious Americans. They are old-time residents of the Eighth Ward, most of them; their fathers lived there, they were born there; with that fatuity that is so common and still so hard to explain, they cling to the familiar regions of their youth. And not the least pathetic part of the unfortunate situation is the struggle they make against their environment, the painful effort to keep their poor little rooms neat and tidy; the cherished old pictures on the dismal walls, and the handful of ornaments on the shelf. You cannot crush out the instincts of the race by two decades

in a tenement house; but you can in four, or five, good gentlemen of the vestry.

But is Trinity, which draws hence so much mysterious revenue and disposes of it as mysteriously, indifferent to its duty as a benevolent institution? Not at all. Look in the year-book of the parish. You will see there that Trinity maintains trade-schools, parochial schools, Sunday schools, missions, many kinds of philanthropy. It teaches girls to cook and sew and gives military training to boys. Every summer it gives to the children of its Sunday school an excursion, up the Hudson, for instance, and I am assured that these excursions are delightful occasions, and the children are very happy, and it would do one good to see how they enjoy the fresh air and the sunshine. Every chapel in the Trinity organization has its guilds and associations for charitable work; every one of its clergy is thoroughly impressed with the idea of doing good in the world. But the fact from which I have found no escape is that the money for these excellent excursions is produced from a living inferno, and the greatest of all the mysteries seems to be this: that even for the religious and benevolent purposes specified by Trinity's charter the means should come in this way.

So runs this extraordinary story. Many strange features pertain to it. The managing forces of Trinity control a very great property. The real owners of that property are the communicants of the church. For ninety-four years none of the owners have known the extent of the property, nor the amount of the revenue therefrom, nor what is done with the money. Every attempt to learn even the simplest fact about these matters has been baffled. The management is a self-perpetuating body, without responsibility and without supervision. All these are strange conditions. But stranger than all is this: that a Christian church should be willing to take money from such tenements as Trinity owns in the old Eighth Ward.—Everybody's Magazine.

### BETWEEN WHILES.

The five-year-old daughter of a Brooklyn man has had such a large experience of dolls that she feels herself to be something of a connoisseur in children.

Recently there came a real live baby into the house.

When it was put into her arms the five-year-old surveyed it with a critical eye.

"Isn't it a nice baby?" asked the nurse.

"Yes, it's nice," answered the youngster hesitatingly. "It's nice, but its head's loose."—Judy Lippincott's.

Customer: "Is there as much genuine Vermont maple sugar on the market this spring as last?"

Dealer: "Just as much, but under the new food law we have to put a different label on it."

---

## WANT AND EXCHANGE

---

To accommodate some of our readers and bring them in closer touch with each other, we have opened this "want and exchange" column.

Rates, twenty-five cents per insertion, not exceeding four lines, including name and address. Five cents per line for additional lines. However, no "want" may exceed six lines altogether.

IMPERIAL VALLEY, CALIFORNIA.—The great Alfalfa and Fruit district where things GROW TOO BIG to write about, you must come and see them. Location, 180 miles east of Los Angeles, on S. P. R. R. Send for illustrated booklet. Address W. F. Gillett, Holtville, Cal.

# EXCERPTS FROM THE CIMARRON CITIZEN

Cimarron, New Mexico, Wednesday, June 10, 1908.

## RESERVOIR COMPLETED

### FARMERS' DEVELOPMENT COMPANY COMPLETE BIG RESERVOIR

Last Wednesday afternoon, the last earth was moved in the big irrigation system that the Farmers' Development Company has been pushing through in the Rayado country. By this system, water is taken from the Rayado River just below the old Abreu place, and stored in a big reservoir which the company have just completed. The dam for the reservoir is over a thousand feet long, and over forty feet high. The storage capacity is over one billion gallons of water at a filling, and about three hundred acres are covered with water when the reservoir is filled. There are over nine miles of ditch in the system, and over ten thousand acres of land will be supplied with sufficient water to meet all needs.

Colt and Windburn had the contract for building the intake ditch and the reservoir dam, and this work

has been completed for some little time. The hills on the north side of the reservoir were found to be too low for the height of the dam, and it was necessary to build twenty-six hundred feet of dyke along the hill top in order to store the water contemplated, and the contract for building this dyke was let to Mr. W. C. Bosley. Mr. Bosley was in Cimarron last Wednesday and he stated that he had just completed his contract, thus finishing up the last work to be done on the whole system. The dyke as is stated, was twenty-six hundred feet long, and the highest fill was eleven and a half feet high.

The Farmers' Development Co. has already sold a large portion of its land to settlers from the middle west, and fine crops are being grown on the rich land. This company has shown its earnest desire to develop Colfax County, and is to be congratulated on the energy and push with which it has taken hold of such a large undertaking as was the building of its big irrigation project. In order that the purchasers of its lands may have every opportunity to raise big crops, the company has, at its own expense, employed two expert irrigation men to instruct the farmers in the proper manner of using the water for irrigation. These two men, who have made irrigation, in a scientific manner, their life study, spend their whole time in the interests of those purchasing lands from the Farmers' Development Co., and big results are being looked for.

## VIEWS PROJECTS

### TERRITORIAL ENGINEER SULLIVAN IN CIMARRON

Last Thursday evening Vernon L. Sullivan, territorial engineer, visited Cimarron, coming up from Springer, where he had been investigating the big work of the Farmers' Development Co., which has just been completed.

Mr. Sullivan, accompanied by E. H. Fisher, the engineer of the Cimarron Townsite Co., went out over several irrigation projects which have been planned in the vicinity of Cimarron by various parties, with a view of ascertaining what is necessary to be done in order to comply fully with the laws of New Mexico relative to the appropriation of waters. Before any waters can be appropriated in the Territory, full maps showing ditches, etc., must be filed with the office of the Territorial Engineer, and full working plans of all dams, etc., must also be placed on file and be approved by Mr. Sullivan.

Mr. Sullivan states that the natural opportunity for development of big irrigation projects, and the watering of lands here in Colfax County, can not be equalled by any other section in the Territory, and that in his opinion, Colfax County and the Cimarron Valley will be one of the garden spots of the southwest.

☞ A few farms with full water rights yet remain at from \$35.00 to \$70.00 per acre. Prices will soon be advanced.

☞ Low rate excursion to Springer, New Mexico, for Miami Ranch, via A. T. & S. Fe Ry the first and third Tuesdays of each month.

Practical Exercises in

## MUSIC READING

for Self Study, Day Schools, Singing Schools, Institutes and Normals, by Geo. B. Holsinger.

## JUST FROM THE PRESS

This book is a valuable one in its line and will fill the demand for a first-class instruction book in music, either for individual study or for class use. The author has had over thirty years' experience in teaching and writing music. He knows just what the student in music needs most, and has it brought together very uniquely in this book. Besides numerous exercises and instructions in music reading, it contains a goodly number of first-class songs and hymns.

Music Lovers and Teachers, here is a book you have been looking for, and at a price that each can afford to own a copy.

It contains 32 pages and has heavy paper cover. Can furnish both round and shaped note. Be sure and mention which notation you desire. Shaped note sent if notation is not named.

Price prepaid, each .....15 cents

Price per dozen, prepaid ....\$1.50

Special prices in quantity to teachers.

## Ropp's New Commercial Calculator and Short Cut Arithmetic The Standard for Store, Farm, Bank or Factory,

5 1/4 x 2 3/4 in.

Is from beginning to end a greatly improved, enlarged and thoroughly revised publication.

It contains an entirely new system of unique Tables, Short-Cuts and up-to-date Methods.

It is unquestionably the most complete, useful and comprehensive Calculator ever published.

It has more than twice the matter, scope and capacity of Ropp's former editions, of which

**Nearly 1,500,000 Copies have been Sold.**

It is the most convenient and practical Labor-saving work ever used in the business world.

It will make every one independent, sure and self-reliant in all practical calculations.

It will prevent mistakes, relieve the mind, save time and labor, and often loss and trouble.

Its Tables are adapted to all the trades and occupations in the city and country, and

### Show the Answer as Quickly as a Watch Shows the Time.

It also explains and simplifies the principles of Arithmetic, Mechanics and Mensuration.

It will make the study and use of Figures easy and interesting for young and old.

It will enable every progressive mind to become an expert, sure and rapid calculator.

It will prove a boon to all whose education in arithmetic has been limited or neglected.

### 48 Cuts Illustrate the Elements of Mechanics and Mensuration

It defines about 70 points in "Commercial Law" which every man and woman should know.

It is the result of devising, and improving system after system; of spending thousands of dollars in experimenting; of making millions of miscellaneous calculations, and of doing some vigorous thinking during 38 years, by an analytic, practical and persevering mind.

### It is Especially Designed for

Farmers, Mechanics, Business and Professional men,

# ALBERTA

## ¶ Of Alberta a distinguished writer has said:

"North of the International boundary line and immediately east of the Rocky Mountains lies the Province of Alberta—a land blessed with all that is necessary to happiness and prosperity. Between the 49th and 60th parallels and between the 110th and 120th meridians lie 281,000 square miles of possibility. Here are mountains and plains, foothills and valleys, rolling prairies with wooded stretches between, dense forests and grassy meadows, clean, timber-girded lakes and winding brooks, cold mountain streams and navigable rivers, and a soil rich in the alluvial and vegetable accumulations of centuries. And as if not content with these outward signs of her favor, nature has hidden beneath the surface vast deposits of coal and other minerals; she has filled the subterranean reservoirs with gas and oil, and sprinkled the sands of the mountain streams with gold. That no living thing should go athirst, she gathered together the waters of the mountains and brought them to the plains, to be directed by the ingenuity of man to the use of the grazing herds and the planted fields. Then, to crown her efforts and leave nothing incomplete, she brought the chinook wind, warm with the breath of May, to temper the north wind."

¶ In the Medicine Hat District we have a gently undulating prairie. The soil is capable of producing generous yields of all small grains and vegetables in abundance.

¶ The city of Medicine Hat, situated on the Saskatchewan river and underlaid with gas and coal, is destined to be a great manufacturing center.

¶ Why not join the colonies already there and enjoy some of the material benefits as well as help build up one of the largest and best colonies in the Canadian West.

¶ We have excursions every first and third Tuesday of the month.

¶ For particulars and cheap rates apply to

## *LIFE*

Life! I know not what thou art,  
But know that thou and I must part;  
And when, or how, or where we met  
I own to me's a secret yet.  
Life! we've been long together  
Through pleasant and through cloudy weather;  
'Tis hard to part when friends are dear—  
Perhaps 'twill cost a sigh, a tear;  
—Then steal away, give little warning,  
Choose thine own time;  
Say not Good Night,—but in some brighter clime  
Bid me Good Morning.

## How to Reach Butte Valley

It is more or less a question in the minds of people after having made a decision to move to a new country as to how to go. Our advice is to take your nearest railroad that leads to Chicago or to the Missouri River. Patronize your own road as far as possible. When you reach Kansas City or Omaha, take the Union Pacific and Southern Pacific to Macdoel, Calif. There is a list of agents published, free for the asking, any one of whom will be glad to furnish you detailed information as to dates, rates and freights. If you and a number of your friends wish to make arrangements to go to Butte Valley, write E. L. Lomax, G. P. A., Union Pacific Railroad, Omaha, Neb., and ask that one of their colonization agents come to see you, which will be done without any expense to you whatever.

There are special excursion rates from June 1st to September 15th to Butte Valley and return.

These rates must be secured from any of our agents. Both Pullman sleepers and tourist sleepers will be found on these daily trains to the Pacific Coast. Our tourist service is constantly growing in favor with the traveling public. Every transcontinental train is provided with dining cars so that every possible comfort is afforded the homeseeker. Stopovers are allowed that friends may be visited, thus enjoying pleasure and doing business with one expense. Be sure to have your ticket read "To Macdoel, California." Daily trains are running on the new branch of the Southern Pacific through Macdoel and there should be no reason why your agent could not furnish you a ticket through to the end of your journey. If you cannot get satisfaction, write the G. P. A., at Omaha, Neb., and you will be provided for.

**CALIFORNIA BUTTE VALLEY LAND COMPANY**

SAN FRANCISCO, CALIFORNIA

Revised Edition of  
**Ropp's New Commercial Calculator**  
**And Short Cut Arithmetic**

The Standard for Store, Farm, Bank or Factory,

5 1/2 x 2 3/4 in.

Greatly improved, enlarged and thoroughly revised.  
 Contains an entirely new system of unique Tables; Short Cuts  
 and Up-to-date Methods.

Unquestionably the most complete and comprehensive Calculator  
 ever published.

Has more than twice the matter, scope and capacity of Ropp's  
 former editions, of which

**Nearly 1,500,000 Copies have been Sold.**

The most convenient and practical Labor-saving work ever used  
 in the business world.

It will make every one independent, sure and self-reliant in all  
 practical calculations.

It will prevent mistakes, relieve the mind, save time and labor,  
 and often loss and trouble.

Its Tables are adapted to all trades and occupations of the city  
 or country.

**The Answer to Your Problem as Quickly as a Watch Shows the Time.**

It also explains and simplifies the principles of Arithmetic, Mechanics and Mensuration.  
 It will make the study and use of Figures easy and interesting to both young and old.  
 It will enable every progressive mind to become an expert, sure and rapid calculator.  
 It will prove a boon to all whose education in arithmetic has been limited or neglected.

**48 Cuts Illustrate the Elements of Mechanics and Mensuration**

It defines about 70 points in "Commercial Law" which every man and woman should  
 know.

It is the result of devising, and improving system after system; of spending thousands  
 of dollars in experimenting; of making millions of miscellaneous calculations, and of doing  
 some vigorous thinking during 38 years, by an analytic, practical and persevering  
 mind.

**It is Especially Designed for**

Farmers, Mechanics, Business and Professional men.

**Three Editions, Five Bindings.**

**Office Edition (9 1/2 x 5 1/4 in.)**

Cloth binding, gold stamp, large type, ..... \$1.00

**Pocket Edition (6 1/2 x 3 3/4)**

Cloth, with pocket, flap and silicate slate, ..... .50

Leather, with pocket, flap and silicate slate, gilt edge, ..... 1.00

**Vest Pocket Edition (5 1/4 x 2 3/4)**

# CHURCH MEMBERSHIP RECORD

The most unique, simple and practical system of record today is the card system.

There has been a demand for a complete practical and simple record system to be used by church clerks in keeping the membership of the local congregation. This demand has caused **Annual Meeting** to ask the Publishing House to arrange such a system. After investigating various systems of keeping church membership records, and getting the advice of many of our church clerks as well as pastors, we are now ready to offer what we consider the best outfit that can be furnished. This system provides for one card for each member and when filled out gives a complete record.

## Church Clerks

send for one of these sets and the question will ever be settled as far as a system of keeping your membership is concerned. It costs no more to start with than in book form and will last a lifetime with the exception of new cards, for new members, which will only cost you a trifle.

### No. 1. Church Membership Record.

A neat cloth-bound box, size 5x6 inches.  
A complete Index.  
100 Membership Cards.  
This outfit is ample for a membership to the number of 150. More cards will be needed when membership is above 100.  
Price prepaid, .....\$1.25

### No. 2. Church Membership Record.

A neat cloth-bound box, size 5x9 inches.  
A complete Index.  
200 Membership Cards.  
This outfit is ample for a membership of 150 to 400. More cards will be needed when membership is above 200.  
Price prepaid, .....\$1.75

Extra cards furnished for 50c per hundred prepaid.

A circular explaining how this record system can be utilized to the best advantage furnished with each outfit. Send your order today. If more information is desired write us.

**BRETHREN PUBLISHING HOUSE, ELGIN, ILL.**

# JERRY McAULEY An Apostle to the Lost

Edited by R. M. Offord

The new and largely revised edition of the book just published is neither biography nor autobiography but the happy blending of both. The editor gathered together the fragmentary accounts of the man's own life and with suitable explanations wove the entire into a most complete story of one of God's humblest servants and yet earth's greatest men. Jerry's own account of his sinful life is put in that language which shows he was keenly sensible of his awful guilt. And while the reader gets a clear insight into his life, it is in such a manner as not to feed the baser of human nature, but rather to rejoice that one should be saved from such lower and devilish depths.

To read his "testimonies" and to stop and ponder on them is to find the clew to his power. Here is one of them. "I have nothing to be proud of; I am proud of my Savior and not of myself. I was a notorious drunkard and gambler. Even my wife does not know of some of the sins I committed, and she never will till the Day of Judgment. I don't know what to say to express my feelings of thankfulness. I know I have been converted, that is, if conversion is ceasing to love that which is evil and loving that which is good. I know that divine grace saved me from a drunkard's grave."

### Kindle the Flame in Other Hearts

It is a good thing to write and print and spread the life of such a man as the hero of this volume. It may kindle the flame in many other hearts. Christians in other walks of life than he trod may be stirred to better living. And some poor, sinning soul, some wretched and sinking soul, some poor sinner, almost as bad as Jerry was, may read it in his extremity, and cry out with this ransomed prisoner, "Lord, save me, I perish."

### Every Church Worker

Should read this book, to get more inspiration and encouragement in Christian duty and privilege. Well bound in good cloth and stamped in gold. It contains over 300 pages. Price prepaid, \$1.00.

**BRETHREN PUBLISHING HOUSE, ELGIN, ILL.**

# **OVER 200,000 ACRES**

of land has been filed under the CAREY ACT in the Twin Falls District, Idaho, since April, 1907.

¶ There is still a large amount of land waiting for the settler in the above district. Also great opportunities are offered at American Falls, at Gooding and other points along the OREGON SHORT LINE RAILROAD.

¶ The Payette-Boise Reclamation Project under the U. S. Government is about completed and will be ready to furnish water to about 300,000 acres of new land in the spring of 1909. These lands can now be bought at reasonable rates and terms, by the settler, and are situated where the country is already partly settled, near good towns, railroads and electric lines.

¶ Rural mail routes and telephone lines are already established. Good schools and churches. No storms or cyclones. Farming is done by irrigation. No failure of crops by reason of too much rain or drought. Fruit crop is abundant every year. The people are happy because they are prosperous.

## **Wonderful Possibilities**

for homeseekers and investors. Climate Mild. Soil Very Productive.

¶ Alfalfa, Sugar Beets, and grains of all kinds are among the products that yield abundantly. Farm hands, carpenters, mechanics and in fact all classes of workmen will find plenty of work at good wages.

¶ Arrange your plans to go and see Idaho as soon as possible and secure some of this fine land.

¶ HOMESEEKERS ROUND TRIP EXCURSION RATES are on First and Third Tuesdays of each month in 1908.

¶ WRITE NOW for printed matter and full particulars regarding this great country and how to get there.

## How to Measure a Teacher's Efficiency

Professor D. C. REBER,

Elizabethtown College, Elizabethtown, Pa.

THIS is a question in school administration and constantly confronts the school director, trustee or superintendent. Of the vital forces affecting the school, the most potent is the teacher whom Seeley calls the High Priest of the future.

Although teaching power cannot be measured quantitatively, since it is a spiritual force, and although the value of a good teacher cannot be reckoned in dollars and cents, yet salary is more or less a popular standard of estimating the teacher's worth. It may be difficult to discriminate between the ability of a \$500 and \$550 teacher, yet a clearly distinguishable difference exists between a \$1000 teacher and a \$3000 or \$5000 teacher. If you were about one of each of the last named for a half-day, you would be conscious of this difference, although it might be difficult to analyze the difference and state explicitly what the elements of efficiency of a first-class and of a third or fourth class teacher are.

There are certain superficial tests or standards for measuring the efficiency of a teacher. One is superficial popularity. The patron soon asks, "How do you like your teacher?" The school authorities have their ears open to hear the opinion of the community concerning a certain teacher to determine his success. This is not always a safe guide. The question that should immediately follow the one just stated is, "What is the basis of his popularity?" Some teachers aim to become popular by resorting to injudicious means. The teacher may be somewhat partial to pupils of patrons of prominence. He may be able to make a show of learning and of skill in sugar-coated teaching which has a temporary effect of arousing interest in school work. He may even succeed in deceiving the employers with superficial results in examination or in public school exercises. Some teachers aim entirely at exhibiting immediate results of their efforts.

The problem of education stated geometrically is:

Given: Two forces:

(a) The pupil—a growing, imitating, self-active, vigorous being;

(b) The teacher—a controlling, directing, sympathetic, inspiring, ideal personality.

To find or achieve: The realization of the end and aim of education in that pupil.

Hence the true test of efficiency is: The degree or extent to which this end sought has been realized, that is, the *product*.

The efficiency of a hand craft is measured by its output; so the school. But humanity is a growing, ever-changing, complex something—never finished—can we ever get a definite product in education? If so, how long must we wait to see this product in order to use it as a criterion for estimating efficiency?

Certainly, immediate evidences or nearly so, are demanded to satisfy the one who is to sit in judgment over the standing of the teacher. Therefore, there are several points which must be *known* by the superintendent or employer in order to estimate the worth of a teacher.

1. The teacher's *personality*, *i. e.*, what he is—his health, freedom from bodily deformity, his personal habits, his nature, temperament, disposition, culture and character. The teacher should be the embodiment of what we want the pupil to become.

2. The teacher's *aim* or *motive*, *i. e.*, Why does he teach? Is it for the money merely, or as a stepping-stone to something else? Is he defective in person or feeble in health, and hence seeks the teacher's vocation? Or is he prompted by a realizing sense of his natural and acquired fitness for the work, by a consciousness of love for his race, and by a knowledge of the nobility and responsibility of the work, believing it the most acceptable field in which to render service to his Maker and to fulfill his destiny?

3. The teacher's conception of the *true aim* of education and of his relation to this aim as a teacher. Does he regard education as synonymous with knowl-

edge? Does he teach the pupil that education is desirable merely to go through life without working, or to take advantage of his fellow-man in business dealings? Or does he consider the end of education to be social efficiency, the formation of Christian character, and the perfection of his whole being to the end of glorifying God?

4. The teacher's *scholarship* or proficiency. This refers to his academic training. He should know more than he is expected to teach. Nowadays this means having completed a definite, well-correlated course of study in some school of recognized standing. A stream never rises higher than its source; so likewise a teacher cannot teach inspiringly unless his knowledge is well digested and comprehensive or even exhaustive.

Plato studied under Socrates for twenty years, and Aristotle for twenty years was a pupil of Plato. No marvel then that Grecian civilization is potent for twenty-two centuries after the death of these great teachers of antiquity. Be a master and you have attained the secret of true popularity as a teacher.

2. The teacher's *skill* or professional training. *i. e.*, the development of his natural powers resulting in the accomplishments for his work as an artist of the highest type. Teaching is the finest of the fine arts. This skill or acquired ability must form the basis of attaining certain immediate as well as more remote results which constitute his product.

In England the "payment by results" system is in vogue. A teacher's salary is there determined by the King's inspector who annually examines the pupils and fixes the salary of the teacher, according to the percentage of pupils successful in passing the prescribed examination. This standard of testing efficient teaching is arbitrary, formal and unreliable if it is used exclusively.

The efficiency of the teacher lies largely in his power to get results and is measured by his ability—

(a) *To control.* There are various kinds of discipline employed by teachers. Does he resort to the discipline of force, or to the discipline of tact or common sense, and to discipline of cause and effect and to the discipline of conscience or moral suasion? Again, to what motives does he appeal in disciplining? Is it fear of punishment which yields a slavish obedience? Or does he resort to sugar plums (bribery) to secure compliance with his wishes? Or does he manifest a loving sympathy in the welfare of each pupil and so constrain and not compel the pupil to yield true and cheerful obedience resulting in self-control and freedom? The elements of efficient government in school are scholarship, skill, steadfastness, sympathy, and self-control.

(b) *To teach.* What are the marks of efficient teaching? How can one secure teaching power? What is it to teach? Roark says, "To teach is to do consciously three things: to instruct, to develop, and

to train." Teaching is a spiritual process in which the teacher's mind comes in vital touch with the pupil's mind resulting in the birth of ideas and truths called knowledge. "It is a process by which one mind from set purpose produces the life unfolding process in another." Given a certain amount of natural ability to show, to utter, and to suggest, efficient teaching must be based on correct psychological principles. It does not proceed haphazardly, but always in accord with the laws and order of mental development and activity. Does his teaching produce interest and attention? Does his teaching arouse the self-activity of the pupil? Does it make the pupil think? Does he teach pupils how to teach themselves? What is the permanent result of his teaching? Does he create a many-sided interest in his pupils? How many of his pupils go to college? How many of his pupils continue their educational work after leaving school? What sort of occupations do they follow? Are they really and truly successful?

(c) *To inspire.* The greatest function of the teacher is to give the pupil a *life purpose* that is lofty and noble. The most important part of a teacher's work is to implant correct ideals of life and of their mission in this world. Hence the best criterion to judge the ultimate value of a teacher's work is the extent the teacher helps the pupil in forming good habits and a pure and noble character.

Therefore, to estimate a teacher's efficiency you must ascertain the kind of permanent impression on the pupil's character the teacher's personality makes. Among the great teachers of the past whose teaching stands the test of this standard are Thomas Arnold, Louis Agassiz, Mark Hopkins, and the master teacher, Jesus Christ.

In conclusion let us ask, What is the upshot of this whole discussion? In order then to estimate intelligently and fairly the teaching power of a teacher, you must answer the following questions:

1. What is he?
2. Why does he teach?
3. What does he aim to make of the pupil?
4. What does he know?
5. What can he do? *i. e.*, How nearly can he achieve what he aims to achieve?
6. What is his record to date as expressed by competent authority?

A DEAR friend of mine used to say of a fine old doctor in Philadelphia that his simple presence did his patients more good than his medicine, and was easier to take beyond all comparison. Well, such a presence is always a noble medicine in itself. The contagion of a cheerful soul helps us always to look toward the light, sets the tides of life flowing again, and cubes all our chances of getting well.—Robert Collyer.

# Sounds and Ears of Some Insects

N. J. Miller

NEARLY every one is familiar with the sounds emitted by at least a few of the common insects the charm of which renders the quiet hours of the day or night less monotonous. During a single hour one's attention may be called to the various calls in the insect world—perhaps the rattling or rasping of the grasshopper, the chirp of the cricket, the call of the katy-

The cricket's "ear," (e), situated on front tibia (t).

Head and part of thorax of mosquito. A, antenna with minute auditory hairs; w, part of wing.

did, the shrill note of the seven-year locust (cicada), the buzzing of a fly or bee, the music of a mosquito, the clicking of a water-beetle or butterfly or other sounds peculiar to the world of insects. In Japan one would not fail to hear "singing" insects, (especially the bridle-bit crickets, the notes of which resemble the rattle of bridle-bits) that are kept in cages just as is the custom with song-birds with the Caucasian races. Whether pleasing or distasteful to human ears, the variety of sounds is very great, and the mechanisms producing and perceiving them very interesting and sometimes intricate.

The fine notes of the mosquito are made by rapid movement of the wings and the passage of air in and out the spiracles, openings of breathing air-tubes

Lateral View of Grasshopper with Wings of one Side Removed. E, Hearing Organ; S, Spines on Legs.

permeating the body. The wings move very rapidly, making many simple movements in a second. During each stroke the wing describes a figure 8. The house-fly's wing, it has been determined, describes three hundred and thirty such revolutions, or six hundred

and sixty oscillations per second. The movement of the mosquito-wing is even more rapid, the vibrations of which, together with the movement of air in and out the breathing tubes, produce the music so familiar to all. The male, according to experiment, perceives the humming of its mate by delicate structures, the tuft of hairs on its antennae. These vibrate in unison with the tones made by the female. Even the sound of a tuning-fork or violin, if properly manipulated, will cause the hairs to vibrate. The stimuli received by the hairs are transmitted by means of a complex mechanism of nerve-cells and nerves to the brain.

In a way similar to that of the mosquito, the humming sounds of insects are produced. The vibrations of the wings and the leaflike structures in the air-tubes (produced by the passage of air through the spiracles) are responsible for the loud or delicate buzz of the bee. In this case the sound serves to frighten away enemies as well as to interchange information. Though one easily hears the vibrations of the bee's sound-making structures, some insects, it is believed, emit and perceive sounds inaudible to the human ear. Only vibrations in the air ranging

Cricket's Chirp-producing Organ. A, roughened Vein or Rasp; d, Drum.

between 16 to 40,000 per second are audible to man. Vibrations of higher frequency, it is believed, are emitted and heard by various insects, which have vibrating organs or a nervous apparatus analogous to the auditory structures of those which are certainly known to perceive sound. So the "talk" of such insects involving courtship, recognition of mates and species, warning friends and enemies, etc., goes on unperceived by the human auditory apparatus.

Very loud noises are made by some insects, especially the cicadas, a group including the seventeen-year locusts, harvest flies, etc. It has been determined that a single insect can emit a sound that can be heard a mile distant. This shrill and loud note—heard usually during July, August and September evenings—is familiar to nearly all living in the country. It is effected by "the rapidly recurring, contractions of

the fibers of a muscle inserted into a stiff chitinous membrane, the result being a series of crackling sounds, which follow one another so rapidly as to give rise to a continuous note." In the seventeen-year locust the thin chitinous plates concerned in the sound are on the under side of the abdomen.

Stridulation is another method by which some insects interchange information. The cricket's chirp falls under this category, the rate of which is determined by the temperature. Dr. Davenport says one may compute the temperature by means of the formula

$$T = 50 + \frac{N-40}{4}$$

in which T stands for temperature, and N the number of chirps per minute. The well-known sound is produced by the outer wings rising and rubbing rapidly against each other from side to side. The minute mechanism concerned in the chirp is as follows: On the under side of each wing is a roughened "vein" which serves as a rasp to be drawn like a violin bow across the wings or their oval membranous "drums." The vibrations of the "drums," produced by the rubbing, are perceived by the auditory organ, situated on the tibiae of the foremost legs. The oval chitinous covering is the tympanum or ear-drum. Also the "katydids" have the auditory apparatus located in the front tibiae of both sexes, but only the males, as is the case with crickets, are concerned in producing the well-known note so famous in story. It is produced by rubbing the base of the one large wing cover on the other.

The common locust or grasshopper stridulates when at rest by rubbing the inner roughened edges of the femurs of the jumping legs over the outer edges of the first pair of wings. Stridulation is also produced by the wings striking together in flight. Only the male produces sound by the first method. At least if the female stridulates, and some believe she does, the sound is too low or the pitch too high to be perceived by the human ear. Both sexes have a pair of ear-drums located in the foremost segment of the abdomen. "On the inner surface of this ear-drum there are a tiny auditory sack, a fine nerve leading from it to a small auditory ganglion lying near the tympanum, and a large nerve leading from this ganglion to one of the larger ganglia situated on the floor of the thorax."

A VERY observant gentleman was characterizing a certain school man and remarked, "He seems to be deficient in terminal facilities." This is a sad state of affairs either in the case of a railroad or a man: without terminal facilities neither can reach the destination—and so becomes greatly crippled in usefulness.—*Ohio Educational Monthly.*

## THE BACK ROAD.

My little garden spot is on the back road,  
But my little garden spot is full of sun;  
There's no such comfort and sweet peace on the high-  
road

When the long day is done.

There's a heap of dust upon the highroad,  
There's a lot o' folks a-passing by;  
There are shadows long and cool upon the back road  
Where there's only you and I.

Temptation's always lurking on the highroad,  
Nearly every man you meet is full of guile;  
But your thoughts don't run to scheming on the back road,  
With the thrush and blackbird singing all the while.

A man must toil to live upon the highroad,  
Till his shriveled soul grows dry;  
But there's work and life and hope upon the back road  
Where there's only you and I.

And as we pray, God keep us on the back road,  
Help us to measure out our life in work and love;  
According as we've dealt upon the back road,  
May he in mercy deal with us above.

—Leslie Fowler, in *Farm and Fireside.*

## PINS BY THE BILLIONS.

THE census bureau issues a statement to the effect that 33,000,000 gross of pins was the output of this country for the year 1905. Nineteen billion pins. It is not strange that mankind has for many years wondered where all the pins go; for 19,000,000,000 pins is surely a stock of pins, and these figures are for the common everyday pin and do not include some tons of hair pins, safety pins nor the imported article from other countries.

It takes a mathematical genius to even conceive 19,000,000,000 pins; but one has come to the front. He tells us that if we assume that the average length of pins is one inch, it appears that in a single year we produce 19,000,000,000 inches of pins, 1,600,000,000 feet of pins, 320,000 miles of pins; pins enough if laid end to end to go around the world thirteen times; pins enough to make a hundred-strand cable between New York and Liverpool. But why pile it up? It is enough to say that it is a deuce of a lot of pins. And the whole lot cost only about \$1,200,000. For the benefit of sticklers for exactness we will say that the figures are 132,632,232 gross, valued at \$1,129,006, for the year 1905 alone.

We have to take the mathematical genius at his own figures. It is all too much for the ordinary mind, but granting that he is right it seems a bit strange that the surface of the earth isn't strewed with pins. Certainly if the manufacture of pins keeps up proportionately for a few years longer, the earth will become a mere pin cushion for the ladies.—*Memphis Commercial Appeal.*

## Around the World Without a Cent

H. M. Spickler

### Chapter XIV.

IN Dublin the Irish still tell you of Mrs. Moriarty, an elderly dealer in tin-ware, who flourished about sixty years ago, on Exchange Street, in Dublin. This old lady was famous for a very bad temper and a bitter tongue. On one occasion some lawyers were discussing her peculiar trait in the court room at the noon hour, at which one of the lawyers challenged the great O'Connell to walk past her stand on the open street on the way home that night and engage her in a conversation, purposely making her angry, just to see "the fur fly." The other gentlemen, laughing in glee at the incident, were to follow closely and stop near by to witness the duel. A bet was laid down and accepted by O'Connell. Forthwith that night, after legal hours, he sauntered down the street, and, followed by the legal brethren, having roused the old lady's wrath, undertook to silence the virago by bursting in upon her, as follows, calling her mathematical terms, which she angrily mistook for blackguard:

"Why sure. Your neighbors all know very well that you keep not only a *Hypothenuse*, but that you have two *Diameters* locked up in your garret, and that you go out to walk with them, every Sunday, you heartless old *Heptagon*!"

"Oh, hear that! Ye saints in glory! There's bad language from a feller that wants to pass for a gentleman! May the devil fly away with you, you Mister from Munster, and make celery-sauce of your limbs, ye mealy-mouthed Bosthoon!"

"Ah! You can't deny the charge, you miserable Sub-multiple of a Duplicate Ratio!"

"Go. Rinse your mouth in the River Liffey, you nasty old tickle-pitcher. After all the bad words you speak, it ought to be filthier than your face, you dirty chicken of Beelzebub!"

"Rinse your own mouth, you wicked-minded old Polygon! To the deuce I pitch you, you blustering *intersection of scenting superficialities*."

"You saucy tinker's apprentice, if you don't cease your jaw I'll—"

But here she gasped for breath, unable to cough up any more words, for the last volley of O'Connell

had nearly knocked the wind out of her.

"While I have a tongue I'll not cease to abuse you, you most Inimitable Periphery. Look at her, boys! There is Contamination in her Circumference, and she trembles with guilt, down to the very extremity of her Corollaries! Ah, you're found out, you Rectilinear Antecedent and Equiangular old hag! 'Tis with you the devil will fly away,

you Similitude of the Bisection of a Vortex (vertex)!"

Overwhelmed with this torrent of language Mrs. Moriarty was silenced.

Seizing a sauce-pan she was aiming it at Mr. O'Connell's head when he very prudently made a timely retreat, joining the friends who had now come close to the affray.

"Ha! ha! here's your bet!" cried the gentleman

Farm Scene, Northeast Coast of Ireland. A Dirt Wall Built 300 Feet Above the Sea Runs Along the Very Edge of the Field to Keep the Horses and Cows from Falling Off.

who had proposed the contest, as he placed into the great Irish agitator's hands a crisp new bill. He had well earned his money, and the people who most intimately knew Mrs. Moriarty are declared to have said that she was never quite the same ugly scold after that day.

For elocutionists good at interpreting strong emotions and powerful temperaments the above would be a rare bit of work, and because of that and the good humor it contains, I have refused to pass it by.

Ireland is a queer place, a place hard to be understood and more troublesome for solution. The man who pretends to have a specific for her people in the way of a form of government is to be carefully watched. For the size of the country there is no nation requiring so many different kinds of remedies for so many different, yet all but alike, ailments.

The Irish constabulary, honored for their manly nobility, and usually true to the letter as also the spirit, are kept, as a national guard, in every town and village, in constant readiness to prevent a riot, save broken heads or gather them up afterwards. Not the County Tipperary alone, but all of Ireland, is subject to an excitable fluctuation of pathetic moods and tenses. Emotions, not thoughts, rule. Passions, not ideas, stir into activity, this coldly-treated Celtic blood. As I rode through the villages I saw at nearly every corner a group of shabbily-dressed young men with faces wrinkled by a lifetime's hardships, whose spirits were crushed by an intolerable tyranny,—held down by forced poverty, pinching poverty, in deepest ignorance and with entirely undeveloped ideals. Standing in doors, huddling against boxes, Irish boys, shivering with starvation's gnawing,—hopeless, forlorn,—looking for a penny by earning it or by begging it, they were ready at the least provocation to empty themselves into the street. Like a volcano that to most people in the immediate neighborhood seems asleep forever, this outnumbering population in Ireland settles down into stolid indifference, caring little for life in the mere agony of existence, appearing to be contented with its awful fate. But from this lethargy the passionate patriot arouses the volcanic fire within. Impulse then is the throttle that opens the Irish machinery to the cyclonic power of an unregistered and unrestrained force. The engine runs well, on tangentials and into space, or off the track. After it has exhausted the supply of energy it drops back to a standstill, and Ireland is just where it was before,—to a generation's eye.

The Irishman is not selfish. He often becomes a great grafter in American politics, but he oftener becomes a good citizen. He craves liberty, for himself and for the world. He is too good at heart to long play the tyrant over his own fellows. Yes, he craves liberty, but it is often the liberty of self-government wrongly handled. This ideal, glorious free-

dom, automatic and spontaneous, sounding well in song and reading well in story, of the Irish patriots, unhampered by class law, and least of all by English law, is the condition dreamed of and hoped for by thousands of her sons.

This volcano of public sentiment, buried and restrained for years, then bursts in a tremendous upheaval, when orators only equaled by America's best, hearers only equaled by Americans for power of being magnetized, champions, with the fury of fanatics, control the hour. The volcano spits forth her flood in spots here and there, and vomits it in great streams over the fairer land below, and Ireland is again rent into a thousand sections, semi-organized, dislocated, helpless and hindering units of conflict. The country is then at war,—the city against the country, the country against the city; the farmer against the factory, the Land League fights the Home Ruler, leader attacks leader.

But I have all confidence in the Irishman's ability. He has great native resource. The man who said to me, "The top of the mornin' to you, sir!" when he met me on the road, he walking in the wet, I riding on my good wheel, has too much of the good cheer that captivates and too much of the hopeful and beneficent spirit of the Bible to be kept down always. He will rise sure as the sun rises.

Their admirable strength, their enviable health, their good nature, are sure to win for them a success in the end. The giant form, the frank countenance, the rosy cheeks, the blue eyes of Erin must win.

Any one who raises his voice against the Irish of Ireland must also raise the same voice against America, for there are four times more Irish in the United States than in Ireland herself.

All success to the glorious people of Ireland, the sons and daughters of the land of Saint Patrick, "the emerald isle of the silver sea."

#### ALPHABET OF AMERICAN AUTHORS.

G. FEGLEY.

#### XVII. Josiah Quincy.

JOSIAH QUINCY was born in Boston, February 4, 1772, and was the son of Josiah Quincy, a noted orator of the Revolution. He graduated at Harvard in 1790, and then took up the profession of law, which he followed successfully, and entering politics, became an active factor in the Federal party in New England. He held various offices, entering Congress in 1805, where he at once came to the front as an able thinker and speaker, being especially active against the politics of Jefferson and Madison, opposing the Non-Intercourse and Embargo business, and the War of 1812. He was one of the earliest to denounce slavery, and declared that it was sufficient cause to dissolve the Union to purchase Louisiana.

He became a member of the Massachusetts Senate, and in 1822 was elected judge of the Boston municipal Court, and in 1823 Mayor of Boston. In 1829 he was elected President of Harvard College, which office he filled till 1845. He denounced the war of the rebellion in unmeasured terms, as his father denounced the British before the Revolution, and did all in his power to aid the Union. He died at Boston, July 3, 1864.

He wrote and published about fifty books and pamphlets, of which the following may be mentioned

as among the best: "History of Harvard University," in two volumes, 1840; "History of the Boston Athenæum, with Biographical Notes of its Deceased Founders," 1851; "Municipal History of the Town and City of Boston for Two Centuries," 1852; "Life of John Quincy Adams," 1858; "Essays on the Soiling of Cattle," 1859.

Worthy of mention: Josiah Quincy, political; Edward Quincy, sketches; James Quinter, theology; C. P. Quackenbos, history.

*Bryan, Ohio.*

## A Day With a Princess

Olive A. Smith

THE Princess was weary of the duties of her realm. She had been granted a fortnight's respite, and her cousin had sent the following urgent invitation: "Come to us, my dear Evelyn, and we will have a delightful outing. We will revel in the grandeur of the mountains, the canyons and the falls. We will go rowing and bathing. We will drift and dream on the still, blue waters of the lakes. We will fill our lungs with the invigorating breath of the sea, and we will know all the sweet enchantments of sunrise and moonlight on the beach. Your country is pretty enough,—in its own quiet way,—but you have no real scenery there. So come to us for your vacation.

But the Princess did not go. Her conscience forbade her, and the voice of conscience must sometimes be considered. The fortnight had passed,—all but one day, and she was still weary. Nothing seemed worth while, when one really considered the price to be paid for it. On the eve of that last day, as she sat alone in the gray gloaming, she formed a plan for the morrow. She smiled as she rose, and began her preparations for carrying it into effect.

She was awake early the next morning. She crept to the east window to see what manner of day had dawned. The sky was clear and blue, the air as fresh and sweet as only the air of a perfect June day can be. House wrens and sparrows chirped and chattered under her window. She wrote a brief note stating that she would not be home until late in the evening, pinned it to her door, and stole softly down stairs and into the street. After stopping at a restaurant for a bit of breakfast and a package of lunch, she soon came to a low wooden building marked "Livery." "Give me a gentle, intelligent horse and a buggy," she said to the groom. "I want them for the day."

Half an hour later, the hoofs of a dappled-gray pony clicked merrily over the last of the paved streets, and the vehicle rolled into the soft, dustless loam of a suburban road.

The wise little pony seemed to understand her mis-

stress perfectly. With never a hint of whip or rein, she raised her small head higher, pointed her sensitive ears forward, and sped along toward the land of the Princess' dreams. The city, which lay behind them, nestled at the junction of two rivers, like a bird's nest, snugly ensconced in the branch of a tree. Thus the road to the westward was a gentle ascent from the river valleys to the higher levels beyond.

Gradually the houses on either side grew farther apart, the fields and orchards larger. The Princess met many of the owners or tenants, and, while she was usually courteous and pleased to meet people, she wanted, for one day, to indulge a delightful repugnance toward the entire family of human beings. This fact, too, the little pony seemed to understand. She tossed her head, and eyed the intruders scornfully, as if to say, "You tiresome creatures, why do you persist in annoying my princess with your presence? I am taking her out of your sight, and now I will take her still faster."

"Thank you, Dapple-Gray," said the Princess, as they glided on, after passing the owner of the last of these fruit farms, and turned south into a stretch of undulating roadway, flanked by rustic rail fences and hedges. Enclosed by the fences were orchards of apple, peach and cherry trees, broad fields of wheat, corn, and oats, with an occasional expanse of young rye or cane, and meadows, green as the emerald isles, starred with daisies and mayweeds. Dapple-Gray trotted briskly, but the Princess often stopped her while she listened to the voices of the morning, watched the robins and blackbirds feast on the ripening cherries, or alighted to pluck some strange, way-side blossom.

Once she stopped to remove her hat, and yield her every sense to the delights of the fresh June breeze,—the breath of a hundred perfumes—which fanned her cheeks as softly as a mother fans her tired child. Even the fragrance of the peach and apple blossoms, long vanished, seemed to linger with the wild rose,

the field lily and catawba, and only a few rods ahead were the snowy drifts which crowned thickets of wild plum and hawthorne.

"The breath of God," murmured the Princess, as the long grasses bent, seemingly in reverence, possibly to let the zephyrs pass without hindrance. Farther ahead, a line of blue flags paid her homage, bowing in stately harmony. Brilliant orioles flashed among the leaves of the orchard trees, uttering clear, martial notes, as if challenging the claims of royalty. A brown thrush perched on a fence post, whisked his long tail and warbled deferentially, until made shy by too great nearness. Close to a hedgerow, she stopped to listen to a mild chorus of song sparrows, gold finches and yellow warblers, varied by an occasional red-bird solo, and the chuckle of a rollicking catbird, who peered at her from a clump of bushes where he kept guard over his family.

At the approach to the plum thickets, a rustic bridge spanned the ravine which ran zigzag—as streams persist in running—through a clover field on one side and a wooded pasture on the other. There the sleek, dreamy-eyed cattle looked up from their grazing in respectful surprise, some of them coming as near as the fence would permit. Regardless of their curiosity, the Princess drew rein on the floor of the bridge, and sprang from the buggy to peer into the water below. It was clear and swift. Directly under the bridge, a pile of stones sent it gurgling to the lower level on the other side. On the banks were flowers and vines in abundance. Purple violets, which should have disappeared weeks ago, had, by some mysterious dispensation of shade and moisture, been preserved. Honeysuckles swung their bells in time with the monotonous song of the water, and the arbutus, like the violets, had forgotten that its day had passed. An occasional wild rose lifted its pink petals timidly, as if blushing in the presence of royalty.

The Princess captured a cluster of pure white pond lilies, and Dapple-Gray carried her swiftly up the incline for a few rods. Then they turned westward again, picking their way through a series of bosky hollows and hills. There a narrow lane led to a place where they must choose between two roads. The Princess knew that one led to the woods, and she turned the pony's head in that direction.

It was warm on this open prairie, but the Princess drew her wide hat over her eyes and walked slowly, dangling the reins. The midday heat seemed a purifying, refining fire of sunlight, detaching her from the very discomfort it produced. At the entrance to the grove, the trail grew wider. They crossed a bridge, and worked their way toward the ideal lunching spot, the ruins of a pioneer mill. Parts of the enclosing walls still stood, overgrown with moss and vines, a pathetic protest against oblivion. Piles of

stones lay as they had fallen in submission to wind and flood, embedded in the shallows of the stream.

The Princess unhitched the horse, gave her water and grain, then opened her package of lunch. She ate leisurely, stopping often to throw bits of bread and cake to her small neighbors. Gray squirrels chattered and scolded from the branches overhead. A chipmunk peeped from behind a hickory, his cheek pockets bulging with the food which he was carrying to cold storage. Timid rabbits peered at her from the thickets, and a blue jay ranted from a neighboring tree-top.

She lingered long in the forest, and it was with reluctance that she prepared to continue her journey. "Good-bye, dear little forest," she whispered. "I shall remember you forever—if I shall be forever." Then she urged the pony forward into the golden blaze of the afternoon.

For several miles they followed a series of rough bottom roads, then a turn to the north showed them again the peaceful wideness of the prairies. On the east was a gently undulating sea of alfalfa, waving and rippling to the breezes which had seemed to rise with them from the region of trees. Over this grassy sea, there hovered myriads of butterflies. Some were milk-white, others white with flecks of gold and crimson; others were yellow and gold, and some wore coats of sober brown with bright-hued borders.

As the Princess stopped to watch this spectacle of diurnal fairyland, she heard the clear, penetrating note of a meadow lark. Then there came an echo to the call. From yonder hill, another lark had answered. The Princess was half indignant at an unromantic quail who persisted in mingling his matter-of-fact "Bob White" with those melodious responses. Farther up the incline was a clover field in full bloom. There, too, the butterflies flitted and floated, drawing the sweetness from the crimson-purple blossoms. The Princess stopped again to listen to the song of the larks. Four times came the responses, "dreamily, faint and far." Then she drove on.

"One thing more, Dapple-Gray," she said playfully brandishing the whip. "Do you see those conical mounds? It is said that they are the work of the mound-builders. I cannot vouch for the truth of the theory, but I must stand, or sit, on the summit of that first one, and view the landscape o'er."

Half an hour later she gained the summit, and was trying to fix the scene so that it would stay with her; the grandeur of the solitude, the peaceful expanse of the prairies, the endless diversity of hill and valley, woodland and stream, the matchless blues of sky and distant plain, blending with the gray and purple of the hills and forests, the hundred tints and shades of verdure upon which her eyes had feasted since morning.

Far to the northeast the city rested like a blur of dolls' houses, against the horizon.

"It's many a bonny mile, Dapple-Gray," she said, rising as the pony looked anxiously toward the mound, "and we want to take our time, so we had better start."

After the eastward journey began, the Princess strove to be oblivious to details. She did not want to think or observe. She wanted to allow thoughts and emotions to drift over her spirit as lightly as those zephyrs had drifted over the seas of green and purple; as lightly as the ships of pearl were then drifting on the sapphire sea above.

Only once did she turn her face westward. It was to see the crimson flame of the sunset; to watch the regal lights of gold, and orange, and amethyst, burn lower and lower, fading at last into the gray opalescence of twilight.

She paused often to listen to the wayside orchestras and vocalists, giving special applause to the fiddling of the crickets, the bull-frog's masterly handling of the bass viol, and the rich contralto of the katydids. When a sudden turn of the road brought the electric lights into view, she experienced a strange feeling of mingled joy and rebellion. Then she noticed how the white moonlight filled all the void between the earth and the watchful stars overhead, and the rebellion was gone. There remained only the joy of the home-comer.

When the Princess awoke the next morning, she knew that it was late and she must make haste. Her dreams had been a strange series of evolutions. Her forest voices had deepened into the clang and jangle of trolleys. The notes of the birds had grown less and less musical, until they had merged into the shrill cries of hucksters and venders. The purling of the waters was only a monotonous grinding of wheels on pavements, and the voices of the wind in the fields were the tones of the King whose dictations she translated through the "clickety-click-click" of the typewriter. The meadow-lark's call proved to be the elevator boy's automatic twang of "Daown-going daown." Then the voices were all put to flight by a very real slightly querulous voice which said, "Evelyn, why don't you hurry? You'll be late to work!"

"I'm coming, Mother," she answered brightly, and there was a smile on her lips, a happy light in her eyes, when she descended the stairs. Some people said that it was "too hard"—this support of a home and invalid parents by a fragile girl, but the Princess' weariness was gone. Everything seemed worth while. The day had been well spent.

EVERY duty which is bidden to wait, returns with seven fresh duties at its back.—*Chas. Kingsley.*

## THE BOOMERANG AND HOW TO THROW IT.

IN this short treatise I do not intend to discuss the boomerang from a scientific point of view, but merely to give my personal experience of it as a very curious and interesting weapon, with a description of its construction and flight. The boomerang is a weird and erratic form of missile, and though I have about fifty, and have continually practiced with them for many years, I have not one that, it may be said, closely resembles another in its behavior. It is impossible to reproduce with even approximate accuracy a good returning Australian boomerang, owing to the numerous twists and indentations contained in its outlines. These curious twists and hollows represent the experience of generations of native boomerang artists. Nor can we obtain any wood with a natural curve in its grain which is nearly as hard and heavy as that from which the boomerangs of Australia are fashioned. This hard wood allows the Australian to finish off his boomerang at its edges to almost the sharpness of a knife blade. As the material he employs is also very heavy, his weapon can be made so thin that it offers but slight resistance to the air when it is cast, while at the same time it has sufficient weight to give

EXAMPLES OF BOOMERANGS.

The four upper ones of the left hand column and the two upper ones of the right hand column are Australian returning boomerangs. The three center ones in the picture are Australian war boomerangs. The remainder are of English manufacture.

it the necessary momentum to travel a long distance. The only suitable wood with a natural curve that grows in northern latitudes is old and dry ash. If a boomerang has not the grain of its material running evenly from one end to the other it will soon fracture, though if made from naturally curved wood, the best of all, or even from wood that has been steamed and bent to shape, it may strike a road or a tree without being damaged. When a boomerang is constructed from a piece of wood that has been steamed to a curve, it is essential that it should be kept flat in a press or else between two boards with a weight upon them. If a boomerang of this kind falls on wet grass or is thrown in rain it is certain to lose its contour, and the slightest warp or twist will at once convert a first-rate weapon into a useless one, though the true cause of its deterioration may not be suspected. For this reason it should always be stored away perfectly flat when not in use, and, if

necessary, retained in this state by means of pressure. Though the Australian returning boomerang has several twists in it and is never flat throughout its length, such twists are one and all purposely designed to assist the weapon in its flight. On the other hand, a casual twist or warp, caused by damp, has an opposite effect.

There are two distinct kinds of Australian boomerang—the one used in warfare and the returning one. As the latter is always more or less flat on one side it may easily be distinguished. If, however, we make one exactly similar as regards its size and curve it will make no attempt to return when thrown.

The Australian war boomerang is nearly twice as large and heavy as the returning one, has no twists and is rounded on both sides. It does not return to the thrower. This weapon will travel, skimming low over the ground, to a range of from 150 yards to 180 yards, and the blow it gives a tree trunk at 100 yards is as if the latter were violently struck with a blunt and heavy sword. As an instrument of savage warfare it would have a terrible effect on a scantily-clad opponent. Though the returning boomerang was chiefly employed by natives for killing, as food, birds flying in small numbers or in flocks, it was also constantly used as an amusing plaything, just as a sling for pebbles or a bow and arrow might be carried by a schoolboy. All the best Australian boomerangs are closely notched on both surfaces. They are, in fact, roughly honeycombed all over, except on their edges. The notches are everywhere in contact, and run laterally along the surface of the wood. They appear as if they were scooped out with a tool like a quarter-inch gouge, though the little hollows thus formed are not deeper than the thickness of paper.

The Australian gave his boomerang this rough surface that it might "bite" the air in its flight. For the same reason the outside or cover of a golf ball is indented or pitted, as when golf balls were made with a smooth china-like surface (as was formerly the case) it was found they would not fly far or accurately. There have been many diagrams in various periodicals describing the flight of a boomerang, none of which, in my opinion, has ever clearly indicated its career in the air. I will endeavor to elucidate this subject in a manner that I consider is easier to understand than one conveyed in a series of confusing lines and figures. For example, take up your position facing the north and throw your boomerang northeast. It should travel from right to left—the north being the far apex of its circular route—and return from the northwest. It should then pass close to you toward the southeast—for a score yards or more behind your back—and, returning again, spin down to the ground within a yard or two of your feet. In this case the most favorable wind would be from the northwest. To put it shortly—throw the boomerang to your right

front, or at an angle that is halfway between the point of your right shoulder and the direction you are facing, standing so that the wind blows toward your left front.

If thrown downward a boomerang will never return to the thrower. If thrown straight against the wind, especially a strong one, it will usually soar high in the air and come down edgewise with great force, almost perpendicularly and close to you—a most dangerous return if the sun happens to be in your eyes or in those of any friends near you. The perfect throw is the one in which the boomerang comes sailing back at a few feet above the ground, takes a dip just as it passes you—in which it almost scythes off the grass stalks—then rises and continues its flight for some 40 yards behind you, to return again and finally drop at your feet, spinning like a falling leaf or the winged pod of a sycamore tree. The best Australian Boomerangs will now and then settle with such a slow butterfly-like flutter at the end of their flight that, when spinning but 4 or 5 yards above you, there is time before they reach the ground to look at your watch, count five seconds, and put it back again in your pocket!

In a strong wind a boomerang will never fly properly, as, though it may return past the thrower it will probably conclude its flight at 150 yards behind or to one side of him. A boomerang can be thrown a long distance if there is no wind, but will not return nearly so well as when there is a slight breeze to assist it to do so. If thrown downward it will travel still farther, but, of course, will not come back against the wind. The best throw I ever made downward was 270 yards. When throwing a boomerang, the great secret is to throw it with the wrist. The wrist can alone give the drawback snatch to its handle end which gives the weapon the rapid spin it should commence its flight with and without which it will never behave as it should do. The usual fault with the uninitiated is to throw a boomerang flatwise, as if casting a quoit or an oyster shell. This method is fatal to success.

Directly a boomerang ceases to spin or commences to spin slowly it falls to the ground like a wounded bird. The weapon should be thrown with the inside edge of its curve toward the ground as if cutting downward with a scimitar, its flat surface outward and its rounded one next to you. It should be aimed as if to strike the ground (which of course it will not do) at a spot some 30 or 40 yards distant from the thrower. The angle at which it should leave the hand, should be halfway between the right shoulder and the direction the thrower is facing, i.e., to his right front, the wind blowing gently toward his left front, or in any event from his left side. The first two fingers and thumb should alone grasp the handle.

As the boomerang thrower becomes proficient he may indulge in many curious feats, though some of

these require years of practice before success is attained. For instance, a boomerang can be thrown so as to ricochet along smooth ground like a flat stone over water, and after making thrée or four contacts return to the thrower—a pretty exhibition of skill. Again, several boomerangs can be thrown in rapid succession, each keeping its proper course and returning to the thrower, one after the other, like a number of birds wheeling to change their direction. I have even had a dozen spinning about me all clear of the ground at the same time, and all thrown by myself within eight or ten seconds. As a variety, three boomerangs may be held together in the hand and then thrown simultaneously, or, three may be thrown round a tree, at intervals of two or three seconds, and caught in the air as they return one by one to the thrower, dropping gently to the ground as they spin over him. They should, of course, be taken at arm's length, as if allowed to descend near the face unpleasant consequences may result to the features.

A curious use for a boomerang is to throw it over a covey of partridges, if they have alighted in a field of roots or other cover late in the season when the birds are wild and will not suffer approach with the gun. As the boomerang sweeps over them, and flies round about in a large circle like a hawk, the birds will squat close to the ground and can often be walked up within easy gunshot. Two or three small holes drilled in each of its ends causes the boomerang to emit a slight whistle or scream as it rushes through the air, which no doubt adds to the alarm of any birds it passes over.

Though the English imitation of the Australian weapon has not all the tricks and antics of the aboriginal one, yet if carefully shaped it will act quite well enough to cause great amusement and interest. The home-made boomerang always requires to be sharply curved, so that this curve may in some degrees take the place of the non-understood twists and indentations of the genuine article. I have an excellent form of returning boomerang made for me by Messrs. Buchanan, 15, Pall Mall, London, who keep a stock of them for sale. They are small and light and hence are not dangerous to use as often are the larger and heavier ones. They can easily be manipulated by a lady. This boomerang I evolutionized after several years of modeling, for a chip here, a shaving there, a trifle too little or too much curve, a quarter of an ounce in weight one way or the other or even too thick a coat of varnish, will make or mar one of these fanciful and fascinating playthings. Playthings it is indeed hardly correct to call them, as the flight of a boomerang is a scientific puzzle that is never likely to be solved, though many scientists have presented us with learned though usually divergent solutions.—*Sir Ralph Payne Gallwey, in Country Life (London).*

## GREAT MINDS AND MONEY.

MONEY has, since the time that trade began, been a subject of much discussion. Everybody has to come in contact with it, some people are having too much contact, others not enough. The following are a few opinions gleaned from the views of prominent men on the subject of money:

A wise man should have money in his head, but not in his heart.—*Dean Swift.*

Money does all things; for it gives and it takes away. It makes honest men and knaves, fools and philosophers.—*L'Estrange.*

He that wants money, means, and content, is without three good friends.—*Shakespeare.*

Money is like manure,—of very little use except it be spread.—*Bacon.*

Make all you can; save all you can; give all you can.—*John Wesley.*

Ready money is Aladdin's lamp.—*Lord Byron.*

The use of money is all the advantage there is in having it.—*Benjamin Franklin.*

Put not your trust in money, but put your money in trust.—*Oliver Wendell Holmes.*

Men are seldom more innocently employed than when they are honestly making money.—*Samuel Johnson.*

Money is a handmaid if you know how to use it,—a mistress if you do not know how.—*Horace.*

It happens a little unluckily that the persons who have the most infinite contempt for money are the same that have the strongest appetite for the pleasures it produces.—*Shenstone.*

Gold is a wonderful clearer of the understanding. It dissipates every doubt and scruple in an instant, accomodates itself to the meanest capacities, silences the loud and clamorous, and brings over the most obstinate and inflexible.—*Addison.*

## OYSTERS ON TREES.

THE natives of the West Indies tell travelers, when they make their first trip to the land where the mangrove tree flourishes, of oysters which can be purchased on branches, so many to the branch. The oysters there grow on trees. Most of the islands in the South are fringed with mangrove trees. Some of them grow in the salt water, and their branches droop until a part of them is submerged. Oysters will cling to any surface in the water to which they can fasten themselves, and as there are few shells or stones along the shores the bivalves attach themselves to the branches. When the natives go oyster gathering they lean over the side of the boat, find a branch to which oysters are clinging, and cut it off.

# THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE, ELGIN, ILL.

Subscription price, \$1.00 per Annum, in Advance.

The Inglenook stands for material and spiritual progress. Its departments are: Literary, Editorial, Home, Cream of Magazines, World News.

Its qualities are: Good Sentiment, Moral Convictions, Inspiration.

Its purpose is: To safeguard home life by supplanting and counteracting bad literature.

Its scope of matter is: Scientific, Religious, Educational, Philanthropic, Economical, Sociological and Financial.

Its field is: The World.

Liberal commission given to agents. Sample copies are given upon request. When changing address give both old and new addresses.

Entered at the Postoffice at Elgin, Ill., as Second-class Matter.

## THE RESULTS OF A GOOD DEED.

WHILE all of us are well acquainted with the truth, that we reap as we sow, we are in some degree surprised anew at every literal demonstration of it. Perhaps this apparent unbelief in the truth accounts in part, at least, for the fact that we do not sow as much as we might of the seeds of goodness and so insure a bounteous harvest of good.

The illustration that has brought this subject to mind at present is that growing out of China's indemnity refund. In the negotiations between China and the Powers at the close of the Boxer uprising in 1900, the former agreed to pay the latter the sum of \$300,000,000 in gold. This was an enormous sum for China to pay, and in the case of some of the Powers, their share of it was much greater than their actual loss through the Boxer uprising.

At least this is the way the United States looked at the matter, and in June of last year "President Roosevelt notified the Chinese minister that, with the approval of Congress, the United States would voluntarily relinquish the difference between the total expenses and claims incurred in the suppression of the Boxer revolt of 1900 and the amount which China agreed to pay this country in satisfaction thereof. The difference was officially fixed at \$27,000,000. The Chinese Emperor cabled his thanks to President Roosevelt for having taken the lead in a matter of international justice."

And now here is the beginning of the result of this "matter of justice." No one can foresee the end, or compute the good of the total results. We give it in the words of the *Washington Post*.

"It is never possible to estimate the consequences of an action, whether good or evil. It was supposed when we returned to China the surplus over actual expenses to us of the Boxer indemnity that China would recognize it as a friendly act, prompted by a desire to do the square thing by her, and that the

time might come when it would redound to our benefit.

"No one had a very definite idea as to how this would come about. Hardly, however, has the act authorizing the release to China been placed on the statute books, when we are informed that the Chinese government intends to spend the entire amount in sending students to this country to be educated. It is said that it is sufficient to enable two hundred to come every year for ten years. That would make in all two thousand young Chinamen, presumably selected for their superior promise and ability, educated here, imbued with our ideas, taught our methods of government, and familiarized with our institutions and civilization. Such a body of men, returning to their native land at a time when its government and civilization, so long stationary, are in a transition state, may well determine its entire future; and whoever it was who suggested and carried through the Chinese indemnity act may have shaped the destiny of a continent and millions of people in a way and to a degree he little imagined."

Would it not be well if as a nation and as individuals we would trust more to the future's promise of good for present well-doing? The promise is sure, and besides the habit of well-doing will grow into something more than a means to an end.

## GOING FISHING.

WHILE there are thousands of people who follow the business of fishing as a means of livelihood, a greater number perhaps, take it up now and then as a means of recreation; they take to fishing when there is nothing else to do, or as a rest from more strenuous labor. Of course there is another class, insignificant in some respects, though hardly as to numbers, who go fishing, apparently, for fear there might be something else for them to do, and yet do not derive a support from the business.

Of the last class the least said the better, so we will not contribute with them to the wasting of time by stopping to discuss them. As this is the season when those of the second class are most in evidence, we shall note a few things concerning such recreation.

In the first place, the main object of the would-be fisherman is to find such diversion from his regular tasks as will put him in possession of the strength and vigor his work as well as his own welfare demands. To do this, he must attend well to that in which he engages himself. This does not mean that he shall go fishing with the zeal and energy with which he has prosecuted his daily tasks, but let him go at it faithfully,—cut himself off from the distracting features of his regular work and give himself over to the mind and body-curing influences of the diversion.

Fishing is not the only sport which promises real rest to the weary toiler, but it easily stands at the head, and when taken alone or with a solitary companion it affords excellent opportunities for the right adjustment of oneself to the essential and the non-essential things of modern life. And such adjustment is of vital importance to one who would do his part in the world.

There is one thing against which almost every seeker after diversion needs to be warned. That is, the inclination to prolong the pastime till it becomes a dissipation. Recreation in the way of fishing and the like is good, but its benefits do not continue to pile up in corresponding ration *ad infinitum*. In many cases more harm than good comes from the summer vacation.

### OF MORE THAN ORDINARY INTEREST

At this season, when many schools are changing teachers, is the article on "How to Measure a Teacher's Efficiency." It should be read by teachers as well as members of school boards.

### LESSONS IN ESPERANTO.—No. 12.

#### VOCABULARY.

- Montri,—to show.  
It,—(past participle passive).  
Vorto,—word.  
Konsili,—to advise.  
Fari,—to make, to do.  
Serio,—series.  
Aldoni,—to add to.  
Ricevi,—to get, obtain.  
Demandi,—to ask, to query.  
Komuna,—common to several.  
Proksima,—near.  
Diri,—to say, to tell.  
Litero,—letter of the alphabet.  
Tiama,—contemporaneous.  
Ĉiama,—eternal.  
Kioma,—how much.  
Tiea,—there.  
Ĉi tiea,—of this place.  
Tieulo,—a person living there.  
Tiamulo,—a contemporary.  
Rilati,—to relate to.  
"Ajn,"—ever (not in reference to time, but as "Kiuajn," whoever).  
Diferenci,—to differ, to be different from.  
Sen,—without.

#### EXERCISE 25.

Ia, ial, iam, ie, iel, ies, io, iom, iu, La montritajn naŭ vortojn ni konsilas bone ellerni, ĉar el<sup>1</sup> ili ĉiu povas jam fari al si grandan serion da<sup>2</sup> aliaj pronomoj kaj adverboj.

1. *El*, the meaning is, out of, from among: *ellerni* means to learn thoroughly.

2. *da* instead of *de* after *serio* used collectively.

Se ni aldonas la literon "t," ni ricevas vortojn montrajn: tia, tial, tiam, tie, tiel, ties, tio, tiom, tiu.

Se ni aldonas la literon "t," ni ricevas vortojn montrajn demandajn aŭ rilatajn: kia, kial, kiam, kie, kiel, kies, kio, kiom, kiu.

Aldonante la literon "ĉ," ni ricevas vortojn komunajn: ĉia, ĉial, ĉiam, ĉie, ĉiel, ĉies, ĉio, ĉiom, ĉiu.

Aldonante la prefikson "nen," ni ricevas vortojn neajn: nenia, nenial, neniam, nenie, neniel, nenies, nenio, neniom, neniu.

Aldonante al la vortojn montrajn la vorton "ĉi," ni ricevas montron pli proksiman; ekzemple: tiu (pli malproksima) tiu ĉi, (aŭ ĉi tiu) (pli proksima); tie, (malproksima) tie ĉi aŭ ĉi tie, (proksima).

Aldonante al la vortojn demandajn la vorton "ajn," ni ricevas vortojn sendiferencajn: kia ajn, kial ajn, kiam ajn, kie ajn, kiel ajn, kies ajn, kio ajn, kiom ajn, kiu ajn.

Ekster tio, el la diritaj vortoj ni povas ankoraŭ fari aliajn vortojn, per helpo de gramatikaj finiĝoj kaj aliaj vortoj (sufiksoj); ekzemple: tiama, ĉiama, kioma, tiea, ĉi-tiea, tieulo, tiamulo, k. t. p. (=kaj tiel plu).

Tia is a demonstrative of quality—*that, such a, such kind*.

With the relative *kia*, it translates *such as*.

Io, tio, kio, ĉio, nenio, all refer to objects and are not used as modifying words: Kio estas tio? Nenio.—What is that? Nothing.

Ia birdo,—any kind of birds. Ciuj birdoj,—all birds. Kiajn librojn vi havas?—What *kind* of books have you?

Jen estas du floroj; kiun vi deziras?—Here are two flowers; *which* do you desire?

#### EXERCISE 26.

His brother is very diligent and thrifty, but is very talkative. Tell me your unhappiness for possibly I shall be able to help you. The act of Joe's is very praiseworthy. Nellie fell asleep on the chair. One spark is sufficient to explode gunpowder. Two flashes of lightning flashed across the dark sky. I saw many men in the street. Put on your overcoat and go away from here. I gave to him the remainder of the cake (pastry). Fruit, something made from fruit, jam. To fry, fritters. To throw, to throw away. To call, to call again. Crime, criminal. A laughing woman.

And God said, Let there be a firmament between the waters and let it divide the waters from the waters. And God made the firmament and divided the waters which were under the firmament from the waters which were above the firmament: and it was so. And God called the firmament Heaven. And the evening and the morning were the second day.

## Obedience

Catharine Beery Van Dyke

### Part one.

"WILLIE, give me that hat; you'll spoil it." Willie was playing with his papa's hat, banging it against this object and that while the parents were trying to talk with a friend. "Willie, don't spoil papa's hat." The play and banging continued. Then the father tried: "Willie, give papa his hat," with no more response than was given the mother. Then in order to make further conversation possible, the father took the hat and the mother the rebellious child. The scene was the occasion of humility to the parents and of embarrassment mixed with indignation to those attempting conversation.

While this child was not more than three or four years old, it was evidently not the first time he had paid no attention to the wishes and commands of his parents. Nor was the child at this time altogether to blame. This state of affairs between these parents and this child was the result of habit on the part of both.

There is such a difference in the ways in which parents work or fail to work with their children. Some seem to consider the advent of children into the family as an intrusion. These can never appreciate their own children with sympathy nor fairness until they change their attitude and feelings. Some take the situation as inevitable and try to perform their "Christian duty" by keeping the child in a state of subordination by fair means or foul. Good it is for the race that some see in the coming of children into the home the opportunity to project through them into the future years all that is noble and true in their own characters and also to inject into their dispositions—into their very nature—an ambition to stand for something, a propelling force which will be in them a constant impulse to carry out both the purpose which God gives to individual lives and the desire which their parents have that they shall reach the highest possible standard of truth, purity and power.

The first class is a type of ignorance often combined with selfishness. The second, a type of dogged submission to the laws of nature. The third not only accepts but welcomes the new relationships which

children bring and intelligently plans for the future good of the child as an individual and for this future good as he shall become related to other individuals in society, in the state and in the church.

But what has this to do with obedience? It simply shows some of the different view points through which parents *come at* the end of obedience or disobedience.

And what was the matter with Willie and his parents? Ignorance of the situation, principally, and ignorance of the laws which govern the human mind and soul.

"To obey is better than sacrifice and to hearken than the fat of rams. For rebellion is as the sin of witchcraft and stubbornness is as iniquity and idolatry." Obedience is said to be activity under control, yet Saul deliberately planned his disobedient act. Was not that also activity under control? Yes. But under control of self. Obedience, then, must be activity under the control of an external person—power or principle.

Know ye not, that to whom ye yield yourselves servants to obey, his servants ye are to whom ye obey; whether of sin unto death, or of obedience unto righteousness.—Rom. 6: 16.

Parents are responsible for their children's conduct and characters through the years of childhood, at least, and it is therefore evident that theirs is the external power to bring about obedience in their children. In other words the child's activity needs to be directed and controlled by the parents' intelligence. Think of that for a moment and then don't attach so much blame to your children when they swerve from the erect line.

How many a person would have reached a more honorable end in life had his activity been directed by careful parents in his years of immaturity—of unaccountability. How many persons who are now weeping over their backslidings and failures would be joyous ministers to others for good had they had in their early life their activities controlled by wise and loving parents. We are only beginning to learn that this matter of child culture can be reduced to and

really is a science, a science which we should teach to our children while they are children, before they have a chance to assume in ignorance the duties of parents.

Now there are different methods to accomplish obedience in our children, but certain common principles underlie all the methods.

One is this: "He who rules must first learn to obey." When our children see, as they ought to be able to see, that we, too, are under law, and are striving to honor, at the expense of selfish desires, our great Lawgiver, then they will be strongly impelled by our example to listen to the voice of authority.

Another instance is this: My father used to tell us children that if we followed what he told us to do, even to the letter, but did it with an unwilling, stubborn spirit, that was not obedience. The psychological interpretation is that the heart must be in the hand. Let me illustrate further. For some reason a door is open that ought to be closed. The mother says, "Walter, close the door." Either the tone of her voice, his own preoccupation or some other thing puts into the boy's mind that he simply won't do it. (And a boy that's going to amount to anything in the future will at times manifest a pretty strong mind.) The command is given repeatedly with no expectation on the part of the child to heed it. With the conviction that her command must be obeyed the mother, by force, leads the boy to the door, places his hand upon the knob and causes the door to be closed. She accomplishes the fact of a closed door, but makes no point of obedience in the child's character. The point for the mother to make is to create in the mind of her child a willingness to do her pleasure, not alone for the sake of pleasing her, but also because what she commands is right. In this case it might require some time and much judgment but the point, once sprung, must be settled and settled according to the laws of rectitude, and when this is done both the child's character and the mother's will have new beauty and strength.

### SING ME TO SLEEP.

CARL NELSON.

Close to your heart  
O mother, my own one,  
Sing me to sleep, O sing me to sleep;  
Your little boy  
Is tired and dreamy,  
Sing me to sleep, O sing me to sleep.  
Out in the lane  
All leaf-hung and shady  
I have been playing all the day long;  
Now it is night  
And back to the cradle,  
Sing me to sleep, O sing me to sleep.  
When by the way  
Of life I must tarry,  
Sing me to sleep, O sing me to sleep;

May thoughts of home—  
The angels of mem'ry,  
Sing me to sleep, O sing me to sleep.  
Dangers are nigh  
And evils are lurking,  
Dimly the sent'nels of prayer surround;  
Safely enshroud  
Awake or in slumber,  
Sing me to sleep, O sing me to sleep.  
If from the strife  
They broken return me,  
Sing me to sleep, O sing me to sleep;  
Whether with crown  
Of fame or contumely,  
Sing me to sleep, O sing me to sleep.  
Out in the night  
A whippoorwill crooning  
Carries a note of heaven in his song;  
Close by my side  
May loved ones be watching  
So may love tenderly sing me to sleep.  
When at the close  
Of life's happy journey  
Angels are sent to call me to sleep,  
Down by the church  
Mid grass, leaves and flowers,  
Spirits unseen will sing me to sleep.  
Flowers of spring  
Will tell the grand story,  
Story of life's immortality.  
So may I rest  
In nature's kind bosom,  
Sing, O sing, O sing me to sleep.  
Cando, N. Dak.

### IS THE MODERN MAN A POOR FATHER?

WHAT the father of today should be to best develop his offspring and at the same time create for himself an abiding source of delight is set forth pleasantly and convincingly in an article in the German magazine, "*Deutsche Monatsschrift*," of Berlin. The writer maintains that neither in the school nor in the home do the children as a rule obtain the training which fits them later to discharge the duties of a father. He remarks at the outset that the haste and unrest of modern life leave little time for paternal joys. Some are too weary from the day's work to pay attention to the children's training; others are pre-occupied with social duties, and many there are who are really indifferent about the whole matter. In this way the coming generation loses those priceless hours when the father is also the educator, friend and ideal; and the latter is robbed of the rejuvenating, vivifying force, the spiritual expansion, that spring from contact with one's own child.

The number of fathers that are able to satisfy their children's thirst for information is steadily decreasing. Even when a father is willing to devote his leisure to their interests the modern parent is no longer capable of coping with the situation. The world of surrounding objects has undergone a fundamental change. Germany, for example, from being pre-

ponderatingly agrarian, has become an industrial country, and modern German life fairly bristles with technical problems. On every hand the child observes phenomena whose solution he is eager to learn—electric roads, gas pipes, telephone wires, aqueducts, demand elucidation. One must not try to satisfy him with foreign words and vague phrases; the explanation should primarily be clear and simple. Here the child becomes the educator; he compels us to reflect about things, and, above all, to realize how little commensurate our knowledge, our culture, is with the demands of the time.

The writer says he trains his own boys—of eight and nine—to be keen observers of the things about them and of apparently simple or insignificant objects, and these reveal a world of wonders and surprises. He himself has grown conscious of his own insufficiency, for in his years of study of Nature but little attention was paid to the plant and animal life of his immediate surroundings. The naturalist never took his pupils into the open where they could question him about the myriad things that met their gaze—plant, beetle, stone; nor does the writer think that even at present instruction is imparted in this profitable, vitalizing way. He shows what a fruitful source of interest and knowledge a mere pond might be, with its many odd forms of animal life.

"The frog might teach us the secret of submarine navigation; the enlarging wave circles, ceaselessly shaped by the water beetles, picture to us the light waves and those that serve as messengers of news in wireless telegraphy. There were mineralogists as far back as five thousand years ago; every boy should be something of a mineralogist today. By proper observation beautiful specimens may be gathered in field and road, and what pleasure to find shells embedded in stones, to strike fire from the flint. A knowledge of mineralogy affords pleasure in a thousand ways—the color of sea and river, the forms of mountains, of landscapes, the material of which most of our industries are the product, all these would be better comprehended through a knowledge of the mineral world. And there are things still closer to us—the house fly, for example, of which we know nothing, in spite of constant contact with it. Instruction usually follows the rule of proceeding from the known to the unknown. Should not a father, too, begin with teaching his little ones in a natural, unconstrained way, about objects which are the most familiar, but about which there is often total ignorance? It may be rejoined that the school is there to instruct the child regarding the things around him, to develop his powers of observation. With all due respect for the school, its actual teaching is done *en masse*; with the best will it cannot accomplish everything. Besides, the child spends only a portion of his time in school, and learns things there which, though indispensable,

tend rather to dull than to sharpen his faculty of observation. The father is the appointed teacher, who in the home, on walks, can develop his senses, which cannot be awakened too early, to be sure, in an easy, pleasurable way. The incitement to exact observation is an incitement to the discovery of unsuspected things in the heavens, in grass, tree, stone."

If one knows through experience how rejuvenating, stimulating and full of delights it is to live in close contact with a child, to investigate, to learn along with it, one is tempted to cry out to the other fathers:

"Ah, did you but know the joy it affords! You can give your children something better than your gold—yourselves, provided you renew and increase your knowledge. And if it be too late for that, see to it that your sons receive a better training for fathers than was vouchsafed to you, and this by having them taught above all about the things that lie nearest to them—in other words, more natural science and technics in the school!"—*Selected*.

#### COURTSHIP.

THERE comes a time in most young people's lives when they lose all their natural common sense, and act generally as though they were fit subjects for a lunatic asylum. In other words, they have the courting fever. For such, and others who may be exposed to contagion, the following is written:

In the first place, courtship is a time for getting acquainted,—for finding out each other's hopes, ambitions, opinions, ideas and theories on and about any matter which is likely to come before them during their future partnership. Many act as if it were a time for concealment, for putting on shams and keeping up pretences, which must be taken down as soon as the knot is tied. That is why so many marriages end in disillusionment. Be sensible; be yourself.

Whatever else you do during your courtship, be frank. If you are poor, don't ride out in a rubber-tired buggy; don't dress on borrowed money; don't give expensive presents or treats. Courting can be carried on without money if the parties concerned have a reasonable amount of common sense. Don't be afraid to have your intended see you at work, or in your working clothes. Do you not expect to work after you are married? Do you think you can be dressed in your best clothes all the time then? Dress according to your means and your work; don't try to seem what you are not.

Know each other's faults as well as virtues. You will have to see them sometime, and the sooner you do the better it will be for all concerned. Don't try to hide them from each other. Love is usually stronger before marriage than after, in expectation than in realization; it will condone more. But if you feel that your friend would not marry you if he or she knew

your faults, is not that the strongest reason in the world for frankness, that you may avoid a marriage which can only end unhappily?

Make your courting a time for friendship, not "spooning"; be comrades. Only in this way can you know each other as you should. Make friends of the other members of the family. Remember that in marrying one of a family you, in a sense, unite yourself with the others. Are you willing to do it? Make your own friendship for your intended so strong that it will last throughout your lives, whether you marry each other or not. If you cannot do this during your courtship, you ought not to marry. A marriage founded on friendship, and the community of interests which that fosters, will last longer than one based on a strong sentimental attachment. And if, for any reason, you find that you two, while remaining friends, ought not to marry, you can look back with satisfaction on the friendship which brought good into your lives and made you stronger.

There is another thing to remember—marriage is a contract, a partnership; moreover, it is a partnership for life. If you were going into a business partnership with another person of your own sex for a term of years, you would insist upon seeing and understanding the terms of the contract; and, to avoid possible disagreements, you would wish to be certain that the other party understood them as you did. Then, how much more important such a frank understanding is when two people of opposite sexes are contemplating a life partnership. Make up your minds what you want to put into the contract, what you are going to contribute toward the business partnership which is to be owned and controlled in common, and then abide by your contract. Don't expect to reform each other; the chances are that it can't be done outside of a novel. Don't expect the marriage vow to take away all your troubles; maybe it will only be the beginning of them.

Aim to own your own home. Don't have an expensive wedding; a showy, gaudy, expensive wedding is in as bad taste as a showy funeral. It is not the time nor place for display. Cut out the honeymoon trip if you ought not to afford it. Anyway, isn't it better to go quietly to work at the homebuilding, setting up sort of a "Honeymoon Ranch," than to have a costly wedding and then go away to exhibit yourselves to strangers? You will be happier if you can own your own home, however small or humble. House rent is much like borrowed money,—takes away a part of your happiness.

There is another point—don't get the idea into your heads that one or the other of you must be boss. There is no more unfortunate person in the world than a boss-ruled woman or a henpecked man. If you have based your marriage on friendship and comradeship, you probably won't make such a mis-

take; if not, you may. This is a democratic country. Make your home a little center of democracy, not a Tzardom; give each other the right to "life, liberty and the pursuit of happiness." Some married people don't live; they exist. Don't make your partner one of them. Cultivate patriotism, love of home and country. Make your home worth loving. Don't require some of its inmates to sink their individuality for the benefit of others. You will disagree sometimes, of course; talk things among yourselves, and then be careful how you act. You are partners, remember; don't either of you do anything to injure the partnership. Give each other the rights you claim for yourselves. Turn about is fair play, you know.

There is another thing that a young man ought to remember, both in choosing a wife and afterwards: Great men are the sons of great women,—women of spirit, energy, brains and character. Choose for your life friend a person of solid worth. A nation may rise to power and glory, but, if it enslaves its women, it cannot long flourish. Its men are the sons of its women; like mother, like son. Boss-ruled women in the homes, boss-ruled voters at the polls. Take away the spirit and individuality of your wife and you take it away from your sons. Let married men who are tempted to act "Caesar in their own homes" think of this.—*Grace V. Silver, in Farm Journal.*

#### CANNING CORN IN GLASS.

"A PLEASED READER" sends the following as her method of canning corn in glass:

Have the corn as freshly gathered as possible, and in good condition for the table. Cut from the cob raw, scraping lightly over the cob to get the rest of the grain, but do not get the bran. Take good, sound self-sealing jars (Mason's preferred), with new rubbers and well-fitting lids. The lids should be tested by filling the jar with hot water and screwing down the lid tightly and standing it bottom up to see that it does not leak. Those standing the test are then ready to wash. Nail strips of wood together and lay in the bottom of a wash boiler, with cross pieces down. Place lids and jars on this and pour over them to cover a cool suds made with a good soap powder and water, and bring to a boil. Then let cool so as to handle, and as soon as the heat will allow, empty the suds out and fill the jars with clear, boiling water, rinsing good and turning bottom side up to drain and dry. They must be perfectly dry when filling begins. Have new rubbers adjusted; then take your prepared corn and pack into the jar, a little at a time, as solidly as possible, pounding down with a little pestle prepared for the purpose, or a small potato masher; fill all crevices and exclude all air. When it is as full as the pressing down will admit, take the corn up in your hand and crowd down hard, rounding it up on top. Then put

on the lid and screw down nearly tight; set in the boiler on the rack in the bottom, and fill the vessel with cool, clean water up to the shoulder of the jar, cover the boiler with a towel, then with the lid, and bring to a boil, after which keep boiling for three or four hours. Then set the boiler off the stove, remove the cover, and let cool until the jars can be handled, when the top must be screwed down tightly, and the jars left to stand in the water until cold, when it is to be tightened again. Then wrap the jars in brown wrapping paper, each to itself, and if possible pack in boxes and cover to exclude all light. Use no salt or anything but the corn, when canning.—*The Com-moner*.

### WHEN TO CRY.

THERE are millions of little boys and girls in the world who want to do just the right thing and the very best thing. But they do not always know what just the right thing is, and sometimes they cannot tell the very best thing from the very worst thing.

Now, I have often thought that there are little boys and girls who cry, now and then, at the wrong time; and I have asked many of the older people, but none of them could tell me the best time to cry.

But the other day I met a man older and wiser than any of the rest. He was very old and very wise, and he told me:

"It is bad luck to cry on Monday.

"To cry on Tuesday makes red eyes.

"Crying on Wednesday is bad for children's heads and for the heads of older people.

"It is said that if a child begins to cry on Thursday he will find it hard to stop.

"It is not best for children to cry on Friday. It makes them unhappy.

"Never cry on Saturday. It is too busy a day.

"Tears on Sunday are salt and bitter.

"Children should on no account cry at night. The nights are for sleep."

I wrote down the rules just as the old man gave them to me. Of course, they will be of no use to boys and girls that are past six, for those children do not cry. The wise man meant them for the little ones—the millions of little boys and girls who want to do the right thing and the very best thing.—*Mary Elizabeth Stone, in St. Nicholas.*

Father—Johnny, what are you making that racket for?

Johnny—So I can go and play tennis, pa.

Father—Then you'll need a bawl, too. Bring me the trunk strap, young man.

### HEAVENLY PEACEMAKERS.

GOERGE S. GRIM.

THERE are some lovely people in this world of ours, who remind us of fragrant flowers. Whenever they come near to us we are glad, but know not why. They may not possess physical beauty, nor riches, nor marvelous intelligence. The atmosphere in which they move is like themselves,—pure, lovely, holy and righteous. They are the embodiment of love; they inspire us, for they are full of peace; they attract us, for they are full of inspiration of the highest order. Such people are like a quiet lake, beside which grow beautiful plants, which, when reflected in the water, make a pleasing picture. There is no jarring, no commotion, no, not a ripple on the mirror-like waters. Birds love to sing softly in and around their presence. The world with its din is only a sweet song to them. They themselves breathe out love and harmony to all such as come near to them.

We meet these soul-inspiring persons as we pass through life, but little do we appreciate their worth until they have passed away. Then we feel as though we have lost a good friend. Oh, we watch them with solemnity as they pass beyond! Their influence will be wafted to us through troubles, trials, and conflicts with sin in coming days, as we are going down with declining age. We miss them greatly when they are gone. We are made better by their living in the world.

Louisville, Ohio.

### COMMON SENSE vs. THE DRINK EVIL.

THE Federation of Labor is of course taking the selfish and not the moral or patriotic view in denouncing prohibition because it would relieve so many bartenders, brewery workers and others of their present jobs. God knows there is better work awaiting these men than making and selling concoctions to steal away the brains of their fellow-men. The unions dwell strongly on the "brotherhood" of labor, but it is but the brotherhood of Cain for Abel which leads men to pass poison out to the day-laborer who has toiled for his meager wage that should be taken home to his family.

A contractor we know went a couple of weeks ago to one of the union headquarters in Washington in search of men to employ; he found six candidates and all were drunk. The union hall is over a saloon, and what a fatal juxtaposition is this for the unemployed. Of course the sober and industrious men are mostly at work. The labor unions are in the most favorable position of any organized body to fight the drink evil,

and it is a pity that they will not fight it instead of bolstering it up. What if thousands of barkeepers and the like find their occupation gone; is there not a demand for their help on the farms and would they not there do more toward building up the country and working out their own salvation than they ever could in handing out drinks over the bar? What if the government does have to suffer a big crimp in its revenues; is there any sense in worrying over a leak at the spigot while the barrel runs to waste at the bung-hole?

No, this argument that evil needs to be tolerated because someone gets a profit out of it is a prompting of the devil. Personally we are not in love with prohibition; we hate to think that people have to be made good by law—but it is a fact that they do have to be. We would gladly give up any desire we might have to get drunk and wallow in the gutter; we would even resign the noble privilege we now enjoy of taking a glass of beer now and then or leaving it alone, in order that the poor sot who has not the will power to choose should be saved from himself. We believe we are our brother's keeper to that extent, and we have little respect for any sort of "brotherhood" which is not willing to make such a personal renunciation for the good of all.

The sale of poisons, firearms, fireworks, gasoline and even razors is restricted and in many cases prohibited by our laws, and why should not the sale of liquors which make beasts and criminals of men be similarly safeguarded? We do not have to be "temperance cranks" in order to see that intoxicating drinks do more harm to society than all the poisons and other interdicted articles put together. The better classes of citizens everywhere are rapidly recognizing this fact, and even though many resent the idea of having their personal liberty interfered with they are very generally recording their willingness to make the sacrifice in the common weal.

This drink question has come to be a matter of plain business common sense, freed of sentimentality, and now that the people of this country are roused up on it they are going to dispose of it in a plain, common-sense, businesslike way. Even if this is done at the cost of millions of government revenue and of driving thousands of men into honest calling it will be well done.—*The Pathfinder*.

#### WHAT THE VOICE SAID AT EVENING.

Rest, life, and be still. The task of the day is done.  
What you have sown God trusts to the soil, rain and the sun.

What you have dreamed is his thought of days that are yet to be.

What you have hoped he counts in the sheaves of eternity.  
Rest, life, and be still. For you falls the night—sweet boon!

Truth lives in eternal day—like the sun, in eternal noon.  
Touch, O soul, the soul of the infinite, patient God,

Who plants the seed of the ages in the moment's molding sod.

Rest, life, and be still. God gave this sunset hour  
That, watching, you might feel the peace of His quiet power.

In lights and colors of life no dusk of death can mar,  
God paints this day in heaven, and over it hangs a star.

—Charles P. Cleaves, in *Youth's Companion*.

#### THE LOVING-KINDNESS OF GOD.

GOD never casts off anyone. His love never fails. Sometimes people speak as if he had cast off the Jewish people, but he did not—he never did! The trouble was that they cast God off. Yet even at the darkest hour there was a remnant of them who were faithful and received the blessing. God never fails in his promises. His word is, "The mountains may depart, and the hills be removed; but my loving-kindness shall not depart from thee, neither shall my covenant of peace be removed, saith Jehovah that hath mercy on thee." This covenant of peace never has been broken with anyone who trusted in God. But there are two parties to every covenant. God's promises are conditioned on our obedience. If we fail in our part, it is we who break the covenant. Then when the blessings promised do not come, we cannot say God has forgotten us. The truth is, we have forsaken God, and the blessings of his love have been withdrawn because we have rejected them.—*J. R. Miller*.

#### CHRIST'S LOVE FOR US.

WE know how to love our friends because they are no worse than we; but how Christ can stoop from without the circle of blessed spirits to love us, who are begrimed with sin, and bestormed with temptation, and wrestling with the lowest parts of humanity—that is past our finding out. He has loved us from the foundation of the world; and because heaven was too far away for us to see, he came down to earth to do the things which he has always been doing profusely above. Christ's life on earth was not an official mission; it was a development of his everlasting state, a dip to bring within our horizon those characteristics and attributes which otherwise we could not comprehend—God's pilgrimage on earth as a shepherd, in search of his wolf-imperiled fold. And when I look into his life I say to myself, "As tender as this, and yet on earth? What is he now then?"—*Henry Ward Beecher*.

THERE is nothing purer than honesty; nothing sweeter than charity; nothing warmer than love; nothing brighter than virtue; and nothing more steadfast than faith. These united in one mind form the purest, the sweetest, the richest, the brightest, and the most steadfast happiness.—*Chesterfield*.

# Echoes from Everywhere

The Russian Council of Empire has adopted the naval budget, including an item of \$5,500,000 which was not sanctioned by the Douma.

The Municipal Traction Company of Cleveland, Ohio, which is operating all the city's car lines on the 3-cent plan carried out by Mayor Johnson, reports a deficit of \$54,916 for May. But Mayor Johnson says that this is due more to the prevailing strike than to the reduced fares.

There are twenty-two Prohibition counties in Nebraska; 14 others with but one wet town each; 7 more with but 2 wet towns apiece, and only 11 wet counties. There are 44 dry county seats. Four hundred fifty towns, large and small, out of 850 are without saloons. Three-fifths of Nebraska is dry, territorially considered.

The Prince of Wales on June 12 opened another tunnel under the Thames, connecting Rotherhithe with Stepney and the eastern districts of London. The tunnel cost \$10,000,000. The total length is 2,294 yards, of which nearly a third is the open approach. In the center the tunnel boring is only 7 feet below the bed of the Thames, which is at this point 500 yards wide.

A New York ironmaster, who desires to reside near his foundry, has retained the services of an architect to fit up a suite of seven luxuriously appointed rooms, which will be so thoroughly soundproof that the noises from the adjacent foundry will not become a nuisance. In warm weather the heat from the foundry is insufferable, so special devices have been installed for cooling the suite of apartments.

An interesting attempt to diminish the force of the waves has been tried recently at Havre. The inventor is Baron d'Alessandro, an Italian, residing in Paris. The apparatus consists of a network of waterproofed hemp, 360 feet long, by 50 feet broad, anchored on the surface of the water. It flattens out heavy waves, and prevents them from breaking, after the manner of oil spread upon the sea.

Tokio, July 12.—The news of the action of the Democratic national convention at Denver, including in its platform a plank favoring the exclusion from the United States of Asiatic laborers, is taken here to be directed against Japanese and is causing considerable surprise and displeasure. In some quarters indignation is expressed and the declaration is made that such a course is an infringement on the treaty rights of Japan and opposed to the principle of humanity that should govern the relations of nations. It is generally believed, however, by those familiar with political conditions in America that the majority of democrats are not anti-Japanese in sentiment and that the exclusion clause was incorporated in the platform for the purpose of satisfying the labor element.

John Henniker Heaton who was greatly interested in arranging the penny post between the United States and Great Britain is now predicting a penny-a-word cable service between the two countries. He says that he has succeeded in interesting some great electricians in the matter and that it will soon be possible to have this cheap service between the two countries.

The salt deposits of Chile are the greatest in the world. The Salar Grande mine in the province of Tarapaca, about 60 miles south and east of Iquique, covers an area of 80,000 acres to the depth of 25 feet. This body of salt is nearly pure and contains more than 14,000,000,000 tons, or enough to supply the world's demands for many decades. There are several other deposits in the interior that cover two or three times the area of the above.

Sea water is the greatest medicine of the age, according to Dr. B. S. Arnulphy of Nice, who lectured recently at Hahnemann Medical College, where he was at one time an instructor. He professed his amazement that little had been done in this country in the way of demonstrating the wonderful medicinal properties of sea water when injected into the blood. In France it is no longer an experiment and the medical profession has become enthusiastic over the miraculous cures, he said. There are two dispensaries and thousands of injections are made every day. And the end is not yet, in his opinion, for it was only a few years ago that the remarkable properties of the ocean were discovered by a layman. Already it has been found to be a sure cure for cutaneous tuberculosis, and good for insomnia, boils, all skin diseases, malaria and typhoid. Best of all, it is a great cleanser of the complexion, and the doctor predicts that in a short time it will become the popular remedy for ladies with poor complexions.

The reports received from various sources of the conditions in Cuba indicate, to the surprise of no one who is familiar with the operations of the army medical department, that there has been a restoration of the conditions which insure the public health of the island. When Cuba was under the control of the United States government before the island officials undertook to administer their own affairs, there was established a protection against disease which it would have seemed to the casual observer might easily have been maintained by the Cuban government. This was very far from the result, however, and with the advent of the army of Cuban pacification it was found there had been, by virtue of carelessness and indifference, a return to the unsanitary situation. Since the army has been in Cuba discharging its office of pacification the conditions have visibly improved and the sick rate of the island, according to the latest reports, is quite as good as that of the United States, which shows that Cuba need not be at any time, even under the most unfavorable circumstances, a place which is hopelessly ridden by disease.

July 8 a call was issued at Pittsburg for an eastern interstate negro press convention to be held in that city during the first three days of September. After reciting that the meeting will bring together the colored press of the country the convention call states: "The political situation, as it now confronts the negro, will be one of the foremost questions of discussion. We believe the political situation, as far as the negro is concerned, is in a critical state, and that something must and can be done by the united effort of the negro press."

How much do you suppose the people of this country pay out for the simple item of illumination? Well, the total bill is \$360,000,000 according to recent figures. That is to say, the tax is \$4 apiece a year for every man, woman and child. Electricity leads with a charge of \$156,000,000. Then follow kerosene with \$133,000,000, gas with \$60,000,000, candles with \$11,000,000, and acetylene with \$6,000,000. Candles, it seems, are steadily coming back into use, contrary to what most people would imagine. It is because candle light is the easiest on the eyes and candles are less liable to cause fires than most other means of lighting.

The latest development in the way of an incandescent lamp is the tungsten lamp, tungsten being a rare metal and difficult of preparation for use in an electric light bulb. But when once ready for service it saves more than two-thirds of the current used in the ordinary lamp; three times as much light is given with the same current and for the same cost. The fundamental value of tungsten as a lamp filament lies in its wonderfully high melting point. It is almost impossible to melt it. As a metal tungsten is practically unknown. It cannot be made into ingots, bar or wire. In its usual refined form it appears as a fine, steel-blue powder. Because it cannot be drawn into wire, the lamp filaments from the metal have to be made in a roundabout way. The powder is mixed with an adhesive paste and squirted through a die in a fine thread. This "thread" is baked in an electric oven at a high temperature until the particles of tungsten are practically welded together. The filament is then looped and anchored in the bulb.

The department of agriculture is expecting to accomplish a good many things with its appropriation of \$15,000,000 for the ensuing fiscal year. The forest service will get nearly \$4,000,000 of this and the bureau of animal industry gets \$3,000,000. For the testing of paper plants \$10,000 is appropriated. This money was appropriated to enable the secretary of agriculture to test plants as to their availability for making paper. The high cost of paper will cause the department to exert unusual energies toward discovering new sources of supply. The department itself is interested in this matter, as it annually sends out millions of printed documents. Forty thousand dollars also is available for the establishment of a bison range, near the confluence of the Pend D'Oreille and Jocko rivers, on the lands embraced by the Flathead Indians in Montana. It is the intention of the president to establish a permanent reservation at this point, and \$30,000 of this amount will be used toward paying the claims of the Indians for the land to be taken from them for this purpose.

#### Neglect of Our Teachers.

America with all its prosperity probably neglects its teachers as much as, if not more than, any other nation. In New York state the Association of Collegiate Alumnae has been trying to get the legislature to adopt a bill calling

for retirement annuities for teachers in state institutions, but so far without avail. So poorly are the teachers paid that men are refusing to pay attention to the profession of giving instruction and some children go through the entire public school course without ever having classes under a man. The association called the attention of the legislature to the way the Argentine Republic pensions its teachers and submitted the following statement:

"There are now in the United States retired teachers drawing for the remainder of their lives \$2,000 per year and upward from the Argentine Republic, and next year will see some more Americans added to their number. The occasion of the retirement of a teacher is made the crowning day of his life. Greater honors could hardly be shown a human being. Moreover, there is the disposition as the term of service draws to a close to advance the salary, so that the teacher may retire on a larger pension. Is it surprising that one will forego the larger financial gains of other professions to follow teaching under such conditions? Is it surprising that with men and women of eminent ability and high character to develop an educational system that affords the most thorough training for every child, even in the most remote valley of the Andes, the Argentine Republic has made such phenomenal advance, or that, in matters where intelligence counts, such educational facilities, free libraries, public sanitation, pure food and water supply, and low death rate, Buenos Ayres leads New York? Liberality in education has proved to be the truest economy and the wisest state policy."

#### London Fogs Insuperable.

The great city of London has long been famous for the heavy fogs that settle down upon it, and a good many theories have been advanced as to how these accumulations could be dispersed, notable among which was the recent proposition to drive them away by means of acetylene gas explosions sent up through a great funnel-shaped sort of cannon, an illustration of which was recently given in these columns. The scientific columns of the London Morning Post consider this suggestion as extremely inadequate and fallacious. It declares that any mechanical or engineering devices are incapable of producing dynamic effects equal to those which daily take place in the atmosphere.

The foggy atmosphere over London, it says, spreads out for 60 square miles and weighs at least 3,000,000,000 tons, and the amount of energy required to remove this mass and prevent it from settling down again would call for more motive force than all the English railways possess or all the artillery developed in the campaign in Manchuria.

Fog frequency in London is closely allied to the occurrence of days of small air movement observed at Greenwich. On any day in winter when the air movement at Greenwich is less than 200 miles in the day a fog in London is a foregone conclusion. Now 200 miles a day is rather more than 11 feet a second. The moving London atmosphere on a comparatively clear day represents a force equivalent to more than 10,000,000,000 foot pounds a second. What amount of horse-power energy would be required to keep that force in existence? Stated in this way the problem furnishes some idea of the dynamic forces of the atmosphere which are continually in action. It may be noted that the mean daily horizontal movement of the air over London is 281 miles. The least daily movement on any one day of a year averages 80 miles, or less than four miles an hour; but the greatest daily movement has been known to rise to 800 miles.

## CREAM OF MAGAZINES

### ANOTHER BLOW AGAINST RACE-TRACK GAMBLERS.

The passage of the anti-betting bill, as it is called, by the Louisiana senate is a welcome surprise to the enemies of race-track gambling throughout the country. Only about a week ago the information from Baton Rouge and New Orleans was to the effect that the bill would "all but pass" this year, and that was considered sufficiently encouraging and significant in a state which not many years since encouraged lottery gambling and resented federal efforts to interfere with the exploitation of so rich a source of revenue.

But the anti-gambling elements were stronger than even benevolent bystanders suspected. They continued the fight, they quietly won over the senators relied on by the opposition to vote against the bill, or at least to stay away from the critical sessions, and under dramatic and exciting circumstances, which strikingly remind one of the New York struggle between Hughes and the gamblers' allies, they put the bill through.

The parallelism alluded to, curiously enough, embraces even such exceptional features as the casting of a deciding vote by a sick senator scarcely able to sit up and follow the proceedings. In one respect, however, the Louisiana victory for decency and public morality is more remarkable than that of New York. In the latter state Governor Hughes was able to rest his case on an explicit provision in the constitution requiring the legislature to enact proper measures against all forms of gambling, and to show beyond all manner of doubt that the legislature had actually legalized and abetted gambling under the guise of prohibition. In Louisiana the matter was absolutely within the discretion of the legislature, and the question was comparatively new.

It is believed by some that the bill is weak and defective. But if that shall prove to be the case the forces which have secured it will attend to the necessary amendments. Where there is the right kind and amount of sentiment there will be the right action. Sufficient unto the day is the moral victory thereof.—Chicago Record-Herald.

### A PROTEST AGAINST REFRESHMENTS.

The writer has often been designated "a crank," because she has a deep-rooted objection to the time-worn custom of "having something to eat" on any and every social occasion, in season and out. Every time a woman's club meets, every time there is a social, an informal entertainment, or any assembly of any kind, it is made an excuse, or seems to be considered indispensable, to have refreshments. And so everybody eats—and a lot, too—simply because it is offered, and it tastes good. Certainly, when refreshments are served at nine o'clock in the evening, say, those present who indulge do not do so because they are hungry, for undoubtedly every last individual has dined within two or three hours before. Why, then,

is it still considered the proper thing to have something to eat on such occasions? The only valid reason that has been discovered is that "refreshments" always attract a crowd and bring people together who otherwise would not come. A sad commentary on us when people have to be bribed, through their stomachs, to be instructed or entertained! One should suppose that persons who have to be corralled in that fashion are hardly worth gathering, but the idea still seems to prevail that they must be got together and that only something to eat will accomplish that end. Then, again, another reason advanced for having something to eat is that it promotes sociability. "Why," said one lady whom I was quizzing on the subject, "the ice is never broken at our club until the plates are passed for refreshments, and then everybody draws up their chairs and begins to be sociable." Important, if true, surely. How about the poor abused stomachs of the individuals gathered? Ice cream, cake and coffee coming a few hours before or after a heavy dinner is apt to disturb the functions of the stomach, to say the least, but often the "refreshments" are not of such a simple character, for they may consist of a heathenish Welsh rarebit, lobster salad or any of a dozen other villainous compounds now so fashionable. No wonder so many pills are needed to keep the American digestive apparatus in even passable shape, and no wonder that bad breaths, muddy complexions and ill tempers are so common. The sociability that depends on overloading an already full stomach, is not of a very high order, surely. Would that hostesses and entertainers would break away from the thralldom of thinking they must "pass something" to tickle the palate every time they have a social gathering! If you must feed people, invite them to dinner or luncheon, where eating is the chief and principal business, but it will be a happy day when it shall become the fashion to ignore the pampering of the appetite without any legitimate excuse, on every social occasion. Let us each one begin now to have the courage of our convictions, and not continue to serve refreshments with the consequent expenditure of time, money and energy, to say nothing of abusing our friends' stomachs, simply because "everybody does so." It is safe to assume, usually, that the majority of people get enough to eat at home; in fact, most of us get too much for our own good, without being tempted to tickle our palates with more every time we go anywhere. As the refreshment fad is so prevalent, it is almost impossible to escape this everlasting feeding, even if one is inclined, for if one goes where refreshments are served, one must at least hold the plate and go through the motions of eating, or else be punished continuously, for those who serve are so watchful and kind, and are so fearful that a guest might be slighted, that if one declines goodies at the hand of one fair waitress, there are always several others ready to rush up and make good the seeming deficiency. And most of us have not sufficient self-control to abstain from eating when one has a plate of tid-bits before one. We will hail the day when it will be considered the acme of bad

taste to serve refreshments at ordinary social functions. When hostesses make up their minds that the thing does not have to be done merely because everybody else does, and they will be thought queer if they don't, the emancipation day will dawn. May it arrive speedily!—Health.

## TWO VIEWS OF "YELLOW RELIGION."

The Rev. "Billy" Sunday, the ex-base-ball-player, is described as "a recognized power in the religion of the West," though there are some who think him rather too "yellow." His revivalist campaigns in Western cities have had wide-spread renown, and such results as demand that they, and not his eccentricities, be taken as the gauge by which he is to be judged. So argues The Presbyterian Banner (Pittsburg), which, though deploring the "coarseness and extravagance of his language," expresses its pride that "the Presbyterian ministry is roomy enough to give scope and service to the singular genius of such a man, though he violates all our traditions and shocks all our proprieties." Mr. Sunday has just closed an extraordinarily successful campaign in the city of Sharon, Pa., seventy miles north of Pittsburg. With a population of 25,000 people, this city announced that "as one of the results more than three thousand persons had publicly signified their desire and purpose to profess Christ as their Savior and to unite with his church," and "a good majority of the adults, who constitute fully two-thirds of this number, are men." The methods of Mr. Sunday are thus described by the organ of the church of which he is a member:

"As a preacher and evangelist Mr. Sunday is in a class by himself. He has never been a pastor, and could not be one. His methods of preaching and working are as picturesque and unique as his personality, and as striking as his temper. He is not like anybody else, and is proud of it. As a revivalist he is no more like Moody than the raging of a cyclone is like the steady roll of the tides. Moody could never have done what Sunday is doing, and a good deal of it he would not have done if he could. One is often asked by those who have not heard him, but have read the newspaper reports of his exaggerations, worse exaggerated, if he is not like Sam Jones. He says a good many things that read like some of Jones's speeches when you see them in print, but they do not sound like them when you hear them, and the man himself is as different from Sam Jones as he is from Moody or Torrey or Chapman or Finney or any other evangelist of whom the modern world knows. Sunday is nothing of a cynic, and Jones was one all over. Jones cut the sins of the day with cold-blooded irony; Sunday pounds them with a bludgeon. He is always in the thick of the fight. We cannot think of him as a disinterested spectator of any kind of a fray, whether it be a baseball game or the ceaseless war between sin and righteousness. He is bound to take sides; he was born a partizan. There isn't a flabby muscle in his body or an inert power in his soul. He is alive all over and all through. As has been said of him, he walks the platform 'with the springiness of a cat,' with his muscles set for a leap in any direction. We are not surprised to learn that when he was a baseball star he was the 'fastest base-runner the National League ever knew.' All that he was in energy, alertness, and dash as a ball-player in those days he is now as a winner of souls.

"His audience is never surprised at anything he does or says. He is just as likely to sit on top of the pulpit as to stand behind it, and to take off his coat as button it up. It is nothing unusual for him to give directions to his assistants while he is praying, or to stop in the mid-

dle of a petition to command some enthusiastic brother who has waxed too loud with his 'amens' to 'shut up.' And if he doesn't 'shut up' and stay 'shut' he can look for a worse thing to befall him before the prayer is through. From the time he announces his text until the sermon closes he storms and rages up and down the platform, whacking the pulpit and twisting and working his body until we are as much amazed at the physical endurance of the man as at the resources of his tongue. He outrages every rule of church decorum we have ever been taught, and slaps in the face all our traditions of dignity and reverence in worship. One of the reasons he assigns for the failure of some ministers to win souls is that they 'preach the Rev. John Smith and him dignified instead of Jesus Christ and him crucified,' an indictment Sunday will never be open to himself, especially in its first count. But not for a moment is he a clown, much less a mountebank. On the contrary, he impresses those who hear him as one of the most earnest, serious-minded, and deeply spiritual men they ever have listened to; and this estimate his work abundantly attests."

Another view of Mr. Sunday is given by a paper that is at the opposite end of the spectrum from anything suggesting a saffron hue. It takes to task not only the communities that have followed him, but the ministers and religious journals that have condoned his methods. During his work about Pittsburg, the ministers of that city invited him to address them, and according to the New York evening Post "he assured his clerical hearers that they were mostly 'fudge-eating mollicoddles.'" Few clergymen, he is reported further to have said, "are anything but 'stiffs and salary quacks.'" As for professors in theological seminaries, the thing to do with them is to 'stand them on their heads in mud-puddles.'" The Evening Post, commenting on his "yellow religion," says:

"The renown of his revivalist campaigns in Western cities was what led the Pittsburg clergy to invite him to address them; and it was doubtless their awe in the presence of one who had, as he would say, 'delivered the goods' in a hundred churches, which led them to sit silent under his insults. The Rev. Mr. Sunday has swept everything before him in town after town of Illinois, Minnesota, and other States. He has gathered all the Protestant denominations in a given place into his work, had them build him a 'tabernacle,' and in it has held meetings three times a day for weeks at a time, kindling enthusiasm and winning converts by the hundred. Yet throughout his preaching, and, indeed, his praying, he uses every vulgarity and irreverence of language, addressing his hearers, and the Almighty, in the idiom of the saloon, the gutter, and the yellow newspaper. One Western audience he recently carried by storm with the assertion that he was going to stay in that city and preach 'till hell freezes over, and then I'm going to get a pair of skates and keep on soaking it into Satan.'

"All this is surprising enough, but the really amazing thing remains to be told. This garrulous blackguard of the pulpit, who is all adrip with street slang; who claps the dread Jehovah on the back, and smears the most sacred things with his coarse blotch of vulgarity—this man is admired and endorsed by religious leaders. Clergymen vie with denominational journals in lauding his wonderful works. Some of them feel compelled to disclaim approval of all his 'methods,' but they confess themselves stricken dumb by his extraordinary results. He makes religion the sensation of the hour. His sacrilegious quips are echoed in the yellow newspapers, for whom he makes the best pious 'copy.' He gives to the Gospel an im-

mense publicity of a kind it never enjoyed before. How, then, can those interested in the spread of Christianity fail to rejoice at the marvel of thousands of people who will not go to church, thronging to hear Mr. Sunday tell them about the religion of Christ in the language and with the reverence of a newsboy or a 'longshoreman? There have been many tearful ejaculations, in connection with the Rev. 'Billy,' about God having chosen the foolish things of this world to confound the wise."—The Literary Digest

#### SCOPE OF THE CARNEGIE INSTITUTION.

To the great public the Carnegie Institution of Washington is little more than a name. Beyond the bare fact that it was founded for the advancement of knowledge, the aims and purposes of this great organization, the objects for which its funds are available, the methods by which those funds are expended, the special provinces of the domain of science in which its operations are conducted, are matters quite beyond the ken of the average newspaper-reading American. By the scientific world, however, the Carnegie Institution is recognized today as an important factor in the furtherance of scientific investigation and the general increase and dissemination of knowledge. While its work very largely involves abstruse scientific subjects, yet it is also of the greatest practical value, and represents the results of modern methods of study and research carried on with a view to the greatest possible efficiency. Indeed, the Carnegie Institution in science and letters represents modern business methods in so far as they aim at coöperation, system, economy, and efficiency, though of course there is no attempt to stifle competition or to supplant existing agencies for research and study, as might be found in commercial life. While the scholar and investigator may once have boasted of his freedom and independence and ascribed discoveries to unaided and individual efforts, it requires but little thought to realize that such conditions have passed away, and while genius and intellectual attainments accomplish as much as ever and are no less appreciated and respected, yet it must be admitted that today the advance of science and exact knowledge can be secured in large part only through such agencies as vast and special libraries and the accumulation of bibliographic data, by the lengthy search of hidden archives, by expeditions to distant or inaccessible regions, or by the construction of special laboratories or experimental plants often with elaborate apparatus and staffs of trained observers and experimenters. It is unnecessary to say that these all require not only large capital outlay and funds for maintenance as well as the coöperation of the workers in any given department of science or knowledge, but also in order to carry on the work economically as regards both expense and effort a thorough and efficient organization is essential.—From "The Carnegie Institution of Washington," by Herbert T. Wade, in the American Review of Reviews for July.

#### BETWEEN WHILES.

Gyer—"Isn't it queer that the bump of benevolence is located exactly at the top of a man's head?"

Meyer—"What's queer about it?"

Gyer—"Why, it's as far from the pocketbook as possible."

Mrs. Blank, wife of a prominent minister near Boston, had in her employ a recently engaged colored cook, as

black as the proverbial ace of spades. One day Mrs. Blank said to her:

"Matilda, I wish you would have oatmeal quite often for breakfast. My husband is very fond of it. He is Scotch, and you know that the Scotch eat a great deal of oatmeal."

"Oh, he's Scotch, is he?" said Matilda. "Well, now, do you know, I was thinkin' all along dat he wasn't des like us."

Bella—Prof. Muggins tells me that the first principle of socialism is to divide with your fellow-man.

Tom—Not as I understand it. On the contrary, the first principle of socialism is to induce your fellow-man to divide with you.

#### The Likeness.

"Why is a pancake like the sun?"

"Because," said the Swede. "it rises out of der yeast and it sets behind der vest."—Christian Guardian.

"The other day," said a man passenger in a street car, "I saw a woman in a street car open a satchel and take out a purse, close the satchel and open the purse, take out a dime and close the purse, open the satchel and put in the purse. Then she gave the dime to the conductor and took a nickel in exchange. Then she opened the satchel and took out the purse, closed the satchel and opened the purse, put in the nickel and closed the purse, opened the satchel and put in the purse, closed the satchel and locked both ends."

Two young merchants who occupied adjoining stores in a small town were intimate friends. When business was dull they visited back and forth from one store to the other. Each was fond of a joke. The Brooklyn Eagle gives their names as John Bruce and Clint Pease. One cold blustery day, when customers were few, Clint sat behind the stove in John's store. A young woman—a stranger—came in, and John stepped forward to wait on her.

"I am soliciting subscriptions for the Fresh Air Fund," said she.

Now, solicitors for one charity or another were numerous, and the merchants usually tried to evade their claims, since it was poor policy to refuse to contribute. So John was greatly pleased with himself when a happy way out of his present difficulty suggested itself to his quick mind.

"You'd better speak to the proprietor about it," he said, politely. "You'll find him a very liberal man. He is back there by the stove."

John grinned as the young woman approached Clint and restated her case.

"How much are the merchants generally giving?" Clint asked, with grave interest in the cause.

"Some are giving as much as a dollar," she answered, "but we are grateful for any sum, however small."

"John," said Clint, with an air of authority, "give the young lady two dollars out of the drawer." And John, of course, had to obey.

Mr. Batch: "I have my doubts about this idea that the more you give away the more you have."

Mr. Phamleigh: "No question at all about it. I gave away my daughter two months ago, and now she's returned to me with her husband."

## RESERVOIR COMPLETED

### FARMERS' DEVELOPMENT COMPANY COMPLETE BIG RESERVOIR

Last Wednesday afternoon, the last earth was moved in the big irrigation system that the Farmers' Development Company has been pushing through in the Rayado country. By this system, water is taken from the Rayado River just below the old Abreu place, and stored in a big reservoir which the company have just completed. The dam for the reservoir is over a thousand feet long, and over forty feet high. The storage capacity is over one billion gallons of water at a filling, and about three hundred acres are covered with water when the reservoir is filled. There are over nine miles of ditch in the system, and over ten thousand acres of land will be supplied with sufficient water to meet all needs.

Colt and Windburn had the contract for building the intake ditch and the reservoir dam, and this work

has been completed for some little time. The hills on the north side of the reservoir were found to be too low for the height of the dam, and it was necessary to build twenty-six hundred feet of dyke along the hill top in order to store the water contemplated, and the contract for building this dyke was let to Mr. W. C. Bosley. Mr. Bosley was in Cimarron last Wednesday and he stated that he had just completed his contract, thus finishing up the last work to be done on the whole system. The dyke as is stated, was twenty-six hundred feet long, and the highest fill was eleven and a half feet high.

The Farmers' Development Co. has already sold a large portion of its land to settlers from the middle west, and fine crops are being grown on the rich land. This company has shown its earnest desire to develop Colfax County, and is to be congratulated on the energy and push with which it has taken hold of such a large undertaking as was the building of its big irrigation project. In order that the purchasers of its lands may have every opportunity to raise big crops, the company has, at its own expense, employed two expert irrigation men to instruct the farmers in the proper manner of using the water for irrigation. These two men, who have made irrigation, in a scientific manner, their life study, spend their whole time in the interests of those purchasing lands from the Farmers' Development Co., and big results are being looked for.

## VIEWS PROJECTS

### TERRITORIAL ENGINEER SULLIVAN IN CIMARRON

Last Thursday evening Vernon L. Sullivan, territorial engineer, visited Cimarron, coming up from Springer, where he had been investigating the big work of the Farmers' Development Co., which has just been completed.

Mr. Sullivan, accompanied by E. H. Fisher, the engineer of the Cimarron Townsite Co., went out over several irrigation projects which have been planned in the vicinity of Cimarron by various parties, with a view of ascertaining what is necessary to be done in order to comply fully with the laws of New Mexico relative to the appropriation of waters. Before any waters can be appropriated in the Territory, full maps showing ditches, etc., must be filed with the office of the Territorial Engineer, and full working plans of all dams, etc., must also be placed on file and be approved by Mr. Sullivan.

Mr. Sullivan states that the natural opportunity for development of big irrigation projects, and the watering of lands here in Colfax County, can not be equalled by any other section in the Territory, and that in his opinion, Colfax County and the Cimarron Valley will be one of the garden spots of the southwest.

---

☞ A few farms with full water rights yet remain at from \$35.00 to \$70.00 per acre. Prices will soon be advanced.

☞ Low rate excursion to Springer, New Mexico, for Miami Ranch, via A. T. & S. Fe Ry the first and third Tuesdays of each month.

## LITERARY ACTIVITY OF THE BRETHREN IN THE EIGHTEENTH CENTURY

By Prof John S. Flory  
of Virginia

A book with the above title has just been published, and promises to be one of exceptional interest to all members of the Brethren church. The book contains nearly 400 pages, and is a marvel in book lore. We want to place this book in 20,000 homes of the Brethren within the next six months. In order to do this, we must have at once

1000 AGENTS

We want a live, energetic agent in each congregation, who will make a house to house canvass, for we are sure it will bring good results.

Write for Territory

Apply for territory at once, so you can begin canvassing before the cream has been taken.

BRETHREN PUBLISHING HOUSE,  
Elgin, Illinois.

## Half Price!

We still have a few copies of the

## Conference Booklet

containing the Bicentennial Program and the business as it came before the Conference at Des Moines, Iowa.

Hundreds of our people will want one of these booklets as a Souvenir of the Bicentennial Conference.

ORDER TODAY.

2 booklets for 5 cents.

BRETHREN PUBLISHING HOUSE,  
Elgin, Illinois.

Write us for our new catalog of

## POST CARDS

and

POST CARD ALBUMS.

We carry an exceptionally fine line. Our prices are just right. Ask for our catalog. It is free. Send us the name and address of 5 friends who are interested in post cards and post card albums and they will each receive a catalog.

BRETHREN PUBLISHING HOUSE,  
Elgin, Illinois.

## FREE SAMPLE

Send letter or postal for free SAMPLE  
**HINDOO TOBACCO HABIT CURE**  
We cure you of chewing and smoking  
for 50c., or money back. Guaranteed perfectly  
harmless. Address Milford Drug Co., Milford,  
Indiana. We answer all letters.

## EUREKA INDESTRUCTIBLE POST

FIELD POST. Cheap as cedar. Made where used. Great inducements to agents. Address, with stamp,  
W. A. DICKEY, North Manchester, Ind.

## Imperial Valley, California

is a country where things grow too large to write about. You will have to come and see them.

The great ALFALFA and FRUIT district, situated 180 miles east of Los Angeles, on the Southern Pacific R. R. Send for illustrated booklet.

Address: W. F. Gillett, Holtville, Cal.

## We Are Now Ready

to fill your orders for the

## Full Report

of the Des Moines Annual Conference.

You will want to read the Conference discussions on change of Church Name, the plans for Advanced Sunday-School Work and the Appointment of the Committee on Temperance, etc.

If you have not sent us your order, do so at once.

Price, per copy, 25 cents.

BRETHREN PUBLISHING HOUSE,  
Elgin, Illinois.

## BICENTENNIAL SONG BOOK

Those who participated in the splendid song service at Des Moines will be sure to want a copy of the **Bicentennial Song Book**. The book contains 80 pages of the very best songs selected from "The Brethren Hymnal" and "Song Praises," besides the "Bicentennial Song" which was written for the Conference.

Your Sunday School

and Christian Workers' society should have a supply of these books for use during the year.

OUR LOW PRICE

We will furnish this book in Manila cover at the following rates: Per dozen, prepaid, \$1.00; per hundred, F. O. B. Elgin, \$6.00.

BRETHREN PUBLISHING HOUSE,  
Elgin, Illinois.

## Buckeye Pure Home Made APPLE BUTTER

is pronounced by hundreds of our customers, the best they ever ate. Send for our NEW circular with NEW recipes, NEW testimonials and Special Wholesale price list. Our Motto: Highest class of goods and a square deal guaranteed to all.

Don't forget to write.

C. J. MILLER & CO., Smithville, Ohio.

## WHAT, WHY and HOW of the

## Home Department

This booklet tells what the Home Department of the Sunday school is. It presents arguments that should induce you to organize this department in your school, at once. If you would know "How to Organize and Maintain a Home Department" order a booklet for each officer and teacher in your school.

Price per copy, .....5 cents.

BRETHREN PUBLISHING HOUSE,  
Elgin, Illinois.

## DO NOT READ THIS

and then lay it aside, but order a package of

# ALBERTA

¶ Of Alberta a distinguished writer has said:

"North of the International boundary line and immediately east of the Rocky Mountains lies the Province of Alberta—a land blessed with all that is necessary to happiness and prosperity. Between the 49th and 60th parallels and between the 110th and 120th meridians lie 281,000 square miles of possibility. Here are mountains and plains, foothills and valleys, rolling prairies with wooded stretches between, dense forests and grassy meadows, clean, timber-girded lakes and winding brooks, cold mountain streams and navigable rivers, and a soil rich in the alluvial and vegetable accumulations of centuries. And as if not content with these outward signs of her favor, nature has hidden beneath the surface vast deposits of coal and other minerals; she has filled the subterranean reservoirs with gas and oil, and sprinkled the sands of the mountain streams with gold. That no living thing should go athirst, she gathered together the waters of the mountains and brought them to the plains, to be directed by the ingenuity of man to the use of the grazing herds and the planted fields. Then, to crown her efforts and leave nothing incomplete, she brought the chinook wind, warm with the breath of May, to temper the north wind."

¶ In the Medicine Hat District we have a gently undulating prairie. The soil is capable of producing generous yields of all small grains and vegetables in abundance.

¶ The city of Medicine Hat, situated on the Saskatchewan river and underlaid with gas and coal, is destined to be a great manufacturing center.

¶ Why not join the colonies already there and enjoy some of the material benefits as well as help build up one of the largest and best colonies in the Canadian West.

¶ We have excursions every first and third Tuesday of the month.

¶ For particulars and cheap rates apply to

# SUMMER ADVANTAGES OF BUTTE VALLEY

The topography of northern California shows what is offered as summer sports to the people in the vicinity of Butte Valley. Here is a clipping from a Siskiyou County paper which tells of a trip to Mt. Shasta which will be read with interest by those who love to see something of nature.

On the morning of the third the party started with a four horse team, two light spring wagons and one saddle horse. They passed the copper mines on the Yellow Buttes about half past nine, and in a couple of hours they stopped to eat a lunch and pack their provisions on the backs of the horses and make other preparations for further ascent. All afternoon they labored up the ashy mountain side without anything but muddy water to drink. At last when the sun was almost down they reached their camp ground at the upper timber line. Dry wood was gathered and a fire started to guard against the cold winds which began to blow.

On the morning of the Fourth they began their climb toward the lofty summit, which though it seemed near was far above them. They were soon high enough to look down over a bank of white clouds, dazzling in the morning sunlight, which hung over Butte Creek Valley, and hid it from their view. Of Shasta Valley they had a splendid view. As they went higher they passed great cracks in the snow and ice, the bottom of which could not be seen. The cameras were used extensively while they prodded their way through the snow. At length it became too steep to climb on the snow so they took to what appeared to be a large rocky ledge on the side of the mountain projecting above the snow, but it proved to be nothing less than a mass of rocks on top of a huge body of ice. This is part of the glacier that people tell about on Mt. Shasta. At certain times rocks could be heard or even seen rolling down the mountain side. The party supposed that snow melting from around and underneath them had allowed them to start. As the party neared the summit they were able to see down into the rugged crater on the west side of the mountain. There they could see ponds of green stagnant water or ice in the bottom. The next points of interest were the hot sulphur springs boiling and steaming from the ground near the summit. Beautiful rocks formed from the minerals in this water lay scattered near by. After filling their pockets with these they went on, the party being much scattered by this time because a few of the youngest and strongest had gone far ahead.

At about ten o'clock four had reached the summit; at eleven five were there; then before the other three successful ones got there seven men from Weed who had been toiling up the south side arrived. Later out other three arrived and finally came one man from Sacramento. Altogether there were fifteen who reached the top on that day and were the first of the season to write their names in the register. Among these fifteen was Miss Barbour, who was the only lady who stood the trip. Together they viewed the country around and told their experiences climbing the mountain, although some of them had never met before.

On the night of the Fourth all nine of our party were circled around the camp fire talking about that "snow clad mountain peak" which they had just climbed. They discussed and argued about the different questions which suggested themselves to them until almost midnight. They all agreed that Mt. Shasta is wearing away with great rapidity. Rocks are rolling down from steep sides, streams are carrying great loads of gravel down into the lava beds, while the glacier is bringing down great loads of dirt and rocks. In time the whole mountain will be nothing but a huge bare point of solid rock still crumbling and falling away.

## NEWS ITEMS.

The Moore-Nine sawmill was disabled last Thursday. While sawing a short log the rear dog was left in the way of the saws. The saws were taken to Weed to be repaired and the mill will resume operations the first of the week.

D. S. Buterbaugh has been employed to teach the Macdoel school.

D. M. Snider drove to Yreka Sunday.

H. W. Allen and Arthur Teegarden were in Doris Sunday.

Born, July 7, to Mr. and Mrs. Ed. Whedon, a baby boy.

W. N. Nine preached at Long Prairie Sunday.

# PRACTICAL HINTS

## For the Summer Season

The illustration here given shows the cover page of an interesting little pamphlet, bearing above caption, just issued by Dr. Peter Fahrney & Sons of Chicago, Ill. It contains much valuable information in regard to the treat-

The great success which attended Dr. Peter Fahrney's medical practice in the early sixties and the renown which he since gained as a manufacturer of family medicines can only be attributed to the sterling merits of the remedies he prescribed and later on prepared and supplied to the public. Among these remedies, Dr. Peter's Blood Vitalizer, the old blood and constitutional remedy, is, of course, best known.

The purpose of this little brochure is, however, to call attention to Dr. Peter's Stomach Vigor, a remedy likewise of his preparation which has been used for many years with the most striking success but which has never been advertised. A word about this preparation is, at this time of year, most timely, adapted as it is, specifically for those ailments which are so characteristic of the summer and fall, such as diarrhoea, dysentery, cholera morbus, cholera infantum (summer complaint), bloody flux, cramps and all relaxed conditions of the bowels.

Dr. Peter's Stomach Vigor is a purely vegetable preparation and contains no opiates or narcotic substances but only such ingredients which will do good and can therefore be administered to the most delicate child as well as adult with absolute safety. It checks the unnatural movements of the bowels at once, not violently, but gently. It soothes the irritated mucous membrane. It allays the inflammation. It corrects the acidity. It strengthens the relaxed conditions and gives ease and comfort. A dose has no sooner been administered than its beneficial results are experienced. It is a remedy which never disappoints. The properties of the Stomach Vigor cannot be better set forth than in the words of a celebrated medical author, who, in speaking of its formula, said: "It is an invaluable remedy for cholera morbus, dysentery and diarrhoea. It is Anti-acid, Anti-dysentric, and I may say, Anti-choleraic. Nothing I have ever seen can compare with it in cholera morbus, dysentery, and other diseases of the stomach and bowels.

Everybody is subject more or less to disorders of the stomach. Young and old are liable to attack. Young children, however, who have but little strength to withstand the terribly weakening effects, suffer most severely. The mortality among infants during the summer months is really appalling, and yet these ailments are not in themselves necessarily fatal or even dangerous.

What, then, is the trouble? Simply lack of proper treatment at the outset, coupled with neglect of the ordinary rules of health and hygiene. We consider the treatment of these bowel troubles, especially in the case of little children, of such vital importance, that we have published in this pamphlet under the caption, "A Word to Mothers," a special article which every mother should read and profit by, etc., etc.

ment and cure of those ailments which are so characteristic of the heated term.

Dr. Peter Fahrney & Sons enjoy a well-earned prestige as manufacturers of standard family medicines. Neither they nor their remedies are strangers to Inglenook families. Copies of the pamphlet together with other interesting literature will be sent gratis on request. We print herewith a portion of the introductory article:

**Dr. Peter Fahrney & Sons Co.**

112-118 South Hoyne Avenue

Chicago, Ill.

Revised Edition of  
**Ropp's New Commercial Calculator**  
**And Short Cut Arithmetic**

The Standard for Store, Farm, Bank or Factory,

5 1/2 x 2 3/4 in.

Greatly improved, enlarged and thoroughly revised.  
 Contains an entirely new system of unique Tables, Short Cuts  
 and Up-to-date Methods.

Unquestionably the most complete and comprehensive Calculator  
 ever published.

Has more than twice the matter, scope and capacity of Ropp's  
 former editions, of which

**Nearly 1,500,000 Copies have been Sold.**

The most convenient and practical Labor-saving work ever used  
 in the business world.

It will make every one independent, sure and self-reliant in all  
 practical calculations.

It will prevent mistakes, relieve the mind, save time and labor,  
 and often loss and trouble.

Its Tables are adapted to all trades and occupations of the city  
 or country.

**The Answer to Your Problem as Quickly as a Watch Shows the Time.**

It also explains and simplifies the principles of Arithmetic, Mechanics and Mensuration.  
 It will make the study and use of Figures easy and interesting to both young and old.  
 It will enable every progressive mind to become an expert, sure and rapid calculator.  
 It will prove a boon to all whose education in arithmetic has been limited or neglected.

**48 Cuts Illustrate the Elements of Mechanics and Mensuration**

It defines about 70 points in "Commercial Law" which every man and woman should  
 know.

It is the result of devising, and improving system after system; of spending thousands  
 of dollars in experimenting; of making millions of miscellaneous calculations, and of doing  
 some vigorous thinking during 38 years, by an analytic, practical and persevering  
 mind.

**It is Especially Designed for**

Farmers, Mechanics, Business and Professional men.

**Three Editions, Five Bindings.**

Office Edition (9 1/2 x 5 1/4 in.)

Cloth binding, gold stamp, large type, ..... \$1.00

Pocket Edition (6 1/2 x 3 3/4)

Cloth, with pocket, flap and silicate slate, ..... .50

Leather, with pocket, flap and silicate slate, gilt edge, ..... 1.00

Vest Pocket Edition (5 1/4 x 2 3/4)

# OVER 200,000 ACRES

of land has been filed under the CAREY ACT in the Twin Falls District, Idaho, since April, 1907.

¶ There is still a large amount of land waiting for the settler in the above district. Also great opportunities are offered at American Falls, at Gooding and other points along the OREGON SHORT LINE RAILROAD.

¶ The Payette-Boise Reclamation Project under the U. S. Government is about completed and will be ready to furnish water to about 300,000 acres of new land in the spring of 1909. These lands can now be bought at reasonable rates and terms, by the settler, and are situated where the country is already partly settled, near good towns, railroads and electric lines.

¶ Rural mail routes and telephone lines are already established. Good schools and churches. No storms or cyclones. Farming is done by irrigation. No failure of crops by reason of too much rain or drought. Fruit crop is abundant every year. The people are happy because they are prosperous.

## Wonderful Possibilities

for homeseekers and investors. Climate Mild. Soil Very Productive.

¶ Alfalfa, Sugar Beets, and grains of all kinds are among the products that yield abundantly. Farm hands, carpenters, mechanics and in fact all classes of workmen will find plenty of work at good wages.

¶ Arrange your plans to go and see Idaho as soon as possible and secure some of this fine land.

¶ HOMESEEEKERS ROUND TRIP EXCURSION RATES are on First and Third Tuesdays of each month in 1908.

¶ WRITE NOW for printed matter and full particulars regarding this great country and how to get there.

## The Tale of Six Cities

O. H. Kimmel

### CITY IV. Berlin: Militarism vs. Socialism.

BERLIN is the embodiment of Co-operativeism. It is also the center of militarism. While the people are working out what they consider is the best thing for their civic good, the tramp, tramp of troops, and the clang of the implements of militarism can be heard on the great thoroughfares. While the city is the embodiment of Co-operativeism or Socialism, it is said to be one of the most beautiful cities, and the best governed city in the world. Its great civic pride, its good moral atmosphere and its cleanliness are almost proverbial. The city from center to circumference seems to be the very embodiment of system, and of uniformity in architectural skill and natural surroundings.

The city administration, as is shown by the very appearance of the city itself, is as systematic and clean and artistic in its direction of the civic affairs of the city as human ingenuity can make itself to be. The city council is made up of good men of clean character, who are successful and upright in their vocations in life, and men who serve the city absolutely without pay. When a man is chosen to be a member of the council, in all probability, if he does not decline, he may remain in the official position until death, for the German seems to feel that the longer a man may serve in such capacity the more useful he becomes to the municipality. This American idea of passing the thing around so that many citizens may be equally honored receives no sympathy from the average German, who desires a well-administered city government.

Graft, too, is not known in the city government. Corruption and graft are absolutely discountenanced by either officials or people. When any city improvement is needed, the officials determine what procedure would be best for the general public, and, when this is figured out, the official course is determined. No influence, except the will of the general public, influences the council in any degree whatsoever.

This condition is a surprise to the American public,

which has grown accustomed to at least a small amount of dishonesty and graft in a public office. An American knows, from home experience, very little about honest administration of public affairs, and the general free and easy anarchical non-observance of law that is found in this country, especially in our cities, seems to have become a part of our national existence. Yet our people are waking up as if conscience-smitten and are swinging toward righteousness. Whether this "swinging" will continue until graft, avarice, and corruption are driven from our public administration, is not known, and nothing except the trend of future events can reveal it to us; but we can hardly imagine a great people, rising in its wrath against an octopus of evil, and then reclining again in sleep, to permit the enraged evil to devour the very vitals of our institutions. We believe that it is a permanent swing toward respect for law, toward patriotic observance of public good and toward a conscientious sense of public decency.

Such a sense as this exists in Germany. The city of Berlin has many laws, and all of its citizens respect and obey them. And every thing in the city is a product of the municipality. It owns and controls its railroads, its car lines, its lighting and heating and watering equipments; it owns and controls every public utility and operates them all at a profit and at a small cost to the general public. German railroads are better than American railroads because they make better time, run on easier schedule, and, because the roadbeds, rolling stock and employees are up to the standard, and they have fewer accidents and run on time more than our roads. Their depots and station grounds are more beautiful, and public crossings are made safe because the railroad is not on the same grade level as the thoroughfare. The street cars are well operated and at less cost than if run by private individuals under franchise; the same thing is true of all the public utilities, and the equipment is for the convenience of the general public, and not so made as to throw the least cost on the installing of the

utility. An example of this is seen in the trolley wire poles which, instead of being great pine poles, the very scepters of trees, are ornamented iron posts which have the street lights artistically arranged thereon. The telephone pole, such a horror, danger and nuisance to most American cities is obliterated by laying the wires under ground. In fact, so great is the contrast between Berlin and our American cities that it is said, that Berlin's most homely streets are nicer and more cleanly than the best streets in any American city.

In order to cleanse the streets, they are flooded and scrubbed periodically, and effectively. Public waste boxes, beautifully decorated, catch anything that would thoughtlessly be tossed into the street in American cities. No one throws anything into the street in Berlin. If he should do so he would prompt-

and all other expenses that might be attributed to it, and pays a handsome profit besides.

Garbage and ashes are removed from the houses in closed buckets, and are dumped into an especially prepared receptacle, mounted on a vehicle, without being exposed to air or wind, thus entirely doing away with the dust that would otherwise arise. The German has also solved the tramp question and he does not appear on the German streets.

Street advertising, too, is of a milder nature than that seen in America. The great billboard with its red lines, lewd pictures, advertisements of malt liquors and brewed goods, so common in our cities, is unknown there. Small pillars are erected at regular intervals upon the street corners which contain about all of the advertising matter.

The public noise nuisance is also well under con-

Heidelberg Castle, on the Rhine, Germany.

ly be arrested, and, what is worse to him, such is the public pride in this city, he would be looked upon with scorn by all his acquaintances. So clean is everything everywhere that it is said an American traveler in Berlin wonders what has become of the dirt and waste, for he cannot conceive of such tidiness day after day, week after week, and year after year.

The sewage, even, is a source of profit instead of expense to the city, so well is the city administration wrought out. This sewage is carried to the outside of the city onto a large tract of land owned by the municipality. Upon this land the sewage empties, thus fertilizing the municipal farm until the fruit and vegetables grown there under the influence of this fertilization are sufficient to go upon the market, pay all the expenses of the sewage, the farm operation,

trol and the discordant yell of the newsboy, or news man, the peanut vender's uncanny whistle, the over use of the street car bell, the bell and whine and grind organ of the beggar, the megaphone, the umbrella to mend and scissors grinder fellow, or the boy with the tin whistle—all are controlled by ordinance and ever-zealous policemen.

The clean street cars run without jerks and bounds, and the noisy ringing of fares is replaced by a receipt system. The conductor is courteous, and sees to the comfort of the passengers. No one is permitted to stand in the aisles and only a designated number on the platform. The cars stop at regular intervals, at which places posts are erected on which are stated the routes and times of city cars. The whole arrangement, from every viewpoint tends toward the in-

insurance of the happiness of the people of the city, and the idea of combining the beauty in architecture with the beauty in nature, and the practical belief that cleanliness is next to godliness has given to the world, in the city of Berlin, a beautiful, moral and wholesome city.

Besides looking after the public welfare of its people, the municipality does all within its power to encourage and promote individual and private thrift and enterprise. It has established municipal savings banks, municipal pawn shops, old-age pensions for working men, municipal life and accident insurance, municipal slaughter houses, municipal market halls and municipal sanitary inspection, besides all of the municipal utility services that have been mentioned.

It seems that all the essentials of happiness that

we find the two opposing forces in government, Militarism and Socialism both worked out to their highest points of effectiveness.

But the military display in Berlin is of the nation and not of the municipality. Berlin is the capital of the German Empire, and its military display is the pride of the Emperor and the boast of his friends throughout the world. In the German army is found the most effective organization and discipline in all the world.

The Emperor is the embodiment of militarism. He does not countenance the socialistic movement in Germany as Franz Josef does the democratic movement in Austria. He believes in absolutism, and is a rather belated exponent of "the divine right of kings." "In his opinion the object of education," says Val-

Dürer's House, Nuremberg, Germany.

any city could control are in the hands of the city council of Berlin. Co-operation seems to be the general spirit of the city in its every sense.

In Austria we noticed that Franz Josef combined democracy with feudalism to make his reign effective. Here, in this German city we see the triumph of the co-operative system, and the people are realizing the very blessings that come from such a system. It is rather strange to say that, in a city which governs itself on a co-operative basis,—and in doing so, governs itself better than any city in the world,—we see displayed the greatest array of militarism found anywhere in the world. The German army is the pride of the Emperor and the boast of the Empire. All Europe arms itself to cope with the great military power of Germany. In this condition in Berlin

bert, "is to create obedient subjects and loyal supporters of the crown." He sees, in Berlin, a city almost as large as Chicago, in actual operation the form of government which he dislikes, but he is sincere in the feeling that such a form of government extended to the entire Empire would assure its utter ruin. He reverences the spirit of his militarist grandfather, William the First, but he treats the democratic ideas of his father, Frederick the Third, with much indifference. More than any other ruler in Europe, except the Czar, William is ambitious, and, in order to carry out his ambitious desires he feels that he must have behind him a great military power. Hence he idolizes his army and is very desirous of constantly improving it in strength and effectiveness. And thus in Berlin, the beautiful city of Europe,

where co-operativeness and the spirit of municipal pride have established the museums and art galleries, the beautiful Unter den Linden, the University, and the Avenue of Victory, we see the royal palaces, which carry its ruler back to the days of the early Hohenzollern family, when it proclaimed itself an adherent of "the divine right of kings," or to the days when it embraced the faith of Martin Luther, and thus sprang into a house of power and influence which has culminated in the great German Empire, and we find the present ruler desiring, not only to add to the glory of his family, but to extend his Empire until this house shall lead the world in power and influence.

And the Emperor has much in his favor. He is still a comparatively young man, and he is an effective diplomatist. He has formed a friendship with the old Sultan of Turkey, and, as a result of this friendship, is permitted to extend German franchises and enterprises into Turkey. He seems to throw the strong arm of protection around the Turkish government, and assist in holding its tottering remnants together. This, the world believes, is done, to insure Germany a safe footing on the inside track when the international carving knife is applied to Turkey, after the old sultan has passed this life. He sees, too, in the possible impending dissolution of Austria-Hungary a rock thrown out of the road and more wheat thrown into his till which will enable him to carry out the desires of his heart.

His doctrine is the doctrine of force and absolutism. It is strange that so intelligent a people as the people of Germany permits itself to be so ruled, yet the Emperor does not molest his people greatly in their pursuits. The German mind has taken to science rather than politics, hence it, nationally speaking, is little concerned about the government, so long as it is stable and not cruel. The people who are interested in government in the empire represent,—as one should judge from what has been said,—the two opposing parties, the military and the socialist parties. Another thing that figures in the German politics is the religious question, and in studying the situation it develops that the Catholics are overrepresented, while the Socialists are underrepresented. This fact, judging from recent events and the attitude of the Emperor, seems to be to the Emperor's liking, for he is doing all within his power to keep down the strength of Socialism. Bismarck has said, "The unity of Germany is to be brought about, not by speeches, nor by votes and majorities, but by *blood and iron*." This idea is thoroughly infused in the Emperor, yet for all this the socialistic idea is growing more rapidly in Germany than anywhere else in the world, and if we are to judge the future elections, by the past, it can not be many years until "votes and majorities" shall rule the Empire instead of "*blood and iron*." In

this the Emperor sees defeat for his plans of extending the German domain to the Bosphorus and beyond the Golden Horn into Asia. Hence his attitude is to discourage the spread of Socialism, and to encourage any power that may tend to bar its progress. Thus, at the present time, he has partially joined hands with the religious party which stands opposed to the Socialist party. If he can stay the progress of Socialism until the time when he can extend his empire, he feels that he can give it a crushing blow, but, if it should gain control of the empire, and embody its doctrines as laws, then his power would be lessened, the great army would be destroyed, the caste system would be attacked, the present collective system of ownership would be extended from city to empire, and last of all, the throne would have to be given up.

And the Emperor has reason to be alarmed. We do not see political and civil strife in Germany as in Russia, but we see there this general world-wide feeling of unrest. The people are thinking in Germany, and Germans are good thinkers. They are educated and cultured, and orderly, and are home lovers. They will think it all out before they strike, and they will be sure that they are right before they make a forward movement.

Among the great Socialist leaders of Germany we would name William Liebknecht—who did much for the cause of Socialism before he died—and August Bebel the present Socialist leader in the Empire.

The Socialists see victory for their cause ahead, and they have the proof that their form of government is the better, in the city governments in the Empire. The cause is growing rapidly and what the outcome will be only future years can tell. But while Emperor William is ambitious to extend his domain into Asia, August Bebel and his followers are ambitious to extend Socialism to every part of the Empire, and to show to the world, what they consider will be the best government that has ever existed on the face of the earth.

DR. WILLIAM DE HYDE, president of Bowdoin College, gives this advice to teachers:

"Live in the active voice, intent on what you can do rather than what happens to you; in the indicative mode, concerned with the facts as they are, rather than what they might be; in the present tense, concentrated on the duty in hand, without regret for the past or worry about the future; in the first person, criticising yourself rather than condemning others; in the singular number, seeking the approval of your own conscience, rather than popularity with the many."

WHEN a man has not a good reason for doing a thing, he has one reason for letting it alone.—*Sir Walter Scott*.

# The Pretty Brown Thrasher

Mrs. M. E. S. Charles

THE brown thrasher belongs to the family which is composed of thrashers and wrens. This is divided into two sub-families. One of these includes the thrashers, southern mockingbirds, and cat birds, and the other is composed of the wrens. This classification places the thrasher among our best singers, where it certainly belongs.

The earlier bird writers described this bird as being so shy that it rarely left the tangled undergrowth of the woodlands. But birds, as well as other creatures, change their habits to suit changed conditions, and now we frequently have the brown thrasher near our homes in towns and villages. No doubt it prefers dense thickets near water. The more thorny and interwoven with vines these are, the more they are preferred by the thrashers; as here they are best protected from their enemies and are sure of finding abundance of food.

The brown thrasher is a bird of many names, as, brown thrush, tawny thrush, ground thrush, brown mockingbird, English mockingbird, etc. Its length is about eleven and one-half inches.

The bill resembles that of the cuckoo, being long and heavy at the base, curved, pointed, black above, yellowish below. In addition to these peculiarities of the cuckoo, strong bristles grow at the base of the bill. Above it is a bright reddish brown, darkest on the wings; below white with black spots forming longitudinal streaks. The tail is long, well rounded and opens and closes like a fan. Undeniably it shows its relationship to the wren family by the constant twitching and wagging of its tail, which Miss Blanchan says it does to help express its emotions. The feet are long and well adapted to a life of scratching for a living in the thickets among the leaves. In appearance the male and female are much alike; the latter may be distinguished by the spots on the breast being smaller than those of her mate.

Its range of migration extends from the Gulf States north to southern Canada and Maine, and west to the Rocky Mountains. It comes North the latter

part of March and in April. The first pair to arrive at our village home this year greeted us from the top of an apple tree near the house on the afternoon of April 10. They remained but a few minutes, the male singing his most pleasing notes by way of an introduction to the season's chorus. They flew to an arbor vitæ hedge on the grounds of a neighbor and repeated the performance. The song of the thrasher, at first, is heard only at intervals; but as soon as spring has poured out its wealth of blossoms and warm breezes, and all the smaller songsters have arrived, its song is heard from all sides. The song consists entirely of original notes, those of other birds never entering into the composition. The variety is wonderful, also the manner in which the notes melt into one another. During the season of incu-

bation the male repeats his song, hour after hour, from the topmost limb of some tree near by where his mate is sitting, reminding one of Browning's lines:

"He sings each song twice over,  
Lest we should think he never  
could recapture  
The first fine, careless rapture."

About the middle of May, in the Northern States, the male and female will often be seen flying about bushes and hedges. They follow each other closely as they skim over the ground. In the Osage Orange hedges which surround many of the farms in Illinois and Indiana, and which sometimes extend miles along the country roads, often five or six nests can be found in a mile's walk. In these close and thorny hedges the nests are built at a height of three to five feet from the ground, and so carefully are they concealed in the dense foliage that they can not be seen without bending the branches aside. Here they are well protected, for it is difficult to reach them without scratching one's hands. Cats, squirrels and other small animals, are likewise unable to get at the nest in such a situation.

The nest is roughly built of small twigs and rootlets, and lined with finer rootlets and hair. By the latter part of May the usual number of eggs, which is

from three to five, has been laid. The ground color varies from a white or a creamy color to a very pale greenish blue, which is speckled over the entire surface with reddish brown.

Professor Judd says that "two-thirds of this bird's food is animal; the vegetable food is mostly fruit, but the quantity taken from cultivated crops is offset by three times that volume of insects. In destroying insects they are helping to keep in check organisms the undue increase of which disturbs the balance of nature and threatens our welfare."

*Spiceland, Ind.*

### THOUGHTS ON NATURE.

RICHARD BRAUNSTEIN.

WHY is sunshine so conducive to dreams, and why do dreams so often take on a reminiscent turn? I suppose I might as well ask, Why are the stars set without order in the heavens, or why do April showers bring rainbows?

It was a most commonplace thing that started my reverie. A toad—a great ugly, blinking toad, sitting in the shade of a geranium leaf snapping flies. How I do abominate toads! But that is what set me thinking. What place, I wondered, could so hideous a creature have in the plan of the universe? Not that of beauty, not—

But the flash of a red tongue gave answer,—to rid plants of insects! But what, in turn, were insects good for? My head began to swim, and I said to myself, "Let's change the subject." But it was not so easily done, for there still sat his Majesty, the toad, and though I shuddered at the fate of each victim of his insatiable hunger, I somehow could not take away my eyes or thoughts.

Soon, by a psychological train of thought, I was back to my zoölogy days—the days of the red-backed notebook and the little case of shiny instruments, and gracious! even the memory of those crawfish in alcohol was so strong that my handkerchief instinctively went to my nose. And I remembered with what keen regret I used for the first time the little scissors, that I might discover the mysteries of the crawfish's anatomy. Mystery it was, to be sure, and it was the discovery process that taught me to understand why the professor of science so often chose for his chapel reading, the psalm beginning, "The heavens declare the glory of God; and the firmament sheweth his handiwork."

Aye, his handiwork. Even the earthworm, the clam and the grasshopper, exemplified the same great wisdom in fitting out each created thing for its particular purpose. Then the scene of my reverie shifted, and it was spring.

Spring and student days! The smell of moist, fresh earth, of green growing things, leisurely walks along

budded ways—and a search for botany specimens. But the searcher forgot to analyze in the joy of finding the little wild beauties, forgot to sketch out of sheer happiness in being alive, and had the gaining of knowledge depended on this season of dreamy languor, then alas for knowledge!

But as the trees stored up their energy in the winter, so the secrets of nature were being stored for the oft-dry pages of a text-book while skies were leaden and before the brown grass beneath the snow had felt the stir of life.

There was one chapter, however, more fascinating than an Egyptian novel—the chapter setting forth the theories of the "struggle for existence" and the "survival of the fittest." What food for thought they afforded! And in the light of these theories, how almost heroic seemed the cacti of the desert and the sagebrush of the plain. Foolish? Perhaps, but would it not be more foolish to shut eyes and ears to the lessons Nature so unobtrusively teaches?

But again the scene shifted, and behold, the greatest of revelations—geology! Not for the names of those prehistoric animals (does anyone ever remember them, I wonder?) for the fact that the horse was originally five-toed and several sizes smaller than it now is—but because it unfolded the panorama of the earth's history from the time when it was hurled as a fragment into space through the eons of ages of which man cannot conceive. Metals and precious stones—gold, silver, diamonds, the baubles for which men sometimes sell their souls—became but incidental results in the working of the force that makes and un-makes worlds. Through them we heard the groanings of the earth, felt the upheaval of its mighty bosom, saw the play of savage waters, and realized the relentlessness of time.

But I should soon have been stalking mastodons, had not my thoughts been interrupted just then by the appearance of a serpent in my little garden of Eden, and gathering myself together, in a move which was at once rapid and scientific, I proved one of the few things my memory retains from geometry—that *a straight line is the shortest distance between two points*, the points in this case being the ground on which I was seated and the hammock.

It was not God's purpose that people should be crowded into cities, huddled together in terraces and tenements. In the beginning he placed our first parents amidst the beautiful sights and sounds he desires us to rejoice in today. The more nearly we come into harmony with God's original plan, the more favorable will be our position to secure health of body, and mind, and soul.—*Selected.*

"GREAT minds have purposes; others have wishes."

## Around the World Without a Cent

H. M. Spickler

### Chapter XV.

It is the old story over again, everywhere and for all time, "Eternal vigilance is the price of liberty," and, "You must work out your own salvation with fear and trembling."

The man with money seeks to get the most out of it. The man with muscle seeks to get the most out of that. The man with capital becomes hardhearted and cruel toward those whom he ought to employ. The man with the muscle of industry grows fearful of the same capital that controls him, is crushed by the contempt of the man of wealth above him and learns in time to cultivate a hate for him and his heartless power. He is also a shirker and does as little as possible. The gentleman of leisure with the money that wins his independence becomes arrogant, selfish, coldhearted and unfeeling. The more he makes, the more he is led to believe that God has been blessing him in direct ratio to his own goodness. He is apt to think that the Creator endowed him with better reason, a finer imagination, and a more worthy destiny than the brother who does his work for him. Unheeding the text of Scripture, "Rob not the poor because he is poor," the rich man lords it over the workingman, and in the nefarious spirit of the trust, compels him to work for a mere living, and when that wage rises above his living, then the trust, by some hellish ingenuity, known only to belong to the brutal knaves of high finance, finds a means to reduce his wage, or raise his expenses, and thus contrive to keep that man poor and

a slave and an abject dependent upon their wage.

The English landlord has lived at home,—in England. He seldom pays a visit to his land in Ireland. For several reasons he does not want to see his farms there. One is that he has little or no respect for the Irish. The other is that he is afraid to visit his farms. He usually sees them through another's eyes. Wider and wider grows this gap between the English and Irish, between two temperaments so different as never to become reconciled by law, court or Gospel,—reconciled to anything short of liberty, right to self-

government, and taxation only by perfect representation,—the primary fundamentals granted by the Gospel.

But the English landlord does come once in a while. When he does come, it is to ride, with many of his hale companions, over the farms of his renters, in the hunt of the fox, or the hare. It is usually denied the renter in Great Britain to take the game that

feeds upon his own crops, and to fish in the streams that flow right by his door is a misdemeanor.

The warm influence of the Gospel of the Master might soften the heart of the peasant and win him to a righteous life and to an equity that was honorable, but it has never, in the two thousand years of progress, made any great impression upon hardhearted capitalists whose minds and hearts were corroded with the lust of great wealth. "It is hard," the Bible says, "for the rich man to enter the kingdom of heaven." And the Bible knew.

*Three Remedies.* There are three remedies pro-

Shipbuilding in Belfast. Ship about Ready to Sail on her Maiden Voyage. Coaling Up.

posed for the vexing land question. Do any of them meet the needs of the Irish peasant whose prosperity must be guaranteed?

First, land purchase to be universal and compulsory.

Second, conciliation by joint conference.

Third, a land bill, seeking to bring both landlord and tenant to good terms with one another and the government.

As to the first remedy,—compulsory sale presupposes a compulsory buyer. The tenant on the farm would be compelled, by this law,—for he it is who is meant to be the purchaser in the sale,—to buy the farm. But if he couldn't and didn't buy it, a mortgage-writer would often become the new and more impertinent landlord.

As to the second,—is this possible? Could so conflicting parties be reconciled? Echo everywhere answers, "I don't think so." The reply of the conference, which might meet in Dublin or Cork or Belfast, would be for all Ireland. It could not, without going, beyond its prerogative, its power or, at least its ability to judge, take into consideration the details of differences of localities and circumstances and objects. But different parts

of the Island require different treatments,—special treatments, that would not be wanted, much less demanded by other parts of the country.

I have formulated at least seven conditions of relation between tenant and landlord in Ireland:

1. Both are content to remain the same. The peasant is willing to stay on the farm—he couldn't get away without starving, often, if he tried. The landlord is willing to have him stay. He couldn't receive so much interest on his investment by any other means of cultivating it.

2. Both are content to remain the same in general, but not in particular. He is willing to pay the landlord the stipulated sum, but he is unwilling to live in the cold, wet cabin without repairs, or carry the drinking water a half a mile from a spring.

3. Landlord willing to sell to tenant unwilling to buy.

4. Landlord wishing to sell to tenant willing but unable to buy.

5. Landlord wishing to sell to tenant willing to buy but unwilling to buy it at the high price asked.

6. Landlord wishing to sell and tenant wishing to buy, and at the price asked, but not on the terms of payment.

7. Tenant wishing to buy, but landlord refusing to sell. This is the most important one of them all.

I found some farmers paying as much as twenty-five dollars rental for three or four acres of very poor ground. But there were others who had better land for less rent. Many of the peasants have contracted the disease of morbid discontent until they imagine their conditions bad whether they are so or not. It is a case of chronic grouchingness. They are born to hate the government and the English landlord.

I found some most excellent farmers, farmers and not peasants,—gentlemen with fine families, living in comparative comfort, delighted with their farms, enjoying the fine air of that splendid climate, finding in the Irish hills the love of patriotism that burned bright in their breasts. But these were the exception, for the greater part of the country districts of

Sea View in Storm, Northwest Coast of Ireland, near Giant's Causeway.  
This Wave Broke over the Rocks Making Mr. Spickler  
Flee for His Life.

Ireland are sadly out of repair, barren looking and in need of something that it seems impossible to supply.

But the country and people require much study. Only the superficial visitor might be able to suggest a workable remedy,—workable to his own mind.

Ireland must be critically studied, sympathetically studied, by honest students, reliable politicians and far-seeing statesmen. People looked at through telescopes require cannon-balls to reach them.

#### Chapter XVI.

Just listen at these names! I crossed the Glashogarriff stream, romantic in beauty, rode thru the town of Carrigadrobid, across the River Lee, and wheeled among the Derrynasoggart Mountains to Macroom where a long while ago nine Irishmen were hung for the murder of an inoffensive man, the heads of the men remaining impaled on spikes over the jail

door for over thirty years afterward,—most terrible examples of ironic vengeance of the law.

Then I crossed a sedgy swamp to the town of Inchigeelagh and allowed the Carrynacurra Castle to frown down at me from its rough escarpment near the Gouganebarra Lake, crossed the pass of Keimaneigh, and with the Knockmealdown Mountains at my back coasted towards Glengariff. Why it's enough to scare you to have a native say "Gouganebarra" at you. And if the wheeling wasn't fine and the scenery majestic, and the people interesting and kind, few tourists would venture through places with such names as these!

I was nearing the most beautiful lakes in the world,—Killarney.

From Windy Gap in the mountains I coasted right down into the lakes for eight miles, over the most glorious of roads, riding in my shirt sleeves, in the winter time, with my cap tied to the handle bars, and the fresh air fanning my flushed cheeks.

Who would dare to attempt to pay, in cold cash, the value to the tourist of that first impression, as the panorama of the lakes, smiling below there in silver-mirrored faces, gradually unfolded their full surface to the enthusiastic cyclist! A dim, mysterious vale of cloud and mist hung in places over them, as if by their tantalizing disclosures their half-concealing, half-revealing coquetry they would increase my fascination. The gradient became steeper and steeper. It glided from rocky gulches into open views and under arching trees, then around and around and back again, turning, winding, twisting, but falling all the time and leaving behind me the grand and terrible mountains, reaching up into the sunset of evening. I no longer doubt the reality of fairies. Fairy books are as real as science books. I was in fairy land, and a man who has been there, ought to know. This earth, crunched and crumpled by the titanic might of geology, devastated by flood and by army, sinned against by its crowning creation, is a Garden of Eden yet to those whose eyes are opened.

At a little less than a mile a minute I glided along the silent lakes, among the sweet shrubs that hid them from my gaze as I rode in this natural cove of overarching trees and trailing flowers.

That night I went to bed, as I usually do,—at night. But after I found I could not sleep, for the intoxicating ecstasy of the spell, when the others had all fallen asleep, I left the house of my host, silently, and stole out into the perfect night.

The light of a full moon and the stars was so remarkably brilliant that the shade cast by the trees along the bank of the lakes was as decided as at day. It was one of the few but real midsummer-nights' dreams. It was such a night in which sleeping would have been a sin. Here, walled in by great moun-

tains, lying under the fair face of the moon, the lakes lay dreaming. It was the sweetest and softest picture of delight God ever painted for me at night-time. I could see across the lakes as easily as in the daytime. A bird flying across it was plainly discernable as it actually chirped a few notes in a song made to order for the night.

Here, among the big trees, breathing the strange fragrance of flowers never seen before, as they mixed their rare odors with the balsam of the pine and other trees whose names I had yet to learn, I walked or loitered, dreaming in the dream all around me.

It was extraordinary that I should leave the house of my host after he had put me to bed. But the night was extraordinary, and the scene before me was still more so. There was good reason for my being there. With the promise from Lord Clommel to send me over his big game preserves to see the wild deer, on the following day, the mellowed light of night, with the hand of silent power, pressed my forehead into a soothing slumber of wide-awakeness that was more restful than the deepest sleep. I was at Killarney! I had found it a paradise beyond the words of travelers before me.

I had passed several gurgling waterfalls that came from the mountain sides to find their cradle in the lake. Birds, awakened by the bright night as much as by my footsteps, fluttered in the green tree-tops above me and with a few rebuking twitters, sought another leafy bed.

It was so still I could hear my heart beat. Only the gentle murmur of the waterfall left behind, broke the silent quiet rest of nature, man and beast.

While thus sauntering, musing, glad that I was around, there came to my startled ear the noise as of approaching footsteps.

Abruptly I stopped in my tracks, on tiptoe, listening and looking in the direction of the noise. Who was it that was coming? It might be the night policeman who patrols the roads here to take into custody any suspicious-looking stranger and to keep the lives and property of the natives from danger.

I would be required to explain why I was out here, all alone, who I was, and where I came from. It was bad to be arrested. It might be worse to miss the glorious scenes of the night before me.

I could go back with the policeman to the Keeper's House, and calling the gentleman from his repose, could explain, before the policeman why I had been found out there along the lake, after he had given me shelter for the night. But the fact that I had deliberately left his house, after he had shown me my bed, without speaking to him about it, and a total stranger, too, to walk out along the lake and be found sneaking around the palaces of rich gentlemen,—at night, might not be the easiest thing to clear up.

A stranger, after having retired at a private house, found after midnight, loitering around the game preserves, by a policeman!

Stranger dilemma can hardly be imagined. I wondered why I had done it. "Can't yez see it on the map?"

The noise might have been made by a tramp. Or, a cow, living on the green grass along the lake, might have been grazing even now. But the noise was like moving feet. The dense shade of a bushy tree came almost to my feet. Into this covert of shade I glided noiselessly, and breathlessly waited for something to happen.

### THE FAILURES.

We who have failed, remember this of us—

O you whose hands have grasped the luminous  
And lovely thing that is your soul's desired,  
Though once we fell and blundered on the way,  
Though now we turn shamed faces from the day,  
Remember this, that once we, too, aspired.

We who have failed through weakness or surmise,  
Be gentle with us if we turn our eyes

Sometimes from sight of those victorious,  
Crowned and exultant on the farthest height,  
Seeing that once we watched our arms by night,  
Seeing that once we dreamed to triumph thus.

We who have failed in life and love and task,  
Surely not overmuch this gift we ask.

Be not too scornful, you whose glorious  
Undaunted souls passed on through flood and fire,  
Of those too weak to grasp a great desire.  
We who have failed, remember this of us.

—The Cosmopolitan.

### A THRILLING EXPERIENCE OF A GOOD SAMARITAN.

NEARLY all of our readers must have heard of Dr. Grenfell, who for years was the only physican for six hundred miles along the bleak, lonely coast of Labrador. What could possibly have induced this brilliant man, who was assistant to the Queen of England's physician, to fling his life away among those ignorant, uncouth deep-sea fishermen and the half-civilized Eskimos?

About two years ago he visited Chicago and spoke nine times to crowded houses in less than four days. He then told us that when he was an ambitious, worldly-minded young doctor, not appreciating there was any thing in life except eating, drinking, the theater, football and athletics, he happened to go by Mr. Moody's tent. Out of curiosity he stopped.

He came away feeling that Moody had something that was worth having, and also with the thought that his own life was unpractical and useless. With it came a conviction that his religion had been a humbug. He made up his mind to take Jesus Christ by simple faith to help him to do good in the world.

He learned of that most inhospitable part of the earth with brief summers, intense and long-drawn-out winters of terrible cold and fierce storms, and he decided to bestow his life in this, the most needy place he could find and there commend Christ to the fishermen.

We have not time in this article to tell of the co-operative stores that he started, the mills that he built to furnish employment in winter when there was no fish, the hospitals that he has founded up and down the coast, the orphan asylum, the schools that he has established, the breaking up of the iron rule of the grasping trader, the banishing of the curse of the saloon power and many other things that he did, even too numerous to mention.

In other words, he tried to preach the Gospel to these folks as he would like to have it preached to him if he had been in their place. He tried to do just what he thought Christ would do if he had been there.

Today every fisherman, every woman and child on that bleak coast know him. They have his name constantly on their lips, and he did it all just to *commend Christ*.

Perhaps a fisherman's wife is dying two hundred miles away: the poor, despairing husband starts out over mountain and valley to call Grenfell. No matter what time of day or night, he merely hitches up his dog team and starts out.

News has just reached civilization of the most thrilling experience of his life while on one of these errands of mercy:

"He was traveling over the ice with a pack of dogs, when he found himself driven off the coast by a moving ice field. Before he realized it he was in an area covered only with broken drift ice, and before he could stop the dogs the animals had carried him into the water. The dogs attempted to climb on Dr. Grenfell's back, and he was obliged to fight them before he was able to climb onto a solid piece of drift ice. The dogs also succeeded in saving themselves.

"With the wind blowing a gale from the north-west, the temperature ten below zero, and night at hand, the doctor would have been frozen to death, for his clothing was saturated, but for the originality and ingenuity he displayed. Taking off his skin boots, he cut them in halves and placed the pieces over his back and chest to shield those parts of his body from the blast.

"As the wind and cold increased when night came on, he determined to kill three of the dogs to afford him more warmth and to supply the other beasts with food, fearing that, becoming hungry, they would tear him to pieces.

"As it was they attacked him savagely and he was bitten terribly about the hands and legs. He spent a

trying night. He wrapped himself up in the skins of the dead dogs but still found it so cold that he repeatedly had to run about the ice to keep up the circulation of the blood.

"Hoping that next day he would be in sight of land, though the ice was fast receding from the shore, the doctor took the legs of the dead dogs and, binding them together, made a pole, to the top of which he attached part of his shirt, to serve as a signal, and this eventually proved to be his salvation, for the flag was seen by General Reid, and they effected a rescue."

Paul gives an explanation for such a life: "For the love of Christ constraineth us." Human love, which we have in common with the brute creation, merely looks after *me and mine*. And some are so destitute of natural affection that they do not even do that. But this divine love is a heavenly plant. you can't originate it by yourself any more than you can develop a case of smallpox, but you can catch it just the same as you can smallpox, and after you have caught it it is wonderful how others can catch it from you.

Dear reader, are you going about destitute of that love? You are missing the sweetest thing in life, for you are not getting by any manners of means all that is coming to you even in this life. Pray God that you may have his love shed abroad in your heart. (Rom. 5: 5.)—*The Lifeboat*.

#### THE ELECTROLYTIC PURIFICATION OF SEWAGE.

THE installation has just been completed at Santa Monica, Cal., of the first electric plant for the purification of sewage to be erected in the United States. The system is known as the Harris magneto-electrolytic process. It will be ready for operation just as soon as the necessary outfall pipes can be laid. The plant consists of two wooden tanks, each thirty feet long, two feet wide, and eighteen inches deep. Each tank is equipped with ten sets of electrodes and ten electro-magnets weighing three hundred pounds each. The electrodes are fitted with steam pipes for use in cleansing them. The electric energy is supplied by a direct-current generator of special construction, equipped with a motor and separate exciter. A generator of this pattern is required to obtain perfect results, as the requisite is low voltage and high amperage, in opposition to the requirements for power and light.

The plant is located in a concrete chamber which is equipped with two compartments sealed tight, into which the sewage is pumped from the receiving basin. The purpose of these chambers is to secure an equalized flow through the electric tanks, and their combined capacity is one million gallons per day. After

leaving these sealed chambers, or forebays, the sewage is allowed to flow into the tanks in sufficient volume to cover the electrodes and the magnets to a depth of three inches. The current is turned on as the sewage flows steadily over the wires and enters the outfall pipe. By that time it is supposed to be odorless and perfectly harmless.

What actually happens as the sewage passes through these charged tanks has not been scientifically determined; but experience has demonstrated that as the electric energy required for the operation of the plant is held, the effect is to immediately release the hydrogen, and as it leaves the water the oxygen is released. The constituents of water being oxygen and hydrogen, the releasing of the latter precipitates all of the inorganic matter, and the releasing of the former forms an ozone, which is responsible for the burning or oxidation of the organic matter. The result is that the sewage becomes immediately purified, and if passed through sand or other filter appears as pure sparkling water.

Experiments have demonstrated that the cost of the electric energy required for the operation of the plant will not be in excess of fifty cents for each million gallons treated. The plant is being installed by C. P. Chandler and L. G. Lautzenheiser, who have contracted to operate it during a period of sixty days to the satisfaction of the city council. At the end of that test period, should the system prove to be a success, the city will purchase the plant, the approximate cost of which is \$12 000.—*Scientific American*.

#### DATES THRIVE ON COLORADO DESERT.

RECENT experiments made at the government farm at Mecca, Arizona, with the date palm have proved that dates can be cultivated on the Colorado desert with equal the facility reached in the Sahara desert, from which the palms for the 15-acre Mecca farm were brought.

Although this farm has been in cultivation for only three years, already the palms are bearing well; and this season contain from one to three branches of dates, each bearing upward of twenty pounds.

A year ago it was believed that the Salton Sea was to overflow and submerge the Mecca farm, and the government officials purchased ten acres of land near Indio, to which the Mecca palms were to be removed. The water was stopped, however, and now the two farms will be utilized, suckers from the Mecca farm plants being transplanted at Indio.

Of the ten or more varieties there, some are very rare, and as soon as they come into their full bearing it is proposed to establish a packing house, and experiments with packing and shipping the fruit will be conducted on the extensive scale.—*Scientific American*.

# THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE, ELGIN, ILL.

Subscription price, \$1.00 per Annum, in Advance.

The Inglenook stands for material and spiritual progress.

Its departments are: Literary, Editorial, Home, Cream of Magazines, World News.

Its qualities are: Good Sentiment, Moral Convictions, Inspiration.

Its purpose is: To safeguard home life by supplanting and counteracting bad literature.

Its scope of matter is: Scientific, Religious, Educational, Philanthropic, Economical, Sociological and Financial.

Its field is: The World.

Liberal commission given to agents. Sample copies are given upon request. When changing address give both old and new addresses.

Entered at the Postoffice at Elgin, Ill., as Second-class Matter.

## AS YOU WOULD THAT OTHERS SHOULD DO.

THE campaign for a sane Fourth is gaining adherents at each return of Independence Day, and it is safe to say that before many years the papers at this season will have other events to chronicle than those which tell of the loss of life and limb as the result of a perverted observance of the day.

The editor of the *Chicago Record-Herald*, commenting on the efforts made to bring about a sane Fourth, urges the taking up of another "sanity" problem—"the problem of eliminating unnecessary and insincere violence of speech, offensive personalities and wholesale indictments from the national campaign of the summer and fall."

We have before us at present an example of our folly in following this uncharitable course toward those who do not agree with us in every particular. Mr. Cleveland as chief magistrate had bitter and savage detractors who refused to concede him any intellectual or moral virtue whatever. Today these very ruthless critics are exuberant in their praise of his character and services. There is not a trace of partisanship in the estimates of his life and personality.

"It is true that events and time are great teachers, and it is idle to ask militant and earnest men to be as impartial and deliberate in their first thoughts as they often are in retrospective judgments. Still, a great deal of campaign abuse and campaign heat are artificial and gratuitous, and a little common sense and justice will go far."

Continuing, the editor quotes from *The Century* which "makes a plea for a campaign of light and fact and is sure that a word from each of the presidential candidates might place the contest on a higher plane than it has ever occupied and help us to a more rational solution of public questions. Intemperate and hypocritical abuse only vulgarizes politics, befogs issues and confuses instead of educating the

people. We boast of the value of our campaigns as courses in economic and political questions, and with ample reason. Why not enhance this value by discouraging all unworthy and objectionable features?"

This is noble sentiment and it is to be hoped that it will find a response in the earnest efforts of the people who love truth and justice. And why not extend this sanity campaign further? Are we not, in our everyday relations with our fellow-men, too much inclined to belittle those who differ from us and to distort their acts into deeds of infamy? It is a characteristic of the truly great that they are able to consider their opponent and his position in an impartial manner, and did we but think of this, though we were wanting in the true essence of greatness, it might help us to rid ourselves of some of the things that bespeak the little and narrow minded. This kindly-feeling course which leads us to give our opponent every consideration that we ourselves would claim does not have in it anything of the nature of compromise. We may hold tenaciously to our principles and defend them in every legitimate way, and we can do it "with malice toward none and charity to all,"—a course that will bring us more supporters than any other.

## THE ABUNDANT LIFE.

THERE are two reasons, at least, why indigestion in one form or another is so prevalent in these days. One is that we exercise little control over our appetites and eat either too much or too often, or take of food improperly prepared or unsuited to our needs. The other is that we have fallen into a sort of semi-unconscious state of existence and work, eat and sleep with only about half our faculties in action. In other words, we are only about half alive.

Of course it isn't the digestion only that suffers because of this condition. It generally manifests itself first in an aversion for all kinds of work requiring the close application of one's powers, and for the work the person is then engaged in in particular. It somehow gives a rosy tint to some job "farther on" which naturally makes the present one distasteful. The inevitable result is that the work is bungled, and from work done in a slipshod, half-hearted manner it is not a long step to indigestion and unrefreshing sleep. And along with these results comes that of discontent which accounts largely for the unrest in the social and business world.

The abundant life, which means life with all the faculties of the body, mind and soul keenly alive, does not, on the other hand, require that we go at our tasks in the strenuous, galloping, mile-a-minute manner characteristic of the twentieth century. We can have a wholesome interest in our work and a love for it and be awake to the activities about us, and yet we can possess the calmness and deliberateness that will

give evidence of our devotion to our tasks and at the same time help us to avoid the risks and follies of a headlong gait.

Only the abundant life can assure to us real happiness. The joy of living is the accompaniment of a wholesome, hearty view of life in which even drudgery is looked upon as a grand opportunity for giving expression to this joy. With the abundant life we have the bouyant, springing step, the sparkling eye, the charitable disposition. And with these influences there is no place for indigestion, sleeplessness and discontent.

### GROVER CLEVELAND.

Grover Cleveland had the good fortune to be three times nominated for the Presidency and twice to be elected. We do not mean to claim that he was one of the greatest men the country has produced, for we do not think he was; but he was one of those many citizens of superior ability who have measured fully up to their opportunities, having taken them as they came. When General Kosuth was in this country, in 1852, pleading the cause of Hungary, begging our nation to seize this opportunity to help a people struggling for freedom, in one of those wonderfully eloquent addresses the orator, who had acquired his extraordinary command of English by studying Shakespeare in prison, stumbled into an expression more vigorous than literary when he begged his hearers to "seize the occasion by the—the—**front-hair**." Cleveland always remembered that, as an old Latin poet tells us, "Opportunity wears a forelock, but the back of her head is bald."

Mr. Everett P. Wheeler tells our readers what were the great achievements of Mr. Cleveland as a public man; and they were great. We venture the untimely merit of praising him for his victory over himself, although we remember how Secretary Taft has been blamed for calling attention to the virtue of self-conquest achieved by General Grant.

Mr. Cleveland's earlier life in Buffalo, and his association with merry companions, made it necessary to excuse and defend him. But if he had been something of a Prince Hal, when he became the servant of the people he lived worthily in the public eye. The companions of his youth complained that he slighted and forgot them. It was probably as well. President Roosevelt pays particular attention to the friends of his undistinguished days; but no stain ever attached in rumor to those companions or to those days. He was no Prince Hal.

It must have been a great resolve which Grover Cleveland took when he was chosen Sheriff, and then Mayor, and again Governor, and so soon President. It was the resolve to do his full duty honestly for the people, and not for low partisan or personal success. Henceforth no stain was to attach to him, no aim lower than patriotism to control him. He had had experience enough of low ways in politics to despise and reject them. It was a day

when the reform of the civil service, as against the spoils system of Andrew Jackson, was much urged, and as Governor and President he was the greatest champion the good cause has ever gained. Perhaps this will be his chief claim for fame, even greater than his opposition to the silver crase and his defense of honest money.

The rise of Grover Cleveland was almost meteoric. Nobody out of his own city had heard of him when, in 1881, he was elected Mayor of Buffalo, and nobody would ever have heard of him again if he had not used the opportunity which others had abused, and vetoed corrupt appropriations. That made him Governor of New York the next year, and his similar honest course as Governor elected him within two years as President of the United States. This is nothing less than astounding, from a commonplace lawyer in three years to be President of the nation. It was extraordinary opportunity, extraordinarily well improved. It does not mean that he was a very great man, certainly not brilliant, but he had the moral courage and sanity to take the honest, straightforward course, after full, deliberate consideration, without regard to immediate political effects. The people said, "There is an honest man," and they chose the honest man rather than the man of vastly greater brilliancy and ability and political experience. His career is evidence that the people at heart put character before shrewd intellect. It is no evidence that such success may come to any one else of equal ability and honesty, for a thousand times has that failed; but it does show what are the opportunities which may come to a man, and which, courageously improved, may lead to the highest distinction.

Although not a literary man, in his somewhat ponderous way he hit on some phrases that have caught the public ear and become part of the common stock of the language. They mostly had occasion in the discussion of the civil service reform. It was he who told us that "Public office is a public trust"; who resented the "pernicious activity" of officials in the public service, and denounced them as "offensive paritsans." It was as a practical statesman that he declared that "it is a condition that confronts us, not a theory." The expressions "ghoulish glee" and "innocuous desuetude" were his; but nothing better indicated his political doctrine than his utterance that "party honesty is party expedience." It was that principle that gave him his prominence and honor. They say that he lacked tact, that he broke up his party; if he did, his party returned to him and again made him President after wandering far away. He had bitter enemies in his party, but that fact gave occasion for the **bon mot** at the Democratic convention: "We love him for the enemies he has made."

So we do not eulogize Cleveland as one of the greatest of American statesmen, nor are we oblivious of his personal weaknesses; but as a public man he would allow no taint to attach to his service of the State. His standard was the highest, and he lived long enough to attain the credit of an honest man and a sage.—The Independent.

## Some Things About Our Bodies

By H. D.

DAVID, in the 134th Psalm, says of himself, "I will praise the Lord, for I am fearfully and wonderfully made." So are the rest of us and so let us all praise the Lord.

The marvels of the human body are not all known, but enough are known and some are understood: sufficient indeed to excite our interest and admiration. The more we know about the body, the more we are inclined, as David was, to praise the Lord for his excellent wisdom.

It would be interesting to know how and where-in the body differs now from the way it was as it passed from the Creator's hands. It is hardly to be supposed that the body has remained unchanged, while such marked changes have come to man spiritually.

Water forms fifty-eight to sixty per cent of the body and it is essential that all the tissues—especially the soft tissues (muscles, nerves, secreting organs, etc.) be continually bathed in a watery solution. Most of the solutions and secretions of the body are alkaline in reaction, such as the blood, lymph, pancreatic juice, saliva, etc.; but some are strongly acid in reaction, as the gastric juice of the stomach and the secretion of the kidneys. The bile is neutral in reaction. When these normal conditions are changed, derangement of function and sickness usually follow. But the body is constructed in such a way, and with such a tendency to health, that it maintains, and, when interfered with, restores this equilibrium, unless the evil influence is too great.

The blood is a powerful antitoxic fluid. Not only does it constantly contain elements that destroy toxic (poisons) substances that gain access to its current, but its ability to immediately manufacture much more antitoxic material is a perfect marvel and a wonderful safeguard to life. The artificial toxins, such as those used for diphtheria, cerebro-spinal diseases, and tetanus, are only the human effort assisting the powers of the blood. The reason some of them, especially diphtheritic, is so powerfully effective against diphtheria is because it is so similar to the natural process.

The greatest advance in caring for and curing bodily ailments has for some time ceased to be in the

line of surgery. Indeed surgery never was and never will be a great curative factor in the strict application of the term; but following Jesus' suggestion, of cutting off and casting away offending members, brings comfort to numberless sufferers who would otherwise perish from their diseases. But serum and antitoxine treatment has robbed surgery of its once first place in interest.

Diphtheria and smallpox (once more dreaded than tuberculosis and cancer are today, because they destroyed more lives than these diseases do) bubonic plague, cholera, sleeping sickness of Africa, tetanus—the horse sickness, hydrophobia—the dog sickness, malarial fever and some others are positively under control. Some of these are controlled by sanitary science.

Tuberculosis, "the great white plague," cancer and scarlet fever, are now the dreaded foes to life; but that these will shortly be conquered seems certain. The best trained men in the world are working on them and God will reveal to whomsoever he will the method of cure. Even the cause of decrepit old age is earnestly being sought for and can anyone say the time will never come when there will be no more death? Warriors are honored to the ends of the earth because of their power to destroy vast armies, but there seems to be tardy and scant praise for the men who have sacrificed their own lives in order to save others from suffering.

With regard to the skeleton, some animals have their skeletons on the outside of the body, such as lobsters, shell fish, clams, turtles, etc.; but in the human animal—and many inhuman—the skeleton is covered with muscles and skin: the nails, hair and teeth being remaining fragmentary suggestions of the exo-skeleton of the other variety. But for mechanical advantage, in the pulley, levers, bony unions, braces, etc., through the arrangement of bone and muscle attachment, the best philosopher and the wisest scientist is far outdone. No man can begin to equal the supple and agile hand with its exquisite form and diversity of movements.

The joints of the body are wonderfully planned so as

to combine strength, usefulness and beauty of form. They need to be oiled, accordingly those allowing the greatest freedom of motion are most abundantly supplied with synovial fluid. The five—sometimes there seem to be six—special senses are each one a marvel in itself. The eye, capable of examining almost microscopic objects, is in the next instant capable of seeing objects many, many miles away without the conscious effort of changing the lenses or readjusting the mechanical arrangement; and, by the aid of the powers of the mind, of estimating the size of the object, if something as to the distance is known: or, if the size is known, of telling something as to the distance away. It is comely in appearance, being spherical and decorated with a beautiful color,—blue, brown or black. By it we are able to give expression to our mental state,—love, hate, anger, reverence, etc.

The whole body is dominated and controlled by the powers of the mind. In its influence upon the body it is nearly equally divided into conscious and subconscious activity. The subconscious plays a more direct part in maintaining life than does the conscious. God has wisely arranged it to be so. By it the heart actions, respirations, secretions and many of the so-called reflex functions of the body are maintained. By the conscious mind social, moral, scientific and religious questions are weighed and evolved.

It is known that our bodies emit rays of light. In fact it is said that all organized bodies are luminous; but those emanating from the human body, though they have not yet been carefully studied, are called "N" rays, and can be detected by a delicate camera. And, while they were known to Christ, this is clearly not the light he had reference to when he said, "Let your light so shine," though each was placed in the body by God,—one at the making of the body, the other at the redemption of the soul.

#### HOME TRAINING.

A FEW years ago, having been asked to go quite a distance from home to take part in the laying of the corner stone of a large new church, I was invited, after the ceremony, to go home, a few miles further away, with an old friend and college mate, and spend a day with his family. We had been very intimate in our earlier ministry, had frequently taken our holidays together, and it did not require very much urging to persuade me to go.

We reached home late at night. The children had all gone to bed, but they were up bright and early in the morning and gave the visitor a most hearty welcome.

There were two girls, one about twelve and another about ten, and two boys younger. We formed a hearty, pleasant company as we sat down together at the breakfast table.

After breakfast the books were brought on, a Psalm was sung, a chapter was read from the New Testament, each one reading a verse in turn; and once, after the elder daughter had read her verse, her father asked her, "What was that passage that you read, Mary?" Mary looked at it again for a moment and then said, "For we must all appear before the judgment seat of Christ." "Can you repeat that, Martha?" the father asked the next little girl; and she also repeated, "For all must appear before the judgment seat of Christ." "Can you, John?" And John repeated it, and then the little fellow sitting on his mother's knee, with a little help from his mother, was able also to repeat the same passage. Then the reading went on until we finished the chapter, when we all knelt together in prayer.

When family worship was over, the children gathered around their father and asked to be allowed to stay home from school that day because an old acquaintance and former companion, who had baptized many of them and had been with them in many a frolic, happened to be with them for the day; and after a little coaxing this was graciously agreed to, to the delight of more than merely the little children.

In a little while the minister, the children and the visitor all went into the study, and the father was showing me some books he had lately been purchasing. We were discussing the books, when suddenly we became conscious that a spat had started among the children. (My experience is that a minister's children are neither better nor worse than anybody else's children.)

My friend took the commotion very coolly. He was in no hurry to say anything. Indeed, he seemed to give them a little lee-way. But when he thought it had gone far enough, he quite deliberately said, "Mary what was that passage that you repeated at worship this morning?" Mary's cheeks turned red. She looked down, she thought a little, and then said, "For we must all appear before the judgment seat of Christ." Martha was asked, and she repeated it; John and the little fellow, also. There was nothing more said. The children went on with their play and the parsons with their conversation. There was no more spat that day; but we had a day of rare enjoyment together.

That happened about fifteen years ago. Last autumn the minister and his two boys, now grown and both teaching school, drove into our yard quite unexpectedly, and there was, of course, a very hearty handshaking and many kind inquiries. We had about a day together. You wouldn't blame an old friend if he had mischief enough to ask the young men, when their father's back was turned, "Boys, what was that passage that you all repeated at the breakfast table the last day that I spent with you at your house?" And you would not be astonished if they were ready

at once, both of them, to answer, "For we must all appear before the judgment seat of Christ."

Thus Christian parents are called upon to teach their children diligently, "when thou art in the house and when thou art by the way."

That family is a model family, commanding the respect of all who know them. How could it be otherwise, brought up under such auspices?—*Home Herald*.

#### WEARIED OF SHAMS.

"DIDN'T you have a pleasant time at Cousin Maria's?" the grandmother was asked, when she returned several days earlier than was expected from a long-talked-of visit.

"Yes-s, oh, yes," but she breathed a little sigh of relief as she looked about her at the home belongings. "Everything was nice at Maria's, and she and the girls as kind and hearty as could be, but it was all a front-door sort of life—just studyin' how things would look from the front door—and seemed like I wanted to get home again. I didn't mind sleepin' on a bed that had looked like a piano all day, nor keepin' my clothes in a box that was rigged up for a sofy, nor eatin' my meals on a table that slid out from what looked like a fireplace. You see, they live in a flat, and Maria says all them things is conveniences; I s'pose they are. Both the girls work downtown, and when Annna packed her patterns and dressmakin' tools into something that looked like a music roll, and Lidy put up her dinner in a box that looked for all the world like a camera, seemed 's if I'd got into a place where I didn't belong. I wanted to get back where things are real; where good, honest work ain't a thing to be ashamed of, and the food it earns is a blessin' to be thankful for."—*Exchange*.

#### A BOOK FOR BABY HANDS.

FOR the little one who loves pictures, but cannot be trusted with the books and magazines, try a picture book. Any soft cloth will do for the leaves; old flour sacks are good. Cut the cloth into pieces just twice the size you want the book to be, and let the book be of a size for baby to handle. Cut as many of these pieces as you wish, each piece making two pages, but eight to ten pages will be enough; it is better to make several small ones than one large one. Starch these pieces very stiff and iron smooth; then lay them evenly together and stitch through the middle of the length crosswise. A darning needle and twine may be used, or the stitching may be done on the machine, with a very loose tension and long stitch. If four pieces were cut, this will give eight leaves. The pictures should be such as appeal to the child's fancy, and at the same time awaken thought in the right direction. The advertising pages of the monthly

magazines, pamphlets, newspapers, catalogs, and price lists, which are no longer valued, will furnish many beautiful and instructive pictures and these may be pasted on the leaves as they are gathered. Let the children help in the selection. But let me beg of you, do not make a book for your child, big or little, of the "funny pages" of the Sunday dailies. Try to cultivate in the child a taste for the beautiful and elevating.—*Exchange*.

#### SELECTED RECIPES.

*Banana Toast*.—Toast six slices of stale bread in a slow oven until of a golden brown throughout. Then dip into a little hot cream or milk just long enough to moisten a little on the outside of the slices. Peel half a dozen bananas, and put them through a colander. On each of the slices of moistened toast, place a spoonful of this banana pulp. This makes a very wholesome breakfast dish.

*Baked Peaches*.—Baked peaches are excellent either for breakfast or as a desert at lunch or dinner. Select good-sized freestones, pare, cut them in halves and remove the stones. Place a single layer in a baking dish, hollow side uppermost. Into each half put half a teaspoonful of butter and the same amount of sugar, or a little more, if the family like sweets. Sprinkle nutmeg generously over the whole, and bake twenty or thirty minutes; when soft the peaches are done. Serve hot.

*Rhubarb Jam*.—Melt five pounds of sugar in the preserving kettle, add six pounds of rhubarb, washed and cut into small pieces, and one pound of figs, washed and shredded. When this has cooked very slowly for eight hours, add four lemons, sliced thin. Remove the seeds but do not peel the lemons. The Jam should be cooked nine or ten hours. When it is a smooth paste it is done.

*New Orleans Omelet*.—Two potatoes are peeled, sliced, and fried in bacon fat or lard. When they are nearly tender enough half a small finely minced onion is stirred in and cooked with them until they are quite tender. Then three or four well-beaten eggs seasoned with salt and pepper are turned over the potatoes and spread evenly. When the under side is done, a plate is put over the pan, the omelet is turned out bottom upward and slipped into the pan for the other side to brown. Boys approve heartily of this dish.

#### HOW TO COOK POTATOES.

SOME experiments carried on at the Connecticut Agricultural Experiment Station have shown that a considerable loss of material results from the cooking of potatoes from which the skins have been removed. In the boiling of peeled potatoes, three per cent of carbohydrates and four per cent of albumin-

iods were lost. When the skins were left on, the amount of nutrient material lost was infinitesimal. Baking or steaming are on this account preferable means of cooking potatoes as well as other vegetables.

One of the most valuable elements of the potato and other fresh vegetables is the considerable amount of alkaline salts found in these esculents, which are largely lost when the vegetables are boiled in water after having the skins removed.

## The Children's Corner

---

### THE MESSENGER ROBIN.

"WHY, what has happened?" asked Aunt Fannie, as she came into the sitting room, where a very rainy-day pair of twins stood looking out of the window.

"This is the very worst summer that ever happened," replied Charlie. "It just rains all the time." "Yes, and we can't do anything," chimed in Carlotta.

The two children had been at grandma's for a week, and it really had rained almost all the time. The vacation days went so fast, and it was hard not to be able to go fishing, or after flowers, or even out in the woods.

Aunt Fannie thought a moment. "Wait till I get my knitting," she said, "and I will tell you about one summer that it did not rain."

The twins were soon perched on the arms of her chair, and the clouds were all gone from their bright, sunshiny faces.

Aunt Fannie was such a busy woman that it was a great treat when she could take time to tell stories. They often read a story in the paper that said, "By Fannie Allen"—that of course meant that Aunt Fannie, but that was not like having her really tell one, and she did tell the splendorous stories.

"Will this be a true one?" asked Charlie. "Yes, every bit true." "O goody, goody!" exclaimed Carlotta. "That kind is best."

When they were settled, Aunt Fannie began. "Once upon a time, but not a very long time, two robins came flying through the woods. They went first to one tree and then to another, and the way they flew about and chirped told everyone that they were going to housekeeping, and were looking for a good place to build their home. After a good deal of hunting, they found just the best place in the world—an old maple tree where the branches were so thick one could scarcely see through the leaves.

"They went right to work, and for several days were very busy carrying twigs, grasses, thread, and many other things to weave into their pretty home. At last it was finished, and they moved into it.

"It must have been their first housekeeping, for Father Redbreast was so happy that he sang all the time. One morning he seemed as though he would

split his little throat he was so full of joy. He seemed to have a new song. Over and over he sang:

"Twee, twee, come and see  
My beautiful nest and blue eggs three."

"Had you peeped into the nest you would have found it was all true. There, sure enough, were the three blue eggs. For several weeks Mother Redbreast spent all of her time taking care of the eggs and keeping them warm.

"After a time Father Redbreast began to look very important, and puff up his feathers as though he was most too proud to fly like other birds; so no one was much surprised one day when a baby robin held its bill over the edge of the nest for his dinner."

"Where were the others?" asked Carlotta. "There were three eggs."

"No one knows what happened to the other eggs, for there was but one baby bird. Having just one little baby, Father and Mother Redbreast were very careful to teach him everything that a little robin should know, and young Robin was such a smart little fellow that long before the summer was over he really seemed to know as much as they did.

"Did I say as much? That was a mistake. There was one or two things that he had not learned. Again and again Father Redbreast showed him how to keep his feathers all smooth, and tight, so as to make a cravanette when it rained; and how to ruffle them up when he wanted to take a bath and feel the cool water on his little hot body. Then, too, Mother Redbreast walked about in the grass and told him how delightfully cool and refreshing it was to bathe his feet in the dew in the early morning.

"Robin listened to all this very respectfully, but sometimes he almost wondered if it was a fairy story. Not once had he felt the cool dew, or the raindrops beating against his feathers and trying to get under, and in his short life he had not had a chance to even take a bath.

"All that long hot summer there had not been any rain or dew. The springs had dried up, and it was all the birds could do to find a drink. Sometimes they would have been very thirsty had it not been for the berries.

"Just on the other side of the forest lived Charles and George Frost. Every evening a beautiful shower kept the grass in their yard fresh and green.

"One morning, just as Robin was starting for his morning fly, Charles's mother said, 'It is so very warm I believe we will turn the water on the front lawn this morning.'

"The hose was taken out, the sprinkler set on the lawn. Then the water was turned on, and a delightful spray gave a fresh drink to everything.

"Master Robin often visited this yard, for the apples on the big tree were fine. This morning, in-

deed, he started out with an apple lunch in mind. As he flew out of the woods, such a strange sight met him. He was so surprised that he forgot to use his wings, and almost fell to the ground. Was it? Could it be? Yes, it surely must be a shower. But how strange! It was like his father had said it would be, and yet it wasn't what he had expected.

"He quickly decided that he would try it anyway. Down he flew. How cool the damp grass was, but he couldn't stop for that.

"The boys looking from the window saw him hop into the spray. For a moment or two he had just the best time of his life. Then something happened. He stopped, tipped his head on one side as though he was thinking, flew out just as fast as he could go, scarcely stopping to shake the water off as he went.

"Back he flew to the woods, and then—what was he doing? Instead of going straight home, he stopped first at one tree and then at another, talking apparently for a few moments with the birds in each. As soon as he left the birds would come out and fly away. A few moments later, Charlie looking out the window, called, 'Mamma, mamma, come and see!'

"From every direction the birds were coming for a bath. Charlie counted over a hundred, then he exclaimed, 'Why, mamma, that first robin must have been a messenger boy and told all the others.'

"Did he, Aunt Fannie, did he?" exclaimed Charlie, almost tumbling off the arm of the chair.

"Yes," said Aunt Fannie, "that was just what he was doing, when he stopped first at one tree and then at another.

"When he felt the cool water and was having such a good time, he happened to think about Father and Mother Redbreast, and flew out in a hurry to tell them."

"Couldn't he find them?" asked Carlotta. "Was that why he went to so many trees?"

"No," said Aunt Fannie, "he knew where they were, but he was so happy he wanted all the birds to find his shower.

"But something else happened. The next day the Frost boys put the hose out at just the same time and then went in the house to watch. Pretty soon Master Robin with Father and Mother Redbreast came flying out of the woods. Then another bird and another, till the spray seemed just full of them. Every day while the dry weather lasted the robins came for their bath, and each time they found the shower waiting for them."

"I guess they were all glad the little robin was such a good messenger boy," said Charlie, with a long breath as he slipped down from the arm of the chair, while Carlotta threw her arms around Aunt Fannie,

exclaiming, "Why, Aunt Fannie, your story made the sun come out, see! see!"

"I wonder," said Aunt Fannie, "if the robin carried that message, too."—*Emma A. Robinson.*

## For SUNDAY READING

### ONWARD, UPWARD.

RICHARD SEIDEL.

Onward, let our motto be,  
Striving for the right;  
Upward is the way of God,  
Leading into light.

Onward, upward let us march,  
With a zeal that's strong;  
Never faltering in our ranks,  
Courage urges on.

Who will stand the fiery test?  
The battle, who'll endure?  
Who will ever onward go  
In the path that's sure?

There's no time for doubting now,  
Onward is the song!  
"Gird the shining shield of truth  
While you march along!"

Though the cross seem hard to bear,  
Upward we must go:  
'Till we feel its weight grow less,  
Conquering every foe.

Moving upward, leaving all  
Worldly dross behind;  
Press we onward is the call,  
Winning peace of mind.

Toiling on with courage brave,  
Trusting in our God;  
Noble souls who've gone before,  
In this way have trod.

God will lead us upward sure,  
Through the golden gate,  
Onward, upward, friends so pure,  
There in love await.

### BEAUTY.

GRACE LONGANECKER.

GOD is a lover of the beautiful, as are men his creatures.

Look at the flower and tree, the mountain and vale, the clouds,—any part of God's creation, for, as "there is beauty in mud," there is beauty in all.

In speaking of beauty of person, there seems to be natural in man a desire to be beautiful and by many there is no sacrifice too great to enhance this beauty.

Much time and money are spent, sufferings endured, by woman especially, to obtain this coveted possession. Diogenes called it "woman's most forcible letter of recommendation." Aristotle said that

"beauty was better than all the letters of recommendation."

But, methinks it is not alone through the force of features that this beauty is so powerful, but it is through that interior beauty which perishes not, which we may all possess even if with homely features.

Who has not beheld a person, beautiful in the extreme,—eyes as diamonds, teeth as pearls, skin of snowy whiteness, magnificent hair, an ideal form, combined with that expression of innocence? Has this same being still appeared beautiful when you beheld the narrow life, the selfish soul, and the repulsive nature?

Have you met a homely face, through which the more you see the beauty of soul shining forth, the more beautiful it becomes?

If God has bestowed upon you that beauty of person or not, cultivate that inward beauty which will never perish. "Pretty is that pretty does." No one can be really beautiful without a beautiful soul and character, beautiful words and deeds.

Hartville, Ohio.

#### FRIENDLY ADVICE TO THE BREWERS.

WHILE the brewers of the United States were holding their recent panic-stricken convention in Milwaukee, the *Journal*, one of the leading daily papers of that city, printed an editorial in which it told what it would do if it were a brewer. The *Journal*, being a Milwaukee paper, is a brewery paper. It doesn't want the brewery business wiped out of existence. These are some of the things the *Journal* would do if it were a brewer:

"It would thoroughly investigate and inform itself as to the causes of the astounding growth of anti-saloon sentiment

"It would accept as a fact that the so-called Anti-Saloon League could not have possibly reaped the harvest it has, were not the soil fit for the sowing and the growing.

"It would insist that the brewers in the national conventoin devote their whole time to considering the case. It would honestly and fairly weigh the facts it had discovered, and if there were wrongs that should be righted it would right them."

The *Journal* adds:

"It is a mighty problem that the brewing interests are facing. \* \* \* The first thing necessary in a fight is to know what you have got to fight."

The Illinois Issue can save the Milwaukee *Journal* and the brewers the trouble of making the investigation. It can tell the brewers that the thing they "have got to fight" is the Christian Church of America, reinforced by a whole army of good men who belong to no church.

This is the cold hard fact.

And the fact is not changed by the mere circum-

stance that here and there you can point to an isolated case of a Christian clergyman or a good moral citizen who is not an out and out anti-saloon man. The very fact that the brewers shout so loudly over every pulpit utterance in their favor shows that such utterances are not the rule, but are very rare exceptions.

This is the appalling fact that the brewers have to face—The church of the living God is against them.

They can't toss that fact aside with a sneer or a jeer about fanatical preachers and emotional women.

The brewers are face to face with the most powerful foe that was ever met by mortal man.

If the brewers really want to know what they "have got to fight," all they need to do is to move up to a little higher ground, where the vision is not obscured by the fog that rises from the moral marshes and swamps, and they will see arrayed against them the armies of the Lord of Hosts.

In the face of such a foe, how idle, how utterly foolish to talk of either resistance or compromise. Utter annihilation can be avoided only by unconditional surrender.

Lay down your arms. Cease your silly snivelling about weeding out the bad saloons. They are all bad. Get out of the business. Beat your swords into plowshares. Turn your breweries into mills to grind corn and wheat to make bread for the children who are now being starved that their drunken fathers may have money to buy the poisonous products of your plants.

There's no hysterics in this. It is cool, calm advice and counsel, the wisdom of which is as sure to be vindicated as the sun of tomorrow is sure to rise.—*The Illinois Issue*.

#### THE STUDENT'S PRAYER,

To God the Father, God the Word, God the Spirit we pour forth most hearty and humble supplications that He, remembering the calamities of mankind, and the pilgrimage of this our life, in which we wear out days few and evil, would please to open to us new refreshments out of the fountain of his goodness for the alleviating of our miseries. This also we humbly and earnestly beg, that human things may not prejudice such as are divine; neither that from the unlocking of the gates of sense and the kindling of a greater natural light anything of incredulity or intellectual might may arise in our minds toward divine mysteries; but rather that by our minds thoroughly cleansed and purged from fancy and vanities, and yet subject and perfectly given up to the divine oracles, there may be given unto faith such things as are faith's.—*Lord Bacon*.

MANY men owe the grandeur of their lives to their tremendous difficulties.—*Spurgeon*.

# Echoes from Everywhere

July 9 Senor Veloz, Venezuelan Chargé d'Affaires in Washington, is recalled by President Castro, thus completely severing diplomatic relations between the United States and Venezuela.

A genealogical history of the Manchu imperial family of China, has been compiled under the direction of two imperial commissioners. About one hundred twenty-three literary officials were employed. The work contains over two hundred thousand pages, and is bound in six hundred forty-seven volumes.

The Iron and Steel Trades Journal announces the most gigantic industrial combination the world has ever known—the completion of an international steel trust. The international agreement will control about three-fourths of the world's output of steel, namely, those of America, Belgium, Russia and Germany.

July 16 Mrs. Mary Baker Eddy completed her eighty-seventh year. She is remarkably vigorous, mentally and physically for a woman of her years. In accordance with the oft-expressed wishes of the leader of the Christian Scientists, there was no official observance of her birthday, she herself following her regular routine on that day.

The saloon partisans of West Virginia are organizing alleged "business men's" anti-prohibition leagues, to fight prohibition, provided the amendment is submitted, which is promised during the coming year. The name is an impudent assumption, since not a tithe of the "business men" of the State is comprised in these pro-saloon clubs.

The British Government has ordered the suppression of opium dens in Hong Kong and Ceylon, and is therefore no longer open to the charge that she overlooks the viciousness of the opium traffic because of the revenue accruing from the sale of the drug. Until this step was taken, forty per cent of the government revenues collected in those localities were opium born.

The American Society for the study of Inebriety and Alcoholism held a two days' session at Saratoga during the recent Centennial Temperance Congress. Nineteen papers were read of unusual interest. Prominent among them was review of the medical pioneers and their work in the temperance cause during the last century, by H. O. Marcy, M. D., of Boston, and Dr. T. D. Crothers of Hartford, Conn. The Canteen was discussed in a most exhaustive paper by Dr. Grosvenor, in which he showed that scientifically and economically it was the most dangerous element in the soldier's life, and from the present evidence, the restoration of the canteen will be a step backwards, and have no support in science, common-sense, or economy and the best interests of the soldier.

Pressed to take some action to prevent the American beef combine from obtaining control of the the retail beef trade in Great Britain, Winston Churchill, president of the board of trade, has informed Lord Robert Cecil in the House of Commons that the operations of the six firms constituting the alleged beef combine were receiving the careful attention of the government. Mr. Churchill said that his investigations thus far had not convinced him of the necessity of appointing a House of Commons committee of inquiry.

The Rockefeller Institute for Medical Research has just received from John D. Rockefeller another \$500,000 for the erection of a hospital building in which the nature and treatment of individual cases can be studied with a thoroughness not now possible in other places. It is not to be a general hospital, but a place for the development of new and more exact methods of treating disease. The gift is in recognition of the discovery by the director of the institute, Dr. Flexner, of a cure for epidemic cerebro-spinal meningitis.

Sioux City, Iowa, July 16.—Special reports collected from various points in the tri-state territory around Sioux City, which includes the greatest corn county in the world, indicate that corn is from a week to two weeks ahead of its growth at the corresponding period last year.

Incessant rains during May and June caused alarm among the farmers of Iowa, Nebraska and South Dakota, but the popping weather of last week has brought corn out in great shape. Even in the low lands of the Missouri Valley which were inundated by floods corn has picked up remarkably and the loss will be but slight.

Conditions are especially promising in South Dakota; wheat, oats and other small grains are doing exceedingly well, and in some sections harvesting has begun.

Recently Senator Otto G. Foelker, whose vote in the State Senate made possible the passage of the anti-race-track gambling bills, demonstrated that quality of heroism which prompted him to leave the operating table at the risk of his life and come to the assistance of Governor Hughes on the floor of the Senate. At the risk of his life Senator Foelker rushed into a burning tenement in Williamsburg near his home and saved two young girls who were partially overcome by smoke. The senator would have gone back into the burning structure to help out other tenants imprisoned in the rear of the first floor by smoke and flame had not two policemen, noticing his weakened condition, prevented him from entering the burning house. Senator Foelker is still suffering from the effects of the operation for appendicitis which he underwent a short time before his vote in the senate.

Eugene W. Chafin, of Chicago, is the nominee of the Prohibition party for President. The shortest platform on record and one containing for the first time in the history of important national parties in this country a declaration in favor of equal suffrage was framed for the candidates to stand upon. Mr. Chafin was not a candidate for the nomination when the convention convened at Columbus, Ohio, but won the nomination by an eloquent speech delivered to a convention of delegates.

Prof. David Eugene Smith, of Columbia University, mathematician of wide fame, and author of Smith's Arithmetics and other mathematical texts published by Ginn & Company, is meeting many pleasurable and profitable experiences in his travels through the Orient. He reports that the Buddhist priests have displayed much interest in his search for mathematical material among the Burmese, and that he has succeeded in obtaining from them a considerable number of interesting manuscripts. Some valuable casts of old numerical inscriptions secured from the Calcutta Museum will make a worthy addition to Professor Smith's already large and unique collection.

The day of the telegraph for the operation and dispatch of railroad trains is rapidly passing and the day of the telephone is at hand. The substitution of the telephone for the telegraph in train service is progressing rapidly, the movement having been accelerated greatly by the passage and operation of the nine-hour telegraph law.

That the statement made by operating officials, when the nine-hour law was pending in the legislature, to the effect that the railway telegraphers were digging their own graves was not an idle threat, is seen by the fact that four railroad systems in Chicago will soon have a total of nearly 3,000 miles of lines operated by telephone systems. The Northwestern, the Illinois Central, the Rock Island and the Burlington railroads have in operation telephone systems covering nearly 1,400 miles of railroad.

These same railroads are preparing to install within the next two months telephones for the operation of more than 1,600 miles of additional road. In addition to this work every railroad in the United States is making careful investigation of the subject of train operation by telephone with a view to installing the best system possible. It is the purpose and avowed intention of each railroad to equip its entire system with a telephone plant as soon as it can be conveniently done, and no doubt the movement of the Telegraphers' Union to secure better hours and more pay has advanced the telephone movement from ten to twenty years.

#### RAILROAD PRESIDENTS MEET IN NEW YORK TO CONSIDER ADVANCE.

NEW YORK, July 16.—A conference of railroad presidents on the subject of the proposed raising of freight rates extended through long morning and afternoon sessions today at the offices of the Trunk Line Association here.

Considerable divergence of opinion appeared in the

discussion as to the policy of raising the scheduled rates at the present time owing to the dullness of trade and the opposition that already has been displayed on the part of shippers to the proposed increase.

On the one hand, it was argued, the necessities of the railroads were urgent, and, while strict economies were being practiced in working expenses, the reduction of wages on a large scale had not been resorted to. On the other hand, the effect of raising the rates before any marked improvement in general freight traffic had set in, it was reasoned, might be to retard the flow of rising business that is expected with the fall.

This consideration appeals more strongly to the eastern lines than to the western, which can rely on the usual shipments of fruit and grain. It was reported that officers of the Pennsylvania who hitherto had advocated an early raising of the scheduled rates had now changed their opinion in the matter. Reading and Lehigh Valley were opposed to an immediate advance, and in this attitude were decidedly at variance with the policy advocated by Mr. Harriman and the lines allied with him.

The discussion brought out very clearly the fact that a great difference of opinion existed among the railway authorities themselves on the question whether rates should be increased. The matter of a reduction of wages was not discussed by the conference.

#### REFRIGERATOR CARS.

A new refrigerator car, the design of two Liverpool experts, has been put upon the English market. The London Times, in describing it, says:

"Up to the present practically no improvement has been made in the ordinary iced box car for carrying perishable produce, a system which has decided limitations. The car now introduced accomplishes the cooling by means of a mechanical refrigeration plant, which consists of a small inclosed type ammonia compressor of special design mounted on one end of the car; an ammonia condenser designed for cooling by the air current produced by the motion of the car and placed on the roof; an expansion valve arranged to keep, automatically, a constant pressure in the evaporators within the car, and consequently a constant temperature therein, and ammonia evaporators placed in suitable positions inside the car arranged to provide a regular supply of cold to keep the car temperature constant during stoppages. The compressor is driven from one of the axles by chain gearing, a change speed gear and disengaging mechanism being interposed between the axle and compressor. The driving wheel placed on the axle may be arranged to allow the toothed part to swing in either direction, and thus keep in the same plane as the driven wheel on the intermediate shaft.

"The advantages claimed for this type of car over those now in use are that it is independent of any ice supply whatever; it is available at any point on the line and at all times; it obviates delays due to icing, and, in addition, the expense attached to ice storage and filling; it effects a lower temperature than is possible with ice tanks; it can undertake any length of journey without renewals; and it is free from the risks due to careless or insufficient icing."—Scientific American Supplement.

## CREAM OF MAGAZINES

### MENTAL MEDICINE.

With nervousness so common that it has come to be called "the American disease," it is remarkable that the United States has been behind European countries in the study of its phases and treatment. We have good insane asylums, but little has been done to keep people from qualifying to enter them. The Church in America has relinquished its historic function of ministering to the mind diseased, chiefly through fear of being led into the old superstitions. Our medical schools have neglected to provide opportunities for the student to specialize in such lines or even to become acquainted with what has been done elsewhere. Collegiate psychology has kept severely aloof from such lines of investigation as might relieve the afflicted. The field thus neglected by the established organizations has produced an unprecedented crop of religions and medical fads and fakes, undeniably beneficial in some cases, but involving such a break with the scientific thought of the age as to be, fortunately, unacceptable to many people.

Now there seems to be a change in the institutional attitude to such subjects. John Hopkins has received from Mr. Phipps a donation of half a million dollars to found the first psychopathic hospital in America. Dr. Morton Prince—he who puts together the dissociated and quarrelsome personalities of Miss Beauchamp—in his commencement address at Tufts College advised that institution to develop courses in the treatment of nervous diseases by suggestion. In the University of Pennsylvania Dr. Witmer has opened a psychological clinic and is doing wonders in the reform of backward children. And the Summer School of Psychotherapy, which has just closed its two weeks' session at the Emmanuel Church in Boston, showed what a deep and widespread interest there is in this unique attempt to combine the forces of religion and science.

Drs. Worcester and McComb, in their two years' work, have had to make heavy drafts on the subliminal reservoir of energy which they claim we all have at our disposal, for they have sometimes worked sixteen or seventeen hours a day. With eight, and sometimes ten, persons assisting them they have found it impossible to see, even for a single conversation, one out of four of those who presented themselves. They had all sorts of cases to handle: a big policeman who was afraid of the men and boys on his beat; a Harvard candidate for Ph. D., who feared that he could not pass his examination; an opera singer who was troubled by wanting to swallow while singing; a man who could not undress himself because he could not decide which button to unbutton first; a schoolteacher who was kept awake nights by the fear that she might have locked in one of her pupils; boys with bad habits; men enslaved by alcohol or morphine; and women tortured by headaches.

The most encouraging feature of the Emmanuel Movement is not its numerous and remarkable cures of functional nervous disorders, but its demonstration that such

cures can be accomplished in a rational manner and under the guidance of trained physicians. There has been hitherto a feeling that the field must be left to the charlatan, because he alone possessed the necessary qualifications. Were not the loud voice and dogmatic temper essential for success? To impress the patient with the saving faith must not the physician have confidence in his own infallible power to heal, and how could he have such confidence when he realized the limitations and lapses of his power? And could an honest man deny the existence of a very real pain and say, "You are sleepy," when he knew you had insomnia? But so far the Emmanuel Movement seems to have been conducted with admirable restraint and to have avoided the temptation to achieve spectacular results by questionable methods. The danger is now that its numerous imitators in other cities will not be as wisely controlled. Dr. Worcester's remark that he "would rather be sick than crazy" is a wholesome maxim.

Nervous sufferers should not be contemned nor neglected. A disease of the imagination is not an imaginary disease. Any physician would rather undertake to cure a broken leg than a case of melancholia. If suggestion, hypnotic or ordinary, can do what dietetic and medicinal treatment fail to do, we ought to know it. In many different ways now the world is being taught the old lessons of the Church; the close relation between sin and disease, the physical advantages of a faith in God, and the benefits, immediate and practical, of prayer and of the forms of worship.—The Independent.

### HOW ELECTRICITY AND STEAM MAY DIVIDE THE FIELD.

The proposal that steam railways shall ultimately be used for freight only, leaving passenger-transportation to the electric roads, is advanced by The Manufacturers' Record (Baltimore, June 4). An editorial writer in this paper notes that wherever high-speed interurban electric railways have been introduced in regions of reasonably large population they have met with liberal patronage and popularity. He says:

"The latest of these to find a place in public esteem is the line between Baltimore and Washington, which is now operating through cars between the two cities at intervals of thirty minutes in each direction, besides conducting an independent service to Annapolis. The success with which this enterprise is meeting again directs attention to the possibility of electricity entirely superseding steam as a motive power for passenger service. The Baltimore and Washington electric line parallels two first-class railroads, namely, the Pennsylvania and the Baltimore & Ohio, each of which operates trains between the two cities at frequent intervals, the Baltimore & Ohio running them for half the day every hour, and the Pennsylvania practically as often. Notwithstanding this, the electric railway, beginning with an hourly schedule, has found itself obliged to start a car every half hour from

each terminal. "While statistics are lacking concerning the growth of business on the high-speed interurban railways which have been operating in other parts of the country, particularly the Middle West, for several years, there is no doubt that they have had very similar experiences. To connect two large cities such as Baltimore and Washington by an electric railway capable of making practically the same time as a steam road is only one of the many evidences of the popularity of superior electric service, and it may be that the time will come when passenger travel will be performed on railways equipped with electricity, steam roads being reserved for freight haulage alone. This, of course, is a glimpse far into the future, because there is no electric railway of sufficient magnitude to handle heavy trains over long distances, such as the run from New York to Pittsburg and Chicago. But the practical demonstration of the ability of first-class electric roads to perform their service with speed and punctuality is a hint of what the future may have in store for the transportation world."

The advantages of separating passenger from freight service by using different tracks were long ago discovered, and this plan is now in frequent use. The complete separation of the two services over an entire system would be of such benefit to all concerned that it would not be surprising, the writer thinks, to find it realized some day, and perhaps before many years have passed. We read further:

The business needs of the country are making greater and greater demands for fast-freight service. On some lines vast improvements have been made, particularly with respect to fruit and vegetable trains, which are sent through on schedules closely approximating in speed those arranged for passenger traffic, and perhaps, in some cases, equalling the latter in rapidity. But the great bulk of freight is handled on most lines subject to passenger schedule. Through freights are obliged to lay off on sidings from time to time to give way to passenger-trains, so that the movement of most freight-trains takes two, three, and four times as long as does the movement of passenger-trains. If the freight service could be conducted on one pair of tracks and the passenger service on another, each would be subject to delays only in its own department, and the operation of trains could be greatly facilitated. Moreover, the movement of trains could be accomplished with a much greater degree of safety to travelers and employees than is now attainable.

"To bring about some such result as this would be a crowning achievement for electric railways. Their comfort and cleanliness are now so well known as to demand no particular remark, but these features are likely to compel their more general adoption where the best passenger service is required. Notwithstanding all the improvements which have been made on the steam lines, it is not to be expected that the public will indefinitely be content to have its eyes filled with smoke and dust and its clothing fouled when both these evils could be avoided by driving cars with electricity. On the contrary, it would be surprising if the newer motive power failed to bring about a greater degree of cleanliness and comfort to travelers."—Literary Digest.

#### DOES PROHIBITION PAY?

With the current number of Appleton's Magazine is inaugurated a series of article under the above caption, concerning which the editor, in his introductory note, says:

In almost every consideration of what we characterize broadly as "the liquor question," the point really at issue is prohibition, whether or not that word comes to the fore. People are not discussing temperance in the sense of moderation, on which there is no respectable difference of opinion. . . . Few now deny the wisdom of some restrictive legislation as to the manufacture and sale of alcoholic beverages. . . . Altogether outside the common range of discussion as to the efficacy of legislation there is a question truly American and deserving of reply: Does prohibition pay?

Applying the individual test, Mr. George C. Lawrence discusses the question from the economic side. He begins his article with a reference to a notable dinner which was given twenty-two years ago to a famous physician. There were nineteen guests, all of whom applied themselves assiduously to the rare wines placed before them. The host meanwhile sat at the head of the table nibbling dry toast and sipping mineral water. "Isn't that pathetic?" said one of the guests to the famous physician. "Yes," was the cynical reply, as the medical man poised his glass of wine in midair. "Nineteen fools and one wise man."

It appears that eighteen years later the twelve survivors of this gathering met at another dinner. **Ten out of the twelve drank mineral water.** For reasons of health or of business they had become convinced that liquor-drinking did not pay. In that incident, Mr. Lawrence thinks, is to be found the true explanation of the present wide-spread legislation against liquor-selling: "Look around among your friends and associates in business," he says, "the men you know and meet, and note the change within your own recollection." In the army at the close of the Civil War practically every officer drank; "to-day one-third are total abstainers, and drunkenness costs a man his commission."

Economic conditions,—in common parlance, "It doesn't pay,"—form the great underlying factor of the anti-drink movement, which is primarily neither moral nor religious, but "a cold matter of dollars and cents." Steadily man has been forced to the conclusion that he cannot afford to drink.

The economical aspects of the anti-drink movement are many. There is the all-important one of productivity.

Man is, if you will, simply an engine, and the question of running that engine most cheaply and efficiently is the question of its highest productivity,—its greatest economic value. . . . Purchasers of labor,—whether that labor be of a sewer-digger or a Senator,—want results from the human machine. And it has been demonstrated that the human machine run on alcohol falls far behind that which is not. . . . No one has ever made a practical internal explosive engine operated by gunpowder, though many have tried. No one has ever evolved an efficient human machine working on alcohol, though millions have tried.

In discussing the aspect of longevity, Mr. Lawrence presents some remarkable figures prepared by the eminent English actuary, Sir Victor Horsley. Where the average mortality among adult males of all classes is 1000, that of saloon-keepers is represented by 1642, and of total abstainers by 560. Out of 100,000 inhabitants at thirty years of age, only 44,000 ordinary persons reach the age of seventy years, whereas 55,000 abstainers do. Consequently, reckoning the population of the British Isles at 44,000,000, it is evident that if they were all abstainers the kingdom would be the gainer every year by more than 4,000,000 work-years; and, figuring the aver-

age annual earning capacity at \$500, temperance, if adopted in England for economic reasons, would increase the labor output by \$2,200,000,000 annually!

In the United States, according to life-insurance tables, the percentage of the actual death loss to the expected loss was: among abstainers, 78 to 100; among non-abstainers, 96 to 100. The increase in mortality among the Indians, when alcoholic liquors were sold to them, is a matter of common knowledge.

The economic waste of alcohol is recognized by many classes of professional men. Lawyers are no longer drinking men, as many of them were in the days of Aaron Burr and Daniel Webster. Fifty years ago many a doctor steadied his nerves for an operation with whisky. To-day few, if any, do so. Why? Simply because it doesn't pay. With the workingman the question is still more vital. Figures show that he, too is decreasing his consumption of drink. He has found that alcohol is not the right kind of fuel for the human machine, and that therefore it is an economic waste to use it. In many cases the use of intoxicants while on duty is prohibited. Some firms require their employees to sign a pledge.

The higher one goes in the social scale the more general is the acceptance of the fact that the use of liquor is economically wrong for the individual; and the same economic law applies to groups of individuals, the towns and cities. "This is the explanation of the national spread of prohibition which has made 55 per cent of the country, with 33,000,000 inhabitants, 'dry territory.'"—Review of Reviews.

#### THE MAN BEHIND THE PLOW.

There's been a lot to say about the man behind the gun,  
And folks have praised him highly for the noble work  
he done;

He won a lot of honor for the land where men are free—  
It was him that sent the Spaniards kitin' back across the  
sea.

But he's had his day of glory, had his little spree, and now  
There's another to be mentioned—he's the man behind  
the plow.

A battleship's a wonder and an army's mighty grand,  
And warrin's a profession only heroes understand;  
There's something sort o' thrillin' in a flag that's wavin'  
high,

And it makes you want to holler when the boys go march-  
in' by;

But when the shoutin's over and the fightin's done, some-  
how

We find we're still dependin' on the man behind the plow.

They sing about the glories of the man behind the gun,  
And the books are full of stories of the wonders he has  
done;

The world has been made over by the fearless ones who  
fight;

Lands that used to be in darkness they have opened to  
the light;

When God's children snarl the soldier has to settle up the  
row,

And folks haven't time for thinkin' of the man behind the  
plow.

In all the pomp and splendor of an army on parade,  
And through all the awful darkness that the smoke of  
battles made;

In the halls where jewels glitter and where shoutin' men  
debate;

In the palaces where rulers deal out honors to the great,  
There is not a single person who'd be doin' bizness now  
Or have medals if it wasn't for the man behind the plow.

We're a-buildin' mighty cities and we're gainin' lofty  
heights;

We're a-winnin' lots of glory and we're settin' things  
to rights;

We're a-showin' all creation how the world's affairs  
should run;

Future men'll gaze in wonder at the things that we have  
done,

And they'll overlook the feller, just the same as we do  
now,

Who's the whole concern's foundation—that's the man  
behind the plow.

—S. E. Kiser.

#### BETWEEN WHILES.

"Pa, what is a political leader?"

"A man who is able to see which way the crowd is  
going, and follows with loud whoops in that direction."  
—Home Herald.

#### Not He.

"The papers are afraid to say anything," sneered the  
first citizen.

"Some people don't feel that way about it," replied the  
other. "Ever run for office?"

"No; but I wrote a letter roasting some fellows that  
needed roasting, and the paper didn't print a line."

"Did you sign your name?"

"Certainly not. D'ye think I'm a chump?"—Phila-  
delphia Ledger.

#### Played Bad.

"What makes Cummerly look so sad? He's got millions  
and ought to be happy."

"He's sore over a mistake he made."

"What was it?"

"He fooled the assessor into believing he had very little,  
and then, when he was haled into court for violation of  
some law or other the judge happened to remember seeing  
his name on the assessment roll and thought he didn't  
amount to much in the business and financial world.  
Cummerly is now forced to go to the Supreme Court  
at big expense to escape a jail sentence."—The Com-  
moner.

Old Gentleman—Do you mean to say that your teachers  
never thrash you?

Little Boy—Never. We have moral suasion at our  
school.

"What's that?"

"Oh, we get kep' in, and stood up in corners, and  
locked out, and locked in, and made to write one word  
a thousand times, and scowled at, and jawed at, and  
that's all"

Mrs. Wickwire—"Wasn't it Shakespeare who said that  
'the apparel oft proclaims the man,' or something of the  
sort?"

Mr. Wickware—"I don't remember, but probably you  
are right. I suppose they had clothes loud enough to  
make proclamations in his day the same as now."

## PEERLESS WEBSTER SELF-PRONOUNCING DICTIONARY FOR THE VEST POCKET

A Strictly Up-to-date Book for Everyday Use.

Read what it contains: 51,200 Words and Meanings, Key to Pronunciation, Parliamentary Rules, Postal Information, Table of Weights and Measures, Rules of Pronunciation and Punctuation, The National Bankruptcy Law, Legal Holidays.

A most valuable pocket companion. This is a book everybody needs and is sold at a price which gives man, woman and child an opportunity to get one. Size 5% x 2% inches.

## LITERARY ACTIVITY

OF

## THE BRETHREN IN

THE

## EIGHTEENTH CENTURY

By Prof John S. Flory  
of Virginia

A book with the above title has just been published, and promises to be one of exceptional interest to all members of the Brethren church. The book contains nearly 400 pages, and is a marvel in book lore. We want to place this book in 20,000 homes of the Brethren within the next six months. In order to do this, we must have at once

1000 AGENTS

We want a live, energetic agent in each congregation, who will make a house to house canvass, for we are sure it will bring good results.

Write for Territory

Apply for territory at once, so you can begin canvassing before the cream has been taken.

BRETHREN PUBLISHING HOUSE,  
Elgin, Illinois.

Write us for our new catalog of

## POST CARDS

and

## POST CARD ALBUMS.

We carry an exceptionally fine line. Our prices are just right. Ask for our catalog. It is free. Send us the name and address of 5 friends who are interested in post cards and post card albums and they will each receive a catalog.

BRETHREN PUBLISHING HOUSE,  
Elgin, Illinois.

## FREE SAMPLE

Send letter or postal for free SAMPLE

HINDOO TOBACCO HABIT CURE

We cure you of chewing and smoking for 50c., or money back. Guaranteed perfectly harmless. Address Milford Drug Co., Milford, Indiana. We answer all letters.

## EUREKA INDESTRUCTIBLE POST

FIELD POST. Cheap as cedar. Made where used. Great inducements to agents. Address, with stamp, W. A. DICKEY, North Manchester, Ind.

## Imperial Valley, California

is a country where things grow too large to write about. You will have to come and see them.

The great ALFALFA and FRUIT district, situated 180 miles east of Los Angeles, on the Southern Pacific R. R. Send for illustrated booklet.

Address, W. F. Gillett, Holtville, Cal.

## We Are Now Ready

to fill your orders for the

# Full Report

of the Des Moines Annual Conference.

You will want to read the Conference discussions on change of Church Name, the plans for Advanced Sunday-School Work and the Appointment of the Committee on Temperance, etc.

If you have not sent us your order, do so at once.

Price, per copy, 25 cents.

BRETHREN PUBLISHING HOUSE,  
Elgin, Illinois.

## NEFF'S CORNER

It is a commonly accepted saying that it pays to advertise, but I have been so literally overwhelmed with work for some months that I did not want more business. There have been times when I would have liked to say some things to the Nook readers, but I really did not feel that I could spare the five minutes necessary to sit down and commit it to writing.

Well, you ought to see Clovis grow. It is a wonder. Crops in the surrounding country are fine and the situation generally bespeaks prosperity and a continued rapid development. July dividend in our Investment Association was 21 per cent. If you care to write some of our investors direct, I suppose you could get information from Isaac Brown, Ollie, Iowa, or W. T. Wilkinson, Raisin, Cal., or others I might name. How would you like to loan \$3,000 to be used in the erection of a brick building on Main Street in Clovis at a good rate of interest, where your security would be as three to one? For further information, write,

JAMES M. NEFF,

Clovis, New Mexico.

N. B.—If that 21 per cent interests you, better drop me a line soon.

## Buckeye Pure Home Made APPLE BUTTER

Is pronounced by hundreds of our customers, the best they ever ate. Send for our NEW circular with NEW recipes, NEW testimonials and Special Wholesale price list. Our Motto: Highest class of goods and a square deal guaranteed to all.

Don't forget to write.

C. J. MILLER & CO., Smithville, Ohio.

## WHAT, WHY and HOW

of the

## Home Department

This booklet tells what the Home Department of the Sunday school is. It presents arguments that should induce you to organize this department in your school, at once. If you would know "How to Organize and Maintain a Home Department" order a booklet for each officer and teacher in your school.

Price per copy, .....5 cents.

BRETHREN PUBLISHING HOUSE,  
Elgin, Illinois.

## DO NOT READ THIS

and then lay it aside, but order a package of

## ELECTRIC CATHARTIC TABLETS

and secure relief from Constipation.

Fifty tablets for 25 cents, or 5 packages for \$1.00, postpaid. Sample free for postal.

ZA-MIA, the wonderful pile cure, used for twenty years by Specialists, without failure.

Write us about full package for free trial. Nine days' treatment for 50 cents, postpaid.

SYRACUSE ELECTRIC TABLET CO.

Syracuse, Indiana.

U. S. A.

## OLIVE BRANCH

OF

Peace and Good Will to Men

By S. F. Sanger and D. Hays.

Partial List of Table of Contents.

The Persecutions of the Brethren in Germany and America.—The Peace People of the South during the Civil War.—What Will a Nonresistant People Do in Time of War?—The Western Movement from the Valley of Virginia in 1862.—Reminiscences of the War Between the States.—The Brethren in Tennessee During the Civil War.—Arrest and Imprisonment of Brethren and Mennonites in 1862.—Sketches of B. F. Moomaw, John Kline and Others.—A Group of Virginia Sisters.—Nonresistance; or the Spirit of Christianity Restored.—The Exemption Act of the Confederate Congress.—Exemption of Nonresistants from Military Duty by the United States Government in 1903.

Price Prepaid, .....75 cents

500 Agents Wanted

to push the sale of this book in your home congregation. Good commission. Write at once for terms.

BRETHREN PUBLISHING HOUSE,  
Elgin, Illinois.

## Mr. World and Miss Churchmember

By W. S. Harris

It is a forcible allegory, somewhat after the style of Pilgrim's Progress, but in no sense an imitation of it. Fathers and mothers, it is the book that you should get for your son and daughter, and at the same time read it yourself. You will be stronger for the church after having read it. It illustrates vividly how Satan lures the church member, step by step, from the pure Gospel, till finally he is lost forever. Send in your order at once and you will never regret it. Cloth only.

Our Price, Prepaid .....\$0.75

**BRETHREN PUBLISHING HOUSE,**  
Elgin, Illinois

## INDIA, A PROBLEM

W. B. Stover.

A book of 344 pages, dealing with India, its people, religions and customs, as seen by the first missionary sent to India by the Church of the Brethren.

Its twenty-four chapters present in an earnest and readable manner just what you want to know about the Land of the Trident. Embellished with nearly 200 splendid illustrations.

**SPECIAL PRICE.**

Cloth, prepaid .....\$1.00

Elgin, Illinois

## CAP GOODS SISTERS,

when in need of Cap Goods remember you can be accommodated by the undersigned. Satisfaction guaranteed. Send for Samples and Price List Free. Mention the Inglenook.

Mary A. BRUBAKER

Box 331

Virden, Illinois

## 6 PER CENT NET

### ON NORTH DAKOTA FARM LOANS

All loans are first mortgage loans.

No loan is made exceeding 50 per cent of the actual value of the property.

Title in all loans is passed on by reliable Attorney and no loan sent out unless title is perfect.

Interest is collected and remitted each year free of charge.

Write for reference as to my reliability. I will refer you to men that you know either personally or by reputation.

MICHAEL BLOCHER, Perth, N. Dak.

## CAP GOODS

Our business has almost doubled itself during the last year. We are sending goods by mail to thousands of permanent, satisfied customers throughout the United States. The reason is simple.

**Our Goods are Reliable, Our Variety is Large, Our Prices are Low.**

All orders filled promptly, post-paid. Satisfaction guaranteed or your money refunded. Send us a sample order and be convinced. Write us for a booklet of unsolicited testimonials and new line of samples, which will be furnished free. Send at once to

E. E. ARNOLD, Elgin, Ill.

## BICENTENNIAL SONG BOOK

Those who participated in the splendid song service at Des Moines will be sure to want a copy of the **Bicentennial Song Book**. The book contains 80 pages of the very best songs selected from "The Brethren Hymnal" and "Song Praises," besides the "Bicentennial Song" which was written for the Conference.

**Your Sunday School**

and Christian Workers' society should have a supply of these books for use during the year.

**OUR LOW PRICE**

We will furnish this book in Manila cover at the following rates: Per dozen, prepaid, \$1.00; per hundred, F. O. B. Elgin, \$6.00.

**BRETHREN PUBLISHING HOUSE,**  
Elgin, Illinois.

# CHURCH MEMBERSHIP RECORD

The most unique, simple and practical system of record today is the card system.

There has been a demand for a complete practical and simple record system to be used by church clerks in keeping the membership of the local congregation. This demand has caused **Annual Meeting** to ask the Publishing House to arrange such a system. After investigating various systems of keeping church membership records, and getting the advice of many of our church clerks as well as pastors, we are now ready to offer what we consider the best outfit that can be furnished. This system provides for one card for each member and when filled out gives a complete record.

## Church Clerks

send for one of these sets and the question will ever be settled as far as a system of keeping your membership is concerned. It costs no more to start with than in book form and will last a lifetime with the exception of new cards, for new members, which will only cost you a trifle.

### No. 1. Church Membership Record.

A neat cloth-bound box, size 5x6 inches.  
A complete Index.  
100 Membership Cards.  
This outfit is ample for a membership to the number of 150. More cards will be needed when membership is above 100.  
Price prepaid, .....\$1.25

### No. 2. Church Membership Record.

A neat cloth-bound box, size 5x9 inches.  
A complete Index.  
200 Membership Cards.  
This outfit is ample for a membership of 150 to 400. More cards will be needed when membership is above 200.  
Price prepaid, .....\$1.75

Extra cards furnished for 50c per hundred prepaid.

A circular explaining how this record system can be utilized to the best advantage furnished with each outfit. Send your order today. If more information is desired write us.

**BRETHREN PUBLISHING HOUSE, ELGIN, ILL.**

# JERRY McAULEY An Apostle to the Lost

Edited by R. M. Offord

The new and largely revised edition of the book just published is neither biography nor autobiography but the happy blending of both. The editor gathered together the fragmentary accounts of the man's own life and with suitable explanations wove the entire into a most complete story of one of God's humblest servants and yet earth's greatest men. Jerry's own account of his sinful life is put in that language which shows he was keenly sensible of his awful guilt. And while the reader gets a clear insight into his life, it is in such a manner as not to feed the baser of human nature, but rather to rejoice that one should be saved from such lower and devilish depths.

To read his "testimonies" and to stop and ponder on them is to find the clew to his power. Here is one of them. "I have nothing to be proud of; I am proud of my Savior and not of myself. I was a notorious drunkard and gambler. Even my wife does not know of some of the sins I committed, and she never will till the Day of Judgment. I don't know what to say to express my feelings of thankfulness. I know I have been converted, that is, if conversion is ceasing to love that which is evil and loving that which is good. I know that divine grace saved me from a drunkard's grave."

## Kindle the Flame in Other Hearts

It is a good thing to write and print and spread the life of such a man as the hero of this volume. It may kindle the flame in many other hearts. Christians in other walks of life than he trod may be stirred to better living. And some poor, sinning soul, some wretched and sinking soul, some poor sinner, almost as bad as Jerry was, may read it in his extremity, and cry out with this ransomed prisoner, "Lord, save me, I perish."

## Every Church Worker

Should read this book, to get more inspiration and encouragement in Christian duty and privilege. Well bound in good cloth and stamped in gold. It contains over 300 pages. Price prepaid, \$1.00.

# ALBERTA

¶ Of Alberta a distinguished writer has said:

"North of the International boundary line and immediately east of the Rocky Mountains lies the Province of Alberta—a land blessed with all that is necessary to happiness and prosperity. Between the 49th and 60th parallels and between the 110th and 120th meridians lie 281,000 square miles of possibility. Here are mountains and plains, foothills and valleys, rolling prairies with wooded stretches between, dense forests and grassy meadows, clean, timber-girded lakes and winding brooks, cold mountain streams and navigable rivers, and a soil rich in the alluvial and vegetable accumulations of centuries. And as if not content with these outward signs of her favor, nature has hidden beneath the surface vast deposits of coal and other minerals; she has filled the subterranean reservoirs with gas and oil, and sprinkled the sands of the mountain streams with gold. That no living thing should go athirst, she gathered together the waters of the mountains and brought them to the plains, to be directed by the ingenuity of man to the use of the grazing herds and the planted fields. Then, to crown her efforts and leave nothing incomplete, she brought the chinook wind, warm with the breath of May, to temper the north wind."

¶ In the Medicine Hat District we have a gently undulating prairie. The soil is capable of producing generous yields of all small grains and vegetables in abundance.

¶ The city of Medicine Hat, situated on the Saskatchewan river and underlaid with gas and coal, is destined to be a great manufacturing center.

¶ Why not join the colonies already there and enjoy some of the material benefits as well as help build up one of the largest and best colonies in the Canadian West.

¶ We have excursions every first and third Tuesday of the month.

¶ For particulars and cheap rates apply to

# BARGAINS IN BIBLES

## For Sunday-School Pupils

### Sunday-School Scholars' Bible

International Self-Pronouncing.

A very appropriate present to a boy or girl. A Bible arranged on the plan of a Teachers' Bible, except that the Aids to the study of the Scripture are in simple language and embrace subjects in which young students find interest. This Bible is printed from easily read large Minion type, with all proper names or "hard words" accented and divided in syllables, thereby facilitating pronunciation. An aid of supreme importance to young people. Thirty-two new pictures illuminate and explain the text. These illustrations are new and so appropriate that they cannot fail to be most instructive to young scholars. In addition to these features this Bible contains many other new and valuable helps.

MINION TYPE, Six Maps. Size  $4 \times 6\frac{1}{4}$  inches.

26590 French Morocco, divinity circuit, round corners, red under gold edges, silk headband and marker, extra grained lining. Indexed.

Publishers' Price, .....\$2.05  
Our Price, ..... 1.55

(Postage extra, 12 cents.)

### Nelson Handy Reference Bibles.

3257X, French Morocco, divinity circuit, silk-sewed, round corners, red under gold edges. Only  $\frac{3}{4}$  of an inch thick. India paper. Minion 16 mo. Thumb Index.

Publishers' Price, .....\$2.15  
Our Price, ..... 1.75

(Postage extra, 10 cents.)

### International India Paper Bibles.

New and Popular Edition.

MINION TYPE, References, Self-Pronouncing.

There has always been a demand for a light weight India Paper Bible containing references, which could be conveniently carried in the pocket. This is a very handy size. Printed on opaque India Paper. Size of complete book, including cover,  $4\frac{3}{4} \times 6\frac{7}{8} \times 5\frac{1}{8}$  inches.

7490X French Seal, divinity circuit, round corners, red under gold edges, silk headband and marker, extra grained lining. Thumb Index.

Publishers' Price, .....\$2.90  
Our Price, ..... 2.05

496X Persian Seal, divinity circuit, round corners, red under gold edges, silk headband and marker, grained leather lining. Thumb Index.

Publishers' Price, .....\$4.30  
Our Price, ..... 3.05

(Postage extra on either of above, 10 cents.)

### Red Letter Scholars' Bible.

The words of Christ printed in red to distinguish them from the remainder of the Holy Scriptures. Presentation page in colored inks. Beautiful maps in colors. A large number of full-page illustrations on enameled paper. Many pages of excellent helps and four thousand questions and answers. Size  $5\frac{1}{2} \times 7\frac{3}{4}$ , Minion Type.

402R French Morocco, divinity circuit, red under gold edges, extra grained lining.

Publishers' Price, .....\$1.90

Our Price, ..... 1.35

Thumb Index, extra, ..... .30

(Postage extra, 15 cents.)

## Gross Misrepresentations Are Going Abroad

Numerous damaging reports have been circulated concerning the crops and weather in BUTTE VALLEY. Through maliciousness and envy perhaps these have been sent broadcast and some friends have written the editor of the DORRIS BOOSTER of Butte Valley to know the truth. Please note what the editor says:

"We have had some very discouraging reports regarding crops in the Klamath region. First, that you recently had a severe cold snap which has killed the potato crop, also, heard that the cattle from the adjoining sections have come down out of the mountains in droves seeking water and food and overrun the farms that are being cultivated and not protected by fences.

"I wish you would please advise

if these conditions exist, and you may feel assured that the information will be treated confidentially."

How such gross misrepresentations can possibly gain currency is a mystery. While a rain at this time would do no harm, it is not an absolute necessity. Frosts have done no harm to speak of, and cattle, in no sense, are suffering.

We are pleased to be able to deny these gross misrepresentations.

Revised Edition of  
**Ropp's New Commercial Calculator**  
**And Short Cut Arithmetic**

**The Standard for Store, Farm, Bank or Factory,**

5 1/2 x 2 3/4 in.

Greatly improved, enlarged and thoroughly revised.  
 Contains an entirely new system of unique Tables, Short Cuts  
 and Up-to-date Methods.

Unquestionably the most complete and comprehensive Calculator  
 ever published.

Has more than twice the matter, scope and capacity of Ropp's  
 former editions, of which

**Nearly 1,500,000 Copies have been Sold.**

The most convenient and practical Labor-saving work ever used  
 in the business world.

It will make every one independent, sure and self-reliant in all  
 practical calculations.

It will prevent mistakes, relieve the mind, save time and labor,  
 and often loss and trouble.

Its Tables are adapted to all trades and occupations of the city  
 or country.

**The Answer to Your Problem as Quickly as a Watch Shows the Time.**

It also explains and simplifies the principles of Arithmetic, Mechanics and Mensuration.  
 It will make the study and use of Figures easy and interesting to both young and old.  
 It will enable every progressive mind to become an expert, sure and rapid calculator.  
 It will prove a boon to all whose education in arithmetic has been limited or neglected.

**48 Cuts Illustrate the Elements of Mechanics and Mensuration**

It defines about 70 points in "Commercial Law" which every man and woman should  
 know.

It is the result of devising, and improving system after system; of spending thousands  
 of dollars in experimenting; of making millions of miscellaneous calculations, and of doing  
 some vigorous thinking during 38 years, by an analytic, practical and persevering  
 mind.

# CHURCH MEMBERSHIP RECORD

The most unique, simple and practical system of record today is the card system.

There has been a demand for a complete practical and simple record system to be used by church clerks in keeping the membership of the local congregation. This demand has caused Annual Meeting to ask the Publishing House to arrange such a system. After investigating various systems of keeping church membership records, and getting the advice of many of our church clerks as well as pastors, we are now ready to offer what we consider the best outfit that can be furnished. This system provides for one card for each member and when filled out gives a complete record.

## Church Clerks

send for one of these sets and the question will ever be settled as far as a system of keeping your membership is concerned. It costs no more to start with than in book form and will last a lifetime with the exception of new cards, for new members, which will only cost you a trifle.

### No. 1. Church Membership Record.

A neat cloth-bound box, size 5x6 inches.  
A complete Index.  
100 Membership Cards.

This outfit is ample for a membership to the number of 150. More cards will be needed when membership is above 100.

Price prepaid, .....\$1.25

### No. 2. Church Membership Record.

A neat cloth-bound box, size 5x9 inches.  
A complete Index.  
200 Membership Cards.

This outfit is ample for a membership of 150 to 400. More cards will be needed when membership is above 200.

Price prepaid, .....\$1.75

Extra cards furnished for 50c per hundred prepaid.

A circular explaining how this record system can be utilized to the best advantage furnished with each outfit. Send your order today. If more information is desired write us.

## JERRY McAULEY An Apostle to the Lost

Edited by R. M. Offord.

The new and largely revised edition of the book just published is neither biography nor autobiography but the happy blending of both. The editor gathered together the fragmentary accounts of the man's own life and with suitable explanations wove the entire into a most complete story of one of God's humblest servants and yet earth's greatest men. Jerry's own account of his sinful life is put in that language which shows he was keenly sensible of his awful guilt. And while the reader gets a clear insight into his life, it is in such a manner as not to feed the baser human nature, but rather to rejoice that one should be saved from such lower and devilish depths.

To read his "testimonies" and to stop and ponder on them is to find the clew to his power. Here is one of them. "I have nothing to be proud of ; I am proud of my Savior and not of myself. I was a notorious drunkard and gambler. Even my wife does not know of some of the sins I committed, and she never will till the Day of Judgment. I don't know what to say to express my feelings of thankfulness. I know I have been converted, that is, if conversion is ceasing to love that which is evil and loving that which is good. I know that divine grace saved me from a drunkard's grave."

### Kindle the Flame in Others Hearts.

It is a good thing to write and print and spread the life of such a man as the hero of this volume. It may kindle the flame in many other hearts. Christians in other walks of life than he trod may be stirred to better living. And some poor, sinning soul, some wretched and sinking soul, some poor sinner, almost as bad as Jerry was, may read it in his extremity, and cry out with this ransomed prisoner, "Lord, save me, I perish."

### Every Church Worker.

Should read this book, to get more inspiration and encouragement in Christian duty and privilege. Well bound in good cloth and stamped in gold. It contains over 300 pages. Price prepaid, \$1.00.

**BRETHREN PUBLISHING HOUSE, ELGIN, ILL.**

# OVER 200,000 ACRES

of land has been filed under the CAREY ACT in the Twin Falls District, Idaho, since April, 1907.

¶ There is still a large amount of land waiting for the settler in the above district. Also great opportunities are offered at American Falls, at Gooding and other points along the OREGON SHORT LINE RAILROAD.

¶ The Payette-Boise Reclamation Project under the U. S. Government is about completed and will be ready to furnish water to about 300,000 acres of new land in the spring of 1909. These lands can now be bought at reasonable rates and terms, by the settler, and are situated where the country is already partly settled, near good towns, railroads and electric lines.

¶ Rural mail routes and telephone lines are already established. Good schools and churches. No storms or cyclones. Farming is done by irrigation. No failure of crops by reason of too much rain or drought. Fruit crop is abundant every year. The people are happy because they are prosperous.

## Wonderful Possibilities

for homeseekers and investors. Climate Mild. Soil Very Productive.

¶ Alfalfa, Sugar Beets, and grains of all kinds are among the products that yield abundantly. Farm hands, carpenters, mechanics and in fact all classes of workmen will find plenty of work at good wages.

¶ Arrange your plans to go and see Idaho as soon as possible and secure some of this fine land.

¶ HOMESEEEKERS ROUND TRIP EXCURSION RATES are on First and Third Tuesdays of each month in 1908.

¶ WRITE NOW for printed matter and full particulars regarding this great country and how to get there.

## How the Home Can Help the School

Prof. O. T. Corson, Columbus, Ohio

### In Two Parts.—Part One.

THE two most potent factors in all progressive civilization are religion and education. In order that the highest type of manhood may be developed these two great forces should move on hand in hand, each one supplementing the work of the other. Religion, so-called, without education has a tendency to develop a dark, narrow-minded, ignorant, bigoted superstition, while on the other hand mere wisdom of the head without that higher wisdom of the heart, is apt to produce a race of skeptics, infidels, and atheists, whose teachings are misleading, whose example is unsafe, and whose whole influence is demoralizing and debasing.

Our forefathers recognized the truth and importance of these fundamental principles which underlie all free government, and they not only founded churches, where pious souls could worship God in prayer and thanksgiving, but at the same time also established the free public school, which is doing so much to aid the church in the great work of elevating humanity to a higher plane of happy, useful, and purposeful living.

It has been only a few years, comparatively speaking, since this free public school system was founded, and yet from these small beginnings it has grown and broadened and deepened in its hold upon the life and affections of the American people until today the schoolhouse is found wherever American civilization is found—in every township and hamlet and village and city—even in the far-off islands of the sea where it is deemed by all as a prime necessity in preparing the people for that citizenship in our Republic for which they long and wait and hope.

In imagination it is not difficult to hear in the ringing of every school bell the echo of that grand old bell in Independence Hall which a century and a third ago rang out freedom to all mankind, and the firm conviction arises in one's soul that so long as the public school is permitted to do the work for which it was intended by its founders, untrammelled by either

sectarian fanatics or political demagogues, our great Republic will be safe.

Closely related to both the church and the school and, in some respects more important than either, is the home, whose influence in building character is of primary importance. These three institutions are so interrelated and interdependent that it is impossible to determine, even if it were desirable, the boundary line of the influence of any one upon either of the others.

It is the purpose of this article to discuss in as practical and helpful a manner as possible the relation of the Home and School and how the former can best help the latter in its extremely important work.

In the first place the home can help the school in a clearer realization of the fact that, in aims and purposes, their work is one and the same, viz; the development of all that is highest and best in character, and in so directing the thought of the child toward the school that the teacher will be considered as a friend in the best sense of that word.

It is encouraging to think that in perhaps the majority of instances the relations between home and school and parent and teacher are growing more cordial as the years go by, but it is sad to relate that there are still too many instances of a lack of this cordial relationship which is so essential to success. As an example of this lack, the following personal experience seems in place:

A few years since in one of the smaller towns of the middle west, I was walking along one of the streets in the evening. A short distance ahead of me, a small boy was playing upon the sidewalk. A shrill voice, pitched in a high key, coming from some one inside the adjoining house and commanding the boy to cease playing and come in, attracted my attention, but did not seem to have any effect on the boy who played on. The voice grew louder and harsher in repeating the command, but the boy still played on apparently indifferent to any call from any source. By this time a woman—undoubtedly the mother—ap-

peared at the door, with broom in hand, and in an angry and excited manner addressed the boy in substance as follows: "You won't mind me, won't you? Well, you just wait till next September when I'll start you to school and then I guess you will catch it."

In my youthful days I occasionally heard of parents who used "rats" to frighten their children into obedience and in rare instances even the "devil" himself was summoned to help them in securing good behavior, but this fond mother had so far advanced in her work of parental control that she was enabled to renounce all such inferior helps, as the two just referred to, and call to her aid the public schoolteacher, several months in advance, in an attempt to enforce family discipline.

With such home preparation as this the child would enter school with the feeling that the teacher is an enemy to be feared and shunned rather than a friend to be honored and loved, and not until such feeling is eradicated from the heart of the child can the teacher's influence be what it must be, if good results are to follow.

The home can also help the school in the important work of discipline—that discipline which produces good behavior and makes for good character. No sane person doubts the necessity of wholesome discipline in the training of the child, and the occasional statements of sentimental theorists, that in this progressive age, no discipline of any kind is needed can well be ignored. To come in contact with a "modern" child reared under the direction of a "modern" mother who has applied the "modern" idea that no discipline is essential to the development of character, will convince anyone of the absurdity of such a course.

That methods of administering discipline have greatly improved within even the last quarter of a century; that the number of both parents and teachers who can tell the difference between mischief and meanness has greatly increased; that, as a rule, school is a happier place than it once was; that the child's nature and motives are gradually becoming better understood as the years go by—all these things are important indications of real progress in the training of children; but as a fact that the world is getting better is not to be considered as an argument, for relaxing our effort for the right, but rather as an incentive to greater diligence in well-doing, so improved methods, resulting from a better knowledge of child nature and more humane ideas of discipline, must not lead us to imagine that the child is no longer in need of discipline, or that punishment is never necessary.

As a rule, the intelligent, tactful teacher whose head is clear, heart warm, and will strong, can succeed in discipline without resorting to the rod, whose too frequent use in the past is a matter of sincere regret, and whose much less frequent use in both

the homes and the schools of today is a source of congratulation.

For either a parent, teacher, or board of education to announce that, under no circumstances, shall corporal punishment be resorted to is but to encourage the occasional outlaw—and there are a few such to be found even in the best communities—to such acts of disobedience and insubordination as can be properly met only by the punishment which has been prohibited.

The wise parent or teacher does not indulge in threats as to what will be done, or in promises as to what will not be done, fully appreciating the meaning of the injunction—"Sufficient unto the day is the evil thereof,"—and the home which is to help the school, or the board of education which is to sustain the teacher in the work of discipline, will also show wisdom by not announcing, in advance, opinions and policies.

It is related that in the Southland a negro farmer at one time missed several chickens from his hen-house, and on another occasion two shoats mysteriously disappeared from their pen. To determine, if possible, the source of these thefts, he seated himself one night with a shotgun in hand, at a good point of observation and awaited developments. Shortly after the midnight hour he was surprised to see one of his colored neighbors stealthily approach his premises and proceed to help himself to several more choice fowls and another pig. At the "psychological moment," the farmer pointed the shotgun in the direction of the thief, ordered him to replace the stolen property where it belonged, and then to get down on his knees and promise never again to steal any more chickens or pigs. The darkey replaced the stolen property as ordered and turning to his neighbor remarked that, while he was willing to carry out that part of his order he did not propose "to sign away any of his rights."

Some day, parents, teachers, and boards of education will become wise enough not "to sign away their rights," and as a result the school will be helped and not hindered in its discipline, as sometimes happens today because of unfortunate outside interference on the part of home influence and the unwise action of boards of education.

That the problem of school discipline is difficult is evident to any one who has given the question even a moment's thoughtful consideration. The old saying that it is hard to manage forty children—not forty acting like one, but each one acting like forty, helps us to a realization of what the problem really is.

The marvel is that the public schools of any of our great States, with their hundreds of thousands of pupils and their thousands of teachers, run with so little friction in their discipline. So seldom is there serious trouble in their management that when any-

thing outbreking does occur, the newspapers always announce it to the world as a choice morsel of news.

It is within the bounds of truth to state that the average public school runs with less friction in its government than the average home. Parents who may read these lines will admit, no doubt, that scenes sometimes occur in their own homes with their own children which they would not like to see described in the newspaper, and their own experiences should make them more sympathetic with the teacher in her difficult task and less critical of her actions when she, a human being like themselves, may happen to err. If the parent cannot always be patient with the acts of his own child, he should not be too severe in his denunciation of the teacher who may occasionally temporarily lose self-control, with forty or more of different dispositions and temperaments to contend with.

Parental anxiety—and what parent is not anxious about his own children?—may well stop and ponder the anxiety of the teacher as she tries, knowing that failure sometimes results from her most earnest effort, to devise ways and means to help the children in the struggles which must always accompany growth in character. The sympathy of parent with teacher is one of the greatest needs of the public schools of today. Because of a lack of this sympathy many an earnest teacher fails.

Perhaps, few people realize the great value of the public school to any community simply as a disciplinary force. In too many instances the public school is the only place where children are compelled to obey anything. In my own experience I have known a father and mother to bring a small boy to the office of the superintendent—it took their combined efforts to bring about the result,—and hold on to him while they made confession of their inability to secure his obedience in any particular, at the same time expressing the hope that the teacher might succeed in doing what they, as parents, had failed to do; but I have yet to know of the parent who has totally failed in home discipline who is willing to support the teacher in her work. Where obedience is taught and enforced in the home, the problem of school discipline is an easy one, but where there is a lack of parental control, coupled with constant fault-finding with the teacher who insists upon a proper regard for the authority of the school, the work is rendered exceedingly difficult.

The very safety of our Republic lies in a willingness on the part of its citizenship to respect and obey law. One of the first public addresses delivered by Abraham Lincoln was before the Young Men's Lyceum of his home city of Springfield, Illinois, on January 27, 1837, the subject being, "The Perpetuation of Our Political Institutions." In that address he said:

"Let every man remember that to violate the law is to trample on the blood of his father, and to tear the charter of his own and his children's liberty. Let reverence for the laws be breathed by every American mother to the lisping babe that prattles on her lap; let it be taught in schools, in seminaries, and in colleges; let it be written in primers, spelling-books, and in almanacs; let it be preached from the pulpit, proclaimed in legislative halls, and enforced in courts of justice. And in short, let it become the political religion of the nation; and let the old and the young, the rich and the poor, the grave and the gay of all sexes and tongues and colors and conditions, sacrifice unceasingly upon its altars."

In this commercial age when the cry against our brave President's attempt to do his plain duty in the enforcement of laws against dishonest practices on the part of those who are high in authority, is so often heard from persons who claim that such just enforcement is a menace to the "business interests" of the country, it is well to stop long enough to think of what a policy of non-enforcement of law would inevitably lead to, and Lincoln's burning words can be seriously pondered by all parents and teachers to the end that both homes and schools may dedicate themselves anew to the great work of training up a citizenship ready to obey the laws of their land as a matter of right principle and never willing to have these laws ignored or trampled under foot at the dictates of a selfish business policy.

In the very important work of securing the application and industry necessary on the part of the pupil to obtain an education, the help of the home is an absolute necessity for the success of the school.

In these days of marvelous progress in science and invention, great care must be exercised by those in educational authority lest the people become inoculated with the notion that there is after all some royal road to learning over which the child can be carried, without effort, to an education. We now talk so far and with so great ease, travel so rapidly and comfortably with so little expense, and enjoy so many material comforts of every kind that it is hard to resist the tendency to conclude that there ought to be some way of getting an education without effort.

My first trip of any extent, as a country boy, was to the Philadelphia Centennial, less than a third of a century ago. I spent nearly all of my time while visiting the exposition, in machinery hall. I well remember three electric novelties exhibited there which were of intense interest to me. There was an electric light, a telephone, and a very small trolley car which was exhibited at certain hours each day. I always had a front position at this show and watched with deepest interest the short trips made by the little car backward and forward along the short table on which its miniature track was laid. I can still call

to mind the appearance of an elderly man who expressed my own thoughts when he observed, "You can't fool me. There's somebody somewhere pushin' that thing." Very few of the observers, with the possible exception of the scientist with prophetic vision, ever dreamed that any one of these electric novelties would ever come into general use.

What were novelties then are prime necessities in the social and business life of today. The electric light is everywhere literally turning night into day; we use the telephone constantly, wondering how we ever lived without it, and have a hint that in the near future we can take our stand at any convenient point, and "hello" to our friends anywhere and everywhere with no "hello-girl" to intervene, or "automatic busy-buzz" to interfere. Trolley cars are no longer con-

fined to cities and towns but carry their thousands of passengers everywhere throughout the country.

It is perhaps not to be wondered at that in the midst of all this rapid change and progress there should be many parents who conclude that, by this time, some educational genius should have invented some kind of an electrical educational railway on which children can be deposited at from four to six years of age, a few nickels dropped in the slot to pay the passage, and no attention be paid to them by the home until they are *graduated* at the other end of the line, with a diploma as a sort of remembrance of the pleasure of the delightful journey. In too many instances parents seem to be more anxious to have their children go through school than they are to have the school go through their children.

## A Pair of Brown Eyes

Mary I. Senseman

MRS. HARPER thought those eyes were beautiful,—so dark, rich, deep, glowing; they seemed always to outpour joy and sweetness.

The lady found many little excuses for going into the store where the owner of the eyes was clerking. A sight of his bright eyes was good for her faded old ones. She drew from him the little story of his hopes, his aims, his daily life. Lawrence Selzbee lived altogether upon his salary. He saved a little. He was attending night school, to learn stenography and typewriting.

Mrs. Harper grew to know, after awhile, when he had had harder lessons at the school or had opposed something difficult elsewhere. The life that streamed from those eyes showed power as well as unquenchable hope.

Lawrence's clothes were shabby long before they were outworn. He told of the dollar he saved every week. And sometimes he asked advice about a boarding place.

"You see," he explained, "my mother could fix such dishes! And she raised eight of us to be more healthy than Durbans' three and at half the expense that they were put to. And cheap board that's wholesome is hard to find. The landladies seem to think they don't get much money, they won't take much time to cook, either. So my economy must be on my clothes."

On education there was no economy, either, altho no unnecessary expense; nor on laundry bills and toilet soap.

Mrs. Harper guessed at those things. She felt he was so wise for his nineteen years. She fancied she could detect the delicate odor of the cleanliness of his soft, glossy black hair.

At last Lawrence showed his friend the strip of paper that proclaimed him a full-fledged stenographer. Yes, he had a position, too, at triple the salary he now received. With Days & Days, wholesale furniture dealers. He would go there in half a week. He had been offered another place, but the money they would pay was so little, only two dollars more than that of his clerkship, the heads of the firm were old and old-fashioned. He would have to keep himself well-dressed at Days & Days. Only the expense of that made him give a second thought to the other proposition. But now his decision was final in favor of the wealthier establishment.

One morning Mrs. Harper awoke troubled in mind. No recollection of any unpleasantness relating to herself could account for her state.

To get rid of the feeling she thought to walk to Lawrence Selzbee's old place of daily work. He was not there, of course, and the surety of his absence only made the old lady feel more downcast.

She next went into a greenhouse and, with a thrill of joy that was greater because so unexpectedly occasioned, she beheld Lawrence himself within. He had just purchased some flowers and she heard him direct that they be sent to Miss Evelyn Days, — — Avenue.

He had turned then so that he faced Mrs. Harper; and his new suit was so becoming, his self-confidence so evident, and, above all, his eyes so rivaled brown gems, that the little cloud on Mrs. Harper's mind was dissipated into vapor.

She permitted herself only a roguish, knowing smile as he nodded to her, and walked briskly out ahead of him.

Out of his generous salary the boy could afford to spend a little on flowers for a young lady, she thought, and that one a daughter of one of the wealthy and well-known Messrs. Days. How well those men must regard the young stenographer to receive him into their own homes. Ah! with what wisdom for his twenty years had he placed himself in such a position of culture and advancement.

Mrs. Harper did not again see Lawrence for several months.

When she did, he was among a laughing, chattering group of youths and maidens. And of all the latter, she who now and then stood beside our young friend was the most bedecked with gay, fluttering ribbons.

Lawrence had the same old air of self-confidence. He was less jovial than the others. He seemed to be enveloped with a sort of pride that contained no haughtiness.

The old lady slipped behind a hedge near enough to see the boy well without being seen.

The shock she received as she looked into those brown eyes made her seriously doubt, for an instant, that their possessor was the person she had supposed.

Were those eyes, calm, shallow, cold, those that had sent out their warmth and gladness steadily, full-brimmed?

Mrs. Harper had to believe what she saw at every encounter with Lawrence. She saw his eyes flash or sparkle, and then some of their depth showed again for a moment. But the old look, that had been so restful, so cheery, seemed to have been lost.

It was more than two years after Lawrence's first week with Days & Days that his old friend espied a handsome seal ring on one of his fingers. She suspected enough to make her look closely at Miss Evelyn Days' small white hand at the first opportunity.

Yes, there it was,—a slender circlet set with a small, clear gem that Mrs. Harper knew to be a diamond.

The young man had long said only "How do you do?" to the little old lady, but by right of those past half-confidences the woman found an opportunity one day to speak further with him.

"You are staying a long time here. Have they increased your salary?"

"Oh, yes, Mrs. Harper! I'm an expert now. They needed one, and if I hadn't learned some one else would have taken the place. I'm valuable to them now and they pay me quite liberally. It's a high-class company, you know, and they demand high-grade employees."

She wished he would not speak so crisply, like one of his own greenbacks.

"And you're engaged to Miss Days?" quizzed the determined old lady.

"Yes, Evelyn and I are to be married after awhile.

She's a very nice little girl. Her father says she uses up lots of money."

"Can she cook and sew?"

"Oh, no! Evelyn's a butterfly."

"You'll have to run your home with money. How much can you put aside then for a rainy day?"

"Now, Mrs. Harper," Lawrence said, fidgeting, "I get better pay with every promotion."

"Are you saving a dollar a week now?" she queried relentlessly.

"I have saved enough for a small new house."

And he would have to save enough for servants and carriages and entertainments and for new things constantly. How well she knew! She, who always had known luxury. But she had been a trained homemaker, ready for any financial emergency that might befall her.

"The money comes so easily," she thought as she went homeward. "He cannot appreciate it as he did. He meets no difficulties. *That* is making him a weakling, robbing him of his warm, young blood."

The next news Mrs. Harper had of Lawrence was a letter to her, requesting her to come to see him at a certain lodging place. The writing was not his, and there was a postscript stating that his right hand was injured.

The old lady found her young friend wretched with mental and physical pain.

His right hand had been so mangled by a revolving electric fan that it had had to be amputated. He had stumbled, and, to save himself, clutched the fan.

"And my position is gone; my engagement is broken; the new house is not to be finished. I have only a hundred dollars of my own, and this, which I shall sell." He held out the diamond ring.

Mrs. Harper's presence was tonic to the young man. She talked little, but she lifted up the left hand, and said, in her most matter-of-fact way, "This is good yet, Lawrence."

She did not offer him money of hers. She left him at the cheap hotel. But she visited him often, and watched, with thankfulness, the depth and earnestness and gentleness come back to make those brown eyes beautiful again.

And after months that Lawrence devoted to inducting some of the swift skill of his mind into that sound left hand, Mrs. Harper permitted herself only one bit of moral:—

"Things outside are to increase the inner beauty. They are wrongly sought and used if they steal it from us."

"I hadn't thought of that one," Lawrence said, in a way that indicated to her that he had himself drawn little lessons from his experience.

How proud Mrs. Harper felt to hold acquaintance with so youthful a philosopher!

*Pleasant Hill, Ohio.*

## ALPHABET OF AMERICAN AUTHORS.

G. FEGLEY.

## XVIII. Whitelaw Reid.

WHITELAW REID is the son of Robert C. Reid, an elder in the Cameronian Covenanting Church, naturally of Scotch descent, and was born in Xenia, Ohio, October 27, 1837. He went to the Xenia Academy, and then to the Miami University, where he graduated with high honors in 1856. Soon after his graduation he became the sole owner and editor of the *Xenia News*. Disposing of this, he went to Cincinnati, where he became a reporter on the *Gazette*, and under the name "Agate," reported the State legislature's proceedings for his paper.

His Vigorous, terse, racy style of writing, and his faculties of observation led him, at the outbreak of the Civil War, to be sent as war correspondent along with the Ohio troops in their campaign in western Virginia. Then he returned to Cincinnati and wrote editorials for the *Gazette* except on occasional reporter trips for field work. He was present at Fort Donelson, and went up the Tennessee River to Pittsburg Landing (Shiloh), in 1862, with the northern troops, being the only correspondent present on that terrible scene of slaughter, leaving a sick-bed to follow the army. He spent the first night with the private soldiers on the bluff, and the next night in the tent of Gen. Lew Wallace.

He went to Washington and took charge of the *Gazette* Bureau, and among all the pens pushed in Newspaper Row, there was none, if occasion needed, to be more dreaded than that of "Agate." He was always more ready to criticise than to praise, more eager in attack than defense. He saw and reported the battles of Fredericksburg and the second Bull Run, and Gettysburg. He was appointed Librarian of the House of Representatives on account of his political services and scholarly taste.

At the close of the war, his health being impaired, he went south with Chief Justice Chase, and as a result, in 1866 published "After the War," a book giving a careful and considerate account of the condition of that section of the country, which was of great value. In 1866 he went to Louisiana with Gen. Francis J. Herron, of Iowa, and undertook the culture of cotton, believing that the end of the war meant peace. They planted 2,500 acres, which included three farms, and employed three hundred hands to do the work. The year was a disastrous one for planters, yet they so skillfully managed that they came through without loss. A second book soon followed; it was, "Ohio in the War," two octavo volumes of 1000 pages each, which besides being a most eloquent tribute to his native State, was a very valuable addition to the history of the war.

Mr. Reid became one of the proprietors of the

*Gazette* and spent two years on the old homestead at Xenia, and in 1868 went to New York at the invitation of Horace Greeley, to accept an editorial position on the *Tribune*. In 1869 he became Managing Editor, and on Mr. Greeley's nomination for President became Editor-in-chief. Under his management it became one of the leading journals of the world, and by this means he became very wealthy.

October 26, 1881, he married the daughter of Mr. D. O. Mills, of California. He has served as President of the Lotus Club, and as Regent of the University of New York State. He refused the office of Minister to Germany tendered to him by both Presidents Hayes and Garfield, but in March, 1889, accepted the office of Minister to France, tendered him by President Harrison, serving three years with the greatest dignity and satisfaction. Being an active Republican, Mr. Reid was nominated for Vice President on the ticket with President Harrison in 1892, but the ticket was unsuccessful. He has been for several years the American Ambassador to Great Britain, and fills the position with the greatest credit to himself and country. Other books he has published, are "Schools of Journalism," "The Scholar in Politics," "Some Newspaper Tendencies," and "Town-Hall Suggestions."

Worthy of mention: Dr. Benjamin Rush, medical and essays; E. P. Roe, novels; Dr. James Rush, medical; Theodore Roosevelt, history; Susan Rowson, "Charlotte Temple"; J. W. Riley, poems; T. B. Read, poems; J. R. Randall, poems; A. D. F. Randolph, poems; William Russell, elocution; Wm. J. Rolfe, science; Dr. D. M. Reese, education; W. J. Rivers, South Carolina History.

Bryan, Ohio.

## OPPORTUNITY.

They do me wrong who say I come no more  
When once I knock and fail to find you in;  
For every day I stand outside your door,  
And bid you wake, and rise to fight and win.

Wail not for precious chances passed away,  
Weep not for golden ages on the wane!  
Each night I burn the records of the day;  
At sunrise every soul is born again.

Laugh like a boy at splendors that have sped,  
To vanished joys be blind and deaf and dumb;  
My judgments seal the dead past with its dead,  
But never bind a moment yet to come.

Though deep in mire, wring not your hand and weep;  
I lend my arm to all who say "I can!"  
No shamefaced outcast ever sank so deep  
But yet might rise and be again a man!

"Art thou a mourner? Rise thee from thy spell.  
Art thou a sinner? Sins may be forgiven.  
Each morning gives thee wings to flee from Hell,  
Each night a star to guide thy feet to Heaven."

—Walter Malone.

## Around the World Without a Cent

H. M. Spickler

### Chapter XVII.

THE sound continued, now regular, now irregular. By the side of the mountain road there grew a clump of trees and shrubs. The noise came from these. In the shady outline there stood what resembled a small cow that seemed to be chewing, not at the grass, but at the bark of the shrubs near the ground. From a distance of fifteen feet I moved up to within eight feet of the slender object. Its head was from me, its hind feet just in front of me. Still it munched. The noise it made, barking the tree, prevented my being heard.

A moment later I experienced the most thrilling of sensations,—at three o'clock in the morning. I had read of elk and other animals eating twigs in snow-covered winter. Not until this moment had I known of deer feasting upon bark in what was the equivalent, in climate, to summertime. Before me stood the fleetest wild animal of the forest, the first wild deer I ever saw, right in the act of getting its breakfast. I raised my voice in self-defense, for I was frightened. At once it ceased chewing, raised its beautiful antlers and looked around. For ten seconds, it seemed, it looked at me, intruding so ruthlessly upon its innocent life, then, with a bound, the beautiful stag shot away into the darkness of the dense foliage, up the steep hillside and across the gully, in front of me. The surprise fairly lifted my cap. I felt the electric force in finger and back, as that lithe creature fled, its antlers laid back over its graceful neck, full of the wild

poetry of motion, and he leapt over the brush with the flying ease of the athlete.

Then I wondered why I had not grabbed it by the hind feet and held on! Yes, held on! But I really believe I could have held it, thrown it down, and in the tussle, been able to seize its glorious antlers and to hold it until I had—killed—no I could never have killed that innocent deer. I'm glad I let it go!

But how it neither heard saw nor smelled me, with its keen senses and wild instinct, I puzzle yet.

A little after six o'clock I returned to the house, locked and bolted the door after me and lay down on my couch to sleep until a breakfast was served

of cured venison and oatmeal.

No one but the deer had known of my leaving the house. The host and his wife and three children had slept so soundly.

I awoke, like a child, with the invigorating memory of the night's quest and the hopeful prospects of the day before me in the hunt promised by Lord Clonmel, of Muckcross Castle.

The sun was shining. The sky was as clear as a diamond. There was no stir of air. It was neither warm nor cold. A more perfect day never dawned.

At ten I paid my second visit to the Castle,—entering, with the keeper, by way of the kitchen, just the way I wanted to go in. One of the waiting maids was preparing a lunch for me of nicely spread bread and a roll jelly cake, and the announcement to Lord

Palace Grounds of the J. & P. Coats Needle Millionaires, Scotland. They wondered what Mr. Spickler was doing daring to take a picture there!

Clonmel by the butler brought me from him a sovereign in gold and his good wishes.

I lost no time in looking around, I tell you, for I had always read about the scullions in the kitchens of these big castles and palaces and of the great expense in such a home. There was no end to servants, some men, some women, some young, others old, some homely, some pretty. Some were in scullion dress, others in showy livery. A tailor was ironing out a black suit for the lord. Another man was packing up the hunting outfit. Still another was looking after the dogs. They were all talking and laughing and quite probably getting more joy out of the castle than the Lord and Lady Clonmel.

An intelligent, well-dressed young fellow was dispatched as my guide through the wildest parts of the mountains back of the lakes.

Into the balmy air at ten o'clock, amid the still sparkling gleams of dewdrops, plucking wild flowers that grew everywhere, he went, along the lake, then straight up the mountain to its very top. The sight from the mountains, down over the lake, cast a spell of poetry over my soul and made me wish I could love everybody in this great, big round world. Of all ideal days, and of all sweet pleasures, this day was the best,—that is, excepting those in which sweet-hearts have figured. The towering mountains around the lakes rising in dark, heavy masses, contrasted most sharply with the clear, calm, smooth water below. There was the purple haze, perfectly transparent, that hung shimmering over the lakes through which the golden sunshine streamed in torrents. The water itself was as of many tints as the directions in which it was viewed, from the brilliant flash to the softening, mellow color that passed here and there into a deeper blue. The mountains and trees were

reflected as perfectly in the water as though they grew there. The sculling of the little boat on the other side stirred the lazy surface into a million curls, and the pebble dropped into the water at the stern by the lady in the boat, was heard by us as plainly as though we stood right there by the boat.

"Are we near the deer, now?" I asked my guide. "Yes," he replied, "we are liable to see them here anywhere."

"Look!" I whispered, "there's one, isn't it?"

"Yes, that's one, sure."

I was as much excited as when I got within gun range of my first Mallard ducks on the Seven-Mile Branch in Northern Illinois.

It was a young fawn.

And through all the day, far back in the wilds, and along the edge of the hills overlooking the prettiest of lakes, we chased up droves of ten or twenty fine deer, watched them run and stop and graze again. I did my best to photograph them singly and in groups, but though I had good chances for fine pictures, for some reason or other, every single exposure was practically a failure.

All Rights Reserved.

"PEOPLE who eat of the tree of knowledge should be sure of perfect digestion if they would attain to symmetrical development. Otherwise, they attain veneer and veneer in education is bad, yea, very bad. The knowledge that we gain must leaven the whole lump, must permeate the whole being, must change the entire structure in order to be effective. If put on with a brush it becomes grotesque and transforms an ignoramus into a hypocrite. Every tissue must be saturated with it. Then it becomes both strength and ornament."

## In Summer Mood

Olive A. Smith

I'm pining for country sights and voices,  
For the scent of fields where the mother-  
earth  
Bares her breast to the patter of summer  
showers,  
And gives to a million wild flowers birth.

I long for the sound of waters, purling  
Through banks where the honeysuckle  
twines,  
Round the maple bough, and the dappled  
sunlight  
Tangles the shade in the wild grape-vines.

I want to see the hills and valleys,  
In the drowsy rest of the noontide hush;  
To dream their dreams, that are broken only  
By the song of the lark, and the sweet-  
voiced thrush.  
Emporia, Kans.

# The Foreigner

H. M. Fogelsonger

THE subject of immigration may be of interest to many readers, even though they do not rub elbows with the foreigner in their daily life. We speak very generally of the newcomers when we refer to them simply as foreigners, unqualified, because there is a great difference between a man from Germany and one from Italy or between a Swede and a Chinaman. We must also remember that great as our coast line is, New York City is the chief port for the immigrants and that the multitudes that pour through Ellis Island are only a few when scattered over the whole country between the Atlantic and Pacific.

Statistics of Immigration form an interesting study and below is a list of figures to think over. They give the number of aliens coming to this country during the years specified.

|                 |           |
|-----------------|-----------|
| 1821-1830 ..... | 143,439   |
| 1831-1840 ..... | 599,125   |
| 1841-1850 ..... | 1,713,251 |
| 1851-1860 ..... | 2,579,580 |
| 1861-1870 ..... | 2,282,787 |
| 1871-1880 ..... | 2,812,191 |
| 1881-1890 ..... | 5,246,613 |
| 1891-1895 ..... | 2,219,793 |
| 1896 .....      | 343,269   |
| 1897 .....      | 230,832   |
| 1898 .....      | 229,299   |
| 1899 .....      | 311,715   |
| 1900 .....      | 448,572   |
| 1901 .....      | 487,918   |
| 1902 .....      | 648,743   |
| 1903 .....      | 857,046   |
| 1904 .....      | 812,870   |
| 1905 .....      | 1,027,421 |

During the decade ending 1900 there were 3,687,564 immigrants. For the year ending 1907 the number of immigrants reached one million two hundred and eighty-five thousand, three hundred and forty-nine, but during the same year some three hundred and fifty-four thousand returned to their native country, so that the net figures would be something less than a million. The number of foreigners coming from each country varies from year to year and yearly conditions must be taken into consideration; but I have selected the year 1905, and during that year the seven countries from which most of the immigrants came are:

|                       |         |
|-----------------------|---------|
| Austria Hungary ..... | 275,693 |
| Italy .....           | 221,479 |

|               |         |
|---------------|---------|
| Russia .....  | 184,897 |
| England ..... | 64,732  |
| Ireland ..... | 52,945  |
| Germany ..... | 40,576  |
| Norway .....  | 25,064  |

No other country has the immigrant problem to deal with in such magnitude as does the United States. Just think, over one million men, women and children have to be taken care of by the government inspectors every year. If all the foreigners were honest, hard working and healthy people the prob-

Europeans Who Have Become American Citizens.

lem would not be so difficult, but it is not so. Criminals of the worst type, men who are seeking a living without work, feeble-minded, those afflicted with a contagious disease, all seek shelter in this country. Notwithstanding the vigilant inspection by the government officials, many undesirable persons enter the United States as anarchistic societies give evidence. Perhaps you would be interested in knowing the questions asked every newcomer before he is allowed to land. They run something like this: 1.—What is your name? 2.—age? 3.—Are you married? 4.—What is your occupation? 5.—Of what country were you a citizen? 6.—Race? 7.—And what was your last permanent residence? 8.—Give the name and address of your nearest relative or friend in the

country from which you came. 9.—What is your destination? 10.—Did you have a ticket through to your destination? 11.—By whom was your passage paid? 12.—How much money have you with you? 13.—Is this your first trip to the United States? 14.—Are you going to join a relative or friend in this country? 15.—Were you ever in prison, an insane asylum or almshouse? 16.—Are you a polygamist? 17.—Are you an anarchist? 18.—Have you made any contract for your labor? 19.—What is the state of your health? 20.—Are you deformed in any way? 21.—How tall are you? 22.—Complexion? 23.—Color of your hair? 24.—Color of your eyes? 25.—And where were you born?

A man could almost be made to order on such specifications could he not? The inspector also makes note of any marks by which the individual might be identified, and the complete record is kept on file for future reference. Of course many puzzling cases come up for the inspector to settle. For instance, a sickly or crippled man may be traveling alone, his fare having been paid by his relatives who have already been in this country. According to the immigration laws his physical condition would prevent him from landing, but he may be coming over here to live with his brother who may or may not take care of him. Such difficult cases are usually carried up to some higher official for decision. The physical examination is an important one. Specialists in the several diseases examine each alien individually and if there is any temporary sickness the individual is detained in the hospital until recovered.

There is also another important check upon the flow of immigrants into this country. Many steamship companies and labor organizations import labor. They make it a business to induce foreigners to settle in the United States. Now the return passage of all persons not passing the inspector's examination and the extra expense of detaining persons in the hospital is paid by the company that brought them over. That stimulates closer inspection where the foreigner embarks.

As to the harm done by the foreigner coming to this country it may be put under two heads, first, remaining in groups or settlements instead of scattering out; and second, replacing American labor. Of the two evils I think the first is by far the greater. Too many of our large cities have districts called "Germany," "Polander Town," "Chinatown," etc. The potent feature in this country is that it is democratic and every citizen should support good government and public schools. A settlement in which all are of one nationality and cling to their native language almost invariably works against good government and public schools. Now I know there are settlements in which the foreigners are peaceful and patriotic, but they are very few. You cannot transplant a

patch of Russia bodily into the United States without evil results any more than you could put Massachusetts over into Russia without causing trouble. Country settlements of foreigners are usually beneficial but in the city conditions are different. Here labor troubles and municipal government work evil results among foreigners. We need foreign laborers but there ought to be some way to distribute them over the country. The farmers out west should not suffer for help when men are standing about the gates of factories asking for work. There is a movement on foot now to turn farm labor towards the South instead of leaving it drift to the cities and already many Italians have settled there.

The fact that a large per cent of criminals and inmates of almshouses are those of foreign birth has been used as an argument against excessive immigration. I will not burden you with more statistics, but it is very true that too large a per cent of criminals and beneficiaries of charity is foreign, and yet that argument against immigration ought to be qualified. Consider for a moment where most of our foreign labor is employed,—in mines, furnaces, steel mills and in various dangerous manufacturing industries. The case is obvious. The scale of wages is based upon the living expenses and *almost invariably* does not include the possible chances of injury. In extreme cases where it is difficult to find men for the job, wages are high enough to allow for doctor bills. Too often does the poor man in the factory or mine have to cry "Me hurt, me no good. Me no have money for wife and babies." Many employers pay for dressing the wounds but the rent and grocery bills must be met. You ask, Why don't they save? The average foreigner does save even though his wages are small. But here is how he often saves. An industrious real estate dealer or furniture man gets a hold of the ignorant foreigner and persuades him to buy on the installment. All goes well until sickness or injury stops the payments when the little home and occupant are separated. Do you wonder that the poor man in desperation is often driven to crime? Nearly every life has its tragedies and the European laborer who risks his fortune in the United States has more troubles than the average.

The accompanying photograph shows an average group of foreigners neither of the worst nor of the best types. The group is made up of a Russian, Russian Poles, German Poles, a German and Hungarians. The two in the front row with mallets in their hands were born in this country and are above the average in intelligence and morality. Three or four others whom I will not indicate are almost too ignorant to be worth anything as common laborers. I could tell you an interesting life story of each man if space permitted.

Thousands of worthless characters come to this

country and settle in New York, Buffalo, Pittsburg, Detroit, Chicago, Milwaukee and other manufacturing cities. The worst characters are those who are unwilling to do honest work and who by their superior ability as leaders stir up trouble among those that do work. I once formed a personal acquaintance with an anarchist and in several conversations purposely drew on him to tell me many things of that class I never knew. You have no idea what deviltry those men plan and believe in. Only more civilization will eradicate such relics of barbarism.

It is true that many of our foreign population live almost like animals. If you walk through the Hungarian quarters of any of the above cities mentioned you will find many so-called boarding houses. I saw one that was so full that some of the men slept in the "dining room" on mattresses. The whole house was filled with beds excepting where the table and cook stove stood. Mike, the landlord, worked in a shipping house for one dollar and forty cents a day and his wife cooked for ten or eleven boarders. You see Mike and his wife were industrious. They charged each man three dollars a week for board and a place to sleep. In such localities there is abundant room for home mission work in regard to right living.

We have strict immigration laws and a worthy commissioner in New York City, but we are in urgent need of some regulation in regard to the locating of these strangers who want to live with us. Many Russians and Poles who come over here are farmers and there is no reason why they should not continue their farm work in the United States. Many foreigners never become really Americanized because they spend their whole life in a settlement where only their native customs exist and only their mother tongue is heard.

#### NO AWARD OF THE PRIZE FOR HUMANE SLAUGHTERING.

No award will be made for some time in the competition for a humane slaughtering device for which a prize of \$500 was offered by the American Society for the Prevention of Cruelty to Animals. Of the numerous inventions submitted in the competition, none came within the exact provisions of the competition. A large consignment of new inventions is expected from Europe in a few days, and will be given a complete and careful trial before a final report is published.

Some progress has been made from the very fact that general attention has been directed to the subject, and the committee hopes within a short time to determine which, if any, of the inventors is entitled to the \$500.

The competition was instituted by the A. S. P. C. A. in these words: "Painfully conscious of the cruelties

inflicted upon animals by the present methods of slaughtering, and desirous of preventing, as far as possible, the sufferings of animals at the moment of giving up their lives for the benefit of mankind, the American Society for the Prevention of Cruelty to Animals, through its board of managers, offers a reward of \$500 for the device or apparatus not now in use which will best accomplish the humane destruction of animals for food purposes."

As a result a great number of models and drawings were submitted prior to June 1, on which date the entries were closed.

Some years ago a German woman offered a reward of \$3,000 for the best method of killing food animals, and this had proved a great stimulus to invention. Then the German government undertook the supervision of all abattoirs, as the American government has since done, appointing specialists of distinction to various posts created for safeguarding both humanity and the dumb creatures, taking the advice of skilled veterinarians, and compelling the strictest observance of the laws enacted to govern abattoirs. Among other inventions the "Behr pistol" was brought forth as an instrument for quick and humane destruction, and this weapon is now generally employed throughout the German empire.

In France, where government supervision is now equally strict, what is called the "Bruneau mask" is placed over the head of the animal to be slain, buckled behind the ears, and a blow from a mallet drives a chisel held in the mask into the animal's brain, causing instant and painless death.

In Spain the spine of the animal is severed with the thrust of the spear, and this is the method in Cuba and other Spanish speaking countries, except that a dagger is sometimes substituted for the spear.

In Great Britain, where the matter of a reform in abattoir methods was agitated some years ago by the Royal Humane Society, an admiralty commission was appointed to make an investigation, and in due time this commission reported in favor of the pole ax, which is also employed in Austria-Hungary.

In no other country on earth which makes a pretense of civilization do such methods as those now in use in America prevail.

An amazing variety was shown in the devices submitted in this competition. The guillotine idea had obsessed many of the inventors, but it was adapted to the use of the abattoirs in several instances with great ingenuity. Rapidity is a prime essential in the big packing houses. The guillotine is not fast enough.  
—*Scientific American*.

THE time will come when the civilized man will feel that the rights of every living creature on earth are as sacred as his own. Anything short of this cannot be perfect civilization.—*David Starr Jordan*.

# THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE, ELGIN, ILL.

Subscription price, \$1.00 per Annum, in Advance.

The Inglenook stands for material and spiritual progress. Its departments are: Literary, Editorial, Home, Cream of Magazines, World News.

Its qualities are: Good Sentiment, Moral Convictions, Inspiration.

Its purpose is: To safeguard home life by supplanting and counteracting bad literature.

Its scope of matter is: Scientific, Religious, Educational, Philanthropic, Economical, Sociological and Financial.

Its field is: The World.

Liberal commission given to agents. Sample copies are given upon request. When changing address give both old and new addresses.

Entered at the Postoffice at Elgin, Ill., as Second-class Matter.

## WILLIAM HOWARD TAFT.

WHILE all our readers are more or less acquainted with the history of our presidential candidates, it might not be amiss to give a brief account of the lives of those of the two leading parties. Both men have been much before the public for some time and much has been written about them. What is given here is selected from various sources with the aim of giving to our readers a fairly good view of the man without going into detail.

In brief the Republican candidate's history is as follows: Born at Cincinnati, Ohio, Sept. 15, 1857; son of the Hon. Alphonso Taft, Attorney-General in President Grant's cabinet; graduated at Yale, 1878, married at Cincinnati, June 1886, Helen Heron; assistant prosecuting attorney of Hamilton County, Ohio, 1881-2; collector of internal revenue, first district of Ohio, 1882-3; assistant county solicitor, Hamilton County, 1885-7; judge of the Superior Court of Ohio, 1887-90; Solicitor-General of the United States, 1890-2; United States Circuit Judge, sixth circuit, 1892-1900; President of the United States Philippine Commission, March 13, 1900, Feb. 1, 1904; first civil governor of the Philippine Islands, July 4, 1901-Feb. 1, 1904; Secretary of War of the United States since Feb. 1, 1904.

Mr. Taft's father was not wealthy, as few men are who spend their whole lives in the public service, but the parents occupied a position of prominence in the city which brought the children into contact with the best people. The father was a man of unusual force and ability, Judge Alphonso Taft, a Yale man and successively Judge of the Superior Court of Cincinnati; secretary of war, attorney-general, and United States minister to Russia. Both he and Mrs. Taft were Baptists. However, after some years spent in pleasant association with the Baptists, during which "Willie" attended the Baptist Sunday school, they moved their membership to the Unitarian church.

With that denomination Mr. Taft has his connection today.

William Howard went through the regulation course in the city schools, graduating from the Woodward High School in 1874. The next year he entered Yale. His wide range of interests gave him an excellent training for his actual later political life. To the "greasy grinds" he was as a "greasy grind," contesting their honors with them from the start, and graduating second in a class of 120. To the class strong men he was as a brother, being stroke on the class crew, anchor in the tug of war, and the prize wrestler of the class who matched the weight of the sophomore Goliath with science and successfully put him in rout; the "jolly good fellows" found in him a kindred soul, who could always be counted on for a good time, and was respected all the more because he never allowed the good fellowship to verge on dissipation. His career stands as a successful denial of the oft-repeated assertion that it is always the man who stands at the bottom of his class in college who finishes at the top of the column in life.

When he had delivered his class oration, said goodbye to the beloved campus scenes and come back to smoky Cincinnati, he found his brother editing a newspaper and he accepted at once the position of court reporter at the staggering sum of six dollars per week. It was a long drop from the high ideals set forth in that class oration to six dollars a week, but Taft took the fall philosophically and landed on his feet. In the work of the courts he was very much interested, and his column became known throughout the city. When, after a time, there came an offer from another paper in the city of \$25 a week for the same work, his brother acquiesced in his acceptance. Later he went to law school and finally was admitted to the bar.

Here is where the "he-never-could-have-done-it-if-it-hadn't-been-for-his-dad" men began to get in their deadly work. And there is a certain amount of truth in what they say, but only a half truth. If it had not been for the acquaintanceship which he had made through his father it is probable that he would not have been appointed collector of internal revenue by President Arthur at the rather premature age of twenty-five, or judge of the Superior Court by Governor Foraker. That is the half truth. The other half is that he made good as collector of revenue, and that he was so much approved as a judge that he was elected for a full term by a majority of over five thousand. The power of a great man is only half shown in his ability to get started in public life. Some *get started*, and some have to dig down and start themselves. The other half lies in their power to make good after they attain their start, and Taft has made good.

It was while he was preparing one of his decisions

in Cincinnati that there came a summons from President McKinley in Washington. Mr. Taft obeyed the summons and found Mr. Root and the president at the White House. "I want you to go to the Philippines," said Mr. McKinley.

"But, Mr. President," said the big Ohian, "I don't want to go. I'm sorry we have the Philippines."

What Mr. McKinley said in answer to that represented his honest thought and it represents also the conviction of the majority of us throughout the country. "Mr. Taft, I, too, am sorry that we have them, but we had to take them; there was no other way. And we have a duty toward them which we must discharge. You must help me to train those people to govern themselves."

And so he threw off the ermine to don the white duck, and with his big body tortured by the heat, with every pore working overtime turning out the streams of sweat, he set out to work the discordant racial elements of the Philippines into one harmonious medley.

We are not in a position to appreciate the value of the work which Mr. Taft did down there. We see what he has done, but we will never realize how hard he had to work to do it. We know that the Filipinos have made thus far a progress which has surprised us all. We never will know how much blood has been sweat, how much nervous energy has been expended in this successful effort to "hurry the East."

Mr. Taft's mother considers her son best fitted for a judicial position, and for a long time has desired that he might attain to the Supreme Court. This desire was shared by Mr. Taft, and while he was in the Philippines the opportunity came to have that desire fulfilled. President Roosevelt informed him that he had decided to appoint him to the vacancy in the court, and congratulated him on the realization of a life-long hope. But here the real man revealed himself. He felt that it was no time for him to let go affairs in the Philippines, acquainted with them as he was, so he turned away from perhaps his only opportunity of ever becoming Justice of the Supreme Court, though it was only after a second communication with the President that he was able to convince him that his decision was the wiser.

Mr. Taft was married a good while ago to Miss Helen Herron, of Cincinnati, who has enough accomplishments herself to justify the writing of an article about her. She is a fine musician and a graduate of a conservatory in Cincinnati. She reads and speaks the modern languages well, so that should her husband become our president she would not be shut out from the delightful diplomatic associations of Washington. Mrs. Taft is not fond of functions and display, but she is very careful to carry out her part in the social obligations of the capital city, and few of those who attend functions with her suspect that

she is not enjoying them just as much as the rest. She pleads guilty of one vanity only—she is very proud indeed of her children. Two boys and a girl, the oldest, Robert, a sophomore at Yale; the second, Helen, about to enter Bryn Mawr College, and the youngest, Charles P., in Washington public schools, and a member of that base ball team of which Quentin Roosevelt is the captain.

The only real home which the Tafts have is in Washington, if one excepts their home at Murray Bay, Canada, where they spend the summers. It is there that Mr. Taft has his own church membership in the Union Church, whose members are partly Presbyterians, partly Episcopalians, and partly Unitarians. Mrs. Taft is a Presbyterian, and Miss Helen has recently joined the Episcopal Church in Washington. The secretary has a pew in both the Presbyterian and Episcopal churches, and attends one about as often as the other.

He has not identified himself actively with any temperance movement, and he is not taking any chances with temperance interviews. In former years he has put himself definitely on record in favor of total abstinence, and just as definitely as opposing prohibition. There are a good many and well-meaning people who do not believe that prohibition lessens the evils of the liquor traffic. Their number is growing constantly smaller as the march of events proves their belief false, but so long as they hate the traffic and oppose it where they can, we need not condemn them utterly because their method of opposing it differs from ours. On one count, however, Mr. Taft does stand condemned; in advocating consistently the re-establishment of the army canteen, he has put himself in the path of progress and against the forces of righteousness.

It is a popular belief that a man can hardly attain to great things in our public life without the support of numerous fraternal organizations. The great mass of politicians are great "joiners," but Mr. Taft does not belong to the number. In Yale he was a member of the Psi Upsilon fraternity, and of Skull and Bones, the great senior society to whose membership all Yale men aspire and few attain. He has since his graduation joined numerous clubs in Washington, Cincinnati and other cities, but no order carries his name upon its roll.

Mr. Taft is not an orator; he can hardly be said to be even an engaging speaker. He says little that is striking or new; he speaks without fire and he does not thrill his audiences or leave behind him a body of converts to his cause. In this he is in the most thorough contrast to Mr. Roosevelt, and particularly to Mr. Bryan. Mr. Bryan never appears before an audience without convincing men against their will. Mr. Taft's public appearances are usually a disap-

### LOVE'S HEALING.

Dear little love-hungry baby, craving a kiss for your hurt,  
 Begging a balm for your bruises got when you fell in the dirt,  
 Standing with pleading palms lifted up to the ones that would do  
 All in their uttermost power, keeping the sorrows from you—  
 Dear little love-hungry baby, fly to your haven of rest,  
 Sob out the ache as I hold you snuggled up close to my breast.  
 Dear little love-hungry baby, all of the cares that you know  
 Flee as the dark flies at dawning, leaving no vestige of woe.  
 Soon through your teardrops will glisten gleams from the mirth that must dwell  
 Aye in the deeps of the child-heart—mirth that but age may dispel.  
 Dear little love-hungry baby, here, in the breast where you lie,  
 Sorrows are slower departing, griefs have more leisure to die.  
 Dear little love-famished baby, here is the kiss for your hurt.  
 Love heals the bumps and the bruises got when you fell in the dirt.  
 Sometime the Arms Everlasting will cuddle you close as my own,  
 Driving each ache from your bosom, turning to laughter each moan.  
 Dear little love-hungry baby, glad should I be if I knew  
 All of life's wearisome burdens love would make lighter for you.

—Author Unknown.

### CHAINED TO LOATHSOMENESS.

IN a recent sermon at the Majestic theater, New York, Rev. Madison C. Peters took for his theme "The Drinking Man." He said:

How often you will see your pure-minded girls giving their hands with their hearts in them to men who perhaps love them warmly in return, but whose habits and associations in life are well known to be such that a pure-minded woman ought to shrink from them in horror.

A young woman in a New York police court, standing before the judge, disillusioned, weary and worn by wretchedness and woe, in telling the story of her husband's brutality and neglect, among other things, said: "I knew my husband drank before I married him, and would like to tell any girl if she thinks she can reform a man by marrying him she is mis-

taken and had better hang herself. All I want in this great world is a place to work." Cases like this might be multiplied indefinitely from the thousands of police courts throughout the land, pointing out how foolhardy the act to marry a man to mend him or reform him.

There are 18,000 wife desertions every year in Chicago, there were 5,825 desertion cases last year in Philadelphia, while the average number of desertions in New York is about 8,000 a year, and, according to the testimony of the police magistrates in these and other cities, the cause at the bottom in the majority of cases is drink.

It is all nonsense to say that love is blind—blind to the faults of one loved. If the man were not deformed, he would not need to be reformed.

If a man will not reform to please his sweetheart, he will never do so to please his wife. Court records show that marriage as a step to man's reform has almost invariably resulted in failure. Women hope that their influence will be greater after marriage than before and too often find with breaking hearts that it is less. The martyr spirit seldom brings the martyr's reward. If the possession of your love and the hope that you may become his own are not enough to reform him, there is little probability that he will turn from his dissipation after you have surrendered your liberty to him.

The man habituated to evil, yielding to strong drink, governed by selfishness, cannot be a genuine lover. He may make the solemn promise to love, honor, and cherish his wife, but a specter of ominous mien portending heartache, sorrow and disaster, follows the hapless woman from the altar to the grave.

I know silly women who imagine a little wickedness is a sort of spice in a young man's life. Mark my words, you will find those habits after the wedding day to be anything but pleasant spice. Love is not only blind, but deaf and dumb in the case of the woman who marries a man to reform him. The risks are great enough for any woman when she marries a man who does not need reforming. If the man reforms before marriage, put him on probation for two years to prove that the reformation is genuine.

Of all the curses ever inflicted on woman and child there is none so unmitigatedly hellish as intemperance. It has nerved the hand that once gave the wedding

ring to deal the deadly blow. It has inspired the lips that once spoke only of love to pour forth the foulest curses of the pit. It has made children fly from the father's approach as they would from a devouring monster. If I could gather into my lips the language of angels and consult cherubim and seraphim on forms of forceful speech, I could not express the deep wretchedness of the drunkard's wife. The most terrible punishment spoken of in antiquity was that devised by Mezentius, who sometimes put a person to death by chaining him to a corpse face to face, the putrefaction of which gradually killed the living man. The drunkard's wife is chained in this way to a loathsome horror—chained with no hope of release save that which the grave may bring to one or the other or to both.

Tamerlane asked for 160,000 skulls with which to build a pyramid to his own honor. He got the skulls and built the pyramid, but if the bones of broken-hearted wives could be piled up it would make a pyramid blushing to the very skies. And when these inebriate husbands are fathers, as most of them are, it is impossible to frame a statement of consequences that will give an idea of their enormity—sending out into the world children, hideous caricatures of the living God, who reel through life insane, imbecile, diseased and depraved, when they should be men and women born in the image of the Father.

#### WHAT A MOTHER CAN DO.

RICHARD SEIDEL.

A MOTHER on the green hills of Vermont was holding by the right hand a son, sixteen years old, mad with the love of sea. And as she stood by the garden gate one morning she said:

"Willy, they tell me, for I never saw the ocean, that the great temptation of a seaman's life is drink. Promise me, before you quit your mother's hand, that you never will drink liquor."

"And," he said, for he told the story, "I gave the promise, and I went the globe, over to Calcutta and the Mediterranean, San Francisco and the Cape of Good Hope, the North and South Poles. I saw them all in forty years, and I never saw a glass filled with sparkling liquor, that my mother's form at the gate did not rise up before my eyes, and today I am innocent of the taste of liquor."

Was not that sweet evidence of the power of a single word? Yet that is not half. "For," still continued he, "yesterday there came into my counting room a man forty years old."

"Do you know me?"

"No."

"Well," said he "I was brought drunk into your presence on ship board; you were a passenger; they kicked me aside; you took me to your berth and

kept me there till I slept off my intoxication. You then asked me if I had a mother; I said I had never heard a word from her lips; you told me of yours at the garden gate; and today I am master of one of the finest ships in New York harbor, and come to ask you to come and see me."

The mother's words on the green hills of Vermont! God be thanked for the mighty power of a single word!

#### WHERE THE RESPONSIBILITY LIES.

THERE were 1,181 students at Wellesley during the past college year, and only 206 of them, it is stated, were accustomed to attend church on Sundays. They attended chapel on most of the days required, but the majority found life too strenuous to get up on Sunday mornings to attend church. The same, with slight changes as to figures, might be said of many other educational institutions besides Wellesley and we are impelled to ask, What and who are responsible? The things, perhaps, which go to make up college "life" are much to blame; the various activities and amusements—social and athletic, for instance—which exact a heavy toll on the physical being and often leave one in a state of collapse on Sunday. Then, again, there is the sheer laziness that impels many a person to lie late in bed Sunday mornings just because there is no work or duty for that time so insistent that it cannot be shirked. But besides these causes, and the more serious is this one, since it seems founded on a worthy ambition, is the great desire for knowledge which impels a student to carry so many studies that it requires the seven days of the week to keep up in them, or, being content with six days, leaves the misguided enthusiast so exhausted mentally and physically that Sunday finds him spent of all energy and desiring nothing but rest. But back of this over-fondness for amusement and back of the mistakes of faculties which allow students to carry too heavy and too many studies, is the neglect of mothers and fathers to make attendance at Sunday service sufficiently important, more a matter of convenience or inclination than an obligation. Are you training your boys and girls so that, when they are out of the home fold and surrounded by the many distractions of college life, they will remember this little time God has asked them to set apart in which to hear the message He has for us all, is no longer theirs to be dissipated in worldly pursuits?—*Home Herald.*

#### DRINKING AT MEALS.

To drink or not to drink at meals is a question long and warmly discussed by dyspeptics, and one concerning which there is no general agreement among authorities in dietetics. Some dyspeptics have declared themselves much benefited by drinking a glassful or

half the quantity of water at the close of a meal, while others have declared that a few sips of water within an hour or two after eating are sufficient to set up a whole train of woful symptoms,—acid, gas, eructations, heartburn, etc.

In other words, it has seemed that moderate drinking at meals has been beneficial to some, and equally harmful to others, so that the old rule forbidding water to dyspeptics at meals has been laid down a little less vigorously of late years. But no one has been able to say in advance definitely to one person, Drink, and to the other, Drink not.

Recent experiments have thrown new light on the subject, and now we know the why and the where of drinking at meals. The great majority of dyspeptics are suffering from one or the other of two opposite conditions, viz., *hypohydrochloria* or *hyperhydrochloria*. That is, too little gastric acid or too much acid. When too little hydrochloric acid is present in the gastric juice, the digestive process is too slow and the food remains too long a time in the stomach, giving opportunity for fermentation and the formation of lactic, butyric, and acetic acids.

When too much acid is present, the action of the pepsin is somehow interfered with and digestion is hindered, as well as when there is a deficiency of acid. This is the newly discovered fact which sheds light on the question of drinking at meals.

When there is a deficiency of acid, drinking aggravates the difficulty by diluting the gastric juice. When there is an excess of acid, however, the contrary effect is produced, for by the dilution, digestion is encouraged.

Here is a rule, then: Those who have too little acid, should drink very little or not at all at meals; those who have too much acid, may drink moderately at meals, and will be especially benefited by drinking one or two glassfuls of hot water two hours after eating.

One exception must be made. Persons who have dilated stomachs should at all times avoid burdening their feeble stomachs with large quantities of liquids, and will do best with a dry diet.

It is best not to drink while eating, but afterward. Drinking while eating interferes with mastication and salivary secretion. Liquids should be taken at the close of the meal.—*Modern Medicine*.

#### STICKY FLY PAPER.

JOHN S. FERNALD.

MANY of the annoyances of using sticky fly paper may be overcome by a very simple device. Make a hollow cylinder of the paper, by sticking the ends together, sticky side outward. Stand a common glass fruit jar on a plate and place the cylinder over the jar. The plate will catch all the drippings from the

paper, and the weight of the jar will prevent the paper from being blown over by a stray gust of wind.

#### HOW TO KEEP WATER COLD.

"HAVING tried it, I recommend the following mode of keeping ice water for a long time in a common pitcher," says a writer in *Woman's Home Companion* for July. "Place between two sheets of thick brown paper a layer of cotton batting about half an inch in thickness; fasten the end of the paper and batting together, forming a circle, then sew or paste a crown over one end, making a box the shape of a stove-pipe hat minus the rim. Place this over an ordinary pitcher filled with ice water, making it deep enough to rest on the table so as to exclude the air, and you will be astonished to see the length of time that the ice will keep and the water remain cold after all the ice has melted."

#### ONE THING AT A TIME.

A YOUNG housekeeper was bemoaning one day the pressure of work confronting her. "And it's all got to be done," she added in a tone of anxiety. "How one pair of hands can do it is more than I can see."

A placid old body who had "summered and wintered" the requirements of a great family for years, remarked bluntly, "You haven't got to do but one thing at a time."

"Yes, but where am I going to find time to do all this, even taking one thing at a time?"

"It'll come. Nobody ever gained a moment by worrying yet, and precious few by hurrying, either. What are you going to do today?"

"I've simply got to do a lot of mending. It can't be put off any longer."

"Then go about it. And while you're doing the mending don't think of anything else except just to decide what you will do next the very next thing. Then think of the last book you read, or the next place you're going to, or anything you please apart from work or worry. Goodness me! I should have gone raving distracted about ten times a year if I'd taken to counting over the things I'd got to do and the time it was going to take, when the family was all together, and I expected to keep everything going straight. I just kept saying to myself, 'Take your time, Susan; you can't do but just so much in a day, so don't trip yourself up a-hurrying.'—*Christian Work*.

"If the world's a vale of tears,  
Smile till rainbows span it;  
Breathe the love that life endears,  
Clear the clouds to fan it.  
Of your gladness lend a gleam  
Unto souls that shiver;  
Show them how dark sorrow's stream  
Blends with hope's bright river."

## The Children's Corner

### ELEANOR'S HOUSE.

JENNIE TAYLOR.

When mother's busy with her work,  
I take my dolls and play  
That I am keeping my house, too,  
In the arbor 'cross the way.

Sometimes I take my picture book,  
My pencil and my slate,  
And read some wonder-story there,  
Then try to illustrate.

Sometimes I wander through the fields,  
Sometimes I scale the hills  
Where I can see so far away,  
And rivers look like rills.

The houses look so very small,  
The animals like toys;  
And then to climb some lofty tree  
Is one of my chief joys.

I think some time when I get big—  
When I'm a woman quite,  
I'll have my house built wide and high  
Upon some dizzy height.

I shall not in the arbor stay,  
But live up near the sky.  
Won't that be nice to entertain  
My friends there, by and by?

Tipton, Iowa.

### BETTY'S PLAYTIME.

"O, PSHAW!" said Betty, when mamma called her from play, "somebody's always a-wantin' me to do something!" She ran into the house with a frown on her face.

"Betty," said mamma, "if you can't obey cheerfully——"

"Well, I always have to be doin' somethin'," burst out Betty. "I never can play——"

"You may play this whole day long," said mamma, quietly.

"And not do anythin' else?" asked Betty.

"Not do another thing," said mamma.

"O goody!" cried Betty, and she ran and got her doll things and began making a dress for Cora May, her new dolly.

Grandma came into the room while she was sewing.

"Betty," she said, "will you run upstairs and get granny her spectacles?"

"Yes ma'am," cried Betty, jumping up in a hurry, for she dearly loved to do things for grandma.

"No, Betty," said mamma; "you keep on with your doll things I'll get grandma's glasses myself."

Betty returned to her sewing, but somehow it wasn't so interesting as it had been. She threw it down the minute little Benjamin waked from his nap and ran to take him.

"Nursing is too much like work," said mamma, taking the baby out of her arms; "you must not do any today."

Betty's cheeks turned rosy. She thought of the times she had grumbled when mamma had asked her to hold baby. Now she would have given anything just to hold him a minute.

Mary Sue, Betty's best friend, came by to get her to go on an errand with her.

"I am sorry but you can't go," said mamma. "Running errands is not play, you know."

Jack came running in with a button to be sewed on. Betty put on her little thimble and began sewing it on. But mamma came in before she had finished.

"Why, the idea of your sewing, child!" she said, taking the needle and thread out of her hand. "Run along to your play."

When father came home to dinner, Betty started, as usual, to open the front door for him. But mamma called her back.

"You forget, Betty," she said in her pleasant way, "that you are not to do anything for anybody today."

"Then I guess I'd better not ask her to drop my letter in the mailbox," said cousin Kate; "it might interfere with her play."

"I'm tired of playin'!" cried Betty. She ran out to the kitchen. Callie, the cook, would let her help her, she knew. But, for a wonder not even black Callie would let her do anything.

"I's agwine ter a fun'ral," she said "an I's in a mighty big hurry to get off. But, law, honey! wouldn't hab you 'rupted in your play fer nuthin'!"

Poor Betty! She thought the day would never come to an end.

"O mamma!" she cried as she kissed her at bedtime. "do wake me up early in the morning. I want to get a good start. Helpin' is so much better than playin' all the time."—*Mary Callum Wiley, in Pearls.*

## For SUNDAY READING

### SYMPATHY.

RICHARD BRAUNSTEIN.

What though my body, all too earthly frail,  
Be spurned and buffeted and broken here;  
Thy hands have felt the piercing of the nail,  
Thy side received the torture of the spear.

What though my human heart be sorely tried,  
And waves of chilling doubt sweep over me;  
Thou, too, hast battled with the strong, cruel tide,  
Thy soul hath had its dark Gethsemane.

O! matchless One, in gentleness and love,  
In perfect faith and radiant purity,  
Speak quickly as I turn my eyes above  
And tell me, "I have borne it all with thee."

### FORGIVENESS AND LOVE.

Wherefore I say unto thee, her sins, which are many, are forgiven; for she loved much: but to whom little is forgiven, the same loveth little.—Luke 7: 47.

THE pathos and beauty of the story of which these words form a part appeal to every reader of the Gospel in which it is found, and it will be well for us to read the narrative carefully through before attempting to learn the lesson it is intended to teach us. That lesson may be summed up in a single sentence: the measure of forgiveness is the measure of love.

Before, however, dwelling on the lesson itself it will be well briefly to consider two difficulties which have sometimes been felt by those who read our Lord's words to this fallen but penitent woman. It has been thought, first, that Christ here makes love and not faith the cause of forgiveness, as he says, "Her sins.....are forgiven, for she loved much." A moment's thought will remove the apparent difficulty.

The conjunction "for" is used in our language, as well as in the Greek, with two opposite meanings. We say, for example, "The snow will melt, for the wind is in the south;" in which case we clearly mean the warm south wind is the cause of the snow melting. On the other hand, we say, "The weather will be fine, for the glass has risen;" but no one imagines the rising of the glass is the cause of the expected fine day. We mean that the rising of the glass is the effect and sign of the weather being fine. It is in this latter sense Christ used the word "for" in our text. He means that the love of the forgiven woman was the effect and sign, and not the cause, of her forgiveness.

That this is the case appears at once, if we remember that in the second half of the text a little love is declared to be the result of a little forgiveness, and in the last words our Lord speaks to the woman (verse 50), he says, "Thy faith," not thy love, "hath saved thee." This is the invariable order in the New Testament. Faith, not love, is the condition of forgiveness. Love is its effect, for "faith that worketh by love" is the spiritual order everywhere.

Then, again, it may be asked whether when Christ says that a great love is the result of a great forgiveness, he does not imply that it is necessary for us to be what this woman was, a great and notorious sinner, to be "forgiven much" and to "love much." The answer to this question will be found, if we ponder the meaning of the second half of the text, "to whom little is forgiven, the same loveth little." Are there any people anywhere who have little to be forgiven? The question answers itself. Just as the finest silk beneath a stronger power of vision than we possess would look like sackcloth, so the life that is outwardly purest when seen in the light of God is all marred with imperfection and sin. If Simon knew himself as God knew him, he would have found that he, too, as well

as this woman of the city, had much to be forgiven.

One of the most striking proofs of this truth is the fact that in every age it is the greatest saints who have been most conscious of their sin. St. Paul, with his lowly words, "Of whom I am chief;" St. Augustine in his confessions;" Catherine of Sienna, whose life seemed as pure as a white lily, but whose acknowledgment of sin sounds almost exaggerated to our ears; Charles Simeon of Cambridge writing in his diary: "Lord make me to know the vileness of my own heart;" these are the types of saintly experience in every age. The nearer a man lives to God, the more he will discover he has to be forgiven. As the light shines more and more fully upon us the more will it reveal "the vileness of your own hearts."

When Christ speaks of those to whom little is forgiven, he is thinking not of the amount of forgiveness really needed, but of the amount that is thought to be needed; and in this sense it is always true that a great forgiveness and a great love, and little forgiveness and little love go together. A great love to Christ is never found in those whose consciences are unenlightened, and whose heart is dead to their own sin, just because they never realize the depth and greatness of their own sin. It is the humble, broken, contrite heart that is always most filled with love of Christ, for it has learned in tears how much he has forgiven it.

The lesson comes home to all who profess to belong to Christ. If we are living far from God, in the twilight of the ordinary religious life, if we never see our hearts and our lives as God sees them, we shall love but little, because there will seem so little to be forgiven. If we are living near to God, day by day we shall discover more and more of our own unworthiness and sin; day by day we shall know more and more of the greatness and forgiveness we need and because we have been "forgiven much" we shall love him who has "freely forgiven us" all our sins.

And the lesson touches also those who are unsaved. An old legend relates that Satan once presented himself at the gates of heaven, and asked to be admitted with the multitude of the redeemed who were entering there. "These souls," he said to God, "have offended against thee a thousand times, I only once."

"Hast thou once asked forgiveness?" was the answer of God.

May each reader of these lines have that same question sounding in his own heart, "Hast thou once asked forgiveness?"—*From "Musings for Quiet Hours."*

### IT TAKES TWO.

A LAD of seventeen had been sent to a saloon to take the measures for a new counter. It was very cold and he arrived with his teeth fairly chattering, for his coat was very thin. The saloonkeeper mixed a hot drink, and pushed it over the counter to him.

"It'll cost you nothing," he said, "Drink it down, and you'll soon stop shivering, my boy."

"He meant it kindly too, and didn't think any harm," said the apprentice as he told the story. "That's what made it harder to push it back and say I didn't want it."

"It must have been a big temptation," said a friend.

"Well," replied the lad, frankly, "I'd rather have had it than some other kinds. You see, it takes two to make a temptation. There's no saloonkeeper and no cold weather can make me drink when I don't want to. The temptation I'm afraid of is the one I'm ready for before it comes, by hankering after it. It takes two every time to make a successful temptation."

"He tempted me" only explains one side of the temptation. The other side—the personal side—we must answer for, and no excuse will save us.—*Selected.*

#### ECONOMIC FACTS FOR PRACTICAL PEOPLE.

THE cost of a first-class battleship equals the valuation of all the land and the one hundred buildings Harvard University has accumulated in two hundred and fifty years plus all the land and buildings of Hampton and Tuskegee Institutes. A modern battleship becomes practically useless in fifteen years.

We have fought European foes only three years in the one hundred and twenty-four years since the Revolution. In every foreign war we made the first attack. With less danger from attack than any other nation, we are now spending more for past war and preparation for future war than any other nation in the world.

1. Since 1800 our population has increased twenty-two times. Our expenditure for armaments has increased two hundred and twenty times, while our danger has diminished.

2. We are spending sixty-five per cent of our national revenue for armaments, pensions and interest on war debts, and have only one-third for Congress, the judicial and executive departments, coastguard, lighthouses, quarantine, customs, postoffices, census, waterways, forestry, consular and diplomatic service and all other constructive work of the national government.

3. In four years we have killed by accident, largely preventable, eighty thousand more persons than perished by bullets on both sides in four years of the Civil War. Every year we destroy vastly more life and property by the internal enemies—ignorance, preventable disease and crime—than in all our six years of war with foreign powers. We are blind to the enemies at home and show an ignoble fear of suppositious enemies abroad who have never attacked us or shown ill feelings toward us. Were we to put our taxes

into the improvements of education, commerce and agriculture, instead of into explosives and new battleships, we should do a thousand times more for real defense.

4. Our agreement with Great Britain in 1817 to remove forts and battleships on our three thousand miles of northern frontier ensured peace and thereby saved hundreds of millions of dollars in needless defense.

5. A million dollar bills packed solidly like leaves in a book make a pile two hundred and seventy-five feet high. One thousand million dollars—less than Europe's annual expenditure for armaments in time of peace—equal a pile of dollar bills over fifty-two miles high. This sum also represents one thousand million days' labor at a dollar a day. A second pile of dollar bills over fifty-two miles high represents Europe's annual payment for interest and other cost of past wars.

6. To these sums, which transcend human power to imagine, must be added the lost earnings of the millions of able-bodied men in European armies and navies who are thus made nonproductive, while the women in the fields toil in their stead.

7. Since 1850 the population of the world has doubled; its indebtedness, chiefly for war purposes, has increased from eight billions to nearly thirty-five billions.

8. Armies take the very flower of youth. Did war consume the weaklings and criminals instead of the best workmen, perhaps something might be said for its "keeping down surplus population." It saps virility. Napoleon's wars, it is claimed, have left the French soldiers of today nearly two inches shorter than their ancestors.

9. Military equipments must be new. One may use an old sewing machine or reaper, but not a gun that is out of date. A new invention turns millions of costly, burnished arms into old junk.

10. The constant increase of standing armies and navies, accomplishing no result but increased burdens on the people, means inevitable bankruptcy to nations that are our customers, unless a halt is soon called. Is it not time for thinking beings, who have abandoned tattooing, the eating of raw flesh and all other savage practices except organized slaughter, to take for their motto, "In time of peace prepare for permanent peace."?—*The Advocate of Peace.*

SORROW, grief, agony are realities. And no vote of the company that they ought not to exist is going to lighten their pressure or soothe their pang. What the good God offers is strength to bear sorrow. In place of happiness, which is gone, very likely forever, he offers blessedness—he offers the certainty of his infinite help and present stay. — *Edward Everett Hale.*

# Echoes from Everywhere

President Roosevelt has appointed three commissioners to represent the United States on the joint international commission to investigate the opium question in the Far East. The commission will meet at Shanghai on Jan. 1, 1909.

A national referendum in Switzerland on the question of prohibiting the manufacture and sale of absinthe resulted in a majority of 80,000 in favor of the prohibition. This will mean a loss to the government revenues, as the most famous brands of absinthe are made in Switzerland.

The local laws that have been enacted have made it difficult for those addicted to the cocaine habit to get a supply of the drug at home; hence they were compelled to order it by mail. The postoffice department has now issued an order which bars cocaine from the mails. Reports gathered by the department show that an enormous amount of cocaine in one form or another has been passing through the mails. A large proportion of the stuff has been sent in the guise of snuffs and medicines.

July 22 the Minneapolis, Red Lake and Manitoba Railroad Company served notice on the State railroad and warehouse commission that beginning Aug. 1 it would charge a passenger rate of 3 cents a mile, thus ignoring the 2-cent fare law. This is considered a forerunner of similar action on the part of all the smaller roads of the State. The larger roads in the State are stopped from taking similar action, as they have brought the 2-cent rate into litigation.

In continuance of its plans to provide for some of its future requirements in timber and crossties the Pennsylvania Railroad forestry department has completed its spring forestry planting for this year. It set out 625,000 trees. These make up to the present time 2,425,000 trees which have been set out by the railroad since it undertook tree planting upon a comprehensive scale. Economically to prosecute tree planting operations on a large scale has necessitated the importation of much European plant material, which owing to the degree of perfection to which the European foresters have brought their work and the cheapness of labor can be purchased at a much lower price than in America.

The saving Japanese, who are forced to play a close game with life because of the narrowness of their islands and the tremendous yearly increase in the population, have learned to take cunning advantage of every by-product of nature. They rake the sea beaches for seaweed to use as fertilizer, and grub the mountains for twigs to burn into charcoal. Now they are turning the many and troublesome volcanoes to good purpose by manufacturing the volcanic ash into cement. To them belongs the credit of discovering that the scoria that sweeps down from volcanic vents and sears the neighboring countryside may at least be tolerated, if it has to come, as an

economic asset. A Japanese company organized to work volcanic ash into cement has already paid a dividend of 9 per cent for the first half-year on a capital of nearly \$200,000, and it has more orders in sight than it can fill. The Mitsu Bishi and Kawasaki dockyards, the two great privately owned dockyards of the empire; the government naval yards at Sasebo and the Wakamatsu Iron Foundry are all being supplied with the new ash cement. The government recently granted a contract for 60,000 bags of the stuff, to be used in the new harbor works at Keelung. Quantities have already been exported to North China, Formosa, and Korea. The ancient Romans used volcanic ash as the basis of their cement.

Papers for bringing suits to annul between 3,000 and 4,000 deeds to Indian lands in Oklahoma which the government alleges are fraudulent have been issued by the department of justice at Washington. Many thousands of acres of valuable lands owned by the Indians of Five Civilized Tribes are involved. The federal government has realized for some time that big land grafting operations are going on in Oklahoma and it is making vigorous efforts to put a stop to them. In the present cases more than 1,700 white defendants who are scattered all over the country are to be proceeded against by the government as having obtained deeds from Indian allottees in violation of the law.

The remains of a prehistoric elephant of mammoth proportions were unearthed recently in the bed of a small creek in Puddingstone Canyon, half a mile north of San Dimas, by Prof. A. J. Cook, head of the department of biology of Pomona College, Cal., and Edward P. Terry, a student. The bone frame, which is in a fair state of preservation, measures 26 feet in length, and 16 feet in height, and what remains of each of the enormous tusks is 10 feet long. The parts of the huge skeleton that could be safely handled, were removed carefully to Claremont, and are to be placed in the museum of Pomona College. The discovery was accidental. The skeleton lay diagonally across the stream with only six inches of ground over it.

The Rhodes scholarship trustees announce that the qualifying examination for the Rhodes scholars to be elected for 1910 will be held in the autumn of 1909, instead of in the month of January, 1910. It is believed that an examination held in October will interfere less than one held in January with the regular work of American university students, and that the earlier selection, which it is hoped can be completed by the beginning of the year, will give a better opportunity for the selected scholars to direct their work on lines most advantageous for their course at Oxford. It has also been found that when the examination is held in January, the selections are frequently made so late that satisfactory arrangements for the entry of the men at the Oxford colleges cannot be made, and the prospect of an earlier elec-

tion is welcomed by all the college authorities. The holding of the examination in October is experimental, and the question of making it permanent will be decided later.

The attorney-general of Texas has seized several million barrels of oil and other property owned by the Standard Oil Company, and has prevented collection of funds due that company in an effort to compel the payment of penalties imposed to the amount of \$6,000,000.

Experiments by the Danish government with windmills for electric power generation for industrial and agricultural purposes have demonstrated that those of the four-wing type are the most successful in operation because they give the most power for a given area. With a wind velocity of 20 feet per second (13½ miles per hour) one horse-power may be developed on 65 square feet of surface. With a velocity of 26 feet the power is doubled.

July 22 the United States Court of Appeals unanimously reversed the decision of Judge Landis imposing a fine of \$29,240,000 upon the Standard Oil Company of Indiana for accepting concessions from the Chicago and Alton Railroad, and remanded the case for rehearing. The next day Secretary Loeb gave out the following statement for President Roosevelt: The President has directed the attorney-general to immediately take steps for the retrial of the Standard Oil case. The reversal of the decision of the lower court does not in any shape or way touch the merits of the case excepting so far as the size of the fine is concerned. There is absolutely no question as to the guilt of the defendant or the exceptionally grave character of the offense. The President would regard it as a gross miscarriage of justice if, through technicalities of any kind, the defendant escaped the punishment which would have unquestionably been meted out to any weaker defendant who had been guilty of any such offense. The President will do everything in his power to avert or prevent such miscarriage of justice. With this purpose in view the President has directed the attorney-general to bring into consultation Frank B. Kellogg in the matter and to do everything possible to bring the offenders to justice.

#### Sultan Grants Constitution.

Prompted by the growth of the Young Turkey movement, which has almost assumed the proportions of a revolt, the sultan electrified his people July 25 by issuing an irade granting a constitution and ordaining the assembling of a chamber of deputies.

Throughout the realm the news was received with extreme manifestations of joy. Thousands of people paraded the streets and held public meetings in all the larger cities. The irade was communicated to the valis and the district lieutenant governors with instructions for holding elections.

The immediate cause of the sultan's raising of the white flag was the receipt of a telegram addressed to him from the Albanians of Uskub informing him that they had taken their oath to favor the re-establishment of the constitution. This message landed like a thunderbolt at the Yildiz Kiosk. The sultan had been under the impression that he could depend upon the Albanians under all circumstances.

The irade comes after thirty-two years of autocratic rule under Sultan Abdul Hamid II, and the new consti-

tution is practically a restoration of the one proclaimed Dec. 23, 1876, by the present sultan immediately following his elevation to the sultanate after the violent death of Sultan Abdul Aziz June 4 of that year and the deposition of Sultan Murad V. on Aug. 31, 1876.

#### Japanese Boom Seen.

The trade of the United States with the Orient, Australia, and New Zealand, amounting to over \$250,000,000 annually, and of Canada with the same countries has been dealt a severe blow by the transcontinental railroads, which have decided to abandon a large portion of this business.

By the same action the railroads controlled by Edward H. Harriman, James J. Hill, the Berwynd syndicate and the Canadian government have made it possible, it is asserted, for the Japanese government to realize speedily its ambition to become the master of all the trade on the Pacific seas, as the Japanese will likely buy the line of steamers these roads have maintained in connection with their lines.

The Canadian Pacific, Great Northern, Northern Pacific, Union Pacific, Southern Pacific, Oregon Short Line and Santa Fe roads have served notice upon the shippers that they will go out of the export trade to China, Japan, New Zealand and Australia Nov. 1, and practically will abandon the import trade.

In so doing the roads are carrying out a threat which was made to the interstate commerce commission at the time that body issued what is known as rule 86.

This rule requires the railroads to publish the inland proportions of their import and export rates and as subsequently modified by the commission not to change these rates under a three days' notice for lowering and a ten days' notice for an increase.

#### Anti-Saloon Activity in Mexico.

The temperance reform on the Western Continent is evidently not confined to the United States and the Dominion of Canada. Old Mexico is feeling the effects of the crusade throughout the United States, and steps have already been taken throughout the republic to limit the evils of the liquor traffic.

In Mexico City a large number of restrictions have recently been passed on the liquor traffic. The sale of liquors to minors has been prohibited, and the federal and local license has been increased.

In Morelia, the capital of Michoacan, the sale of liquor is now prohibited, except in original packages or in unopened bottles. No liquors can be drunk on the premises and drinking over the bar has been entirely done away with. Chihuahua has just adopted the same policy, and the law will go into effect there in September.

The law passed by the last legislature of North Carolina, which was ratified by the people on May 26, by the overwhelming majority of 44,000 votes, prohibits the manufacture of all intoxicating liquors within the State with the only exception that sales may be made upon the prescription of a reputable physician for medical purposes only. Recognizing the possibility of an abuse of this provision of the law, the State Medical Society of North Carolina, which recently held its sessions at Winston-Salem, took the following strong stand: "Resolved, That we condemn as unprofessional and grossly immoral any lax or unfaithful conduct in the members of this society in the exercise of the privilege conferred in this (prohibition) law."

## CREAM OF MAGAZINES

### THE DIGNIFIED LIFE.

There are fashions in character as in the cut of the beard; in the conduct of life, as in the giving of dinners. It was once good form among well-bred people in the United States to cultivate in manner, and if possible in character, decorum and dignity. The example had been set by the great men of the Revolutionary age, Washington and Franklin, Jefferson and the Adamsses. Of late, dignity and decorum, if not lost sight of, have at least not been much insisted on. This is the age of efficiency, and, of course, of that make-believe efficiency which consists in "hustle" and vociferation. The "strenuous life" has been the up-to-date thing.

Fashions are in nothing more true to their nature than in the suddenness with which they change, in obedience to a cause which to the unthinking seems curiously trivial in proportion to its effect. Some little trick of mode or manner operates as a potent suggestion upon the minds of thousands, and before one can realize what is happening the outward aspect of a nation is transformed.

The marvelous unanimity and sincerity with which the whole civilized world has paid its tribute of admiration and respect to the life and character of Grover Cleveland afford substantial ground for hope that we may once more witness a popular preference for the dignified life. It would seem that such spontaneous and such genuine praise of the modesty, the simplicity and the rugged integrity of a great man who in his lifetime was thought cold and unmagnetic, could hardly have been rendered if the American people had not arrived at certain new valuations of personal qualities. There is indeed much evidence that, partly because of business misfortunes freely attributed to the policies and the individual influence of the President now in office, the nation has become somewhat weary of the "strenuous life" and ready to give heed to a very different model.

The life of keen activity, of ceaseless striving to achieve, is one always to be respected so long as it attains its ends by just and honorable means. It is not, however, the highest type, and has never been so regarded in the greatest ages of high civilization. To accomplish much, but to do so with a certain grace and decorum, to combine the proprieties and an unflinching respect for self and others with the dynamic power to do, is a finer thing than to achieve noisily and crudely. This was the supreme lesson of Greek civilization; it should be the supreme endeavor of our later civilizations, none of which has as yet quite measured up to the standard of the Periclean Age.

When a college president lately complained that a college teacher could in these days hardly open his mouth without being lampooned for his utterances by the press, the reply was made by one of our leading journals that the press never lampoons President Eliot or President Hadley or President Woodrow Wilson. Every one sees in their discussions of events, whether educational or sociological, a dignity, a quiet but weighty

and self-resecting reserve, which maintains the noblest traditions of more stately days.

We cannot prophesy that these events will turn the tides of men's thoughts and feelings, and mark the beginning of a new insistence upon the dignified life, in contrast with that which is "Strenuous" only. Yet we dare to hope that they may.—The Independent.

### "THE BLUES" AS A STATE OF MIND.

One of the strangest things which the average individual has to contend with in his daily life is his tendency to recurrent fits of depression, commonly known as "the blues." They occur with equal impartiality among the rich and the poor, the young and the old. Poor health, mental uncertainty and overwork are commonly given as the reasons, but these do not always apply. Gray weather seems to have considerable to do with them, as also do the states of minds of those who are about us. Whole communities can be apparently simultaneously affected, and the individual, whether the community is affected or not, or whether the day be dark or fair, can suffer intensely.

A recent examination of some three hundred girl and boy students of the Minnesota State Normal School brought to light some interesting evidence. "Rainy weather always makes me feel blue," wrote one. "I am more susceptible to the blues in the latter part of the day," wrote another. "Monday is the most dismal day in the week," answered a third.

Forty-two per cent report blues associated with some physical ailment; twenty per cent with overfatigue; twenty per cent with loss of sleep; eighteen per cent with discouragement due to failure to reach ideals or to succeed as well as they desired in their work. There are really all sorts of reasons given, however, and it is not actually proved that any of these things cause the blues. There may be subtler forces in nature which play upon our minds and bodies as the vagrant winds upon a harp.

There is one thing which should be considered by all those who are so afflicted, and that is that the resolute human will, which is in all of us, has something to do with the making or breaking of this physical and mental condition. The mind in its make-up is not necessarily tied down to any one state. It can think, if it chooses, of forces which are larger than any petty earthly forces, of influences which are subtler than any which play about us in our petty human condition, and it may be possible that in thinking we have the power of drawing that which we desire. If the clouds are gray is there not sunshine beyond them? And can we not actually draw from oceans of physical force, which are running in mighty streams on every hand, the strength we need? The thing that makes a tree grow, that causes a flower to bloom, that draws water in mighty cataracts to the earth—is not that available? It would not do any harm to think so, would it? And since "as a man thinketh,

so he is" it may be possible to fight off the influence of undesirable weather changes, of supposed or threatened dangers, even of failure and pain itself. You might try. "There is neither good nor ill but thinking makes it so."  
—The Delineator.

### THE NEW PATHS OF EDUCATION.

The note of the practical is the one oftenest sounded in a congress of opinions from our leading educators relative to the educational trend of the present. Under various guises this is the generalization that covers the majority of replies received by The World's Work in answer to their inquiry stated in this form:

"What new subject or new method, or new direction of effort or new tendency, in educational work is of most value and significance and now needs most emphasis and encouragement?"

Among these replies a general survey of educational tendencies is given by Elmer Elsworth Brown, United States Commissioner of Education. He writes:

"The following twelve concrete suggestions which I present below refer to definite and typical manifestations of educational advance:

"(1) The interest in education of a hygienic sort has culminated in the organization of the American School Hygiene Association, and in the Second International Congress on School Hygiene at London, August 5-10, 1907. The past year accordingly marks an epoch in the hygienic aspect of our education.

"(2) The Third International Congress for the Advancement of Drawing and Art Teaching, to be held in London in August, 1908, shows the strong interest which has already grown up on the side of education which it represents. With drawing there is now closely associated the so-called arts and crafts movement which has faddism mixt in with it, but has a good deal also that is better than fad.

"(3) The National Society for the Promotion of Industrial Education, that was organized November 16, 1906, shows that we have become seriously interested in the making of trade-schools; and the two commissions in Massachusetts and legislation in two or three other States further emphasize this.

"(4) The interest in rural schools has taken a new turn. The effort to make a really new type of rural education is represented by the establishment of agricultural high schools in Wisconsin, Georgia, and Michigan; by the introduction in Congress of the Davis Bill and the Burkett Bill, for national aid to education of this kind; and by numerous other special efforts in various parts of the country.

"(5) The recent International Congress on the Welfare of the Child, brought together at Washington by the Mothers' Congress, gave new points to the long-standing desire for a training of women for the specific duties of the home. Several of the European nations are now able to point to successful schools for the training of mothers. We have not gone so far, but the growth of interest in these European experiments is manifest.

"(6) Closely connected with this movement is the recent growth of organizations for bringing the school and the home nearer together. Especial interest attaches just now to the experiment being made in Philadelphia, under which the school-building becomes a social center for the neighborhood in which it stands.

"(7) The fourth Camp Conference, held on the 26th of April, 1905, showed that this effort at a real outdoor education in the time commonly called vacation has be-

come an undertaking of considerable importance, and one to be reckoned with in the future.

"(8) The publicity given to the recent playgrounds Banquet in New York City calls attention to a group of movements concerning themselves with provision for wholesome play, which have undoubted educational value and are likely to become increasingly important.

"(9) The experiment now being made at Cincinnati University, in a combination of apprenticeship with technical study of collegiate grade, is representative of a far-reaching endeavor to bring together two kinds of education which for centuries have gone apart, namely, the education of the school and education by the actual doings of the things of ordinary daily life. The further progress of the Cincinnati experiment and related experiments in Pittsburg and Boston calls for close attention.

"(10) In college education the attention of thoughtful observers is still turned to Princeton, but there have been experiments and happenings in other institutions which have to do with the same general tendency. Colleges are seeking with all earnestness to secure adequate training for individual students under fair conditions. Princeton is showing clearly some of the difficulties of the situation and is also contributing thought and experience which will furnish at least suggestion and perhaps more than suggestion to other institutions.

"(11) International education keeps cropping up in new forms. Just now it is proposed to interchange teachers between the secondary schools and colleges of this country and the secondary schools of Germany, under the management, on this side of the water, of the Carnegie Foundation for the Advancement of Teaching.

"(12) The endeavor to get at higher and better defined educational standards has been making itself manifest in too many directions to be enumerated. The attempt by the Association of American Universities, at its meeting in Ann Arbor in January last, to make the conditions of membership in that body objective and automatic in their working, is one of the most recent phases of this movement."—Literary Digest.

### WILLIAM HOWARD TAFT.

(Continued from page 633.)

pointment to those who had admired his public acts and had come prepared to be captivated. Mr. Bryan owes his whole leadership to his platform appearances. Mr. Taft owes his to the work which he has done and the confidence which the people have in Mr. Roosevelt's judgment.

Taking a long-distance view of his whole career we must conclude that for a man who has been in public life for so long a time, Mr. Taft has opened himself to criticism at singularly few points. He has been square, personally clean and straightforward in his private life. He was a righteous judge; he has been a conscientious and faithful public servant. He is a man to whom fortune has been very kind, but he has merited her favors and shown himself worthy of them. He is not a man of transcendent ability, but he has what will be of value in the White House in the next four years, one of these never-worry-keep-smiling natures which smooth out the rough places and reconcile antagonistic elements,

### USING GOOD ENGLISH.

VERY few pupils who have supposedly finished the work of the grades, and not very many who have finished the work of the high school, have acquired the habit of using good, straightforward English in speaking and writing. The word *habit* is used advisedly as it seems probable that the incorrect, slovenly use of English so prevalent today is in large measure the result of carelessness rather than of ignorance. Somewhat extended observation leads to the conclusion that teachers are not always as careful as they should be about using English in all their schoolroom work. Questions asked by teachers are not always put into the best possible form. It would be an excellent resolution for any teacher to make, were she to resolve that in her schoolroom work her language should be plain, pleasant, distinct, and as near to absolute correctness as her knowledge of grammar and constant watchfulness could make it. The pupils, especially the older ones, would be sure to recognize the care manifested by their teacher. Consciously, or unconsciously, they would to some extent imitate her.

It would be hard to overestimate the importance that attaches to the use of good spoken English—perhaps difficult to exaggerate in making statements concerning the extent to which its cultivation is neglected. Even those who do much writing use spoken language much more than they do written language; and much more attention should be given at school to the cultivation of correct spoken language. Much of the written work called for in our present State text in grammar is of very doubtful use as written language work, but may easily be made the basis of some valuable oral work.

Whatever of truth there may or may not be in what has so far been said, it is very certain that the boy or girl who leaves the high school with the ability to say what he has to say in distinct, plain, pleasant, direct, correct language is the fortunate possessor of an accomplishment as rare as it will be serviceable. Is it the fault of the school that more young people are not of this sort?—*The Interstate Schoolman*.

### A PUZZLE.

WE have never conducted a puzzle department in the INGLENOOK, not having any desire to test the skill of our readers along that line. But sometimes we are made to do things against our wishes or better judgment. For instance, in the issue of July 21 the pages of the Nook are so misplaced that it would be asking too much to expect the readers to have the patience necessary to find their way through the magazine, especially in this July weather. The mistake was made by feeding a bunch of sheets into the press the wrong way. Fortunately there was not a large num-

ber in the bunch, but as it was the second side, the number of good ones was limited, and it was necessary to send out some of the mixups to cover the list.

### FAME.

The incumbent of an old church in Wales asked a party of Americans to visit his parochial school. After a recitation he invited them to question the scholars, and one of the party accepted the invitation. "Little boy," said he to a rosy-faced lad, "can you tell me who George Washington was?" "Iss, surr," was the smiling reply. "'E was a 'Merican gen'ral." "Quite right. And can you tell me what George Washington was remarkable for?" "Iss, surr. 'E was remarkable 'cos 'e was a 'Merican an' told the trewth." The rest was silence.—Cassell's Journal.

### HURTIN' BIZNESS.

"Don't you know you're hurtin' bizness," said the red fox to the hound,  
 "When instead of sleepin' peaceful you come snoopin',  
 sniffin' round?  
 What's the good of all your barkin'? What's the use of all this fuss?  
 What were chickens ever made for if they weren't made for us?"

"Can't you see you're hurtin' bizness?" said the South Sea savage chief  
 To the fearless missionary who was sitting on the reef;  
 "I have seven white men captured that I want to sell as meat;  
 What were white folks ever made for if they weren't made to eat?"

"Don't you know you're hurtin' bizness?" said the robber in the jail  
 While the stubborn sheriff listened to his almost tearful tale;  
 "Those who make and sell the jimmies, don't you see, are losin' trade  
 While you foolishly confine me where no get-aways are made?"

"Can't you see you're hurtin' bizness?" said the devil to the man  
 Who was steadily progressing on the live-and-let-live plan;  
 "You are keepin' men from fallin' who, if sorely pressed, might fall;  
 Why, if all men done as you do I would have no job at all."

—Chicago Record-Herald.

## LITERARY ACTIVITY

OF

## THE BRETHREN IN

THE

## EIGHTEENTH CENTURY

By Prof John S. Flory  
of Virginia

A book with the above title has just been published, and promises to be one of exceptional interest to all members of the Brethren church. The book contains nearly 400 pages, and is a marvel in book lore. We want to place this book in 20,000 homes of the Brethren within the next six months. In order to do this, we must have at once

1000 AGENTS

We want a live, energetic agent in each congregation, who will make a house to house canvass, for we are sure it will bring good results.

Write for Territory

Apply for territory at once, so you can begin canvassing before the cream has been taken.

**BRETHREN PUBLISHING HOUSE,**  
Elgin, Illinois.

Write us for our new catalog of

## POST CARDS

and

POST CARD ALBUMS.

We carry an exceptionally fine line. Our prices are just right. Ask for our catalog. It is free. Send us the name and address of 5 friends who are interested in post cards and post card albums and they will each receive a catalog.

**BRETHREN PUBLISHING HOUSE,**  
Elgin, Illinois.

## FREE SAMPLE

Send letter or postal for free **SAMPLE HINDOO TOBACCO HABIT CURE**

We cure you of chewing and smoking for 50c., or money back. Guaranteed perfectly harmless. Address Milford Drug Co., Milford, Indiana. We answer all letters.

## EUREKA INDESTRUCTIBLE POST

**FIELD POST** Cheap as cedar. Made where used. Great inducements to agents. Address, with stamp, W. A. DICKEY, North Manchester, Ind.

## Imperial Valley, California

is a country where things grow too large to write about. You will have to come and see them.

The great **ALPALPA** and **FRUIT** district, situated 180 miles east of Los Angeles, on the Southern Pacific R. R. Send for illustrated booklet.

Address, W. F. Gillett, Holtville, Cal.

## SUNDAY SCHOOL SUCCESS IS A ?

of consecrated workers, proper methods and adequate equipment. If you are using the

## TWENTIETH CENTURY RECORD SYSTEM

you have solved the problem of Regular and Punctual Attendance. It secures the use of the Bible in class and places your school on a safe financial basis.

Write us for our revised price list, and eight-page descriptive Booklet. Also send us the name and address of 5 other superintendents and we will send booklet and prices to each one.

**BRETHREN PUBLISHING HOUSE,**  
Elgin, Illinois.

## BICENTENNIAL SONG BOOK

Those who participated in the splendid song service at Des Moines will be sure to want a copy of the **Bicentennial Song Book**. The book contains 80 pages of the very best songs selected from "The Brethren Hymnal" and "Song Praises," besides the "Bicentennial Song" which was written for the Conference.

Your Sunday School

and Christian Workers' society should have a supply of these books for use during the year.

## OUR LOW PRICE

We will furnish this book in Manila cover at the following rates: Per dozen, prepaid, \$1.00; per hundred, F. O. B. Elgin, \$6.00.

**BRETHREN PUBLISHING HOUSE,**  
Elgin, Illinois.

# ALBERTA

¶ Of Alberta a distinguished writer has said:

"North of the International boundary line and immediately east of the Rocky Mountains lies the Province of Alberta—a land blessed with all that is necessary to happiness and prosperity. Between the 49th and 60th parallels and between the 110th and 120th meridians lie 281,000 square miles of possibility. Here are mountains and plains, foothills and valleys, rolling prairies with wooded stretches between, dense forests and grassy meadows, clean, timber-girded lakes and winding brooks, cold mountain streams and navigable rivers, and a soil rich in the alluvial and vegetable accumulations of centuries. And as if not content with these outward signs of her favor, nature has hidden beneath the surface vast deposits of coal and other minerals; she has filled the subterranean reservoirs with gas and oil, and sprinkled the sands of the mountain streams with gold. That no living thing should go athirst, she gathered together the waters of the mountains and brought them to the plains, to be directed by the ingenuity of man to the use of the grazing herds and the planted fields. Then, to crown her efforts and leave nothing incomplete, she brought the chinook wind, warm with the breath of May, to temper the north wind."

¶ In the Medicine Hat District we have a gently undulating prairie. The soil is capable of producing generous yields of all small grains and vegetables in abundance.

¶ The city of Medicine Hat, situated on the Saskatchewan river and underlaid with gas and coal, is destined to be a great manufacturing center.

¶ Why not join the colonies already there and enjoy some of the material benefits as well as help build up one of the largest and best colonies in the Canadian West.

¶ We have excursions every first and third Tuesday of the month.

¶ For particulars and cheap rates apply to

# BARGAINS IN BIBLES

## For Sunday-School Pupils

### Sunday-School Scholars' Bible

International Self-Pronouncing.

A very appropriate present to a boy or girl. A Bible arranged on the plan of a Teachers' Bible, except that the Aids to the study of the Scripture are in simple language and embrace subjects in which young students find interest. This Bible is printed from easily read large Minion type, with all proper names or "hard words" accented and divided in syllables, thereby facilitating pronunciation. An aid of supreme importance to young people. Thirty-two new pictures illuminate and explain the text. These illustrations are new and so appropriate that they cannot fail to be most instructive to young scholars. In addition to these features this Bible contains many other new and valuable helps.

MINION TYPE, Six Maps. Size 4x6 $\frac{1}{4}$  inches.

26590 French Morocco, divinity circuit, round corners, red under gold edges, silk headband and marker, extra grained lining. Indexed.

# BUTTE VALLEY GARDEN

Summer 1908

❑ Some of you remember that last year we brought a single cabbage head from this valley to the International Stock show at Chicago, and some of you saw it, and it looks as if there were going to be another crop like that this year. Do you notice the cabbage in this picture? This photo was just taken the other day on the Meiss Ranch, Butte Valley, California.

❑ Do you see D. C. Campbell and Geo. L. McDonaugh standing there between the rows of onions? Say! the whole thing looks like living doesn't it? Mr. S. P. Bowman and wife of Southern California were there too, and although they have already bought some land in Butte Valley, they both said while there, that they were going to sell their place in the southern part of the State and buy more land in this beautiful valley. Mrs. Bowman says it looks good to her. There are others.

❑ Say! One thing more. The excursion of the 4th is postponed until the eleventh. If you are going on that date, you will find the party at the Chicago and North-Western depot in Chicago on Tuesday evening, the 11th, at 10:45 P. M., bound for Butte Valley.

# COLLAPSED

The history of Venice, the queen of the Adriatic Sea, one of the most picturesque cities of the world, dates back to the beginning of the Christian Era, when the mighty Romans fortified the coast of the Mediterranean as a protection against the invasion of the barbarians. Although stripped in a measure of its political power, it is still one of the proudest of European cities and its many palaces, historical monuments and Campanili or bell towers, gray with age, speak eloquently of its past grandeur. Among its many world-famed towers was the Campanile of St. Marc, whose gilded steeple extended high over the stately church below and which had stood for centuries as a landmark for the seafarers and the thrifty fishermen who dipped their nets in the blue waters of the Adriatic Sea.

The foundation of the Campanile of St. Marc was laid in the 9th century A. D., but it was not completed until about 300 years later. For centuries it has stood, the pride of the Venetians, rearing its lofty tower 323 feet above the ground. It braved the biting winds and storms of the sea and won the admiration of the traveler. On the morning of July 10, 1902, at half past 10 o'clock, a sudden rumbling, followed by a fearful crash, startled the city of Venice. The artisan left his bench, the gondolier rested his oar and everybody rushed out of his home and asked, with blanched face—"What is the matter?" A heavy cloud of dust hung over the square of old St. Marc. The Campanile, the pride of the city, had collapsed. A huge pile of stone and mortar, ninety feet high, marked the place where the famous tower had stood. The celebrated Campanile was no more. In a few minutes the telegraph was busy flashing the news around the world.

Many theories have been advanced as to the cause of the sudden and unexpected collapse of this grand piece of architecture. The consensus of opinion is however, that its foundation had become weakened by the attacks of climate and possible changes on the earth's surface. It was recalled that sometime before, a Board of Supervisors, appointed by the government to look after and inspect such buildings and structures had recommended, after a close inspection of the Campanile, that certain repairs be made. This board was composed of distinguished

architects and engineers. It seems however, that their recommendations passed unheeded, at least for the time being. With the usual governmental red-tape, the matter was delayed and when finally the repairs were ordered, the Campanile had collapsed.

What a striking similitude between this Campanile and our own bodies! We feel frequently a disturbance of the foundation of our bodily structure. We know and realize that it has become weakened by the inroads of disease, impure blood and loss of vitality, but instead of giving it immediate attention, we neglect it until the collapse has come. When your body shakes with pain and your nerves tremble, when your blood is thin, weak or impure, and you feel you are not well—but that something is wrong, that is the time to brace up the foundation, and strengthen the weakened portions. The blood is the elementary principle of life. It is the foundation. If it is not pure and vigorous all organs of the body will suffer and a general collapse will sooner or later take place. It is our duty to look after this and keep our blood in a condition which insures good health. There is only one safe, sure and effective way of doing this and that is through the remedial agents found in Nature's botanical storehouse. That is the only natural way. From pre-historic times, man has by instinct,—and who can say that the All-wise Creator did not plant it there,—sought the herbs of the field as a cure for physical ills.

The originator of **Dr. Peter's Blood Vitalizer** was termed an "enthusiast" on the subject of herb treatment in the cure of the sick. He was proud of the distinction. The success of his methods has surprised not only the laity but the medical profession as well. The record of cures accomplished by his remedy, the Blood Vitalizer, has silenced all argument. It is a remedy which contains the very essence of those botanical agents which time and experiment have proven exert a helpful influence on the human system. **Dr. Peter's Blood Vitalizer** comes in a plain bottle incased in a plain carton, but there is virtue in its homeliness. It is a remedy of positive merit. It is not a drugstore medicine but is supplied direct to the people by local agents appointed by the proprietors.

# OVER 200,000 ACRES

of land has been filed under the CAREY ACT in the Twin Falls District, Idaho, since April, 1907.

¶ There is still a large amount of land waiting for the settler in the above district. Also great opportunities are offered at American Falls, at Gooding and other points along the OREGON SHORT LINE RAILROAD.

¶ The Payette-Boise Reclamation Project under the U. S. Government is about completed and will be ready to furnish water to about 300,000 acres of new land in the spring of 1909. These lands can now be bought at reasonable rates and terms, by the settler, and are situated where the country is already partly settled, near good towns, railroads and electric lines.

¶ Rural mail routes and telephone lines are already established. Good schools and churches. No storms or cyclones. Farming is done by irrigation. No failure of crops by reason of too much rain or drought. Fruit crop is abundant every year. The people are happy because they are prosperous.

## Wonderful Possibilities

for homeseekers and investors. Climate Mild. Soil Very Productive.

¶ Alfalfa, Sugar Beets, and grains of all kinds are among the products that yield abundantly. Farm hands, carpenters, mechanics and in fact all classes of workmen will find plenty of work at good wages.

¶ Arrange your plans to go and see Idaho as soon as possible and secure some of this fine land.

¶ HOMESEEKERS ROUND TRIP EXCURSION RATES are on First and Third Tuesdays of each month in 1908.

¶ WRITE NOW for printed matter and full particulars regarding this great country and how to get there.

## How the Home Can Help the School

Prof. O. T. Corson, Columbus, Ohio

### In Two Parts.—Part Two.

THE school cannot *give* an education to any one. If it could, no doubt, the percentage of educated people would be much larger than it is. All that any school can give to any pupil or student is a *chance to work out* his own educational salvation. There are not, and cannot ever be any short cuts to an education nor any easy ways of learning to think. Work may be made pleasanter by better methods and wiser teachers, but hard work will ever remain a prime necessity in winning honorable success either within or without the schoolroom.

It is difficult to be patient with some of the criticisms of public schools and their teachers, made by persons who seem to think that boys and girls should learn, in these modern days, without effort and that all the wrongs of modern civilization have their origin in the schoolroom.

One of the most recent attacks made upon the public schools, is in the form of a circular, signed by Francis B. Livesey, Skeysville, Maryland, U. S. A., printed with startling headlines, and distributed in the Teachers' Institutes of Pennsylvania. It reads as follows:

*"Child labor in the mills is better than child study in the schools."*

"It is not the factories that are killing the children, but our boasted and beautiful schools."—*Mrs. Lew Wallace, Crawfordsville, Ind.*

"Fifty thousand children are killed yearly by the public schools, and double as many more are injured for life."—*Edward Bok, Editor of Ladies' Home Journal, Philadelphia.*

"Too often our schools train away from the shop and the forge."—*President Roosevelt, at Lansing, Mich.*

"Away with the cry that the child must be idle—  
That the sweat of its brow is the drain of its life—  
That the capitalist never will his avarice bridle—  
That its wages are wanted by husband and wife.

"By the wisdom of God it has long been decreed  
That man by his labor must eat daily bread,  
And what is the child but the small man indeed,  
With performance demanded in proportionate stead?

"I plead for a moderate work for the child,  
For fresh air and sunshine and natural play,  
For a little bit more of Dame Nature wild,  
And less of the fashion and fads of the day.

"Hark ye, who deplore the grind of the mills,  
Why leave ye the schoolhouse in utter neglect?  
Where are the figures to show which the most kills?  
They've been duly sounded with none to reject.

"Did you ever hear tell of a suicide child  
That worked in a mill, large, airy and light?  
But sad are the records, as in papers filed,  
Of plunges from schools into suicide's night.

"And what of the health of the child of the book,  
When life is vouchsafed to drag sadly along?  
Has not the whole country roused up to look  
At what the physicians call killing and wrong?

"Did you ever hear tell of a factory closed  
Because of disease 'mong the workers within?  
Why, thousands of schools are stopped by such woes—  
All, all the result of the school system's sin.

"It's not for the children the zealot does cry,  
It's only a fetich he worships, you know.  
The school is the Juggernaut he has in his eye—  
For victims for that he will lay nations low."

The unfairness of putting side by side the sensational and untrue statement quoted from Mrs. Lew Wallace and Edward Bok, and the sane, conservative, and helpfully suggestive sentence from one of President Roosevelt's recent speeches, will be evident to all fair-minded persons. Such unfairness is characteristic of too many attacks made on the public schools.

It is amusing even to think of Edward Bok and Theodore Roosevelt at the same time. A debate between them on the subject of the "Overworked Boy" in the public schools would be interesting.

The purpose of this circular is evidently to turn away the attention which is being focused upon the evils of "Child Labor," by a false cry against the

public schools. It is ever the policy of the guilty to accuse the innocent. "Stop thief!" is the exclamation often used by the burglar.

To the credit of many employers of labor, it can be said that they are working hand in hand with the other friends of the children to secure the enactment of laws which will protect them from the avarice and greed of those who would traffic in childhood to increase their fortunes; but unfortunately there are still too many men without heart who are willing to sacrifice even innocent children upon the altar of their ambition to become rich at any cost. We must not permit attention to be turned from them by a false accusation against the public schools.

It is true, of course, that the schools are far from perfect. Since it is necessary to employ teachers who are *human*, mistakes will be made. No doubt, occasionally children are overworked and very frequently such overwork is due, not to the teacher or to the system, but to the ambitious parent who drives the child beyond his ability in order that advanced standing may be reached.

The "suicide child" is not the product of the public school, but the natural result of the conditions of modern society for which the school is not entirely, nor even largely responsible. This child may come from the home of poverty, the result of the grinding despotism of cruel capital, or from the home of wealth and luxury where "society" reigns supreme and where life is so artificial as to seem to the child not worth living. To speak of "plunges from schools into suicide's night," indicates a lack of sanity which is alarming.

The school is *not* the "Juggernaut" which is crushing the child, but in many instances his only haven of safety.

The schools are doing all they can to provide "fresh air and sunshine and the natural play" for the children, and "Dame Nature" is receiving marked attention in every community. Occasionally "fads" may have more consideration than they deserve, but the follies of "fashion" are certainly not to be charged up to the account of the teachers of the public schools.

In fact it is "fashion," as interpreted by so-called society, that is the greatest hindrance to good work in the schools. For one instance of "nervous prostration" due to overwork in a grammar or high school, there are scores due to cigaret smoking or to premature entrance into society which takes the child out to parties, dances, and theaters several nights each week, when there should be substituted for these, at least an hour or two of home study, followed by a long night of wholesome sleep to prepare for the work of the next day.

The public school with all its faults is one of the strongest factors in existence today in securing for

the child the rights which are his due, and in many instances teachers show more unselfish devotion to the best interests of the children—physical, mental and moral, than either the home or society.

The success of the country boy is constantly referred to and there is no denying the fact that a large majority of the best and most successful business and professional men of all our cities were reared in the country in the midst of many apparent disadvantages. Two factors have entered into their early training which will, in a measure at least, help to explain their success, sometimes credited to the supposed mental and moral superiority of the country boy as compared with the town or city boy, which superiority does not exist.

In the first place, as a rule, the country boy is so trained early in life, both by direct teaching and surrounding experience, as to cause him to assume responsibility which naturally leads to his taking the initiative in the performance of duty. The many chores which are incident to the life of the farm, such as carrying in wood, caring for stock, and helping parents and other members of the family in scores of different ways, all tend to develop this sense of responsibility and the habit of taking the initiative in doing things. The country boy does not, as a rule, have any greater longing for such performance of duty than his city cousin, but in the experience of the one the task is present and must be performed, while, generally speaking, in the different life of the other, the absence of all such demands tends to develop the inertia of rest rather than that of motion.

Then the constant presence of work of some kind, which must be done, is a powerful factor in the training of the country boy in the habits of industry so important in winning success, while the almost complete absence of work for city boys in the unoccupied hours of their school days and, especially vacation periods, is a constant source of anxiety on the part of parents who realize that the "devil always has something for idle hands to do."

A few years since, a prominent citizen of one of our cities made the remark that he did not know what to do with his three boys during the summer time—that he was afraid of the idleness of the vacation, and well he might be. Knowing that his father was reared on the farm, I inquired whether, in his boyhood home, there was a similar anxiety on the part of those in authority. Anyone brought up in the country can well imagine the answer. I am certain that every farmer of my boyhood acquaintance had work mapped out at least twenty-five years ahead for every boy under his direction, even the rainy days being fully provided for.

In many cities much is being done to improve the opportunities of children for work. Vacation schools are being established and industrial training intro-

duced, but none of these things can ever take the place of home training that insists upon home work in the preparation of lessons in school—home work, not on the part of the parent for the child, but on the part of the child by himself and for himself.

One of the inexplicable things which every teacher is compelled to witness with sincere regret is the constant effort on the part of many parents, strong in ability and character, because of having been compelled to win their own way in the midst of extreme difficulty, to remove every semblance of difficulty from the educational pathway of their children, by practically getting their lessons for them, thus robbing them of the chance to grow strong by their own efforts. In too many instances the benefits of home study are practically lost to the child because of the mistaken kindness of an over-indulgent father and mother.

Many children of wealthy and prominent families turn out to be worthless in life because they are neither taught to work nor to respect those who do work. If the public school insists upon honest effort as the only condition of success, such children are usually withdrawn from it and placed in some fashionable private school, where money is supposed to be able to purchase what the child is too lazy to learn. In all probability, the father worked his way through college, but the indolent son must be sent to the most expensive institution of learning the country affords, given all the money he wants, to be squandered as he sees fit, and, when vacation comes, has to be sent to some seaside resort, to recuperate exhausted energies for another season of educational effort.

Sometimes a child of real promise is spoiled by being made to feel that because he is bright, hard study is not necessary. Perhaps no more dangerous notion can enter the head of a young person than the notion that he can succeed by his wits without honest, persistent effort. Thomas Edison has been quoted as saying that success is made up of five per cent of ability and ninety-five per cent of hard work. The probabilities of accomplishing something worth while in the world are much greater for the student who puts forth one hundred per cent of effort in connection with seventy per cent of ability than for the one who has one hundred per cent of ability but uses only seventy per cent of effort.

If class honors, usually conferred on commencement day, were deferred for fifteen or twenty years, after graduation, perhaps, a more just recognition of ability and worth could be given. It would then be made plain that not simply native ability alone is essential to success, but that constant use and application of that ability in persistent hard work on the problems of life and living are even more important.

Right here is a danger point in our school work.

The tendency is to let down the standard of effort and assume that, if the child goes to school with reasonable regularity, he will absorb knowledge and the ability to use it. To guard against this fallacy, the home and the school should unite in instilling the old-time lesson of the absolute necessity of old-fashioned hard work as the only means of getting an education which is to be of any use in practical life.

Fairness and justice to the school demand that the teacher should never be condemned without a hearing. Our constitution guarantees that the worst criminal shall be confronted by his accusers, be given a chance not only to defend himself, but also to have the best legal talent to conduct his defense, at the expense of the state, that the trial be under the direction of an impartial judge, and that the final decision as to the guilt or innocence of the accused be determined by a jury of twelve men sworn to render a verdict in strict accordance with the evidence presented.

The public schoolteacher is not always accorded this courtesy. Too frequently he is the victim of unfair criticism on the part of parents who act upon "hearsay" evidence which would not be permitted in any court of justice engaged in the trial of even a horse thief. Too often he is condemned without a hearing upon silly reports of what really never happened. Because of these unfair criticisms and unjust condemnations of the teacher, I plead for that help which the home owes the school, which will result from paying no attention to the idle rumors afloat in every community regarding the work of the school, or to the necessarily one-sided reports of the partiality or injustice of the teacher, brought to the home by the child, who has been corrected for some act which he will naturally claim has been, in no sense, a wrong one.

I can recall very vividly a game which was quite popular in the country school I attended as a boy. This game was played on rainy days when out-door sports were not possible.

How distinctly I can recall the appearance of that circle, formed in the old brick schoolhouse, and composed of two or three scores of country boys and girls. There at the head of the circle, seated together were the boys and girls who had reached that age of great interest in each other. Next in order came the girls seated by themselves who had not yet reached that period, and last of all came the forlorn boys who did not think they ever would reach it. I always occupied the extreme foot of this latter class.

To this day, there is no being who so thoroughly arouses my interest and enlists my sympathy as an overgrown boy who does not know what to do with head, hands, feet, or any of the rest of his anatomy. Boys of this type and age need all the help that can

come to them from all possible sources, and the home and the school should unite to help them in this crisis. A boy who is too old to be interesting to the old women of the community and not old enough to be interesting to the young girls, is in a precarious condition.

But to return to the game. The girl who sat at the head of the circle whispered into the ear of the boy who sat next to her a long meaningless sentence, with such haste, and in such an indistinct, incoherent manner, as to render the understanding of it almost impossible. He in turn passed on what he pretended to hear to his neighbor, always adding a little, on his own account, to the rumor, which thus rapidly traveled round the circle, and finally reached me at the foot. Silence then reigned for a brief space of time as all eyes and ears were turned, first to the head of the circle as she slowly repeated the statement which she told to her neighbor, and then to the foot of the class as I, in turn, related what had come to me at the other end of the line. After the shouts of laughter, which followed, had died away, the game was repeated, the fun seeming to grow with each round, due, of course, to the fact that there was never any resemblance between the original statement of the pupil at the head of the circle and the final report of the one at the foot.

*We called the game by name of Gossip*, although but few, if any of us knew what the word meant. All who have since engaged in teaching school have, no doubt, learned the meaning by experience, for all communities, unfortunately, have too many homes where rumor, no matter how unreasonable, is certain to find sympathetic listeners and the tongue of gossip an attentive hearing. Many an earnest teacher has been the victim of misrepresentation and abuse because of homes in the district where gossip is permitted to run its harmful course.

Instances could be multiplied to illustrate how the most foolish reports, concerning what really never happened, originate. The following will suffice: A little girl upon her return from school one evening startled her mother with the remark that the special teacher of music had lost all her senses. The mother remonstrated against such language but the child further stated, as a reason for her remark that the teacher referred to, had stopped the entire school in the midst of a song and had asked the foolish question — "How many turnips are there in a bushel?"

To this the mother replied, "Mary, we shall not mention this again until we have seen your teacher" — a sentiment which might well find its way into the mind and heart of every father and mother who is tempted to criticise the teacher, in her absence, but in the presence of the child.

A few days after, mother, child, and teacher met when the report of the child concerning the supposed

question of the teacher was related by the mother with the suggestion that there was probably some misunderstanding. The teacher greatly amused at the report laughingly replied, "Yes, a very strange misunderstanding, indeed. I did not ask 'How many turnips there were in a bushel,' but 'how many *beats* in a *measure*.'"

How frequently the little misunderstanding which exists between home and school, and parent and teacher would vanish if only the home would refuse to listen to the idle reports which are so often circulated in the community, and parents, instead of criticising the teacher in the presence of the child, would be fair enough to go with the child direct to the teacher and in a friendly spirit seek to know the truth.

As the severest critic of the church is the man who never enters it and knows nothing of the spirit of its mission and work, so the most unreasonable critic of the public school is the parent who knows the least about it. Every community has its citizens who assume to know what is going on in the school which they never visit and of whose real work they are totally ignorant.

The teacher should constantly strive for an intimate acquaintance with the home life of the child, and the parent should, in every way possible, learn all that can be known of the work of the school. In this way home and school will grow into a more sympathetic relation with each other and the life of the child will be made brighter and happier.

When parents sustain teachers in the discipline of the school, coöperate with them in all reasonable regulations and requirements which have for their object the development of studious habits and an appreciation of the value and necessity of hard work, and refuse to pass judgment upon the work of the school and the success of the teacher without any knowledge of either, the educational millennium will be near.

On every hand can be found evidences of educational progress. There is no doubt that the world is growing both wiser and better as the years pass. Each tidal wave of progress bears us onward and upward, higher and higher, to an ideal civilization. In that ideal civilization there must, of necessity, be many important factors, but chief among them all will ever remain the three named at the beginning of this article — the Church, the Home, and the School.

It is not necessary to determine which of these three is greatest. In fact neither one is great except as it is willing to lend a helping hand to the work of the other two. Let the members of the church, the parents in the home, and the teachers in the school all consecrate themselves anew to their work and thus be prepared for one constant, united effort to give the world what it needs worse than it can ever need anything else, and that is a true, strong pure, noble, Christian manhood and womanhood.

# Charity Work in China

C. F. Appleton

As a result of the teachings of Christianity, the poor not only have the Gospel preached unto them, thus providing for their spiritual needs, but provision is also made for their temporal needs. One noticeable feature of most Chinese cities as contrasted with those in Western lands, is the number of beggars—the lame, the halt, the blind, the leper and the slug-gard—who wander about the streets piteously pleading for a few cash to purchase food to satisfy the cravings of hunger.

During the famine of 1907, the Chinese Government contributed five hundred thousand dollars (Mexican), and two native famine relief Committees

temple grounds, at another point in an old soldiers' barracks, but any public property may be used for the purpose. We visited two of these places recently and were kindly received by those in charge of the work. It reminded one much of the old Roman public food cribs where the multitudes of voters received free meals. It also reminds one of the work of distribution of foodstuffs in the famine district of 1907. The work here, however, is entirely under native control and seems to be well managed. Separate compounds are provided for the men and women. In the men's compound there are separate passageways for children, for old men and for those in the prime of

life. At the entrance to the distributing place each child is given one and each man two bamboo tally sticks, each of which entitles the holder to a bowl of cooked millet. A large yard is walled off inside the compound where the people remain while eating their portion and until the work of distribution is over for the day—usually about ten o'clock or earlier in the morning. The millet is cooked in large Chinese kettles, fourteen of which we counted in one kitchen. From these it is poured into large water jars whence it is distributed to the people.

Another line of charity work has recently been opened in the old examination halls which have become use-

Joss Idol.

raised nearly one million two hundred thousand more for the relief of the starving multitudes. These were in addition to the generous foreign contributions.

In the city of Kai Feng Fu, Honan Province, the central government for many years has made provision for the feeding of several thousand poor people for the three winter months of each year, viz.: the eleventh, twelfth, and first moons, corresponding nearly to our December, January and February. The population of this city is estimated at half a million and the people who receive help from the poor fund annually number several tens of thousands. There are six distributing points for the relief work—three for men and boys and the same number for girls and women. The distribution takes place at one point on

less since the passing away of the old régime of education. These buildings are now turned to better use. A normal school of three hundred students now occupies about half the old compound while the other half has been turned into an industrial school for the poor. About a dozen trades, including carpenter, blacksmith, tailor, shoemaker, making straw mats and weaving, are being taught by experienced men. The last-mentioned trade is especially interesting and employs a large number of men and boys, some of whom soon become quite skillful and turn out some beautiful designs of a cheaper grade of carpet. The inmates are provided with food, shelter and clothing for the first few weeks and as they become skillful in any line of work wages are paid them. The expenses of this

institution also are paid from the Emperor's treasury. Yet in spite of all the efforts being put forth for the alleviation of suffering, on the streets of this city are still heard the piteous cries of the poor, the sick, the homeless and the opium fiend.

*Kai Feng Fu, Honan, China.*

### AN OUTING.

CARL NELSON.

Sky of blue,  
Sunny, too,  
Gauzy clouds are scudding;  
Fields of flowers,  
Woodland bowers,  
And cherry blossoms a-budding.  
Freshening breeze,  
Rustling leaves,  
Through them sun shafts gleaming;  
Crowd of three,  
Lucky three,  
Wander lakeward dreaming.  
Wind is high,  
Joyous high,  
White-capped waves are brimming;  
Push from shore,  
Swing the oar,  
Through the waves we're skimming.  
Mabel aft,  
Lill abaft,  
Amidships sits the oarsman;  
Rhythmic ride  
O'er the tide,  
Then we camp in woodland.  
Restful shade,  
Grassy glade,  
Spread the viands over;  
Picnic lunch,  
Hungry bunch,  
Three little pigs in clover.  
Evening tide,  
Home we glide,  
Sun-kissed waves are foaming;  
Fragile shell,  
Rides the swell  
Like a pigeon homing.  
Dying breeze,  
Whispering leaves,  
Mellow sunlight gleaming;  
Crowd of three,  
Lucky three,  
Ramble homeward dreaming.

Cando, N. D.

### HISTORY OF PRINTING.

JOHN H. NOWLAN.

To tell just when printing was invented is very much like stating the precise moment when night ends and day begins.

The Egyptians engraved on tiles and cylinders, and impressed them on clay tablets, which were afterwards hardened by fire.

The ruins of Nineveh and Babylon yield many volumes of books made of burnt clay on which the characters were stamped while the material was soft. The characters were triangular, from which the writings are called "cuneiform," which means wedge-shaped.

The Chinese have printed for centuries, but as in all their other arts, have made little or no progress. The blocks were cut by hand, each one being a page.

Some think the Romans knew of the art of printing, but were afraid to use it, for fear that the spread of knowledge would cause the people to revolt. It was at least true that their emperors had stamps and signets to affix to public documents as seals.

For the antiquity of this kind of printing read Ex. 28: 11; 1 Kings 21: 8; Job 38: 14.

Who was the inventor of printing as we know it? The Dutch claim Lawrence Koster, of Harlem, and the Germans declare for John Gutenberg, of Mentz.

Others claim Gutenberg invented only a press, while movable type was the invention of one of his workmen. Gutenberg is said to have rewarded him by giving him an interest in the business and the hand of his daughter in marriage. He is said to have taken one of the blocks, sawed the letters apart, and used them in other combinations.

Gutenberg's first book was Luther's translation of the Old Testament.

After the death of Gutenberg the business was carried on by his son-in-law, and John Faust, a goldsmith of Mentz.

Faust printed Bibles, which he sold for sixty crowns, while manuscript copies sold for five hundred. He supplied all demands, and even reduced the price.

The type was in imitation of the script of those days. Because of the exactness of the copies and the fact that he used red ink the superstitious people accused him of being in league with the devil and of using his own blood.

To save himself from the stake he revealed his secret to the Parliament of Paris.

The art spread rapidly, and in a few years presses were in operation in the principal cities of Europe.

The first press in America was set up in the City of Mexico in 1569, and the first in what is now United States in Harvard College in 1639.

The first Bible printed in America was John Eliot's Indian Bible. The type for this book was set by an Indian and required three years to complete on the Cambridge press.

The first strictly American Bible was printed by Christopher Sauer, who was a member of the Church of the Brethren. He cast his own type and I think made his own paper. I have read that several copies of this Bible, which was in the German language, are yet in existence in Pennsylvania and neighboring States.

## Around the World Without a Cent

H. M. Spickler

### Chapter XVIII.

AFTER Killarney I rode to the north, passing among the quaint western people. The country people live in queer old stone houses. In fact almost every house here is of stone. Lumber is an unknown article in building material. Some of the houses were convex in form, rising from the ground like the upper half of a ball, the stones fitting into one another so perfectly as to be able to endure the weight of themselves for hundreds of years. The door is so small that on entering you must stoop low, and when once in you see no windows. The fuel here is peat that is digged from the ground, from the surface down to a depth of five or ten feet, cut out in the shape of ordinary bricks.

At one of the country houses where I was entertained over night the upstairs was reached by a ladder. The big white pig came into the dining hall and nudged my elbow while I was cutting the bacon and mixing it with the potatoes which the people usually call "spuds." I was unwilling to share any of my meal here in a strange house with so strange a guest, and the hog came closer, working its clean, white snout into all kinds of grunt wrinkles and trying to talk to me in its pig language. Just as I often squeeze a dog's nose, so I dared to pinch the grisly nose of the Irish hog which I was allowed to do,—under conditions.

At another place the donkey stayed in my sleeping room, which was the parlor of the home. One night on going to bed in the dark, something struck me on the hand as I carried something into my room. I lighted a match, standing still in my tracks, when I saw just in front of me the family donkey getting ready to fire away with both feet if I approached nearer. It had been in the dark room all evening and could see me as I came in. I had come in from the lighted room and so could not perceive it. Neither of us was to blame, the donkey or I. My eyes hadn't yet adjusted their focus for the dark room, and the donkey hadn't used his reasoning powers relative to the results obtained in passing from a lighted to a darkened room. He thought I was going "to walk over him" and like most human donkeys, he was going to resent the intrusion by a couple of kicks. Although no harm is meant, some people at once resent an act of another as

if it had been meant to harm them. Many an insult is received but not given. Snubs fall from snobs, but never come from gentlemen or are received by them. "Thinketh no evil." Men, like donkeys, floundering about in the dark, often kick those who come to them.

So I thought as I drew the damp covers over my tired muscles and slept in the "spare bed" of the interesting Irish family.

The wild waves were beating upon the cliffs in the northwest, smashing the rocks as if they were eggs. From my room I could hear their angry howl all night long. The house stood so near the beach I was told that in the greatest gales the spray of the waves dashed into the house. At times the roar was deafening. Along in the afternoon I caught some excellent snap-shots of rough sea-breaking effects, and was nearly drenched by the billows several times before getting out of their ponderous way.

At Galway I saw the finest fishing-place, probably, in the world, where, to catch salmon, the fishermen must pay five dollars a day and give back two-thirds of the fish caught. Even at this high price the fishers make money. The salmon jump over the ford in great droves.

After a dozen recitals in rope-making, ship-building Belfast a little steamer carried me to bonny Scotland where I was received as an honored guest before a number of inspiring audiences in the elegant city of Glasgow.

With the gentle breeze of spring kissing my cheek I pedaled into the Burns country, stood where Robbie and his Highland Mary had plighted their troth, never again to see one another in life, walked into the field where he plowed up the "mouse" and into the meadow where he plucked the "daisy," and where I plucked one and sent to my mother and another to my sister, and fastened one in the lapel of my coat,—the same kind of a daisy, the descendant of those Burns sang about; crossed the Brig o' Doon, where Tam O' Shanter's mare lost her tail, and after dreaming along the

"Banks and braes of Bonnie Doon  
How can ye bloom sae fresh and fair,"

I rode to the extreme south of the island, through Scotland and England, and on a morning after disembarked from a French steamer, at Dieppe, France.

That night, sixty miles from the coast, I was arrested as the possible *murderer* of two Paris policemen.

Riding into a provincial town I inquired for a cheap lodging. No one could speak English and it was difficult to make them understand. In fact they were a little frightened at me. They wondered why a tourist dressed in a good bicycle suit and riding a good wheel should ask for a "cheap" lodging.

Finally, after asking here and there about town, and not securing any supper or lodging, two official-looking men took me in charge, one the mayor, the other the superintendent of schools, and both acting as policemen. I wasn't sure they meant to detain me, but when I attempted to mount and ride away, the mayor forcibly seized my wheel and I changed my mind about going just then.

In France,—at night, under arrest!

The trial was conducted in French and English. They used the French, I the English.

The schoolmaster asked most of the questions, which he did in the usual vehement, excited, nervous way of the voluble French.

"Avez-vous des papiers delivres par l'autorites civiles? Respondez!" (Have you any papers delivered by the civil authorities? Answer.)

"Oui, mon passeporte des Etas Units." (Yes, my United States passport.)

But they were too excited to understand me. What they had asked for was an interior passport showing the city in France to which I belonged. Such a paper is not demanded in Britain or America.

"Pourquoi ne vous etes vous pas presents du Consul Americaine?" (Why did you not present yourself to the American Consul?)

A chill passed over me when I noticed with what bated breath they awaited my answer to this decisive question.

But the holder of a passport is protected by virtue of its possession without the need of looking up the consul everywhere to have it visaed. Besides I had arrived at the French port that morning at four o'clock and had ridden at once into the country. Outside of Spain, Turkey and Russia there is no great need of a passport.

"Vous avez commis une negligence qui causera une nuit de retard." (You have committed a negligence which will cause you a night of delay.)

A night of delay! That meant the jail for me that night. Although tired, hungry and sleepy, I was now compelled to draw upon my wasted strength in self-defense for my liberty.

## ALPHABET OF AMERICAN AUTHORS.

G. FEGLEY.

### XIX. Mrs. L. H. Sigourney.

LYDIA HUNTLEY was born in Norwich, Conn., in 1791, and was an only child. She was a descendant of Elder William Wentworth, who came over in the Mayflower, and was the father of the American branch of the famous House of Wentworths, who are able to trace their ancestry back to the Saxon, Rynald de Wyntewade, or Reginald of Wentworth, in Strafford, England, about 1066. This House reached royalty itself. In 1339 Sir John Wentworth was Lord High Chancellor and Bishop of London, and later on came Oliver Cromwell, and a Wentworth married Sir John Seymour, whose daughter Jane married King Henry VIII, and became mother of King Edward VI. The American Wentworths and their families are of this immediate line.

Having been carefully educated, at the age of nineteen Miss Huntley with her friend, Anna Maria Hyde, established a school for young ladies, and two years later she removed to Hartford to pursue the same occupation. In 1819 she married Mr. Charles Sigourney, a Hartford merchant. She made a trip to Europe in 1840, and on her return wrote her "Pleasant Memories of Pleasant Lands." Her habits of system and order were such that she was able to accomplish much that to others would have been impossible. "She was famous among her neighbors for her domestic thrift and for active coöperation with her sex in deeds of social benevolence." She has been designated as "the American Hemans," from the tone of her writings. "Along the calm, sequestered vale of duty and usefulness, her writings like a river fresh from its mountain spring, gladdened many a quiet home, stimulated into activity many a generous heart." She wrote much prose in the way of tales, sketches, essays, instructive letters, yet is remembered always as a poetess of no mean quality.

Her first published work was a small volume of poems in 1815. In 1822 she published a descriptive poem on the "Traits of the Aborigines in America," and in 1824 "A Sketch of Connecticut Forty Years Since." Other works were, "Pocahontas and Other Poems," "Lays of the Heart," "Tales in Prose and Verse," "Whispers to a Bride," "Letters to Young Ladies," "Letters to Mothers," "Letters to My Pupils," etc. "Past Meridian" was written when the shadows of life began to fall about her, and her fiftieth book, "Letters of Life," a sort of autobiography, was ready for publication at the time of her death in June, 1865.

"When count shall be made of the various agencies, moral and intellectual, which moulded the American mind and heart during the first half of the nineteenth century, few names will be honored with a larger credit than that of Lydia H. Sigourney."

Worthy of mention: W. G. Simms, novels; E. C. Stedman, poetry; Harriet B. Stowe, novels; R. H. Stoddard, poetry; Rev. J. L. Spalding, education; Henry W. Shaw, humorous; A. Schuyler, mathematics; Epes Sargent, poetry and history; H. E. Scudder,

stories; John G. Saxe, poetry; Philip Schaff, theology; N. C. Schaeffer, education; Jared Sparks, history; Charles Sprague, poetry; F. R. Stockton, stories; Levi Seeley, education.

## Protective Resemblances and Mimicry of the Arthropods

Charlotte Davis

THE Arthropodia, meaning joint-footed animals, is one of the seven great branches in the animal kingdom, and is divided into five classes, namely: Crustacea, Onychophora, Myriapodia, Insecta, and Arachnida. In many of the animals of this extensive branch we find "Protective Resemblances and Mimicry" beautifully illustrated.

First, I will explain to my reader the meaning of the term "protective resemblances"; by this is meant the harmonization of colors and markings of an animal with soil and vegetation so that it is nearly indistinguishable as long as it remains at rest, thus protecting it from capture and death. By "mimicry" we must not take the broad meaning of the word, which suggests the exercise of volition or intent on the part of the mimicking animal, but must ascribe to it a technical meaning, which excludes any such suggestion. However, each case of mimicry is the result of a slow gradual change thru a long series of ancestors. The mimicry may indeed include the adoption of certain habits of action which strengthen and make more pronounced the deception of shape and color. But these habits, too, are the result of a long development and are performed without the exercise of the will or reason.

Let us now look at the first class of Arthropods, the class, "Crustacea," which is divided into two subclasses, the Entomostraca and the Malacostraca. In the former subclass we find the fairy shrimp or branchipus which is especially interesting because of its protective resemblances. It is said that in certain parts of the Atlantic Ocean which are covered with great patches of sea-weed, called the gulf-weed, many of the shrimps, also some of the crabs, belonging to the subclass Malacostraca, live. The gulf-weed is of an olive-yellow color and these crabs and shrimps which live among the weed are exactly the same shade of yellow and have small white markings on their bodies which are characteristic of the weed. However, we need not go to the Atlantic Ocean for illustrations. Let us notice the common crawfish, found in any of our fresh-water streams. Is it not precisely the same color of the rocks and sand among which it lives? General protective resemblance is very widespread among animals, but is not easily appreciated when

the animal is seen without its natural environment. Along almost any coast, the lobster, a decapod, another species of the Malacostraca, are to be found, often beautifully colored and harmonizing with the sea-weed among which they live.

In the class Onychophora, we have the little animal Peripatus, the seeming link between worms and insects, which is very dark in color, making it difficult to detect when lying on the moist earth where it makes its home. Among the class Myriapoda we find the same thing true of the thousand-legged worms and the centipeds.

Now, of all the classes the Insecta come first in possessing the greatest number of remarkable illustrations of protective resemblances and mimicry. Perhaps this is due to the fact that the insects have been made a special study by entomologists, but it may also be due to the fact that the great class "Insecta" includes more than two-thirds of all the living species of animals known. The struggle for existence among the insects is especially severe and bitter and since insect colors and patterns are especially varied it is only to be expected that this useful modification that results in striking protective resemblances and mimicry should be especially widespread among insects. Moreover, they are mostly deficient in other means of defense, and seem to be the favorite food for many different kinds of animals. Protective resemblance is their best and most widely-adopted means of preserving life.

The class "Insecta" includes seven subclasses, namely: Aptera, Orothoptera, Hemiptera, Diptera, Coleoptera, Lepidoptera, and Hymenoptera, nearly all of which claim various species bearing some form of protective resemblances. Let us notice some of the four-winged species, belonging to the Orothoptera. The common grasshopper is a good example. It is so like its environment in color that it is very hard to locate altho you may think you know exactly where it hopped. The pretty little katydid is also of a bright green color resembling closely the shade of foliage whereon it stays during the day. Going to the next subclass, Hemiptera we all know how hard it is to detect the little green plant lice which sometimes ruin our plants before we know they are on them. Espe-

cially is this true of the phylloxera, a plant louse which causes annually the loss of millions of dollars among the vineyards of this and other countries. While many animals are variously colored so as to resemble their surroundings, generally or specifically, many other animals are very brightly colored and patterned. Many animals, as we well know, possess special and effective weapons of defense, as the poison fangs of some snakes and the sting of bees and wasps. Other animals, and with these cases most of us are not so well acquainted, possess a means of defense, or rather safety, in being inedible—that is, in possessing some ill-tasting substance in the body which renders them unpalatable to predaceous animals. Now, it is obvious that it would be a great advantage to such animals if they could be easily recognized by the different animals likely to prey upon them and this advantage of being readily recognized is possessed by many, if not all the ill-tasting animals, by being brilliantly colored and marked. This is clearly illustrated by the lady-bird beetle, one of the Coleoptera. This composes a whole family of beetles which are brightly colored and spotted. Not only is this true of the beetles but many caterpillars possess these warning colors.

Noticing the subclass of moths and butterflies, we notice that some of these possess special protective resemblances. The larvae of the geometrid moth, called inch-worm or span-worm, are twig-like in appearance and have the habit, when disturbed, of standing out stiffly from the twig or branch upon which they rest, so as to resemble in position as well as in color and markings a short or broken twig. There are also many butterflies that resemble dead leaves. All of our common meadow brown and reddish butterflies with ragged-edged wings, that appear in the autumn and flutter aimlessly about like a falling leaf, show this resemblance. But the most remarkable of all is a large butterfly of the East Indian region. The upper sides of the wings are dark, with purplish and orange markings, not at all resembling a dead leaf. But the butterflies when at rest hold their wings together over their back, so that only the undersides of the wings are exposed. The undersides of the wings are exactly the color of a dead leaf and the wings are so held that all combine to mimic with extraordinary fidelity a dead leaf still attached to the twig by a short leaf-stalk imitated by a short tail on the hind wings, and showing mid rib, oblique veins, and, most remarkable of all, two apparent holes, like those made in leaves by insects. With the head and feelers concealed beneath the wings, it makes the resemblance wonderfully exact. It is also true that many brightly-colored butterflies are not edible. These species are mimicked by other different species which are edible, but the deception is not detected by the birds and so they are not molested.

Bees and wasps are protected by their stings. They are usually conspicuous, being branded with yellow and black. There is also a peculiar species of ant, found in the Amazons, which have the curious habit of cutting off, with their sharp jaws, bits of green leaves and carrying them to their nests. In carrying the bits of leaves the ants hold them vertically above their heads and thus to some extent, hide themselves.

In the subclass, Arachnida, it is found that many spiders that live habitually on tree trunks resemble bits of bark or small irregular masses of lichen. A whole family of spiders, which live in flower cups lying in wait for insects, are white and pink and party-colored, resembling the markings of the special flowers frequented by them. This is a special resemblance not so much for protection as it is to aid the little animal in securing its food; the insects coming to visit the flowers are unable to distinguish the enemy and fall an easy prey.

Protective resemblances and mimicry are a great benefit to all animals possessing them and they play a great part in the preservation of a great many different species.

#### THE GREAT ROOSEVELT IRRIGATION DAM.

THE irrigation dam in construction on the Salt River in eastern Arizona is one of the greatest projects of its kind which has yet been undertaken by the United States Board of Reclamation. The Roosevelt dam, which is to create the Tonto reservoir, will be with one exception the highest constructed by the Board's engineers, while exceeding all other of their works in capacities. The dam will form a storage basin holding sufficient water to flood 1,300,000 acres to an average depth of one foot. This quantity is much larger than the volume held in storage by the greatest Nile reservoir. The supply will be secured from the Verde and the Salt rivers, which drain a watershed of 6,260 square miles. The average yearly rainfall over this drainage basin is not over 20 inches. The annual rainfall upon the territory to be irrigated ranges from 3 to 10 inches; and the rapid evaporation of moisture is indicated by the fact that the temperature in the summer ranges as high as 120 degrees, although the elevation varies from 1,000 to 1,300 feet altitude. The dam will impound sufficient water to fully irrigate 270,000 acres of soil. This soil is known to be fertile when water in sufficient quantities is applied; the Department of Agriculture having tested a few experimental tracts, with the result that the crops have been remarkable for their quality and yield.

A feature of the undertaking is the power canal. Water power or electric current has before been secured from dams intended for irrigating purposes by utilizing the waste water. Such power, however, is only available when the flow of water into a reservoir is more than sufficient to fill it. The power at Roose-

velt is obtained independently of the irrigating scheme, the canal being separate from the reservoir and one of the first works completed. The head of water secured by means of the canal actuates waterwheels connected to electric generators at present developing over 1,500 horse-power. From the power station extends a transmission line conveying current to the plant for the manufacture of cement, the stone-crushing plant, for lighting, operating the aerial railway, and for other purposes. Under a head of 250 feet, hydraulic jets with nozzles of 11 inches have been used to wash away the loose formation and accumulation of sump above the bedrock upon which the dam proper is being built, and have greatly facilitated progress. Much of the gravel thus secured has been utilized for construction material. To remove the gravel, elevators have been placed in service.

This canal, which is twenty miles in length, is one of the permanent works. Most of it is lined with concrete, and it includes several extensive tunnels, aggregating nearly 10,000 feet in length. It is carried over gulches by concrete pipes. The dams used for diverting the water to the power canal represent a cost of \$40,000, while the canal, including its pressure pipe and auxiliary structures, represents a total of nearly \$1,000,000. When all the generating sets are to be installed for service, it will develop no less than 4,400 horse-power, which will be used for pumping water for irrigation.

A cement mill has a capacity for manufacturing 10,000 barrels a month when the machinery is working to its complete capacity. Much of the raw material necessary for the cement has been found in abundance locally, and cement is manufactured at a cost of \$2.25 per barrel, less than half the cost of cement from the outside. The mill is operated entirely by electric power, as already intimated, the current being transmitted from the power house at the end of the canal.

Work upon the construction of the dam proper has been in progress only since September 20, 1906, owing to the immense amount of labor required in making the excavation to bedrock. When it is remembered that the height of the dam above the rock is 284 feet, the length at the bottom 235 feet, and the length at the top 1,080 feet, the time and labor required in preparing the site for the wall do not seem excessive. The work is what is technically known as a masonry arch dam with a gravity section arising from the foundation. It will range in thickness from nearly 175 feet at the bottom to 16 feet at the top—sufficient to provide a highway for vehicles.

As soon as the blocks of stone are quarried, they are carried to the site and placed in position by boom derricks, while the aerial tramway conveys the cement in which they are set. An enormous quantity of rock, set in concrete, is required for filling in behind the face, and boulders as large as can be handled are used.

Nearly 400,000 cubic yards of masonry will be placed in position when the dam is completed, and the reservoir which it will create will form a lake  $25\frac{1}{2}$  square miles in area. As soon as the dam is finished, the cement mill and other construction plants will be stripped of all machinery which can be profitably removed and the buildings abandoned, as they will be many feet under water when the reservoir fills.

An interesting feature of the work is an outlet, which has been constructed through the walls of the canyon a distance of 500 feet. This tunnel will not only carry off much of the surplus water, but also the silt which is brought down the channels in such large quantities during the flood height. The question of removing this silt was solved by the engineers by planning the tunnel in question. The current through it will be so rapid, that it is believed the sediment will thus be removed without difficulty. The tunnel contains no less than six gates, which will be required to regulate the flow of the water. They are built to be operated under a pressure of 100 pounds to the square inch, and including their operating mechanism will weigh in the aggregate nearly 400 tons.

Considering the extent of the project, rapid progress has been made. On July 1 of last year but three per cent of the construction had been completed. At the end of 1907, however, the great wall had reached a point nearly 20 feet above its base and extending from side to side of the canyon. This work has been accomplished in a climate where the temperature reaches 120 degrees, and operations have been carried on during the intense heat of the summer.

The diversion dam to be constructed 30 miles from the main dam is almost as important in connection with the reclamation of this section of Arizona as the construction at Roosevelt. Work has been in progress upon this for over a year. It is intended to keep the water of the Salt and Verde rivers at a certain level, and will increase their depth to the extent of 15 feet over the present low water average. An idea of the dimensions of this dam can be gained when it is stated that it will be nearly 1,300 feet long, and will require 40,000 cubic yards of concrete before it is completed. A distributing canal is being built in connection with regulating gates, which will have a flow of at least 2,000 feet per second. This is located upon the north side of the dam. Another canal with a capacity of 1,000 feet per second is being constructed on the south side. The site of this operation is at what is known as Granite Reef, about thirty miles from Phoenix. It will furnish the water which will be served by the electric pumps already referred to, the service covering 40,000 acres. — *Scientific American*.

WHAT is the use of health or life if not to do some work therewith? — *Carlyle*.

# THE INGLENOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE, ELGIN, ILL.

Subscription price, \$1.00 per Annum, in Advance.

The Inglenook stands for material and spiritual progress. Its departments are: Literary, Editorial, Home, Cream of Magazines, World News.

Its qualities are: Good Sentiment, Moral Convictions, Inspiration.

Its purpose is: To safeguard home life by supplanting and counteracting bad literature.

Its scope of matter is: Scientific, Religious, Educational, Philanthropic, Economical, Sociological and Financial.

Its field is: The World.

Liberal commission given to agents. Sample copies are given upon request. When changing address give both old and new addresses.

Entered at the Postoffice at Elgin, Ill., as Second-class Matter.

## WILLIAM JENNINGS BRYAN.

LAST week we printed a sketch of the life of the Republican candidate for the presidency. The sketch of the life of the Democratic candidate, as that of Mr. Taft, is adapted from several write-ups of the man.

William Jennings Bryan was born March 19, 1860, at Salem, Ill., and was the second of the nine children of Silas and Mariah Jennings Bryan. Silas, the father, was born in Culpeper County, Virginia, in 1822, and is described as a man of exceptional character and excellent education, being a graduate of McKendree College and a lawyer of distinction. He also occupied a judicial position and was a member of the Illinois convention of 1872, which framed the present constitution of the State. He was a member of the Baptist church, and was very devout. It was his habit to pray morning, noon and night. He was a firm believer in providential direction in the affairs of life. He was not a narrow sectarian, however, as is evidenced by the fact that his broad and tolerant sympathies found expression every year at harvest time when he sent a load of hay to each preacher and priest in Salem, his neighboring town. This information is interesting, since it suggests the origin of Mr. Bryan's deep and broad religious faith. It was the earliest ambition of the son to become a minister, he having been converted at the age of fourteen in special meetings in the Cumberland Presbyterian Church, which explains by the way, how he happens to be of a different church connection from that of his parents. His passion for public life, however, was also inherited from his father, and on completion of his academic career at Illinois College where he was graduated with the honor of the highest rank in scholarship, being also elected class orator, he determined to begin the study of law, which he pursued at the Union College of Law in Chicago. On his admission to the bar, he practiced four years in Jacksonville, Illinois, and removed to Lincoln, Nebraska, his present home, Octo-

ber 1, 1887. Here he has been in partnership with Mr. A. R. Talbot, a classmate in the law school, who has attained considerable prominence in the Republican politics of Nebraska.

From 1891 to 1895 Mr. Bryan was a Representative in the national congress where he made several effective speeches on free trade. From 1894 to 1896 he was editor of the Omaha *World-Herald*. For a short period in 1898 he served as a Colonel of volunteers in the Spanish-American war. All are familiar with his public appearances as Democratic candidate for the presidency in 1896 and in 1900.

Mrs. Bryan, who was Miss Mary Baird before her marriage October 1, 1884, is a most worthy companion of her husband. She was valedictorian of her class in Jacksonville Female Seminary, as Mr. Bryan was of his. She also has pursued a thorough course in the Supreme Court of Nebraska. Her talents are not exercised actively at the bar, but she is of incalculable assistance to her husband in the multiplied activities, both political and personal, in which he is engaged. There are three children in the family, Mrs. Ruth Bryan Leavitt, William Jennings, Jr., and Miss Grace D. Bryan, the youngest child.

It will be evident from the above that Mr. Bryan bears a good family pedigree. His ancestors were all people of the middle class, if we must recognize class in our American social order, but they were without exception industrious, law-abiding, God-fearing people.

It is evident also that, besides having the advantage of being well born, Mr. Bryan has the benefit of a liberal education, which has been extended in later years by world-wide travel, in which he has been received with distinguished honor by foreign governments and by men of large caliber in all parts of the world. Indeed, there has been no American since the days of Grant who has received a more generous tribute of respect from foreign people, and there has been no man since Lincoln who has borne his honors with more discretion and humility. In the city of Lincoln he is still on familiar terms of respect and confidence with all classes. This is illustrated by a recent conference between two citizens of Lincoln, which is reported to us by Mr. C. M. Mayne, general secretary of the Young Men's Christian Association of that city, to whom we are indebted for much of the local information which appears in this article. These two townsmen were discussing the invitation which Mr. Bryan had received to attend the recent conference at the White House. One said, "I tell you, Mr. Bryan is getting to be a great man." The other replied, "Well, anyhow, he never shows it off around here." One need not be in Lincoln an hour before finding that, irrespective of creed or party or class, Mr. Bryan has the genuine respect of the entire community in which he lives.

His religious faith is as simple as a child's, yet deep and powerful. Its enunciation in his address, entitled the "Prince of Peace," which has been heard in the last two years in all parts of the land, is clear-cut and comforting and of great practical value, especially to all young men. His confidence in the overruling power of God in the affairs of men is the only explanation for his calmness and repose when facing great odds or enduring defeat. His religious life and his ability as a speaker have led many to wish often that he might devote his life to evangelistic work. A well-known member of an organization of Christian traveling men said to him recently, "I am a Republican, but I will vote for you next time if you will promise to devote your life to religious work after you have served for one term in the White House." Mr. Bryan retorted, laughing, "No doubt! You are not the first Republican I have met who wished to have me enter the ministry."

Not only has Mr. Bryan's public influence as a Christian been of great and positive aid to the cause, but his public and private example as a man of clean life and habit has been of immense assistance, especially to the cause of temperance. He is absolutely and always has been a teetotaler, not only at home, but abroad. While traveling in Japan, for example, he was the guest at a banquet given to welcome Admiral Togo. When the American visitor arose to toast the victorious old seaman, somebody called his attention to the fact that his glass contained only water instead of champagne. Mr. Bryan said, "Admiral Togo won his battles on water. When he wins them on wine it will be time enough to drink to him in that beverage."

In consequence of his public declaration of personal aversion to the use of liquor, as well as his condemnation of the army canteen and his suppression of it in his own regiment during the Spanish War, Mr. Bryan is almost sure to incur the united hostility of the liquor interests in the presidential campaign. Four, eight or twelve years ago they would have been largely indifferent to his public attitude on the drink habit, but now that the saloon has become the dominant moral issue of the times it is bound to have a large place in determining the results of every election henceforth until this issue is settled and settled right.

The statement has been made that the Bryan of today is not intellectually or ethically the same Bryan who carried the Chicago Convention of 1896 off its feet with his "Cross of Gold and Crown of Thorns" speech.

This assertion is only about half true. The Bryan of 1896 had youth and its fire. The Bryan of today has more maturity, more knowledge of the world, and more poise. But it is to be questioned whether there has been so much change in Bryan as there has

been in the temper of the people to whom he made his appeal twelve years ago, and to whom he is renewing practically the same appeal, with the exception of one issue, today.

Yet he is a new man in many ways. When first nominated, barely beyond the constitutional age prescribed for a President, he knew his own country, but none other. Since that time he has made frequent trips abroad, has made one trip around the world, has visited every one of our colonial possessions, and indeed is better equipped to discuss the foreign relations of the United States and its colonial problems than any man in public life.

This statement may be objected to by some who have in mind Mr. Taft's work and travels abroad. But the difference in the relations under which each man traveled gives the advantage to Mr. Bryan, since he went as an unofficial American citizen and was permitted to see things as they were, while Mr. Taft in his official position was made to see conditions in as favorable light as possible.

And there is, too, another difference between the new Bryan and the old, though this is a material and not a moral difference. The Bryan of 1896 was ridiculed very unjustly for his poverty; the Bryan of 1908 is attacked very unjustly for his wealth. Mr. Bryan has always owned his own home. In '96 it was an attractive and not too small a frame house within the town limits of Lincoln. Some people then sneered at him because he did not live in a style more befitting a Presidential possibility. Today they sneer because, with advancing years and as the result of indomitable energy and the utilization of his mental power, he has built himself a beautiful house outside of the city of Lincoln. In brief, while the first Bryan was by no means a pauper, the new Bryan is prosperous, but his prosperity has been coined from his own brain and is in no way dependent upon speculation, investments, or legal retainers from trusts or monopolies. Such prosperity as he has today comes from hard work on the lecture platform and from a weekly newspaper which he founded and to which he gives all the attention which it is possible for a man continually traveling to devote.

If Mr. Bryan cared more for money and less for ethics than he does, the income which he derives from his paper, the *Commoner*, might readily be tripled. His advertising manager in Chicago some time ago almost wept as he spoke of the obstacles which were put in his way when he attempted to secure advertising. It is only a guess, but the circulation of the paper probably exceeds 200,000 copies weekly. Any journalist or publisher knows what might be done with such a circulation. But the *Commoner* carries only a beggarly two or three columns of advertising. The reason is that the owner of the *Commoner* clings

## Before Nellie Was Married

Elizabeth D. Rosenberger

"A GREAT chef once remarked, speaking of women as cooks: 'Women—women are no good; they haven't the brains!' And he explained that the greater number of women who entered kitchens are too uneducated, too mentally inferior to make cooks, therefore, sister mine, I foresee a troubled future for you," and Arthur Hadley drew his sister Nellie down on his knee to comfort her for the shortcomings of woman as a class.

Nellie laughed a merry, whole-souled laugh in which her brother joined. "And I say that I should like to cook some dishes for your old chef that would make him conclude that at least these were seasoned with brains."

"Bake some apple-dumplings then," said her brother remorselessly, and that was "the most unkindest cut of all," for Nellie's apple dumplings needed a label in order that they might not be mistaken for something else. She could not make the seams join, and so the apples usually burst their narrow bounds, escaped from their moorings, and were scattered all over the baking pan.

"You might have recalled a more pleasing memory, but I don't care, my chocolate cake is better than any ever concocted by a French chef. You'll have to admit that," retorted Nellie.

"I am afraid there is where the trouble lies," continued her brother soberly. "You can bake fine cake, and maybe make fudge and other candies until a fellow yearns for them. But how about broiling beefsteak and preparing every-day things for a hungry man?"

"If I don't know how, at least I can learn before we get married," said Nellie courageously.

"See that you begin soon, for there is no time to lose," answered her brother as he went down the street to his office.

And Nellie sat still, thinking more seriously about the domestic duties of her home that was to be than she had ever done before. She knew that a knowledge of housekeeping did not "come by nature," and as she thought of all the things that must be evolved from the kitchen to fill the dining table three times a day, her ignorance came over her with a rush.

She had a wild desire to take lessons in cookery, and after a while she could astonish her brother and the household generally by her skill and proficiency. She decided to begin at the beginning and learn from the foundation up. She knew a good deal about the frills of cookery, but her brother had opened her eyes to the fact that she knew very little about the fundamentals. Yes, she could go to a cooking school and she soon decided that she would go and learn all she could, how to make apple dumplings and broil steak as well as how to make *parfait*, *frappe*, and all those dainty desserts with which she was familiar.

But after some time spent in the cooking school, Nellie decided it was not enough. She was learning how to cook, the instruction was excellent, but she had no practical idea of the workings of a kitchen. So she decided to take a turn at keeping house in her mother's home before leaving the dear old place for her own home. And in doing this she learned many things of which she was ignorant before. She found that not all the knowledge demanded concerning housekeeping was concentrated in the kitchen; and a familiarity with cooking did not make up for ignorance in other respects. The marketing class was affiliated with the cooking class at her school, so by the help of this instruction, Nellie learned what to buy. Her teacher in marketing showed her how to judge of poultry, and how to distinguish fresh fish; she took her to the meat shop and described the different cuts of each animal, she showed what piece should be taken for one purpose, what cut is demanded for another. And then the vegetables, cheese, butter and eggs, had to be investigated, and Nellie felt that she knew how to judge fresh things, nothing either stale or rancid should find its way to her table.

Will you be surprised when I tell you that Nellie determined to learn how to wash and iron clothes? Her mother had always hired a woman to do this work and supposed that Nellie would also hire her washing done; but Nellie said, "If I never need to stand at the wash-tub, I want to know how to wash and starch shirts and shirt-waists, how to do up thin curtains and lawn

dresses." Then Nellie learned how to sweep, how to polish silver at the least expenditure of energy with the best results; how to wash wood-work without taking off the paint as well as the dirt. And she was happy because she believed that in all the world there is no higher or more noble office, because none having a wider influence than that of the home-maker.

And when people spoke of Nellie's approaching marriage, they asked, "Will she do well?" meaning "Is she going to marry a rich man?" And if that question was answered truthfully, the reply must be, "No, he is a poor man, holding a good position, and hoping to be promoted." But in every way he was worthy of her and her efforts to be a fitting helpmeet for him. No piled up wealth for either of them, no splendid palatial home awaiting them, only an ordinary seven-roomed house, to be made into a home.

"Locust timbers, brick and stones  
Are its bones;  
And I saw them wrought together  
In the keen autumnal weather  
Joint by joint and bone by bone to fit a plan,  
As sages build of fossil forms some unremembered man."

"So my house there reared its head,  
Cold and dead,  
With a chill to linger always—  
Till Love breathed along the hallways,  
Laughed and wept there, toiled and dreamt there  
in the gloam;  
Now those window eyes are brimming with the  
wakened soul of Home."

Nellie and her husband found it so. He possessed honesty and courage and was willing to work hard, and she counted responsibility a privilege and was able to adjust herself to all the new relations of her own home. There was no place in her heart or mind for the unkind word or thought which is likely to halt another soul, she came to her husband bringing delight and serene strength, deep in her emotion and capable in her actions. As the good Book describes her, she will do him good and not evil all the days of her life. And as the years went by these two weathered life's storms together and were blessed.

#### HER NEW CURE.

MRS. MCADAM'S home was surely a bit of paradise, so her friends all said, and so she daily acknowledged. In business her husband was prosperous, and even the most critical agreed that the couple were well mated. Sudden sickness attacked the husband, and his death brought sorrow and change. Nurse Ball had been a school friend of Mrs. McAdam and was a great admirer of the dear woman.

"I must crochet as fast as I can," said the nurse to her sister. "I want to finish these slippers before I am able to take another case."

"Why do you hurry? I do not think you ought when your hands are lame."

"They are for Mary McAdam. She gets cold so easily; they will be just the thing for her in her room. The house she has taken is not the same she has been accustomed to and she is frail. How strange things turn."

"Why do you make them of red yarn when she wears black?"

"Red looks warm and cheerful, and in one's room it does not matter." The slippers were finished and sent with a loving note.

Thanksgiving Day came in the changed home, but Mrs. McAdam tried to keep good cheer with her young boy. They had a nice dinner, and late in the afternoon a caller came and said: "I have thought about you all day. We have had a glorious day; had our first invited guests in our new housekeeping. As soon as our company went I started out to see you. I had thought of you before, and got mamma to knit you a pair of bedroom slippers. I put the soles on myself. I think mamma knits them very prettily. I hope they will fit you."

Mrs. McAdam was delighted with the thoughtfulness of her friend, and said the gift was as dainty as could be. The slippers were knit in a small block pattern of black wool, with a crocheted row around the top for a tie ribbon.

"I hope the slippers will keep you from catching cold. Do not try to save them. When they are worn out we will make another pair," were the words at parting.

A little later, in spite of the two pairs of slippers Mrs. McAdam was down sick in bed. When she began to recover, her friends were kind in sending her dainty jellies and tempting things to eat. One day one of her choice friends sent her a small package and a dear note. In the note her friend said:

"I send you these bedroom slippers of my own handwork. I know how easily one takes cold after any sickness. I beg you will wear them out as fast as you can."

That pair of slippers was so pretty that Mrs. McAdam put them on that same day. They were made of black wool and lined throughout with soft lavender silk, and a large knot of lavender ribbon trimmed the toe of each.

Winter wore on, and Mrs. McAdam received a letter from a favorite cousin living in the West. This letter expressed much sympathy. In the letter she said that she was sending under separate cover a pair of bedroom slippers. She added:

"I have knit into the slippers such loving thoughts of you, and such hopes for your health and happiness, that I look to the shoes as a sort of cure-all for you."

When it neared Easter, and the large number of

flowers at the florist's rivaled each other in their delicate purples and lavenders and white, Mrs. McAdam received a package from a very dear friend. In this package there was a delicately perfumed note, telling how the writer had seen the flowers but desired to send some more lasting gift, so had made a pair of slippers of shaded wools of the colors, lavender and purple with white, and the note added:

"I can only wish for these slippers:

"Like violets blooming in the wayside grass,  
Some subtle hope and strengthening to bring."

Mrs. McAdam arranged the five pairs of slippers on a low shelf in her clothes closet, and called the shelf her medicine chest. Several months later a few mutual friends met for a cup of four o'clock tea, which was always brewed at Mrs. McAdam's house. They discussed the various new cures that had interested them, and remarked how the best physicians now gave little medicine. They talked of drinking a great deal of cold water, and the hot water drink, of the old "grape cure," and of things both new and old, when Mrs. McAdam said:

"Did you know I have my own special cure? Come with me and I will show you." They followed her, and she opened her closet door and told the story of the slippers.

"The red pair, sent by the nurse, I call my 'rest cure,' for she warned me to take needed rest, and often to rest instead of depending upon tonics. The next pair are my 'joy cure,' for they came from a happy bride and recall to me my own happy life. The third pair serve for ministry; the friend thought of me, so I can always find some one to whom to show kindness and favor. The fourth one, from a cousin, is 'kinship,' and recalls the privilege of remembering those bound to you by relationship; and the sight of the beautiful colors of the fifth suggests faith and hope, with the warning of sweet humility."

One friend exclaimed: "Whether the slippers are a cure for you or not, your story of them has cured me of fault-finding about presents I do not need. I see it does not depend entirely upon the spirit in which things are given, but much upon one's own spirit in receiving."—*New York Observer*.

#### TELLING NOT TRAINING.

TELLING is not training. The one is but thin air, the other is substance.

It is easy for us to remember this in a material way, but not hard to forget it when it comes to training the child spiritually.

A mother could not expect to train her daughter to sew by merely telling her to get a needle and "do it right." She knows very well she must sit down beside the little girl, take her hands and guide them

time after time, until she can thread the needle. Then she shows her how to hold the cloth, how to take a stitch, and the way the seam should go.

This she does many times, encouraging, correcting; but sympathizing and comforting when the tears of failure come.

That is training.

No mother would expect her son to become a carpenter by merely being told to "do it right."

His hands must be taught to guide the saw until it will follow the line. Week after week, here a correction, there an encouragement from his teacher must pass before he can even join two boards as they should be joined. Then months of practice under the guidance of the one who knows before he is a skilled workman.

That is training.

Could you make a great musician by merely telling the child to go and "do it right"? Certainly not. Months and months and even years it takes of patient showing, explaining, guiding, encouraging, sympathizing.

Even to give knowledge is not training. We know a long time before we can do.

Not a sense, not a muscle, not a faculty can be trained by merely telling what to do and what not to do. It must be surrounded and upheld, guided and led corrected and encouraged, strengthened and fortified.

The moral training of a child is no exception. It is not only the most important, but the most difficult part of the child's training.

To tell the child what is right and wrong is only a beginning,—a small beginning of his training.

A child is inclined by nature to do everything it can, either right or wrong. The object of moral training is to teach it which is right and which is wrong; lead it to prefer the right, then strengthen and develop its powers until it can do the right in spite of temptation.

The qualities above all others required for this training are justice and sympathy—sympathy all the way, even more when the child is wrong than when it is right.

The justice keeps the mother from shielding the child from the punishment which its wrong acts bring. It causes the mother to make it plain to the child that "being found out" is not the punishment for wrong doing, but that the very act itself will bring punishment.

The sympathy keeps her in vital touch with the child. The most dangerous thing of all is to associate the child in your mind or allow it to associate itself in its mind with the wrong it has done.

That is, no child should be made to feel that because of a bad act it has become an exile, that it is a "bad little boy" or an "ugly little girl."

That is the start that leads to deception in an effort

to cover up its wrong acts, and causes the child to ally itself after awhile to wrong deeds, and making that its policy, fight for and justify its evil ways.

The child must feel that the evil itself is its enemy. It should know that the wrong will bring punishment that hurts, but that the mother will help bear it, and show how to keep from doing it again.

Many a tragic battle goes on in a little soul when the spirit and flesh are at war. It is both unwise and cruel to make it feel when the tears of defeat tell that the flesh is victor, that it is bad like its act and is cut off from love and sympathy.

Then of all times it should be mother's child, and while it should be allowed to pay the full penalty of its misconduct, in the fullness of her sympathy she should show it the way to avoid or overcome next time the enemy—the common enemy of mother and child—evil.—*American Motherhood.*

#### SEASONABLE RECIPES AND SUGGESTIONS.

**BEETS**—Wash, boil, and skin white or red beets; slice and cut in small squares; to one pint add one pint of milk, two eggs well beaten, a little salt and pepper; put in buttered baking dish and bake till custard is firm, fifteen or twenty minutes. Beets are especially valuable as an article of food on account of the sugar they contain.

**RICE AND TOMATO SOUP**—A good summer soup is made by boiling one-half of a cupful of rice in two quarts of water until reduced to a thick starch. Add to this a pint of reduced stewed tomatoes, season with salt, pepper and onion juice and rub through a sieve. Reheat and serve with croutons, sprinkling over it, when in the tureen, a little finely chopped parsley.

**WHEN** on your outings, if you wish to bring flowers or plants home with you, lay a piece of wet newspaper in the bottom of your pasteboard lunch box, lay the flowers or plants on this, sprinkle them well, and lay another wet paper over them, and put on the cover. They will keep fresh and sweet for a considerable time, or until your home is reached.

**FRUIT CANNING**—A correspondent of the *Agricultural Economist* says an old colored woman, brought up in the South, taught her a point in fruit canning. She says: "She advised me to buy a roll of the very best cotton batting, cut rounds out of it just the size of the top of the fruit cans, and place one on top of the fruit as soon as I had filled the can, and seal it immediately. I have tried this plan for five years and have found it excellent for preserving the fruit, as the cotton excludes all the air, and if any particles of mold form at all they can be lifted out without spreading into the fruit."

### O SUMI SAN, A GIRL OF JAPAN.

O SUMI SAN was only eight years old but she was sorrowful, for her mother was very very ill. Each day O Sumi San had prayed to the heathen gods, "Make my mother well, make my mother well!" but no comfort came to her, and each day her mother was weaker. Sumi's heart ached. She had no brothers or sisters. Her father was very dear, but how lonely it would be if her mother should die!

"I will climb up the 'hundred steps' of the temple," said Sumi to herself, "then the gods will listen." So she slipped out of her home early one morning, not telling anyone of her purpose—it was too sad to talk about. Wearily she climbed the steep flight of stone steps leading to the temple, and all the while she was praying: "Make my mother well, make my mother well!" But the gods did not seem to hear. "Over and over will I do it, then will they listen," thought Sumi.

Morning after morning she climbed the temple steps with heavy heart. Each day her mother seemed to be slipping away. "I must deny myself something, then the gods will hear," thought Sumi. "I will deny myself sweet potatoes." (Sweet potatoes are to Japanese children what candy is to Americans.) No help came even then. Her dear mother died and little Sumi grieved and wondered why the gods did not hear.

One day Sumi's father said to her: "My little daughter, I have found a pleasant school where you may live with other girls. You will not be so lonely, and the foreign ladies will teach you English. Our people must learn English if we are to meet the Western nations."

In a few days Sumi started off with her father to the foreign school. She was sorry to leave him, but she was eager to see the strange ways of foreign people. The school was a mission boarding school for girls, and the missionary lady who welcomed Sumi was so kind and sweet that Sumi loved her at once.

That night Sumi nestled in the missionary's arms and told her her sorrow, told her of her dear mother who had died and of the gods who would not listen. Very gently the missionary told Sumi of the loving Jesus who cares for all our sorrows, and who has prepared a beautiful home in heaven. She read the words, "I will not leave you comfortless, I will come to you." How sweet these words sounded, how different this from the careless priests and the idol gods who never loved!

Each day Sumi learned more about Jesus and each day she grew more fond of the teacher who

was her loving friend. When she became older she asked her father's permission to confess Christ. This he allowed her to do. Several years later her father also became a Christian.

When some years had passed and Sumi had finished school we said to her one day: "Sumi, how long was it after you heard of Jesus before you became a Christian?"

"How long?" She seemed hardly to understand. "How long?—why, as soon as I heard, I loved him."

Many people say that the religion of the heathen satisfies them, that it is not necessary for us to give them our own, so one day we asked: "Sumi, suppose you had never heard of Jesus, you had your own religion, would not that have satisfied you? Would it have made any difference if you had never heard of Jesus?"

Sumi looked at us with grieved, astonished eyes. We felt ashamed to ask, but we wanted her answer. Big tears came into her eyes as she said in low, earnest tones: "*Any difference? The difference of darkness and light!*"—*Over Sea and Land.*

## For SUNDAY READING

### ALONE WITH GOD.

MARTHA SHEPARD LIPPINCOTT.

Alone with God in silent prayer,  
My heart will find content,  
While through the power of his love,  
Rich blessings will be sent.  
My soul will resignation learn,  
To what must be his will.  
He all my loving, trusting heart,  
With faith and trust, will fill.  
Then, when the trials of life will come,  
Dear Lord, alone with thee,  
Let me commune in silent prayer,  
To thy blest wisdom, see;  
For thou wilt guide me through each night,  
When dark may seem the way;  
And when I'm guided by thy light  
The night will turn to day.

Moorestown, New Jersey.

### CONCERNING THE NEEDS OF THE CHURCH.

RICHARD BRAUNSTEIN.

FOR quite a number of years now attention has been drawn to the unsatisfactory condition of the spiritual side of the church and many thoughtful persons regard the matter with apprehension. The fires are burning low. They are not extinguished. They are low, and must be fanned into flames of activity, enthusiasm, praise and worship. There is need of personal work which will ignite the dead-wood out-

side of our church edifice. We are in need of a widespread, far-reaching and sweeping revival.

The defects may be traced to the coldness and apparent deadness of spiritual life. Many of our ministers and their congregations are in a rut; in a lethargic state. The churches are strong in membership; there are funds in the treasury, there is good attendance. There is, however, a "come Sunday, go Sunday" feeling about it all. The Gospel, of course is spread, but most of it is held in the narrow confines of four walls. We sit and listen to it every Sunday. We are content to have it so. Outside there is a sister or a brother who would like to hear it. Do we bring it to them? Do we make an effort to bring them to hear it? No, I believe not.

There is a certain deadness, we said. We are not going to write an obituary, and we do not regard the prevalent languor as premonitory of dissolution. Such a period of depression is not a novelty in the history of the Christian Church; and the condition of things may be vastly improved by a small effort; by a little individual work. We write, to suggest remedies.

The first and best of remedies is giving attention to the evil by a vast body of well-intentioned and thoroughly loyal Christians who have hitherto more or less neglected religious work for reasons best known to themselves perhaps; for reasons that have seemed sufficient but are really altogether inadequate. Religious duties are supreme; nothing should be allowed to interfere with them. The fact that multitudes of good people *do* allow everything to interfere with religious work is the first fact in the case. If such persons will look about them and note the general decay of church life, they will probably be startled into activity. If in any church two score of such Christians would begin the treatment of the claims of the church, and zealously enter into all the work of God, a revival would inevitably follow; and by a revival here, we do not mean the sensational, hysterical, psychological kind but a revival, a resurrection of sleeping spirituality; a quickening of the pulse, and expanding of the soul.

So long as large numbers of influential members are irregular in church attendance, habitually absent from social meetings, and, to be perfectly plain, spiritually *dead* and *useless* in the church there will be increasing lack of interest and devotion; and a general tumbling down of the institution. This is an age of progress. The slogan of the twentieth century is *go ahead*. Do, dare, achieve. Everything to be modern, and worth while must keep abreast of the times. Very much so the Church.

A special trouble these days is our inappropriate intellectuality. The pulpit deals too much with opinions and a very little with religious experience.

*Opinions, as a form of intellectual life, are too apt to encroach upon activity in all fields.* It is one thing

to desire knowledge; it is quite another thing to make all intellectual life a study or a defense of opinions. What one knows is a very different matter from what conclusions he has come to. It often happens that a man's strenuous opinions have no relation to his knowledge. He knows how to manage a farm; but his tenacious concern is free-will and foreordination, of which he knows nothing. As a Christian he ought to know his own heart, and his own penitence, faith and love toward God.

The pulpit ought to press upon our attention the facts of inner knowledge, the aspects and possibilities of experience, the personal and spiritual divine life in man. This cannot be done by rote, by catalogue and nomenclature. The preacher must think it out for himself and present it in his own way. The Lord has need of a preacher's personality. The oldest truth is fresh and animating when it is poured through the personality of the preacher.

We have been well-nigh undone by orthodox formulas, by careful and exact repetition of phrases, and sentences which once had *men* behind them, and have become tedious and depressing by lifeless iteration. We need orthodox experience in living forms of speech. We need originality, naturalness, and modernness, in the verbal dress of spiritual things.

We also need a like freshness in methods of doing religious work. A minister ought to be alert to devise ways of doing things. Conducting social meetings, Sunday schools and conference meetings. A bit of novelty is like a summer shower on a parched field. The monotony of a perpetual motion deadens the interest of the people; they grow weary of unchanging order and stereotyped system. It is not necessary to change everything; but give us now and then the refreshment of some small change, some bit of new method. Better still, do not change anything. Give us everything in a new way, in a new light and a stronger one. What we need is a mental interest in spiritual concerns. How to give or get, that is a proper subject for study by pastor and member. It is very certain that unvarying method becomes to most minds fatal to sustained interest. It will do the pastor a world of good to study himself out of sameness, and his people out of ruts of routine.

When there is a quickened interest and earnestness in the work of God, a revival which shall thrill the church with divine life may be confidently expected. The preacher needs a devout rather than a theological mind. The layman needs religious experiences rather than opinions about religion. We are plentifully stocked with theology and religious opinions; we ought to lay in a store of sound and earnest piety. We have the skeleton, but the bones are very dry. The dry bones must be clothed with spiritual life. They must be alive, and throb with vitality and animation.

### LIKE THE RAGS.

A WICKED woman working in one of the great paper mills of Glasgow was converted through the efforts of a city missionary, and became a person of great devoutness of character. She described the process of her salvation in these terms: "I was like the rags that go into the paper mill. They are torn and filthy, but they come out clear, white paper. That is like what Jesus is doing for me." That is, indeed, the work which the great Redeemer is doing for millions of our race. That is the method by which the kingdom of God is being made triumphant in the earth.—*Selected.*

### LET YOUR SOUL DELIGHT ITSELF IN FATNESS.

"If ye be willing and obedient ye shall eat the good of the land." Isa. 1: 19. "Eat ye that which is good and let your soul delight itself in fatness." Isa. 55: 2. How lean some Christians are! Like Pharaoh's kine, they can scarcely cast a shadow. Why be so lean when there is plenty to eat and to spare? Is there any lack in your experience? Get into Canaan. Do you lack power? Tarry in the upper room, and you shall receive the power of the Holy Ghost. Acts 1: 8. Do you lack boldness? Perfect love is the remedy. "Every place that the sole of your foot shall tread upon, that have I given unto you, as I said unto Moses." Joshua 1: 3. They could have all they claimed. If they were content with an acre, all right; if they wanted realms, they were simply to move on, and they owned them. How contented some people are to be staked out with a twelve-foot rope until they have eaten all the grass off and are nearly starved! Where are your feet treading—in green pastures beside still waters? "With joy shall ye draw waters out of the wells of salvation." Isa. 12: 3. "A well of water springing up into everlasting life." John 4: 14. No more working away at the rusty old pump, pumping and priming and working to get a little joy, but like an artesian well bubbling up and running over, watering the dreary wastes around. The fountain that makes every whit whole. Deep? A deeper work of grace. Surely deeper than stains of sin. If the atonement of Christ in his cleansing blood can not get as deep in the soul as the devil has put sin, surely it must be a failure. Is it a failure? "The blood of Jesus Christ his Son cleanseth us from all sin." 1 John 1: 7.—*Selected.*

"WHEN" the Bible is thrown open we find the whole tone of it, the keynote to which all its song is pitched, is that of prayer offered and answer given. Its very praises are prayers; its epistles are interrupted with outbursts and overflow of prayers, so that the Bible is the prayer book of the world."

# Echoes from Everywhere

Mr. Burbank is said to have perfected his thornless cactus, so that he will be able to offer plants for sale in the spring of 1909. He thinks it will become a great food-producing crop for both men and animals.

Temperance victories are the more cheering when it is considered how powerful is the foe from whom they have been won. The liquor traffic of the country has a capital of \$3,500,000,000 invested in 3,632 distilleries, 17,111 wholesale houses and 225,000 saloons.

Winnipeg, Man., Aug. 2.—More than 100 lives are known to have been lost as the result of bush fires, which have swept over an area of one hundred square miles in the east Kootenay country. Whole cities and towns have been laid low and the flames are spreading throughout other places. Already the loss in property is estimated at more than \$10,000,000, and this may be swelled enormously before the fire burns itself out.

It is reported that the Czar has ordered the expulsion from the Russian universities of all female students. It is said that the order will affect no less than 22,000 women, many of whom are nearing graduation. Hereafter no women are to be admitted as students. The reason for this drastic action lies in the open encouragement of the revolutionary propaganda on the part of the women students. The edict will doubtless go into effect, but the result of it is yet to be seen.

The associated chambers of commerce of Japan have passed resolutions pledging themselves to invite a party of one hundred representative business men from our leading cities to visit the Island Empire in October during the beautiful chrysanthemum season, and look into the industrial and commercial conditions of the country. Such a visit, they hope, will promote trade and cordial relations, and possibly help to increase Western faith in Eastern ideals and promises.

A total abstinence league has been organized in the Alton, Illinois, Diocese by Catholic priests. The members include twenty-five priests, one-sixth of the number in Alton Diocese. The league has pledged itself to emphasize in sermons the declaration of the Council of Baltimore that all Catholics should refrain from engaging in the saloon business and those now engaged should get out of the business as soon as they can.

As the result of a cave-in in a coal mine at Crows Nest Pass, twenty-three miners are buried in the workings of the mine and may all succumb before aid can reach them. A large crew of rescuers it at work endeavoring to dig a tunnel through the 400 feet of earth which separates the imprisoned miners from daylight, in order to give them air and sustain life until they can be reached. It will take several days to dig them out or send them food.

The Vienna Academy of Sciences has spent nearly \$9,000 in working 10 tons of uranium ore for radium. The yield was three grains of pure radium—the largest amount ever secured at once, the value being \$20,000.

London, July 31.—The old age pensions bill passed the house of lords this afternoon in the form adopted by the house of commons. The bill was sent back to the commons yesterday, and the commons rejected the amendment added by Lord Cromer and other members of the upper house. The house of lords passed also the Irish universities bill, so both measures now are law.

The new rail specifications of the Pennsylvania Railroad contain one requirement which should result in some decidedly interesting information concerning the cause of failures of rails in service. This is the marking of each rail with a letter indicating the portion of the ingot from which it came. It has been found by the Philadelphia and Reading Railway that two-thirds of all the rails which fail are rolled from the top of the ingot, and the next largest percentage of failures is among the rails from the bottom of the ingot.

Preparations are being made for the opening of a forestry school in Mukden, for China is beginning to realize that she must begin to endeavor to save her trees. To the lack of forests more than to anything else is assigned the cause of the destructive floods that sweep down the denuded mountains. Despite the fact that Chinese soil is well adapted to raising trees these members of the vegetable world are scarcer in that country than in any other in the world.

Measures have been adopted to limit and finally prohibit the importation of Turkish and Persian opium into the Celestial Empire. Permits for the importation of Turkish and Persian opium will be issued only to firms now importing it, and the maximum amount allowed to enter the empire during 1908 will be the amount imported last year, and this amount will, beginning with 1909, be reduced one-ninth each year. After 1916 no permits will be issued, and Turkish and Persian opium will be denied admission, as will the Indian product under the agreement with Great Britain.

Hawthorne's famous "House of Seven Gables" at Salem, Mass., has been purchased by Miss Caroline O. Emmerton of that city, to be used as a social settlement center. The old building on Turner Street will be completely repaired, but in keeping with its original colonial architecture. Miss Emmerton is the daughter of a sea captain who amassed a fortune in the coast trade. The old house belonged to the family of Captain Samuel Ingersoll, relatives of Hawthorne. Like numerous famous landmarks, the authenticity of this house of seven gables has been questioned.

With the announcement by the Chinese of their plans to erect a \$100,000 Confucian temple in New York's Chinatown, comes the information that Y. M. C. A. workers have already made plans for a Chinese Y. M. C. A. branch in the same neighborhood, which they will make a valiant competitor of the temple.

It is mentioned in an item in the Horseless Age that the city of Milwaukee will, in a short time, use no horses for municipal purposes, except to draw fire engines. The city officials are convinced that the automobile is so far in advance of the horse in cost, maintenance, and utility, that there is hardly any room for a comparison.

Havana, Aug. 3.—Examination of the ballots in last week's election is still unfinished, only fourteen out of the 143 existing election districts having been examined. The result, based on calculations by leaders of each party, seem to indicate that General Zayas, liberal, is in the lead for the governorship of Havana province, and for mayor of Havana Julio de Gardenas, conservative, has the advantage. In the rest of the island the conservatives are leading in three out of six provinces.

During the past year the Intercollegiate Prohibition movement reached 48,000 students, enlisted workers and leaders for the cause in every section of the country, put 75 young men into Minnesota campaign, 60 in Illinois, furnished many others for Indiana, Iowa, Texas, Washington and other States, and conducted a systematic study of the liquor problem in the colleges and universities of 17 States. It is announced that General Secretary Harry S. Warner has published the entire study course of the Intercollegiate Prohibition Association during the past three years in a comprehensive and ready-for-practical-use arrangement. One of the best points of this new publication which is entitled "Social Welfare and the Liquor Problem," is its exhaustive and accurate bibliography covering practically every point of special interest and importance in the sixteen chapters dealing with the general subject.

#### Providing for Future Railroad Ties.

The Santa Fe system is perfecting plans for a forest of eucalyptus trees in San Diego County, California, from which to obtain a steady supply of crossties. A ranch of 8,000 acres has been purchased for this purpose, and as a start 600 acres will be planted. It is estimated that in eighteen years the company will be able to harvest from six to eight ties to a tree, and keep up the harvest thereafter continually. At present the Santa Fe system uses about 3,000,000 ties annually. In eighteen years the company thinks it will be able to obtain from its forest 7,000,000 annually.

The growing scarcity of timber suitable for ties, with a resultant increase in their cost, has led eleven roads, including the Santa Fe, to start forests. Ten roads in the East have already planted in their respective forest sites thousands of catalpa, black locust, red oak, pin oak, and chestnut. The Santa Fe has selected the eucalyptus because of its rapid growth and adaptability to the climate of California, New Mexico, and Texas.

Eucalyptus ties in Hawaii are said to last fifteen years. East of Albuquerque the Santa Fe is using Georgia pine. At present both the Santa Fe and Southern Pacific are using many thousands of redwood ties on the coast. They are also getting oaken ties from Japan.—Scientific American.

Work on the Government's petition for a rehearing of the Standard Oil case is progressing rapidly. District Attorney Sims, and his assistants, James H. Wilkerson and Harry A. Parkin, are confining practically all of their attention to work on the plea which will be presented to the United States Circuit Court of Appeals.

It is said the Government will set up as one of the causes why it should be granted a rehearing on the reversal of the \$29,240,000 fine against the oil company that the Court of Appeals' opinion contained many discrepancies of fact. Meanwhile Attorney-General Bonaparte is said to have instructed Special Government Counsel Frank B. Kellogg to prepare for the certiorari proceedings to be filed in the Supreme Court.

Henry Farman has been making a number of successful flights recently with his aeroplane, a machine heavier than air, at the Brighton Beach racetrack. After several flights in a straight line Farman made an attempt to turn his machine. The huge birdlike apparatus answered the helm readily, turning in a semi-circle and then flying clear across the track, where the aviator made it alight. In one of the trial flights an attempt at the spectacular was made by Farman's managers when they introduced a speedy automobile, for the purpose of having a race between the flying machine and motor car. The first attempt resulted in a failure, as the automobile found soft ground and many obstacles. In a second trial the driver used the racetrack. It was, however, no race at all, for the airship easily left the car in the rear. After a flight of 800 yards Farman alighted. The automobile was at that time about 300 yards in the rear.

#### A New Salt-Refining Process.

The British salt-manufacturing industry is deeply interested in a new refining process that has been evolved, and one which promises to completely revolutionize the trade. By its utilization the involved and expensive evaporation process is completely superseded. The crude salt combined with its impurities is dumped into an open-hearth furnace, where it rapidly becomes converted into a molten condition. The furnace is then tapped, and the molten mineral is drawn off into a huge iron mold or converter. A stream of compressed air is then projected through the mass, which precipitates the impurities, owing to the agitation of the mass, to the bottom of the converter. This operation occupies about an hour, and then the salt is permitted to cool and recrystallize. The converter is then discharged, and the mass is secured with the impurities lying caked at the bottom, while the salt itself is snow-white and pure, ready for grinding and shipment. In a recent test some 4,000 pounds of the crude article were charged into the furnace, of which eighty per cent ultimately yielded pure salt, the balance being various impurities associated with the raw mineral. During the smelting operation the temperature of the furnace is raised to between 1600 and 1800 deg. F. The cost of production is very low, averaging \$1.25 per ton. In this particular experiment the fuel used was slack coal, a ton of which is sufficient to produce 15 tons of pure salt. One advantage of salt obtained by this process is the destruction of its absorbent quality, the salt crystals being very fine and absolutely free from moisture, so that it does not cake by coming into contact with and so readily absorbing atmospheric moisture as does the article produced by the ordinary evaporative methods.—Scientific American Supplement.

## CREAM OF MAGAZINES

### "UNCLE REMUS."

It is being said of "Uncle Remus" that "there was never another just like him in all our history, and there will never be any one else who can exactly take his place." This observation in the Charleston News and Courier may be explained perhaps by another to be found in the Detroit Free Press, that "men of wide fame have died in the recent past, and among them have been some who may have influenced the nation more than Joel Chandler Harris, tho none has been closer to the hearts of his countrymen." Comments on the death of the Southern writer whose identity has long been merged with "Uncle Remus," the figure he created, all partake of personal affection. He passed away at his home in Atlanta, Ga., on July 3. Young and old are represented as his friends. "He did not 'write down' to children," says the Indianapolis News, "and the result is that the stories of Mr. Harris have delighted all classes. . . . They captivated, not only the children, not only their fathers and mothers, but the sober students of folk-lore as well."

The following sketch of Mr. Harris's career is quoted from the Springfield Republican:

"Harris was born at Eatonton, Ga., December 8, 1848, and was thus but halfway along in his sixtieth year—he ought to have lived longer, for there was visible no diminution of his genius. He was educated in the common schools of his region and at the Eatonton Academy. He began work as 'printer's devil' on a Confederate newspaper, *The Countryman*, published on a plantation nine miles from the nearest postoffice. The paper was edited by Joseph Addison Turner, to whose memory Mr. Harris dedicated his book, 'On the Plantation,' as 'lawyer, editor, scholar, planter, and philanthropist.' This journal, a weekly, was published at \$10 a year in the early part of 1864; then the price was raised to \$15, and later to \$20—in Confederate money of course. Turner had a good deal of wit, and an insouciant way of bearing the brunt of war. His place was plundered by the 'bummers' of Sherman's army, and yet he bore it in a good-natured way that was wonderful. Harris the man remembered with gratitude his boy's experience with such a man. He wrote items for *The Countryman*, and occasionally verse; nor should it be forgotten that Uncle Remus's 'Songs and Sayings' showed a clever facility in riming, which Harris seldom indulged in. After the burning of the little 'shanty' printing-office Harris went to Savannah, and thence to Atlanta. He was a reporter on the Atlanta Constitution when he wrote the first Uncle Remus sketch, at the urgent encouragement of Evan Howell, long the editor of that able paper. Immediately it caught the attention of the country, and he remained attached to *The Constitution*, becoming its chief ornament and distinction. His plantation stories and sketches are genuine, and he did an inestimable service in preserving them. Since he showed the way, there have been many to follow, and among the few who have done this

successfully is Martha Young, many of whose beautiful or quaint sketches have first appeared in *The Republican*, and are since issued in book form.

"Mr. Harris was, besides all this original work, an editorial writer for *The Constitution*, and was excellent in that work also. Most of his work was done outside the office of the paper, at his home, in a cottage embowered in sweet gums and pines, in the little village of West Point, where the mocking-birds sang, and in whose grounds his Jersey cows and his bees and his kitchen and flower-gardens had room. The cottage had generous hearths and many windows; his library was but a small one, his pictures were few, but his children had the run of the house and the place. There dwelt his mother, his wife, four boys, and one daughter. He cared nothing for society, and was indeed the most natural and informal of men. Harris was an American as well as a Southerner, and he was an idealist; his great hero was Abraham Lincoln."

### BOYS OUT OF SCHOOL AND FACTORIES OUT OF BOYS.

The commonest sight of our American cities today is the boy who has nothing to do. If you watch the street corners or alleyways of crowded neighborhoods, you will see them in groups of six and a dozen. They are not in school and they are not at work. At the same time, if you enter the factories and stores where trades and industries of our times are learned they are not there either. Machine shops today do not contain apprentices. You do not see blacksmiths, and bricklayers, and carpenters, with helpers. Our American boys are above that—or we think they are—and they do not go into factories. Add to this the movement to secure a uniform child labor law which will take boys under the age of fourteen out of the factories and from the labor of all sorts of trades, and you will readily see where the man of the future who is not intellectually superior is going to land. "Out of work" will be a commoner cry in twenty years from now than it is now, if something is not done to modify this condition.

At the same time, it is not the part of either good sense or good judgment to advocate a return to or continuation of the child-labor system as it is maintained in certain portions of the world at this date. The child should be educated and not be injured in a sweating labor system. Neither should he be allowed to be seized upon by disease or deformity for want of early medical attention. How he should be educated is another matter and that is where the solution, if any, lies. A boy who is not capable of a very exceptional development ought to be taught a trade, and he ought to be taught that trade in our public schools. And he ought to be taught a trade whether he wants it or not, for if he were equipped to take a position as an iron-molder, a wagon-maker, a plasterer, a carpenter, or any other worth-while doer of the technical details of the world, he would not so easily fall a prey to a variable labor market, and be seen drifting about wonder-

ing where he is to get the next meal. Labor is no less a matter of mental and technical ability than the work of any other profession. You must know how to do before you are allowed to do, and this can only be learned in a school or factory. If we will not send our children into the factories we must send them into the schools, and our schools must teach them what they are fitted to learn. This is not always Latin and Greek or any other of a score of things we now insist on teaching. The manual and technical training schools of our day have the right idea. If they were brought forward out of a background of uncertainty and given a front place in our array of educational or social training institutions, it would be a great thing for the oncoming boy, and the country as well. —The Delineator.

### A PUBLIC NUISANCE.

We refer—we more than refer, we point to, we inculpate, cite and arraign Richmond Pearson Hobson as a public nuisance, who fails to be a menace to public peace solely because the sensible American people, startled at first by his positive assurances of what he “knows,” will not take him seriously. He has been going over the country preaching an unholy war, slandering a peaceable nation, swinging Bellona’s torch, and mouthing the abuses of Shimei or Thersites. He is a public nuisance and a national disgrace.

We have had him first prancing and dancing over the country, ridiculous as the most bekist of martial heroes, but of late as the panoplied apostle of militant peace, making a new campaign around the Chautauquas and the Y. M. and Y. W. C. A.’s of the land, no longer as le baiseur, ringed with lovelocks, but changed to a frenzied godkin of battle, flying over our peaceful heavens, swinging the red thunderbolts of battle, and his head horrent with spired serpents, spitting flame and shaking pestilence and war. “War! war!” has been his strident cry, till we could think that the three Fates, and the three Furies, and the three Gorgons, and nine devils, and the dreaded name of Demogorgon, were in his train. We had hoped that the stout shaft of our correspondent, Dr. J. H. De Forest’s logic might have quenched his madness, as it has given confidence to all intelligent people, but he has steered his flight westward and found resting for unblest feet at Denver, and there, to the makers of the Democratic platform, for a full hour and a quarter he prophesied and threatened war, declared it was coming from Japan within four short years, declared that already Japan has a huge army of trained soldiers in Hawaii, that on the Pacific coast there were as many who are practicing the military art in shooting galleries, that the Philippines will be as easily snatched from us as will Hawaii, and that then terrible Japan will rule ocean and continent as far as the Rocky Mountains, while we, poor fools unprepared, our ships blown up, our harbors captured, our coasts ravaged, will be driven back to the Mississippi or the Atlantic to bemoan our deafness in not listening to this modern Tiresias of Greensboro, Alabama.

The committee on platform listened to him with open-mouthed wonder. Some believed and some doubted. He begged them to put in an ironclad plank for a big navy. The next day he was called to the platform to address the convention and the galleries. He began to repeat his well-worn tale of terror, but this time they were not impressed. When he looked to curdle their blood, telling them that “not so very long ago the President of the United States said in my presence, ‘There exists

the greatest possibility of a war with Japan,’” the disrespectful audience called out, “Come off!” “Rot!” “You’re crazy!” and he had to subside. Then the chairman, Mr. Bell, said, “The Chair hails from the Pacific Coast, and up to the present moment he has seen no occasion to enlist,” and the people roared with laughter. The next day President Roosevelt elected him an active member of the Ananias Club.

Congressman Hobson is ridiculous, but his campaign of slander and war is no laughing matter. He has been supported by lyceums and associations that have the curiosity to see and hear the man who scuttled a coal-ship and was supposed to cultivate kissing bees. He has the gift of speech and he has one mischievous obsession. There are people enough in Alabama who believe his insanity is not obvious enough to require confinement in an asylum, but they thought he would yield to the constraint required of a new member in the Capitol. He has escaped, he is rabid, foaming and frothing, his tumult and wrath in; he is a nuisance.

When Wali Dad—

“His sire was leaky of tongue and pen,  
His dam was a clucking, Khuttuck hen——”

carried his curse of an unstaunched speech to the Red Chief, Gholam Hyder, at Cabul, and told him the army of the Russ was coming, then the King smiled a smile as dark as death, and bade the babbling mischief-maker climb a peach tree and shout when the Russians came, and stay there till they came:

“‘The Russ is upon us,’ the clamor ran;  
‘Surely an hour shall bring their van  
Wait and watch.’”

and twenty bayonets ringed the tree to catch him if he fell. But that was in Cabul, and the King’s jest befitted the olden days. We cannot so utilize one of our peach trees.—The Independent.

### AN AMERICAN HERO.

“One morning in January, when the ice in the Hudson River ran unusually heavy,” says F. Hopkinson Smith, in the August Everybody’s “a Hoboken ferry-boat slowly crunched her way through the floating floes, until the thickness of the pack choked her paddles in mid-river. It was an early morning trip, and the decks were crowded with laboring men and the driveways choked with teams; the women and children standing inside the cabins were a solid mass up to the swinging doors. While she was gathering strength for a further effort, an ocean tug sheered to avoid her, veered a point, and crashed into her side, cutting her below the water-line in a great V-shaped gash. A moment more, and the disabled boat careened from the shock and fell over on her beam, helpless. Into the V-shaped gash the water poured a torrent. It seemed but a question of minutes before she would lunge headlong below the ice.

“Within two hundred yards of both boats, and free of the heaviest ice, steamed the wrecking-tug Reliance of the Off-shore Wrecking Company, and on her deck forward stood Captain Scott. When the ocean tug reversed her engines after the collision and backed clear of the shattered wheel-house of the ferry-boat, he sprang forward, stooped down, ran his eye along the water-line, noted in a flash every shattered plank, climbed into the pilot-house of his own boat, and before the astonished pilot could catch his breath, pushed the nose of the Re-

liance along the rail of the ferry-boat and dropped upon the latter's deck like a cat.

"With a threat to throw overboard any man who stirred, he dropped into the engine-room, met the engineer half-way up the ladder, compelled him to return, dragged the mattresses from the crew's bunks, stripped off blankets, snatched up clothes, overalls, cotton waste, and rags of carpet, cramming them into the great rent left by the tug's cutwater.

"It was useless. Little by little the water gained, bursting out first below, then on one side, only to be calked out again, and only to rush in once more.

"Captain Scott stood a moment as if undecided, ran his eye searchingly over the engine-room, saw that for his needs it was empty, then deliberately tore down the top wall of calking he had so carefully built up, and, before the engineer could protest, forced his own body into the gap, with his arm outside, level with the drifting ice.

"An hour later, the disabled ferry-boat, with every soul on board, was towed into the Hoboken slip.

"When they lifted the captain from the wreck, he was unconscious and barely alive. The water had frozen his blood, and the floating ice had torn the flesh from his protruding arm from shoulder to wrist. When the color began to creep back to his cheeks, he opened his eyes and said to the doctor who was winding the bandages: "Wuz any of them babies hurt?"

"A month passed before he regained his strength, and another week before the arm had healed so that he could get his coat on. Then he went back to the Reliance."

#### WILLIAM JENNINGS BRYAN.

(Continued from Page 757.)

to the idea that its advertising columns are just exactly as much a part of the paper as its editorial columns, and that if he is responsible for the editorial "we," he is equally responsible for any advertisement which appears in the paper which secures its circulation through his national prominence.

There is nothing new in this attitude on the part of Bryan. From his very earliest days in public life he has insisted upon making his private affairs run parallel with his public utterances and beliefs. There are men in public life who believe that they can sit in the United States Senate or the House of Representatives and represent all the people while as attorneys they represent a very few of the people whose interests are necessarily opposed to those of the many. Mr. Bryan is not of this sort. He discontinued the practice of law when he went to Congress first, and has never resumed it.

In these latter days a sense of his responsibility to the millions of people in this country who have put their trust in him, and who look upon him with an admiration amounting almost to idolatry, has impelled him to give up any sort of legal work, any kind of personal activity which would withdraw him in any degree from the fight for the people in which he has been enlisted. Mr. Bryan's entrance upon this campaign means to him a struggle, a task. While the Bryan of 1896 was a youth flushed with ambition,

eager to rush to the forefront as he then did, the new Bryan is a man not desiring so much the honors that are proffered to him, but rather feeling, with a solemn sense of responsibility, his duty to take up the battle for true Democratic principles and to lead a party long out of power to ultimate victory.

#### TO OUR READERS.

If you did not read the first article in last week's issue, "How the Home can Help the School," hunt up the magazine now and read the article and then read the remaining part of it in this issue. The author, Professor O. T. Corson, ex-state school commissioner of Ohio and editor of the *Ohio Educational Monthly*, has spent many years in the educational field and his experience makes him an authority on the subject. Let all parents read the articles and keep their points in mind during the coming school year.

#### BETWEEN WHILES.

A Scotchman, wishing to know his fate at once, telegraphed a proposal of marriage to the lady of his choice. After spending the entire day at the telegraph office he was finally rewarded late in the evening by an affirmative answer.

"If I were you," suggested the operator when he delivered the message, "I'd think twice before I'd marry a girl that kept me waiting all day for my answer."

"Na, na," retorted the Scot. "The lass who waits for the night rates is the lass for me."—Everybody's Magazine.

"An artist," said the man with pointed whiskers, "must not think about money."

"I suppose not," answered Mr. Cumrox. "Every time I buy a picture the artist wants enough to keep him from thinking about money for the rest of his life."—Washington Star.

**He Found Out.**—Gentleman (to cigar dealer)—"Have you any So-and-So brand in stock? How are they?"

Dealer—"First-class, sir. This last lot is an extremely fine one."

Gentleman (departing)—"Thanks; you wrote that they were very poor, but I am pleased to find you were mistaken. I am the manufacturer. Good-day."—Philadelphia Inquirer.

to push the sale of this book in your home congregation. Good commission. Write at once for terms.

**BRETHREN PUBLISHING HOUSE,**  
Elgin, Illinois.

## Mr. World and Miss Churchmember

By W. S. Harris

It is a forcible allegory, somewhat after the style of Pilgrim's Progress, but in no sense an imitation of it. Fathers and mothers, it is the book that you should get for your son and daughter, and at the same time read it yourself. You will be stronger for the church after having read it. It illustrates vividly how Satan lures the church member, step by step, from the pure Gospel, till finally he is lost forever. Send in your order at once and you will never regret it. Cloth only.

Our Price, Prepaid .....\$0.75

**BRETHREN PUBLISHING HOUSE,**  
Elgin, Illinois

## INDIA, A PROBLEM

W. B. Stover.

**BRETHREN PUBLISHING HOUSE,**  
Elgin, Illinois

Revised Edition of  
**Ropp's New Commercial Calculator**  
 And Short Cut Arithmetic

The Standard for Store, Farm, Bank or Factory,

5 1/2 x 2 3/4 in.

Greatly improved, enlarged and thoroughly revised.  
 Contains an entirely new system of unique Tables, Short Cuts  
 and Up-to-date Methods.

Unquestionably the most complete and comprehensive Calculator  
 ever published.

Has more than twice the matter, scope and capacity of Ropp's  
 former editions, of which

**Nearly 1,500,000 Copies have been Sold.**

The most convenient and practical Labor-saving work ever used  
 in the business world.

It will make every one independent, sure and self-reliant in all  
 practical calculations.

It will prevent mistakes, relieve the mind, save time and labor,  
 and often loss and trouble.

Its Tables are adapted to all trades and occupations of the city  
 or country.

**The Answer to Your Problem as Quickly as a Watch Shows the Time.**

It also explains and simplifies the principles of Arithmetic, Mechanics and Mensuration.  
 It will make the study and use of Figures easy and interesting to both young and old.  
 It will enable every progressive mind to become an expert, sure and rapid calculator.  
 It will prove a boon to all whose education in arithmetic has been limited or neglected.

**48 Cuts Illustrate the Elements of Mechanics and Mensuration**

It defines about 70 points in "Commercial Law" which every man and woman should  
 know.

It is the result of devising, and improving system after system; of spending thousands  
 of dollars in experimenting; of making millions of miscellaneous calculations, and of doing  
 some vigorous thinking during 38 years, by an analytic, practical and persevering  
 mind.

**It is Especially Designed for**

Farmers, Mechanics, Business and Professional men.

# ALBERTA

¶ Of Alberta a distinguished writer has said:

"North of the International boundary line and immediately east of the Rocky Mountains lies the Province of Alberta—a land blessed with all that is necessary to happiness and prosperity. Between the 49th and 60th parallels and between the 110th and 120th meridians lie 281,000 square miles of possibility. Here are mountains and plains, foothills and valleys, rolling prairies with wooded stretches between, dense forests and grassy meadows, clean, timber-girded lakes and winding brooks, cold mountain streams and navigable rivers, and a soil rich in the alluvial and vegetable accumulations of centuries. And as if not content with these outward signs of her favor, nature has hidden beneath the surface vast deposits of coal and other minerals; she has filled the subterranean reservoirs with gas and oil, and sprinkled the sands of the mountain streams with gold. That no living thing should go athirst, she gathered together the waters of the mountains and brought them to the plains, to be directed by the ingenuity of man to the use of the grazing herds and the planted fields. Then, to crown her efforts and leave nothing incomplete, she brought the chinook wind, warm with the breath of May, to temper the north wind."

¶ In the Medicine Hat District we have a gently undulating prairie. The soil is capable of producing generous yields of all small grains and vegetables in abundance.

¶ The city of Medicine Hat, situated on the Saskatchewan river and underlaid with gas and coal, is destined to be a great manufacturing center.

¶ Why not join the colonies already there and enjoy some of the material benefits as well as help build up one of the largest and best colonies in the Canadian West.

¶ We have excursions every first and third Tuesday of the month.

# The Twentieth Century Sunday-School Record System

recommends itself to every wide-awake worker because it:

☐ Enlarges the Enrollment. ☐ Places a Premium on Punctuality. ☐ Begets Bible Bringing. ☐ Increases Attendance. ☐ Encourages Systematic Giving. ☐ Relieves the Teacher of keeping class books. ☐ Provides for Offering at entrance rather than in class during recitation period. ☐ Makes possible the keeping of accurate records, without unnecessary effort.

## A Unique, Original and Thoroughly Practical System.

Below we quote prices on three sizes of outfit only. Schools having an enrollment of over 200 will do well to write us.

### Outfit No. 1

This outfit is suited to the requirements of a school whose enrollment does not exceed 100. Provision is made for 15 visitors. The outfit comprises:

- |                                                                                                                                                                                                                                                                                                                                                                                                                           |               |

# **A FEW FACTS FOR FARMERS THAT FIGURE**

**Facts—hard, cold facts are stubborn things to deal with. Facts and figures will sometimes reveal wonderful things. Here are a few facts. You do the figuring.**

☐ Mr. John Chastain, of the Bonanza Creamery Co., from the Bonanza Valley, Oregon, which is sixty miles northeast of Macdoel, California, came to our town, Macdoel, on Saturday, July 18, 1908, with 1,500 lbs. of the finest butter you ever saw. We saw him there. We saw him unload it at the depot. We asked him where he came from, who he was, what he had, what he was going to do with it, etc.

☐ Now he told us that he had a small load this week as his heavy wagon was in repairing but that last week and next week, and so on, he would have an average of 2,500 lbs., instead of 1,500 lbs., and that he was shipping it to Sacramento, Cal. He is one of the men who belong to the Bonanza Creamery Co. They used to be great cattle raisers up there, they are yet, but they found out that there was a great deal more money in making butter from the herd than in selling them as they had been doing before. They have a Coöperative company. The farmers are getting wise to this idea of working together and protecting themselves and their products.

☐ We were informed by Mr. W. W. Mackay of Sacramento (the government expert on soils) that butter in Sacramento was selling for 85 cents per roll (1½ lbs.). Now, there are the facts. You get to figuring. If he can haul that butter through the sun, sixty-two miles to the railroad, and make that kind of money, what can the Butte Valley farmer do, who has all the succulent grasses he wants, all the pure water the cows can drink, and the eternal sunshine of that section? Better say "What can't he do?" Take a certain number of cows. So much per cow. So many cents per lb. Then figure the cost.

☐ Remember we have the railroad right here in the Valley, running daily trains. Do you want to know any more about this? Address any one of the following:

GEO. L. McDONAUGH, Omaha, Nebr.

D. C. CAMPBELL, Colfax, Ind.

ISAIAH WHEELER, Cerro Gordo, Ill.

E. M. COBB, Elgin, Ill.

## WEBSTER'S IMPERIAL DICTIONARY

New and Up-to-date

Reset from New Type

Thousands of New Words

**THIS IS THE ONLY NEW AND COMPLETE  
WEBSTER DICTIONARY ISSUED**

Since 1890. For it is the Only "Webster" in which common sense and discrimination have been shown by the editors in the use of capitals. In the Imperial all proper names begin with capitals and other words with small letters. It is strange that so important a feature should have been overlooked in the other Websters—but it was. This is but one of the hundreds of illustrations of the thoroughness with which Webster's Imperial has been prepared.

It is the best and Most Practical, as well as the latest Complete Dictionary of the English Language, giving the Spelling, Pronunciation, Etymology, and Definitions of Words, together with thousands of Illustrations.

Full Sheep Binding with Patent Index.

## ABRAHAM THE FAITHFUL

Twelfth Volume of the Popular Edition of BIBLE BIOGRAPHY SERIES, by Galen B. Royer.

### Contents of Book

Birthplace, Early Life, Shechem, Canaan, Egypt, Lot's Choice, Lot Rescued, "Like Stars," A Solemn Covenant, Hagar, Circumcision, Pleading for Sodom, Fire and Brimstone, Isaac Born, Ishmael Cast Forth, A Great Trial, Sarah Dies, Isaac and Rebekah, "Gathered to His People."

You will readily see, from the above contents, that this volume is of much interest to all, and especially to boys and girls.

### Parents and Sunday-School Teachers

here is a new book in attractive binding that will please and instruct along right lines.

The book is well bound in cloth, with beautiful cover design. The book contains 181 pages, with a number of illustrations.

Price, per single copy, prepaid.....\$0.30  
Price, per dozen, prepaid..... 3.25

Write for special quantity price to Sunday schools.

**BRETHREN PUBLISHING HOUSE,**  
Elgin, Illinois

# OVER 200,000 ACRES

of land has been filed under the CAREY ACT in the Twin Falls District, Idaho, since April, 1907.

¶ There is still a large amount of land waiting for the settler in the above district. Also great opportunities are offered at American Falls, at Gooding and other points along the OREGON SHORT LINE RAILROAD.

¶ The Payette-Boise Reclamation Project under the U. S. Government is about completed and will be ready to furnish water to about 300,000 acres of new land in the spring of 1909. These lands can now be bought at reasonable rates and terms, by the settler, and are situated where the country is already partly settled, near good towns, railroads and electric lines.

¶ Rural mail routes and telephone lines are already established. Good schools and churches. No storms or cyclones. Farming is done by irrigation. No failure of crops by reason of too much rain or drought. Fruit crop is abundant every year. The people are happy because they are prosperous.

## Wonderful Possibilities

for homeseekers and investors. Climate Mild. Soil Very Productive.

¶ Alfalfa, Sugar Beets, and grains of all kinds are among the products that yield abundantly. Farm hands, carpenters, mechanics and in fact all classes of workmen will find plenty of work at good wages.

¶ Arrange your plans to go and see Idaho as soon as possible and secure some of this fine land.

¶ HOMESEEEKERS ROUND TRIP EXCURSION RATES are on First and Third Tuesdays of each month in 1908.

¶ WRITE NOW for printed matter and full particulars regarding this great country and how to get there.

## Responsibility of Fatherhood

Elizabeth B. Grannis

President National Christian League for Promotion of Purity.

No new thought, only suggestions on old time lines, which I trust may lead others to express their thought in regard to higher and better methods by which responsibility of fatherhood shall be more fully understood and accepted. In view of the importance of this subject, many of us probably feel that discussion should be opened by a father with an unquestionable record for accepting and discharging the duties and privileges of fatherhood; not only one who has been acceptable to his own family, but he should stand out a grand and noble public example of all that true fatherhood embodies.

Our right to speak, however, lies in the fact that we women have been daughters of fathers, and a large majority of us have had experience more or less of responsibility in being wives and mothers, which is in close touch with fatherhood.

Some of us realize that environment and heredity are closely related and that each is dependent upon, or, in great measure the result of, the other. The environment of today develops largely the heredity of tomorrow, much in a sense that our heredity is to a great extent the result of the environment of past generations.

There can be nothing indelicate in teaching young children all the way from infancy to maturity, that they are building characters, training themselves and being trained, to become the parents of their own children. Such teaching invariably develops self-control, righteous ambition and helpfulness to coming generations.

We need the equipment of vast thought, research and discussion along lines of scientific and spiritual mating, in preparation for a wise discussion of Responsibility of Fatherhood.

Secular and divine laws which refer to mating in the human family, have been ignored by theologian and scientist, down to the least intelligent of the common people. If the Church has failed to render helpfulness along these lines, to whom shall we appeal

if not to wise thinkers wherever they may be found? It is well known that scientists and really learned thinkers, from the best of evangelical faith to those who appear to spurn all faiths, are subject to mistakes in thought and action, each akin to the other.

What of the lack of parental responsibility in the record of more than 800,000 defective offspring in public institutions under this government, added to the number in secret seclusion from among the powerful and wealthy of society, down to the reckless, lawless, alley-house unprepared propagators of offspring? A very large majority of defective children in public institutions are born out of wedlock.

The time is at hand when persons of little and much influence, should unite in agitating for merciful treatment by expert surgeons, for hopeless criminals, degenerates, idiots, and all such persons as scientific and competent judges admit ought never to reproduce themselves.

The National Christian League for the Promotion of Purity has a bill at the present time, in the hands of the Legislature of the Empire State, which is an exact copy of the new law which is being successfully enforced, in penal institutions of the State of Indiana, for special criminals. We hope the day is not far distant when this new law will be placed on the statute books in every State in the Union.

All helpless people, without ways and means or capacity for self-support, and who are utterly unfit to perpetuate the race, should be provided for by the paternal care and at the expense of the Government. They should have all that is necessary for their well being. Segregation in most cases is a relentless cruelty, and is often practiced in many public institutions.

We certainly should advocate no measure which must necessarily increase the miseries of dependent, wretched children, precipitated into human life without natural affection, home protection, or rights of

heritage, even of their father's name.

Children born in wedlock inherit the name and property of the father, so they should not be deprived of this right out of wedlock. Why should an innocent dependent child be punished and condemned to legal illegitimacy for the sin of illegitimate parentage, in addition to the inevitable deprivation of natural home and family affection? Is not the law regarding offspring a strong ally to lessen responsibility of fatherhood? Every Christian, ethical organization, and every individual striving to promote mercy and justice towards dependent motherhood and worse than orphaned children, should unite in appealing for and demanding that legal responsibility be placed upon fathers out of wedlock.

The following resolution has been adopted by several National organizations, and it should speedily become the law of every land. This resolution was first adopted by the National Christian League for the Promotion of Purity, and was subsequently sent to the National Council of Women, and adopted by that body representing 1,500,000 people, after having been discussed at three meetings of its resolution committee:

"Resolved, That any child born out of wedlock, the name of whose paternal parent is definitely known either by proof or admission, shall be entitled to the name of its father, and a share in his property, the same as children who are born to legal parentage."

We have reason to believe from past experience that this resolution could not have been approved up to within the past few years, save by individuals who have given serious thought to this subject.

A number of the daily papers have discussed it intelligently, while some bright, flippant writers of the male sex have ridiculed the idea of placing legal responsibility upon fathers out of wedlock. The editor of one of our Sunday dailies gave a column and a half to this discussion in which he drew special attention to the fact that no father in the history of civilization had borne any legal relationship whatsoever to offspring born out of wedlock. Many readers of daily journals have never realized that children of illegitimate fathers have never inherited kinship, name, or any other legal heritage, save through the maternal parent. Few women or men have comprehended the abominable wrong of this injustice to the victimized child which is certainly entitled to the love and responsibility of a father as truly as of a mother.

I have never met a boy, mature man, or any one in the evening of life, in private conference, who did not express his earnest desire to produce the best of himself, if he contemplated becoming a father in wedlock. Why is it then, that so many men fail to practice according to their highest desire or best intention? Why is it that they do not seek to marry women who they believe are able to aid them and their offspring

to the higher, all-around development, and why, too, does not each husband seek to be the one man who can by daily association aid the woman of his selection to higher achievement in wifehood, motherhood, and Christlike citizenship?

A thoroughly well-informed woman is a far more instructive and helpful mother of children, and vitally a more interesting companion in wedlock, than her flippant and semi-senseless sister, to whose effeminate prattle some men claim they prefer to listen rather than to converse with a well-equipped, intelligent woman.

Heart and brain forces of women are not hindrances to lessen their graces, their daintiness of attire, or any sort of fascinations which are considered most attractive to the opposite sex. It is no light responsibility that a man assumes in selecting his life mate to be the mother of their children. The right of the children to be well born, involves the duty of the man contemplating marriage to select a mate that shall ensure this result.

Responsibility of fatherhood does not all rest in bread-winning, or money-making qualities, and not a few women place too high a value on this requisite. Industry is equally valuable and desirable for women as for men; each should supplement the other in financial provision in various ways, when circumstances require. Male-men have wrought out most of the valuable inventions, and have made more of the scientific discoveries that have been of the highest importance to the world, yet in many cases the benefits thereof have failed to bring comfortable financial returns to the individual researchers.

It is equally as unjust and rational to humiliate husbands for not having the ability to make money, as to ascribe unwomanliness to wives because they seek to aid financially in support of the family when they have the ability to make money, and their service is needed.

The first public address I ever heard upon responsibility of fatherhood, was given about twelve years ago by the Rev. Samuel H. Virgin, from the pulpit of the Broadway Tabernacle Church, at an annual meeting of the National Christian League for the Promotion of Purity. The subject was discussed at my suggestion, and the address dilated on the evolution in sentiment with regard to responsibility of fatherhood, during the last century. The speaker referred impressively to the progress gained since his boyhood, when a majority of fathers manifested their chief sense of responsibility by supplying financial necessities, and by flying buttons from their son's clothing in the woodshed, illustrating a lower order of paternal parenthood than at present exists. Texts of Scripture such as "The chastening of the Lord" or a fanatical and ignorant interpretation of Solomon's command not to "spare the rod" and similar

ones were exemplified with a whip in the hand of a stalwart human father, which he applied upon the smarting, writhing flesh of his own boys (who are in reality himself once removed). Such teaching is largely being supplanted by friendly counsel and appeals to the child's reason, coupled with various forms of moral suasion.

The emotional nature of a child ought not to be calloused by physical punishment.

The man who uses tobacco or alcoholic stimulants and stupefies his olfactory nerve, and the acute perception of his palate, ceases to enjoy the natural odors and tastes with normal acuteness.

Every physical appetite is injured and benumbed by any excess in gratification. All parents should be taught that every hurt they give the nervous system of a child in punishment is not only a cruelty, but is blunting and deadening to their sensibility, and proves a detriment rather than a quickener to their higher and nobler development.

Children should be taught to preserve and cultivate to a high degree every nerve of the "House Beautiful," constructed by the Creator of the Universe.

Many a college athlete and spanking parent have but a one-sided idea of the highest achievement in self-control and true Godly courage attainable, even by very young infants.

There were fathers in past generations, and there are more in the present, who practice the better methods of convincing children that their father is their most tenacious friend. Such fathers pledge themselves to help each son and daughter through every form of error and sin, the result of which is a self-inflicted punishment of mental suffering, if nothing more, which must ever follow the yielding to any form of evil temptation.

Does any sensitive, refined person at thirty, forty or seventy years of age, enjoy the memory of physical punishment, inflicted wisely or unwisely by a parent? The men and women who say they were not whipped enough in youth or childhood, are only victims of coarse ignorance, or exaggerated and perverted doctrinal truths.

What of the recent discussion and its significance for re-establishment of the whipping post? The irrational sympathy expressed for the wife who is beaten by what is erroneously termed the "brutal husband" is absurd in the judgment of many humanitarians and Christ's Gospel Christians. There are wise observers who realize that in lower animal life, the male has never been known to degrade itself or its species by abusing and maltreating its feminine mate. Yet there are truly great minds, leaders in Church and State, who are exhausting themselves in fantastic expressions in defense of the beaten wife by the "brutal husband." What of the inconsistency

in teaching and advocating physical chastisement by beating, spanking, strapping and display of frenzied emotion or the premeditated, payed-over practice of corporal punishment of children, all the way from infancy to youth, and even well into the teens? What about the logic of unwise advocates of the whipping post for "brutal husbands"? Is not every wife better fitted for self-protection against any masculine coward than is the dependent, confiding little child, against either its father or its mother? What punishment then shall we advocate for the mother who descends to the degrading practice of beating her own child because of her lack of knowledge to help it overcome its inherited tendencies to manifest impetuous weakness, or sin in its own little personality? What of the mother's weakness and her want of control and her "brutal" or well-trained sainted husband who may not have acquired any high degree of self-government until after the advent of these natural human wee miniature likenesses of their parenthood?

Let us look well to the symbolic whipping-post for the spanking mother and cowardly father, before we attempt to re-establish the literal whipping-post for "brutal husbands."

It will never be possible for any woman to possess or exercise too much judicious mother-love towards her children; and it is probable that generations may be required to attain satisfactory father-love and sympathetic, tender, compassionate companionship with his offspring, which is essential in order to accomplish the higher development of the race.

No success in life is a compensation for natural affection. There is no substitute for delightful companionship of wise fathers with the parents of their grandchildren, who have presented one by one the facsimile of themselves in infancy in the relationship of grandchildren to the arms and bosoms of their grandparents.

The best woman who ever becomes wife or mother has never been endowed with gifts by nature or the Creator that she might fulfill the responsibilities of both parents. Children should never be deprived of the inalienable right to the loving care and tender training of a father who realized his responsibility in habilitating an immortal soul, after the best possible fashion of himself physically, mentally and spiritually. Certainly no father is assuming his full responsibility to his children after birth till death, by simply providing them with funds for physical, social and intellectual needs and comforts.

Personality in fatherhood is more powerful for good or evil than in all other human relationships save one. Not nearly enough fathers appreciate the fact that they are daily building their likenesses into the lives and memories of their children either for inspiration or suffering for many future generations, in preparation for the real life everlasting.

# A Day With an Editor

Olive A. Smith

THE editor's desk was piled high with letters, manuscripts and circulars. At one side was a bundle of clippings which he had been arranging with a view to use in his autumn numbers. Unopened exchanges lay on a small table near the desk. He had come very early to the office, for the work was accumulating too rapidly for a pleasant outlook at this season.

But the editor could not compose himself to work. Judge LaMont, whose office was across the hall, had dropped in for his usual morning chat, and George, the office boy, was throwing up the windows. The sounds of a July morning in the city came rushing in with unusual force and distinctness.

"What's the trouble Mr. Beatty?" inquired the lawyer, as the editor threw aside the letter which he had been reading; "you don't seem to find the editing of a religious weekly congenial employment this morning. Such a beautiful morning, too! I never knew such cool July days before."

"That's the trouble," exclaimed the editor, wheeling about impatiently in his chair. "I'm so humiliated! Here I am, two weeks behind with work, and you know what I've always said about vacations."

"Yes," said the judge, "that it is all nonsense; that if a man is in the right place, and enjoys his work, he needs no more vacation than every day's rest brings."

"Exactly," admitted the editor with a grim smile. "I'm still of that opinion about long vacations, but"—he turned and began piling up the envelopes—"it's no use for me to try to work today. I'm going to the country and I'm not coming back till dark!"

"Good! Take my auto. I'll phone right away," and the judge reached for the receiver. "You can take Mrs. Beatty and the boys"—

The editor waved his hand with a deprecatory smile. "I know you'll bear witness to the fact that I'm a *fairly* good husband and father, Judge, and I do thank you for the offer, but I'm going alone and"—

His voice was drowned in the chorus that was wafted through the window, the shriek of a locomotive on the Illinois Central, the clang of four trolley cars, and the wild signals of the autos, the clatter of hoofs and rattling of wagons.

The editor tried to look calm until the din had subsided. Then he continued fiercely, "I won't have a town sight or sound near me! Everything that rattles, or jangles, or talks, or shrieks, or screeches, or clangs, or *houks*, has got to be—"

"Cut out," suggested George, who had learned to anticipate the editor's wants.

"Thank you, George," smiled the editor. Then he quickly covered the smile with a frown. "You know, George, that I don't approve of slang. You may have a holiday now. Put a card on the door saying, 'out for the day,' and be off."

A few moments later, an intelligent-looking bay pony was trotting briskly along the beautiful Hampshire road, north of the city, and in the phaeton behind her, lounged a city-tired editor, drinking in the rich fragrance of the morning air, and revelling in the beauties of field, orchard and meadow, as they lay spread before him.

"It's late for the songsters," he had thought, as they left the city limits, and he was delighted when he found that he was mistaken. The unusual coolness of the morning had so inspired the thrushes, the song sparrows and robins, that the editor was favored with solos, choruses, and the sweetest of antiphonies from the meadowlarks. A pair of blue-birds who had constituted themselves an editorial escort, fluttered from their resting place on a rail by the roadside, circled coquettishly over the pony's head, and alighted in the branches of a tree on the opposite side of the road. Thus they had kept watch over the equipage for many miles. The Hampshire road was not a long highway, but more than two hours were consumed in its travel, because the editor so often stopped to listen to the scores of voices, to pluck some strange wayside blossom, or to watch the robins and orioles getting breakfast in the orchards and berry patches.

The time of wheat harvest was at hand, and the bay pony often stood still while the editor watched the great yellowish-green seas waving, rippling, swelling and receding in response to the growing fitfulness of the westerly winds. When they came to the corn fields, these pauses were longer, for the editor had removed every barrier that existed between his usually practical mind and the wildest of poetic fancy. To him, on this beautiful July morning every object spoke with the gift of tongues, every faint appeal to the senses was an appeal to the power of imagery, which had been starved for expression through the world of nature. In these glorious fields of corn, the breezes were, to him, the voices of the wandering wind, full of mystery, of pathos, sometimes of dread, or of apprehension. There was ever a surprise, a fresh suggestion, something to ponder and dream over, in the aspect of the corn field. The long emerald blades were extended, drooping, as if in benediction over the rich soil that had given them birth. Yet

the corn, like the cottonwood trees, seemed to whisper secrets understood by no other living thing.

In the orchards, the time of blossoms had passed and the trees had acquired the sober permanence of the color which was in perfect harmony with their stage of usefulness. The tiny peaches and winter apples were but prophecies of a rich harvest time, the red Junes blushed in profusion on their boughs and the pear trees wore their usual air of unpretentious virtue.

Near the end of the road, the editor discovered the object which he had been longing for, a clear stream

bend in the stream. There the pensive willows on either side drooped lower, as if listening to the whispered confidences of the stream and guarding the innocent blossoms. But the editor secured them, returned to the bridge, and rewarded the whinnying pony with a lump of sugar.

When they reached the top of the incline at the further side of the stream, the editor turned to view the long line of trees, and to notice, as he had never before noticed, the individuality of each. The oak was like a sentinel, grim and unresponsive. The elm was esthetic and tasty in the carriage of its beau-

Nature's Realm—Not a "town sight or sound."

of water. It came from the higher regions to the eastward, descending with considerable force over a wall of rock near the bridge.

"Be good, pony," he said, reining the horse to the right side of the bridge, "and wait for me. It would be an insult to tie you." He slipped and clambered down the steep bank, working his way through networks of vines and bushes until he reached the spot that suited his purpose; the spot where he could stretch himself upon the bank, and quench his thirst as he had been wont to do when a boy. For several minutes he wandered along the banks. Then he spied another object which challenged his efforts,—a cluster of pure white pond lilies that gleamed from a sharp

tiful plumes. The catawba seemed to have a protecting instinct, but it was a vain creature at this season, and the box elder was eager and aggressive, seemingly ambitious to excel in size and foliage. He liked the social nature of the maple. It seemed to be always bowing and whispering, "How-do-you-do?" Best of all he loved the simple, unassuming cottonwood, whose silvery-olive leaves were ever turning, glinting, shimmering in the yellow sunlight, even when there seemed to be no breath of air to which other trees and grasses responded.

As the horse's head was turned eastward, the editor noticed that the sun was higher in the blue vault overhead. He must hasten on, for he was not yet satisfied.

There was a fuller and deeper consciousness of height and space, of freedom and beauty, to be gained from the wide prairies and hills beyond.

Their eastward course lay through an up-hill prairie region, where the beautiful fields of white and red clover were the chief attraction. Then a narrow lane took them to a junction of two roads. One led to a thickly settled farm region. The editor could see the men in the fields, the women and children gathering the early fruits. He heard the sharp, clear song of the mowers, where the harvesters were busy with the early crops of grains and grasses. He knew that the other road led to the river. In a meadow directly south of this junction, a score or more of sedate horses and playful colts picked daintily among the grasses, as though glutted with the rich pasturage. The bay pony was allowed to receive and return the friendly overtures of the animals, who, in their turn seemed to appreciate the privilege of becoming acquainted with a city horse. The editor hesitated several moments, then started down the river road. "It's the solitary way, horsy," he said, "and it's solitude we want today. It's lunch time, too, and you may have a long rest."

It took some little time to find an ideal lunching spot, but at last the pony was provided with water and grain, and the editor, seated where he could command a satisfactory view of river, blue sky and woodland, opened his lunch. The inmates of the woods seemed, at first, to resent the invasion of their home by these denizens of the city, but the editor betrayed so much unobtrusive friendliness that they soon accepted him in the spirit of toleration, at least, and proceeded to entertain him with their everyday antics. Squirrels, rabbits and birds, seemed to vie with one another in rousing his interest and holding his attention. Through the dense foliage of a beech tree, he heard a curious "rap-tap-tap," and saw a fluff of gray and white feathers which caused him to leave his lunch while he investigated. It was only a downy woodpecker, his tiny red cap set jauntily on the back of his head, and never falling off, though he used his bill with great vehemence. The editor did not care to see him dine on living creatures, even though they were but ants or larvae, and he turned away, to find himself challenged to a game of hide-and-seek with a tiny brown creeper. The plaintive little call was interesting, and the editor chased round and round the tree. But always the bright eyes and hard little bill peeped from the opposite side of the branch.

"All right, little midget," he laughed. "You've won the game and I'm going to finish my lunch."

"Now for the hills," thought he, half an hour later, as he climbed into the phaeton, and the pony, refreshed and eager, started off at a brisk trot. Then he suddenly drew rein and listened almost breathlessly. It came again, the sound he had not hoped to hear at

midday; soft, sweet and clear, like the note of a silver flute inspired by a Godlike intelligence—the song of the woodland thrush. He waited, and the music grew fainter and more distant, dying away at last as if lost in the depths of the woodland. It may have been a small subject for a special prayer of gratitude, but the editor did not think so.

There was a definite object in view when they came to the hills. The editor knew exactly what *they* had to impart, that matchless sense of wideness, and space, and fullness of life, that sacred emotion that fills the soul when it realizes that there are no barriers between its life and the Life from which it sprung. "Here I can see Him face to face," murmured the editor reverently as his own being seemed to expand in keeping with the surroundings. While he was rejoicing his horse, a couplet kept ringing through his brain,

"I want to be no more myself, but be  
Made one with all the beauty that I see."

"We're to have a new route home, horsy," he said, patting the pony's head, "and it's time to be off."

The magic word "home" brought its train of delightful thoughts. During the entire ride, the editor's mind vacillated between the pleasant cottage on Harrison Street, and the disorderly office from which he had fled that morning. Millie and the boys, his paper, his readers, his contributors, crowded thick and fast in his mind. New plans, new ideas, new hopes and longings burned in his soul. The road seemed long. The pony was slow. He wished he might have even an hour before dark with that delightfully littered desk, but no, he *must* have that hour with Millie and the boys! It seemed like an age since he had seen them. How they must have missed his telephone messages! He never could get home to lunch, but he always called them up several times a day.

Still, his conscience utterly refused to voice a condemnation for that selfishly spent day.

"There's no use in talking," he said to himself, playfully brandishing the whip over the pony's head. "I just had to get out of there today, and I had to go alone. Next time I'll accept the judge's offer if it comes—and we'll all go. Won't Millie and the boys enjoy it!"

It was twilight now. There seemed to be no breath of air; the leaves of the wayside trees hung motionless. One by one the stars appeared in the cloudless blue overhead, and a tiny crescent moon hung above a clump of pine trees on yonder hill. There were the voices of the twilight, as there had been the voices of the day, but the editor scarcely heard them, for the lights of the city were twinkling not far ahead. Every turn of the wheels brought them nearer, and the editor's thoughts were of the two great sources of joy in a good man's life—his work and his home.

*Emporia, Kans.*

## Around the World Without a Cent

H. M. Spickler

### Chapter XIX.

At the thought of lying in their jail over night, or possibly for many months, I rolled my eyes in excited wonder at what the mayor had said to me in his determined, decisive way,—“You have committed a negligence which will cause you a night of delay.”

Then the schoolmaster asked: “What have you to say to that?” He had been studying English as I had been studying French, only I was far more able to understand his language than he to understand mine.

What had I to say to that?

My imagination painted the future in dark colors. The false imprisonment of the innocent Alfred Dreyfus arose in my mind. Possibly my own country had insulted the French Government in some diplomatic question, and these men were about to wreak vengeance upon poor me, just as unthinking Americans might feel like chastising the few Chinamen who happen into our country, because of the outrages of the Boxers. Maybe I had broken

some French custom or law in my day's ride, for it is a crime, in England, to walk upon the railroad track, to cross it, or to stand upon it. The penalty is arrest, and fine or imprisonment, or both, the fine being a goodly sum. In order that this law may not be broken, depots, in city and country throughout England and Scotland, are usually set high above the tracks so that the people can walk right off the platform into the coaches without climbing up the steps. When the tracks are to be crossed, the people

look for the overhead foot or wagon bridges and go across by means of these. In the country the tracks are usually laid far above the road, so that the people walking and driving may pass through under the tracks. Because of these wise precautions there are so few railroad accidents and so few lives lost on the railroads in Britain. Of course, as there is no one allowed upon the tracks or to cross them, the engineer does not need to blow his whistle at every crossing as in this country, but runs right along, at full speed, with no signal of fear to startle the people who wish to cross the tracks.

One after another the door of escape seemed to close upon me. This was intensified by my weary muscles and sleepy eyes, for while crossing the English Channel the night before I had slept little or none.

“What have you to say to that?”

“Just as you say, gentlemen,” I replied, “but do not forget that I am an American citizen.”

This they seemed unwilling, for some reason I could not understand, to believe.

Then the teacher said: “Monsieur le Maire croit vous demander de vouloir bien rester a sa disposition jusqu'au moment on il aurait de reçu des orders de l'autorité supérieure. Que pensez-vous?” (“The honorable mayor thinks that he will have to detain you at his disposition until such time as he has heard from the civil authorities. What think you?”)

This question they wrote out in legible French and I read it easily. I understood it only too well. But it was the “que pensez-vous?” that hurt. I

Charming Railway Station in Scotland. Tracks Sunk  $3\frac{1}{2}$  Feet for Safety. Passengers Not Allowed on Rails. They Use Overhead Bridge When Crossing Track.

was the mouse in the paws of the cat and it looked as if I would have about as much chance for escape. But I was given no reason for the detention. Failing to understand one of the questions, I quickly asked:

"Qu'est ce que cel que vous dit?" ("What did you say?")

"Ah, bah!" exclaimed the schoolmaster, "pour-quois pronounce vous bien le Francais quand le voulez-vous? Ah, bah!" ("Ah, bah! How is it you can pronounce the French language so well, when you want to? Ah, bah!")

"Ah, monsieur," I replied, "my teacher taught me to pronounce that one sentence perfectly. He knew I would need it. Je ne parlais pas Francais beaucoup." ("I do not speak much French.")

I then insisted on a reason for my detention, but the more I insisted, the more they persisted in plying their questions. At last they asked me if I had an American passport, to which I replied in the affirmative.

"Why did you not show it?" they asked.

"You gave me no chance to get it," I replied. "Besides, you suspicion the man too eager to show his credentials. *I travel on my face. I am my passport.*"

The villagers had crowded into the little room and pressed close to the table around which we sat, I on the farther side, facing the mob, and my examiners on the other side. An elderly woman, wearing a plain muslin cap, dusted about the room and looked tenderly into my eyes from time to time. She believed I was innocent. So did I. But when I looked into the face of the mob, they made me believe I ought to be hung. The more intellectual faces showed me some sympathy, but the two in the crowd who did me the most good were a little boy and girl who stood at the edge of the table on the side from me, looking into my eyes as about to cry. I recognized the little girl as one I had seen as I entered the village, to whom I had bidden the time of day, with a "Bon jour, mademoiselle." ("Good evening, little girl.") She was crossing the street with milk-pail in hand, and she replied to my salutation with a merry smile and a twinkle in her eye, "Bon jour, monsieur." ("Good evening, Mister.")

When I needed strength to combat the mob I just looked into her sweet face. Her truer interpretation of character is only another lesson taught us of children who know innocence from villainy when their grown-ups are often mistaken.

### THE PERNICIOUS MULLAHS.

EVER since the beginning of the now constant troubles in India, a good deal has been heard about the Mullahs. A Mullah, or, as it is more properly written,

Mollah, is a title given in India, and throughout the East generally, to a religious leader of any description.

Thus, the Sultan of Turkey is a Mollah, because he is the supreme head of the Moslem world. The hostile Somali leader, who caused us so much anxiety between 1901 and 1905, and whose name occasionally crops up even now in the daily papers, was also a Mollah. And there are hundreds of others. To most of the more conspicuous among them we prefix the adjective "mad." This, however, must not be taken to mean that they are insane, the word being used rather in its oriental signification of "inspired."

The influence wielded by the Mollahs, who are now stirring up against us the border tribes of Afghanistan, is enormous. Clad in their sacred robes, bearing aloft the green standard of Islam, they go up and down the valleys shrilling the Mohammedan war cry, and woe be to him who refuses to heed. The person of the Mollah is sacred. True, the Amir the other day was reported to have ordered that any of them caught preaching the jedad (holy war) should have their tongues torn out. But if he really issued such an edict—which is extremely doubtful—it was merely meant for European ears. Not even the mighty Habibullah himself would care to lay a sacrilegious finger on one of these saintly personages. If he were to venture such an unheard-of thing vengeance would surely overtake him. For it is the cardinal principle of the Ulima—as the Mollahs are collectively termed—that an injury purposely caused to one of their number can only be atoned for by the death of the individual inflicting it.—*Pearson's Weekly*.

It is the high privilege of every child to have a healthy body and, allowing in full for all influences of heredity, almost every child may have such a body if nature is permitted to do her perfect work. It does not follow, however, that the idle child is the healthy child. Activity is fundamental in child-life and the activity of school need not militate against the child's health if conditions at home and at school are kept right. But right here enters the responsibility of the teacher in this whole matter. If the child is deprived of wholesome food, pure air, abundant sleep, and freedom from carking anxiety at home, then the school must counteract these influences as far as possible. The teacher must be quick to note these conditions at once, else much time may be lost. The happy child is the one who does good work, and this happiness may come as the result of hard work, if antagonistic conditions are warded off. Every recitation in whatever subject should be a recitation in physiology in that the children are trained to habits of right living every hour of the day.—*Ohio Educational Monthly*.

# Glacier National Park

Guy E. Mitchell

THE first step toward the creation of the beautiful Glacier National Park has been accomplished in the favorable recommendation of the Glacier Park bill by the Senate Public Lands Committee and the printing of the report. It is expected that Congress will soon pass the bill and thus define one of the grandest nature spots in the world. The territory embraced covers nearly a million acres of the wildest and most majestic mountain scenery on the North American continent, including numerous rugged and snow-capped peaks from 6,000 to 10,000 feet high, many glistening glaciers and crystal lakes, cataracts and foaming torrents.

The United States Geological Map accompanying the report shows the famous Lake McDonald to be

regions of the world. It is bounded on the west and south by the Flathead River and on the east by the Blackfeet Indian Reservation, and extends northward to the International Boundary Line, being reached by the Great Northern Railroad, which parallels the Flathead River on the south. To the east of the mountains, the great plains, drained by the Missouri and the Saskatchewan river systems, stretch for miles upon miles—a region of open grass land and practically treeless. The glacier-born waters of the park find their way into three oceans, the Atlantic through the Missouri's channel, the Arctic Ocean through the Saskatchewan and the Pacific through the Flathead River.

In sharp contrast to the plains, says Mr. Chapman in describing the park, rise the mountains, which, seen from a distance, present a rock wall of great steepness, extending apparently unbroken for miles. This, the eastern face of the range, is actually cut by long, deep, U-shaped canyons, largely formed by the great glaciers which once flowed from the mighty snow-covered peaks and ridges forming the divide between the waters of the Atlantic and Pacific Oceans. In the canyons are roaring streams, which head in the melting ice and snow, flow into placid lakes and eventually into the arroyos of the plains. Between the canyons the long, finger-like ridges rise to considerable heights, the timber-covered foot sloping steeply until a regions of brush-covered broken rock is reached, which in turn leads to the base of

U. S. Geological Survey Party in Approach to Glacier National Park.  
(Photograph by U. S. Geological Survey: R. H. Chapman.)

the largest body of water in the area, and such suggestive names are shown as Vulture Glacier, Goat-haunt Mountain, Citadel Mountain, Wild Creek, Swift-current Pass, Trapper's Peak, etc. The park area is already included in the Lewis and Clark National Forest and the large portion west of the Continental Divide is heavily forested. Under the bill, this forest will be subject to the regulations of a Forest Service with respect to timber cutting.

Robert H. Chapman, of the U. S. Geological Survey, the author of the Glacier Park map, describes the proposed park as one of the most exquisite mountain

precipitous cliffs. The canyons at the head usually terminate in great amphitheatres, rising cliff over cliff in stairways of tremendous proportions, many steps of which retain ice masses slowly flowing across them, each fed from a large ice-field above, until a region of huge snowbanks is reached. The main Rocky Mountain mass is actually made up of two principal ranges, generally parallel, Lewis Range and Livingston Range. These ranges are the remnants of what was once a much wider, plateau-like region of rock, which has been carved and shattered by the forces of erosion, principally those of the glaciers.

Upon this great mass are the higher peaks, huge pyramids and blocks with cliffs and precipices hundreds and in some instances thousands of feet high, plunging away to the roaring streams of the valleys, or ending in the great crevasses at the heads of the glaciers.

To the westward the mountains break precipitously, and from the foot of the steep, long, timbered ridges reach out toward the valley of the Flathead. Between these ridges and extending up the canyons of the higher ranges are many miles of lakes, joined by rushing streams similar to those on the eastern side.

The entire region is inhabited by wild animals, some of them noble types which are fast disappearing, and the streams and lakes abound in fish of many species. In the higher barren rock areas the retiring white goat is found in great numbers, while on the slightly lower ridges, where some protection is afforded by stunted timber growth and brush the Rocky Mountain bighorn has his haunts. In the valleys and on the lower spurs are many deer and moose; in a few places elk are found and over the whole area from high glacier and snow field to the huckleberry region of flat and valley, roams the great grizzly. All the game animals occupy the higher mountain districts for summer range only, as the area is too high and the snowfall too heavy to permit of winter use, but the park includes valley land which supplies feed under all circumstances.

At one time prospectors for copper flocked into the region, but no finds were made that warrant the belief that the region is one of any value for this metal. Indications of oil have been found on both sides of the range, but none of the explorations have proved productive.

There are numerous passes through the higher ranges. Across these the game trails lead from valley to valley; following the game came the Indians; the hunter and the trapper, looking for easy routes of travel, followed the Indians; then came the Government engineers exploring and mapping, and finally the hardier of the tourists and lovers of nature. Most of these passes are closed for many months of each year by snow; some of them are available only after the use of the axe to give footing on the hard ice of glaciers lying close to the divide; but one or two of them are of such nature as to eventually accommodate wagon roads, by which persons disliking the strenuous efforts now required to reach the higher country may have opportunity to view it at close range. None of the passes south of the Canadian boundary, Mr. Chapman thinks, will ever be used for a railway route. At some future day the locomotive may cross from Canada to the waters of the Flathead River and wend southward to the towns and farming valleys adjacent to Columbia Falls and Kalispel and form a link with the Great Northern Railway.

Within the boundaries of this great park there are 250 lakes varying from ponds of a few hundred feet to sheets ten miles in length; there are more than sixty glaciers ranging from a few acres in area to five square miles, and there are rocks, plants and animals in numbers and quantity to satisfy the most ardent student, and views of great variety, beauty and grandeur to gratify the artist and lover of nature.

#### ANOTHER DAY.

D. D. THOMAS.

Lose not your taste for nobler things,  
Stoop not to love the low,  
Give of the substance labor brings,  
Mind not the winds that blow.  
Heed not the cadence of the call,  
For solemn as the wordings fall,  
It strikes the heart to take away  
The glory of another day.

The bugle sounds the call for war,  
The horse and rider seek the fray,  
The strokes but weaken love and power,  
And take the better life away,  
Oh, may we hear the bugle call,  
The strains from fields Elysian fall,  
And as the heavenly music play,  
Give promise of another day.

How sad I live with those I love—  
Hear both the laughter and the wail;  
The cry of pain the senses move  
And weaken force so that I fail.  
Oh, that a sturdy heart were mine  
To reap the good for which I pine,  
Might get at least for which I pray—  
Love unalloyed another day.

God grant the glory of an hour  
To cheer me as the days go by,  
With all its brilliancy and power  
Be but a foretaste of the sky.  
May I but reach the fruit of love  
That hangs in vineyards fair above,  
And take the pangs of heart away  
Forever, in another day.

#### THE RUBY-THROAT—GEM OF THE GARDEN.

MRS. M. E. S. CHARLES.

FROM early May to October, the ruby-throated hummingbird forsakes the warmer climates to spend the flower months with us. Its diminutive size, the dazzling splendor of its plumage, its unequalled and beautiful flight, and its constant connection with the most brilliantly colored flowers cannot fail to excite the admiration of all who see these tiny denizens of the air.

Hummingbirds are found only in the Western Hemisphere and are almost exclusively confined to the warmer parts of it. Something like four hundred species have been identified, and of this large number, the ruby-throat is the only one found in the United States east of the Rocky Mountains. It ranges from

Central America, where it winters, north to the fur countries of British Columbia. It appears in this part of the country about the first of May, and begins nesting nearly a month later. The nest is a most beautiful cup-shaped creation of plant fibers, especially the down of the mullein and ferns. The outside of the nest is adorned with grayish-green lichens which give it the appearance of the branch upon which it is built. It is lined with the very softest material the bird can obtain, consisting of thistle down and the "silken sails" of the milkweed seeds. The nest is almost invariably saddled on the branch of a tree, several feet from the ground, and so constructed as

Nest of Hummingbird.

to have the appearance of a knot on the branch, and to make it difficult to discover it. In June two pearly white eggs about the size of a pea, and rather more elliptical than oval in shape, are deposited in the nest. These are hatched in about ten days and are near the size and look much like half-grown honey bees. In three weeks they are ready to leave the nest. While the mother bird is sitting the male renders no aid, but does his full share in procuring food for the little ones.

Only those familiar with this fairy-like creature can form an adequate idea of its surpassing beauty. Yet all its beauty does not arrest our attention to such a degree as does its incomparable flight, a flight that is in every respect different from that of any other bird. It somewhat resembles the flight of the hawk moth, or sphinxes, and, indeed, the hummingbird is often confounded with these insects by superficial observers. As the moths are of nocturnal habits, only searching the flowers in the twilight of the evening, while the ruby-throat is a child of the sun, rarely being seen after sunset, it is easily distinguished from these insects. While flying from flower to flower its tremulous motions of the wings are so rapid that the eye is unable to follow them. The bird flies backward and to the side with equal ease and dexterity. It does not, however, remain long on the wing, taking frequent short rests and choosing for this purpose a small twig at the extremity of a tree or shrub. At such times it is busily engaged in trimming its plumage, and stretching and preening the feathers of its long wings.

Owners of flower gardens have the best opportunities to study these birds. With whirring wings they remain suspended before a blossom, then—buzz—and they are examining the next, with bill lost in its depths. The family of hummingbirds gets its name from the humming noise made by the rapid vibration of the wings.

"Hear thy soft humming  
Like a sylph's drumming."

The food habits of the hummingbird are very interesting. The food consists of minute insects and nectar from flowers, which it extracts from them and the sap which it obtains from the trees where the sap-suckers have perforated them. The tongue is especially adapted to this work. It is long, thread-like, and divided into tubes which run through its entire length, and is capable of being extended a considerable distance beyond the point of the beak, and can be bent in any direction. The tongue acts like a suction pump, giving the bird the power to draw nectar from the deep-throated flowers and to capture the tiny insects that are in them. It was once thought that hummingbirds required food no more substantial than nectar, but upon examination of the stomachs of many of them the presence of the remains of insects, especially spiders, prove that their requirements are, at least partially, the same as other birds. Some naturalists give insects as their main food.

Flowers most frequented by the ruby-throat are the most showy ones. The twining honeysuckles, the vase-like flowers of the red clematis, the pretty flowers of the pentstemon, and the gorgeous flower-trusses of the trumpet creeper are especially sought after. In August when the gladioli and canna beds are in full bloom these "winged jewels" are most abundant. The jewel-weed offers a feast to these birds after the cares of family life are over.

The changeableness in the color of the ruby-throat is due to the construction of the feathers. A careful examination of these will show them to be composed of a multitude of facets, which are so arranged as to present various angles to the falling rays, and thus absorb or reflect the different colors, according to the position in which they are held.

The hummingbirds are great fighters. Their temper is out of all proportion to their size, for they will dash at an intruder much larger than themselves, and generally come off conqueror. Their angry twitters and squeaks are amusing and surprising as are their excitable actions.

These beautiful birds are common in our gardens during summer, and they should be protected in every way as they are not only beneficial but also form a great ornament of the garden.

*Spiceland, Ind.*

# THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE, ELGIN, ILL.

Subscription price, \$1.00 per Annum, in Advance.

The Inglenook stands for material and spiritual progress. Its departments are: Literary, Editorial, Home, Cream of Magazines, World News.

Its qualities are: Good Sentiment, Moral Convictions, Inspiration.

Its purpose is: To safeguard home life by supplanting and counteracting bad literature.

Its scope of matter is: Scientific, Religious, Educational, Philanthropic, Economical, Sociological and Financial.

Its field is: The World.

Liberal commission given to agents. Sample copies are given upon request. When changing address give both old and new addresses.

Entered at the Postoffice at Elgin, Ill., as Second-class Matter.

## OPPORTUNITIES FOR WINNING SUCCESS.

In comparing the conditions of the present with those of the past, the question is sometimes asked, Does the present hold out as many and as great opportunities for winning success as did the past? Did the fathers of the present generation stand a better show in the struggle for high places than do their sons?

In the first place it will be necessary to say what is meant by success. The word has different meanings, depending on one's view-point. In what is said here reference is had to success in material things,—success as the world looks at it. It might be said, before entering upon any discussion of that question, that opportunities for winning success as it relates to the inner religious life are much the same in all ages. The helps or hindrances have about the same power to ennoble or enslave as they had in other times.

In looking at the many lines of activity in which marked progress has been made in the last generation, the youth of today may feel that his father had the advantage of living in the age of opportunity, and Alexander-like he may sigh because there is nothing left to be done by which he might achieve the desired degree of success. But if the son has taken this view it is because he has faced in the wrong direction. He has looked toward the past instead of the future. With the achievements of the past the possibilities of the future become the greater, for in no step forward has the worker felt that the limit of progress has been reached in that line.

In the modes of travel and communication great things have been achieved, but do not these very achievements hint at still greater ones that are possible? Important advancement has been made in the treatment of diseases, but the things yet to be accomplished in this field are so many that it would seem only a beginning has been made. We have climbed to

great heights in the educational field, but present methods and results indicate that we have not yet reached the top, even the question as to what constitutes an education being a live one and apparently not yet solved. In the field of agriculture great progress has been made and many inventions and improvements of recent date have helped to bring success to a large number, but the possibilities in this field, as yet unrealized, are even greater than those already enjoyed and they offer a strong attraction to the would-be successful youth of today.

We have mentioned only a few of the many activities which offer exceptional opportunities to the youth of today for winning a signal success. But a man may come to success by employing his efforts in proving and perfecting discoveries and improvements already made as well as by pushing forward over an untraveled road, and the field for such intelligent, earnest effort is almost boundless.

With the multiplicity of ways by which one may apply his powers successfully it must be confessed that the ways by which he is tempted to spend his time and money uselessly have likewise multiplied. On every hand there are avenues by which one may be led from the path of success, and he needs to be wise and well fortified if he can discern the spirits and withstand the temptations.

Taking it all in all, the youth of today has no reason for considering his chances unfavorable as compared to those of his father, while the father has no reason for lamenting over the dearth of opportunities in his day. The ways of winning success may increase, or change, but the fact remains the same in all ages, that there is no royal road to that goal. He who is determined to win will always have difficulties to overcome, but they have been overcome in the past and they can be overcome now.

## A LITTLE FIRE.

A LITTLE fire goes a long ways in this August weather. In fact it goes a long ways in any kind of weather if it happens to be where it is not needed. Ordinarily, in the everyday affairs of life, we give little thought to the nature of fire. It is only when it has broken over its bounds and left destruction in its path that we bring ourselves to study it and the means of controlling it. It is at such a time, too, that we are most open to the lessons which it points.

The Apostle James tells us the tongue is a fire, and we do not need to study his statement long to agree with him fully. Of all the agents by which people may be aroused and set on fire there is none that can work so quickly and effectively as the tongue. A large per cent of the troubles from which we suffer as a people and as individuals is the direct result of words spoken. And worst of all, it is the result of

useless speaking,—of words that had no legitimate reason for being called into existence.

Of this useless speaking Christ says, "Every idle word that men shall speak, they shall give account thereof in the day of judgment." Some would interpret this to mean only the light, trivial words, but it means more than that. It includes all unprofitable and unimportant speaking, all vain and fruitless words. What an accounting some of us will have! How some of our public speeches and even sermons will appear in that last analysis!

But it is good that the Master gave us this warning, knowing as he did "how great a matter a little fire kindleth," and it was his desire that we avoid the destruction that such a fire brings. If these tongue-produced fires continue to rage, it is because we do not think of their direct results and of the Master's warning.

#### ESPERANTO STUDENTS.

It has been some time since our series of Esperanto lessons came to an end, but we feel that most of those who followed the lessons carefully have continued the study thus begun and are reaping some of the fruits of efforts.

Several weeks ago we printed the names of a number of Esperantists who are desirous of becoming acquainted with others who are studying the language. Following are the names and addresses of three more.

(Miss) Maude Berry, Route 1, Portage, Ohio.

A. A. Berry, Portage, Ohio.

David C. Bosserman, 3538 Vista Ave., St. Louis, Mo.

If there are others who would like to join the list, send us your names.

#### THE CALL.

I'm weary of toiling and worry,  
Of living the strenuous life;  
I tire of the struggle and hurry,  
The tumult, the noise, and the strife.  
I long for a sight of the flowers,  
The song of the murmuring stream;  
I long for the forests where hours  
Will pass like the woof of a dream.  
I'm weary of plotting and scheming  
That lay out the map of the game;  
I'm tired of make-believe seeming  
That oft is mistaken for fame.  
I long for the lake and the river  
That shimmer and shine in the sun;  
Where leaves in the warm breezes quiver,  
And rest is the goal I have won.  
I'm weary of sepulchres whited  
That harbor but moldy old bones;  
I see childish toil unrequited  
And listen to widowhood's moans.  
I long for the day to be dawning  
When right with the sceptre shall reign;  
When men now at Mammon's feet fawning  
Will rise in their manhood again.

I'm weary of false prophets crying  
Their wicked, inscrutable lies;  
While thousands of helpless are dying  
As Mammon's and Greed's sacrifice.  
I long for the day and the hour  
When greed shall be flung from the throne;  
When man in his right and his power  
Again shall step into his own.

I'm weary, but duty is calling,  
And only the sluggard will shirk;  
The tasks that are set are appalling,  
But honor says simply, "Go work!"  
I long for the woods in their beauty,  
But over the call that they give  
I hear the stern calling of duty  
That bids me be worthy to live.

—The Commoner.

#### THE OLD ARM-CHAIR.

I love it, I love it, and who shall dare  
To chide me for loving that old arm-chair!  
I've treasured it long as a sainted prize;  
I've bedew'd it with tears and embalm'd it with sighs.  
'Tis bound by a thousand bands to my heart;  
Not a tie will break, not a link will start.  
Would ye learn the spell?—a mother sat there;  
And a sacred thing is that old arm-chair.

In childhood's hour I lingered near  
The hallow'd seat with listening ear;  
And gentle words that mother would give  
To fit me to die and teach me to live.  
She told me shame would never betide,  
With truth for my creed and God for my guide,  
She taught me to lisp my earliest prayer,  
As I knelt beside that old arm-chair.

I sat and watch'd her many a day,  
When her eye grew dim and her locks were gray;  
And I almost worship'd her when she smiled  
And turn'd from her Bible to bless her child.  
Years rolled on; but the last one sped—  
My idol was shatter'd; my earth-star fled;  
I learnt how much the heart can bear,  
When I saw her die in that old arm-chair.

'Tis past, 'tis past, but I gaze on it now  
With quivering breath and throbbing brow;  
'Twas there she nursed me, 'twas there she died;  
And memory flows with lava tide.  
Say it is folly and deem me weak,  
While the scalding drops start down my cheek;  
But I love it, I love it, and cannot tear  
My soul from a mother's old arm-chair.

—Eliza Cook.

"WHATEVER else we do this vacation, we should see to it that each day affords us an hour or so of solitude. In solitude the soul grows and the mind gains the mastery of itself. Solitude gives pose and poise and gains for us a bank-account of reserve power that proves a mighty agency in times of sore need. Frittering, fluttering, and flustering may have their uses, but an engine without a balance-wheel is a poor affair at best. Solitude is the balance-wheel of the soul and unless vacation gives us many hours of solitude it will not be a good vacation."

## The Sign of the Soul

Adaline Hohf Beery

WHEN Gladys awoke, the sun was high, and several audacious beams were dancing a jig on her Marseilles counterpane. She turned over slowly, blinked, yawned, tossed the covers back, and began to make her toilet. Two robins in the apple-tree outside were having a lively conversation.

"Lazy! so lazy! that girl in the bed!" That is what Gladys thought they said.

"Mind your own business," she replied. "You make a good deal of racket, it seems to me."

The robins laughed. "Ha! ha! you're missing a lot of fun." And they kept up their teasing until, her primping finished, Gladys descended leisurely to the dining-room.

Her breakfast had been set aside for her, and while she daintily picked it over, from the kitchen came the sound of merry voices and clattering dishes.

"I don't see what they find out there to laugh about," she grumbled to herself. "I despise dish-washing. The very sound of it gives me the shivers. And such loud laughing! Those girls need a little training in etiquette."

Folding up her napkin, she sauntered out to where the hammock swung between two splendid Norway maples. Adjusting her fluffy skirts so they would wrinkle the least, she sat down and looked idly about.

At the far side of the lawn stood a row of bee-hives, and the citizens of that busy village were crossing each other's airy paths, everywhere, in search of the day's measure of provisions. Several flew past Gladys' head, and one lit on a twig beside her.

"Oh! you ugly bee! get out of here!" she cried, throwing up her hands deprecatingly. The bee obeyed, its wings humming back in response, "You'd better be doing something too—something too!"

Presently she heard the sound of a wagon approaching the end of the lane. The wind being at the rear, she saw a cloud of dust first, then a gray horse and a sorrel hitched to a hay-rack, on which sat a brown farmer lad in a broad-brimmed straw hat with a hole in the crown, whistling lustily, "I was seeing Nellie home." Gladys watched him turn into the gate of the far meadow.

"Dear me! he must be queer, to be jolly at that kind of work—dust flying, sun broiling, and such old clothes on! And the click of that mower all day long, and the rumble of those heavy wheels, and that everlasting whistle—it makes me tired!"

Back in the orchard she heard a calf bleating. She saw only a little red animal, propped up at the four corners with the most ungainly legs. On the other side of the barn she heard its mother responding with a sonorous bawl with an upward circumflex.

"Of all things!" exclaimed Gladys; "that cow and her youngster would better join the brass band."

The sitting-room clock was striking ten. It was one of the "grandfather" kind, and had stood in the corner for a generation. Sometimes it got a little "rattled." Just now it seemed somewhat fatigued as the slow tones floated out to the hammock.

"I think," mused Gladys, "if that were my clock, I'd sell it for junk, and get a modern one—with an ebony case, and chimes."

In the basement Norah was churning gayly to the tune of "Michael Roy." Gladys could hear the monotonous "swish, swish," of the cream, as it gurgled pleasantly to itself at Norah's determination to dash it into butter.

"Here she is!" announced Norah, "and a fine yellow hunk too;" and she appeared in the doorway a moment for a breath of fresh air.

"Norah's face is as red as a beet," commented Gladys; "and her apron is torn, and her shoes all broken. I wouldn't slave like that. I'd die. But some people can actually get enjoyment out of it!"

With that she went into the cool parlor, as it was getting warm on the lawn, and sat down to one of Schubert's melodies. The music of her own fingers (and she was well advanced in technic) was the first she had heard since she got up that morning, and she went off in a rapture while the dinner was preparing over the torrid range.

\* \* \* \* \*

It was half past two in the afternoon when Phyllis rang the bell at the home of her old school-friend, who lived in a good-sized manufacturing town. As she

waited a moment for the door to open, a passerby could see a frank, fresh face, with merry brown eyes and a mouth turned up at the corners, looking as if ready to break into a smile at the least provocation. The smile "broke" the next moment when the door flew wide and she fell into her friend Clara's arms.

"It's such a treat, dear," and "I'm so glad you have come at last," were the greetings at the same moment. Then Phyllis was drawn into the sitting-room, and the front door closed.

The girlish chatter went on in a key vibrant with pleasure.

"I had such an interesting trolley ride," said Phyllis. "It's a good ways out here from the station, and I got a good five-cents' worth of satisfaction. There was a fleeting panorama of houses on both sides, brick, wood, stone, big, little, gabled, narrow, squatty, a square yard of grass here and there, lines full of clothes across the back yard sky, yellow dogs on the porch, dirty babies on the curb, and some interesting fellow-passengers in holiday colors. And the breeze as the car bounded along was very refreshing this hot afternoon."

"Don't make so much noise," announced a big green parrot from the bay window. At which the girls laughed even more merrily.

"Where did you get such a fine bird, Clara? His feathers are gorgeous, and his words so distinct. I wonder what he would say if I should bring my canary and hang his cage alongside? I suppose it would be, 'Give a fellow a little peace!'"

There was a slight sound of bare feet, the portiere was held aside, and there stood Clara's little sister Marjory, her shy, round face framed in wayward, blond ringlets.

"Come here, dearie," said Phyllis, holding out her arms, with her compelling smile, and Marjory gave herself up at once to the influence of the gracious visitor. In ten minutes they were chums, and Phyllis was on her way to the back yard to inspect a wonderful pair of kittens. The mother-cat looked a little suspicious at first, but was disarmed when a gentle hand stroked her and complimented her on her bright children.

The odor of supper in the making came through the kitchen door. Clara excused herself that she might assist her mother. A number of whistles were heard simultaneously through the town, and soon after her father came in from the shops, dressed in soiled overalls, with an unmistakably smudgy face.

"This is my father, Phyllis," said Clara.

"I am very glad to meet you, Mr. Derland," said Phyllis, in a genuine tone, reaching out unhesitatingly for his grimy hand.

At the supper table, with his clothes changed, Mr. Derland looked almost handsome. His pleasant voice and intelligent conversation delighted Phyllis, and she

asked him many questions about his work at the shops. He promised to take her and Clara to the works next day, and have them shown around.

"I want to add as much as possible to my stock of knowledge," laughed Phyllis.

"Now, Mrs. Derland, let me take your place," she said, when they rose from the table. "I am used to washing dishes at home, and I know Clara and I will have a jolly time over it. Do you and Mr. Derland go and sit on the veranda."

To her winning manners the mother could make only a mild protest, and so the banishment was accomplished.

Later the whole family walked to the park, a few blocks away. The strains of an amateur orchestra greeted them.

"Do you notice that pale young man with the cornet, Clara? Doesn't he handle his instrument well? The trombone is a trifle off, sometimes, but I suppose he has to work long hours, and doesn't get much time to practice. I like to see a fellow *try* to do things, don't you?"

That night Phyllis went to bed in a plain little room, with white muslin curtains, a braided rug in front of the dresser, and an alarm clock on a little shelf.

"O, but this is cozy!" said Phyllis. "I know I shall sleep like a log. You'd better wind that clock up to the limit!" And she laughingly bade her hostess good-night.

*Huntingdon, Pa.*

#### A LIFE IDEAL.

Not with eye-service, Lord,  
May this, my task, be done;  
But ever unto thee,  
That, with each setting sun,  
To me may be the worthy prize  
Of sure approval in thine eyes!

O may no fatal flaw  
Destroy this life of mine,  
But may it perfect be  
As grace alloweth! Thine  
The glory, Sovereign of all,  
If any glory shall befall!

—Thomas Curtis Clark.

#### THE FATHER IN THE HOME.

PRESIDENT ROOSEVELT has again "spoken out in meeting" regarding the duty of the father in the home. Very recently Mrs. E. H. Merrill, of Syracuse, N. Y., wrote to President Roosevelt, asking for suggestions for a council of mothers to be held at Newburg, Mrs. Merrill being state president of the New York State Mothers' Assembly. In reply, the President said, in part:

"For one of your topics, how would it do to speak of the place of the father in the home? Now and then

people forget that exactly as the mother must help the breadwinner by being a good housewife, so the father, in his turn, if he is worth his salt, must in every way back up the mother in helping bring up the children. Just as the highest work for the normal man is work for his wife and children, so the highest work for the normal woman is the work of the home, where, heaven knows, the work is ample enough."

As usual, our President speaks with no uncertain sound. It is characteristic of President Roosevelt that he speaks with a clearness and a definiteness that leaves no doubt as to his meaning when he speaks at all. He stands for the best in our American life, and particularly for the best in our home life. He is a man who believes in the dignity and duty of fatherhood, and he has given many a clear message to the fathers of the world. Like all broad-minded and conscientious men, he believes that the father's duty to the home and to the children in that home is a duty the mother cannot assume if she would, and there are many men who agree with him that the father is not "worth his salt" who is unwilling to "back up" the mother in her bringing up of the children. The place of the father in the home is too often forgotten by the father himself, and it might be a very good thing if the fathers would now and then come together in a congress or convention of some sort and discuss the affairs of the home and the duties they owe to their children, just as the mothers are getting together for this purpose.—*The Mother's Magazine*.

#### HE WAS SO BUSY.

ONE year ago today I sat at my desk busy with the month's bills and accounts, when a bright-faced, starry-eyed lad of twelve rushed in and impetuously announced, "Say, pa, this is your birthday; you are fifty-five years old and I am going to give you fifty-five kisses, one for each year." And he began to make good his word when I exclaimed, "O Andrew, don't do it now, I am so busy!" His silence attracted my attention, and, looking up, I saw his big blue eyes filled with tears, and apologetically said, "You can finish tomorrow." He made no reply, but was unable to conceal his disappointment, his face wearing a grieved expression as he quietly walked away.

The same evening I said, "Come and finish the kisses now, Andrew," but he did not respond to the invitation.

Two months later, in consequence of an accident, the waves of the Fox River closed over his body, and we carried him away to sleep near the village where he loved to spend his summer vacations. The robin's note was never sweeter than his voice, and the turtle-doves that coo to their nestlings where he sleeps could not be more gentle than my little boy who never finished his love-imposed task.

If I could build a ladder to the skies and find him there; if I could only tell him how much I regret the thoughtless word spoken; if I could be assured that he understands and knows how my heart is aching because of the unkind request, there would be no man in all this wide world so inexpressibly happy as the one who sits today and thinks how he prevented an act that love inspired, and grieved a little heart as tender as the mercy of God.

"And, be ye kind one to another, tender-hearted."

—*Northwestern Christian Advocate*.

#### CARE OF PETS.

THERE is no time in the year when animals need so much care as in the summer. Then they must not only be kept clean, but must be fed and watered properly, for on this depends their health.

Dogs should be given little or no meat during the warm weather, and water should be kept where they can get at it any time. Dog biscuits are the best form of food for them; milk and oatmeal are also good. A bone with very little meat on it may be given for them to chew, but it is better to let the biscuits take its place. Dogs should be washed at least once a week to keep them in good condition. A soap containing tar is best for the purpose.

Cats should be fed mainly on milk and mush; and, strange to say, they are very fond of some vegetables. Corn on the cob does not hurt them, and a great many like it very much. There have even been cats which like cantaloupe. These animals also should have water where they may get it, and some cats may be washed with good results—to the cat—although it is a very dangerous operation for the unfortunate person who is detailed to perform the feat. Some cool place should be provided for them to sleep, but the cellar is not always good, for it is too damp.

Dogs should not be allowed to sleep in the house, particularly in summer. The stable is the best place, or, lacking that, the dog kennel would be all right.

Canaries should be provided with a daily bath. Drinking water should be kept in their cages at all times. Lettuce leaves, celery tops and chickweed should be provided for them about twice a week, and a bit of red pepper will do them no harm. Cuttlefish, of course, is always kept in the cage, which should be lined with gravel. Hempseed is very fattening, and should not be given to the birds very often. They should be fed on bird seed and rape seed, with a lump of sugar as an occasional treat.—*Floral Life*.

#### SELECTED MEAT DISHES.

PRESSED BEEF.—Boil 3 or 4 pounds of lean beef until the meat drops from the bones. Use as little water at the last as possible. Season to taste and add sage, celery seed or onion if liked. Pack neatly in a

small crock and when cold cut in thin slices. This makes an excellent supper dish on warm evenings and is easily prepared while ironing or other work is going on. It can be prepared Saturday for Sunday, thus making an ideal dish for a day of rest.

**PRESSED CHICKEN.**—Prepare in the same manner as the beef, taking care to remove all gristle and skin. Old fowls may be disposed of in this manner to good advantage. Try to have just enough broth to moisten the meat well.

**CHOPPED HAM.**—This dish uses up the odds and ends of meat on a boiled ham bone very nicely. Chop the meat very fine and add a little pepper. Beat two eggs for each cup of chopped ham, loosely measured, with 1 tablespoon of flour and half a cup of sweet milk. When the eggs, flour and milk are well blended add the ham and proceed as with omelet. Have the fat in the frying pan very hot and turn your ham often. To be nicely done the egg should be in large flakes filled with the ham. This is a good dish for quick breakfasts or suppers, as the ham may be chopped the day before it is needed.

**SCALLOPED SALMON.**—Remove the bones from a can of salmon and break in small bits. Place in a baking pan a layer of cracker crumbs dotted with bits of butter, then a layer of the fish, seasoning to taste, and another layer of crumbs until the dish is full. Squeeze over the whole the juice of one lemon and add enough hot water to moisten. Bake one hour in a steady oven.

#### TOY FURNITURE.

SOME time ago, when several juvenile members of our household were recovering from a severe attack of measles and were clamoring for "amusement," my thoughts went back to the days of my own childhood, which I spent in Germany, and memory presented me with a suggestion of which I proceeded to make instant use for the benefit of our little invalids. I purchased a lot of dried green peas—whole ones—which were put to soak in lukewarm water. When they were thoroughly softened I used them in the manufacture of toy furniture and the like, with the aid of pointed toothpicks—capital substitutes for the headless matches supplied to me for the same purpose long ago, when I myself was an invalid in a nursery. My little band, after watching me attentively for a while, was soon earnestly at work, and the question of amusement was settled for many a day to come.

For the benefit of many little sufferers all over our broad land and their harassed mothers—sufferers, too—I send this simple and satisfactory entertainment. It is also inexpensive, and will be entirely harmless if an older person will cut the toothpicks into shorter lengths (and point them) when such are required.

Remember, children, you must let the peas soak in warm water until quite soft, preferably over night. Do not take hot water, as this will cause the skin to come off and the peas will become split and useless. Then pick out the perfect ones, have a supply of toothpicks on hand, and make all the pretty furniture your dollies may require. You may also make canoes and sleds, or even a workbasket or handkerchief box for mamma, ribbons supplying the necessary hinges for the latter.—*Selected.*

### The Children's Corner

---

#### A GOOD INVESTMENT.

JOHN and James were twins, fourteen years old. Their father was very wealthy. On every birthday they expected a rich present from him. A week before they were fourteen they were talking over what they most wanted.

"I want a pony," said James.

"And what do you want, John?" asked his father.

"A boy."

"A boy!" gasped his father.

"Yes. It doesn't cost much more to keep a boy than it does a horse, does it?"

"Well, no," replied his father, still very much surprised.

"And I can get a boy for nothing to begin with."

"Yes," replied the father, hesitatingly, "I suppose so."

"Why, papa, I know so. There are lots of 'em running around without any home."

"Oh, that's what you are up to, is it? Want to take a boy in and bring him up, do you?"

"Yes, sir; it would be a great deal better than the Saint Bernard dog you were going to buy me, wouldn't it? You see, my boy could go about with me, and do all kinds of nice things for me—and I could do nice things for him, too, couldn't I? He could go to school, and I could help him with his examples and Latin."

"Examples and Latin? God bless the boy, what is he aiming at?" and Judge Roding wiped the sweat from his bald head.

"I know," laughed James. "He wants to adopt old drunken Pete's son."

"Yes, papa, 'cause he is running about the streets as dirty and ragged as he can be, and he's a splendid boy, father. He's just as smart as he can be, only he can't go to school half the time, 'cause he hasn't anything decent to wear."

"How long do you want to keep him?"

"Until he gets to be a man, father."

"And turns out such a man as old Pete?"

"No danger of that, father. He has signed the

pledge not to drink intoxicants, nor swear, nor smoke, and he has helped me, father, for when I have wanted to do such things he told me his father was once a rich man's son, and just as promising as James and I."

"Do you mean to tell me that you ever feel like doing such things as drinking, swearing, smoking, and loafing?" asked his father, sternly.

"Why, papa, you don't know half the temptations boys have nowadays. Why, boys of our set swear and smoke and drink right along when nobody sees them. I am trying to surrender all—every vice, every bad habit. I don't see how I could enjoy a dog or a pony when I know a nice boy suffering for some of the good things I enjoy."

"You may have the boy, John, and may God bless the gift!"—*Pure Words.*

## For SUNDAY READING

### LOVE'S OFFERING.

MARY C. STONER.

May my heart for all thy mercies  
Yield its greatest gift to thee,  
For the lofty God of Heaven  
Gave his greatest gift for me.

Yes, he gave this precious offering,—  
Life celestial, life sublime,  
Life of triune God and Spirit  
Son incarnate, life divine.

See, he yields his crimson fountain,  
Yields to Satan's dread control,  
For the healing of the nations,—  
Heaven's cleansing of the soul.

Can the life of human longings  
Find a recompense to bring  
For the priceless gem of glory,  
For her great eternal King?

Ah, the soul can find no treasure,  
Humbly bows beneath the cross,  
Naught to give for all its anguish,  
Naught for all the death it cost.

But with deepest awe and rev'rence,  
Touched with fervor from above,  
Brings the offering small but precious—  
All the gifts and pow'rs of love.

Ladoga, Ind.

### THE SUPREME VENTURE.

RICHARD BRAUNSTEIN.

FAITH is the supreme venture of the soul, the hazard of life, the investment of personality, the daring fling of the heart into the bosom of eternity. It is dealing in futures on the large; the inward conviction of a divine imperative to risk with Jehovah. Not credence nor contentment is faith: neither has it pre-empted the field. Sentimentality must be disbarred and every vestige of superstition expunged, if we would

grip the imperial idea. Heroic spirits—men with rich, red blood thumping through their veins—have been turned away by spiritless creeds and formulas, the spirit of the forum, the arena, the emporium is theirs, the genius of our complex civilization has seized them, and they dare and do things, and if the Gospel becomes good news to them it must appeal to the strenuous. Does faith offer an outlet to these virile souls? Is it a slogan as well as tonic? An armory as well as hospital? In truth is it for intrepids or invertebrates?

Now it is just such a test as this that the Lion-Lamb covets and his answer to the fearless is the challenge contained in this story:

The economy of faith is like a non-resident prince of finance who commits his money to his agents, and though absent, exults in anticipated gains and joys over expected profits, for he trusts his men and knows the investment. Returning, he reckons with them, receiving with suitable comment, the splendid returns of all save one who becomes the object of pitiless but deserved scorn. "Your gains?" queried the Master. "Sir," replied the crestfallen culprit, "I knew that you were hard to please and exacting of your agents, and, fearing loss through devious ways of business I therefore carefully wrapped my portion and hid it in safety. Lo! here is the identical coin!"

With him safety, security, was supreme. With the Master it was gain, enlargement, and this involves risks, venture, faith. Had it been a question of safeguarding and keeping, the owner had himself carried it away. Its possible loss would have been retrieved by the large gains of others, or generously forgiven. No, he was faithless because he refused to venture for his master. The sin of this frustrate man was the "unlit lamp" and the "ungirt loin."

It was the lack of this daring element which Jesus so much deplored in the twelve. Having trained them so long he is astonished and grieved.

A small boat is struggling in the waves. The storm king raids the night, riding his inky clouds. Down sweep the winds from all quarters, the chinks suck in the horrid flood, nearer comes the midnight monster and Death takes a seat beside each oarman. Meanwhile the Master of earth and sky sleeps on—the dreamless slumber of innocence and childhood. But filled with terror, rude hands arouse him and they catch his note of disappointment—"Have ye not yet faith? Could you not dare to command the tempest in my name?" The embarrassed winds retired to the hills, while the calm becomes so oppressive that the bewildered fishermen heard nothing save the beating of their own faithless hearts.

If the twelve were lacking in this determining element, Abraham, the sky-pilot of the Hebrews, was not. In him the supreme venture was orb'd. The divine dictum is "By faith he went out, not knowing whither

he went." There is something majestic about this shrouded figure coming up out of the mystic land of the Chaldee; with his pilgrim rod and staff he stalks across the horizon of that shadowy past seeking ever the city of foundations. He may not stay to set his stakes or fix his cords for the divine impulse urges him on.

Abraham is not only the primitive apostle of faith, but he is the symbol of humanity and manhood. The seeker after truth is ever going out of us toward the light, not knowing where he shall rest, but ever trusting the inflexible guide within. What young man knows what he will believe ten or twenty years from today? Do you say that you have found the truth, that your faith is fixed? The Psalmist sings, "O God! my heart is fixed." That is, "I know not where the vision shall lead, but I am fixed in my confidence that it will lead to the light and all will be well."

"I know not where his islands lift  
Their fronded palms in air,  
I only know I cannot drift  
Beyond his love and care."

The difference between faith and recklessness is: Faith is the supreme venture without a knowledge of the time, place and definite description of the final outcome—but with an inwrought assurance that the outcome will be a fit climax to all. While recklessness, without this element of assurance, ventures its all upon the present throw, or sits passive and inactive when it should be marching, thus either paralyzed or fired by Fate.

To Abraham once more: When it is said that he saw Christ's day and was glad, it does not mean that he became a long drawn-out telescope that saw the literal Jesus walking on the shores of Galilee. But it means that he caught a vision of human development, of the progress of civilization. Living among idolaters, steeped in sin, himself a polygamist and slave-holder, a warrior, red-handed—a prevaricator, double-tongued, a would-be son-killer, he saw in imagination, by faith, a day coming when mankind would have no polygamy, no idols, no lies, no bloody sacrifices to God, but with a great eternal life, and he was glad. Small wonder! This is faith: "All will be well—not only with me personally but with the world." And the man of faith ventured his life on this ages before it could be realized.

The writer to the Hebrews tells us that Abraham dwelt in tents but looked for a city. Wonderful statement that he lived in the tent age of the world, but he saw the cosmopolitan age. Looking over the plains of the Jordan, at the booths, tents and rival flocks, seeing the various caravans traversing the valley in their restless search for trade and wealth, he saw the day afar off when men would dwell together in cities, bringing together all nations, all products of all climes and God would rule over all! Faith makes

optimists out of tent-makers, whether the name be Abraham or Paul.

Once more. The Book says he might have returned to Ur of the Chaldees if he so desired. There is nothing compulsory about faith. You need not venture unless you so will. But Abraham preferred the tent, the venture, the growth, "Wherefore," says the apostle, "God is not ashamed of him." Slowly the walls of his tent become the walls of a great city, slowly his bosom becomes the paradise of every sainted Lazarus. He had escaped the thralldom of the present age and its conditions though he dwelt in a tent.

Shall we, then, fear the venture of faith with Jesus? Shall we look backward to Ur or forward to Canaan? Are we to live by the ideas, creeds and dogmas of the past or look ever toward the sunrise for a new light? Under the stress and strain of new discoveries, new inventions, a new industrial and scientific age, many of the old landmarks are being swept away. Many old beliefs which we held as truths are trembling to the fall. Many hearts are terrified lest our religious structure totter and crumble. But faith shines like a beacon light through it all. Truth is invincible. Only its forms perish.

"God hath set eternity in the heart of men" and they will not turn backward. Trust God; see all, nor be afraid.

Man is a Childe Roland on the pilgrimage to the Tower of Truth. Through briars of error, in the darksome, chilly plain, o'er nature's barren wastes and futile answer to the soul, past wrecks of men, and skeletons strewn along the sands, cross the temptation serpent-river from the pit, over the somber hills of silence and struggle, through the valley of darkness and sorrow, at last we shall to the tower come! Till then keep faith, O man! And when the venture's o'er, rest thee on the bosom of thy God.

It is said that John Wesley was once walking with a brother, who related to him his troubles, saying he did not know what he should do. They were at that moment passing a stone wall to a meadow, over which a cow was looking.

"Do you know," asked Wesley, "why that cow looks over that wall?"

"No," replied the one in trouble.

"I will tell you," said Wesley. "Because she could not look through it; and that is what you must do with your troubles—look over and above them."

"An astronomer does not turn his telescope to the skies with a more reasonable hope of penetrating those distant heavens, than I have of reaching the mind of God by lifting up my heart at the throne of God."

# Echoes from Everywhere

A test case in the supreme court of Chicago resulted in the decision that a child cannot be debarred from the public school for not complying with a demand of the school board to undergo vaccination.

Germany holds the record for best attendance in the public schools. A recent census shows that ninety-four per cent of all the children of school age attend the public schools, leaving only six per cent for other institutions and home training.

According to the terms of an act of the last session of congress, removing the restriction on the alienation of land owned by members of the Five Civilized Tribes of Indians in Oklahoma, which went into effect recently, about 9,000,000 acres of land which has been tied up has become available to purchasers.

June made a bigger showing in fruit shipped East from California than any previous month on record. In that month 4,100 cars went out of California to points in the East, among which were 1,000 cars of canteloupes which were raised in the newly reclaimed Colorado desert; 4,100 tons of ice were required in the refrigerator cars to protect the fruit.

The hot, stormy weather experienced in Paris during the last few weeks has led to the appearance of unusual numbers of bright and multi-colored moths, which at night time swarm in millions around the street lamps in certain districts of Paris. According to officials at the natural history museum, some very rare specimens of moths, of which there are some 600 varieties in Paris, have been caught during the last few days.

On account of refusing to obey legal authority, Governor Folk decided, August 2, to send the State Militia Troops into St. Louis County to enforce the Sunday liquor law and preserve order. Liquor men in the State continue to show their lawlessness by assaults upon prominent officials. Judge John Wiehaupt of the St. Louis County Court was assaulted without warning July 27 in the corridor of the court house by Henry Niemoyer, a saloon-keeper who was angered because his petition for a saloon license had been rejected.

"Off in a flash" is a time-honored expression that has become literally true, for on some of the gasoline motor cars which some of the railroads have adopted the old-style shot gun cartridge, which was used before the breech-loading guns came into service, is being utilized to give the gasoline engine the boost which is necessary to start the machinery. A breech is supplied into which the cartridge is fitted and fired, and then the engine is ready to do work. This method is pronounced superior to the "cranking up" method of the automobilist.

The Illinois Central Railroad, through its General Passenger Agent, Samuel D. Hatch, announces that the sale of liquor will not be allowed hereafter in any of its diners or buffet cars South of the Ohio River. "There are so many local option stations along our road," he says, "that we have decided not to permit the sale of any intoxicating drinks on our trains south of the Ohio River."

The oil field fire, near the San Geronimo River, 75 miles southwest of Tampico, Mexico, has increased in fury. Several subterranean explosions of gas have occurred the last three days, causing new openings, through which the burning oil is now flowing. According to the government engineer who was sent to the scene of the fire a few days ago, the flames maintained a height of 1,000 to 1,500 feet, and the estimated flow of oil that is being destroyed is 90,000 barrels a day.

The presence of an unusual number of white butterflies caused a collision between two tramway cars at Florence, Italy. The rails were made slippery by hundreds of thousands of the butterflies falling on the rails and being crushed by the cars. The cars that collided had the windows broken, many of the passengers were bruised and the drivers were injured. The work of clearing the line was rendered difficult owing to the appearance of fresh clouds of butterflies. The presence of the swarms of butterflies is attributed to the great heat and to the amount of electricity in the atmosphere.

Railroad employes throughout the middle West are organizing to prevent the passage of legislation hostile to the railroads. Local branches have already been formed in thirteen States, and organizers are now at work among the men perfecting details. The fear of a reduction in wages is behind the move of the employes to assist the roads in opposing hostile legislation. The railroad brotherhoods, as such, will take no part in the agitation, but the men composing them are joining the Railway Employes' Protective Association formed to look after railroad legislation.

Parisians are now using a new envelope which is practically proof against the prying person who would open it and reseal it without leaving traces of his dishonesty. Two envelopes are used, a blue one, and a white one, which is small enough to fit into the blue one. The letter is placed into the white envelope which is then slipped into the blue one, except that the flap is left out and is sealed down upon the outside of the blue envelope. The flap of this latter is much larger than the white flap and reaches down over it to a star shaped opening in the blue envelope, through which the white envelope is visible when the blue flap is sealed; it covers the white one, sticks to the blue envelope and also to the white one through the star shaped opening. The letter is thus practically locked in securely.

Under the last revision of the list of retailers of alcoholic drinks in Belgium the number appears as 210,340, or one to every thirty-four inhabitants. This frightful number does not include the places that sell liquors as a side line, such as grocers, confectioners, etc.

After years of thorough testing and experimenting, the officials of the Burlington Railroad have come to the conclusion that the use of concrete for ties is not satisfactory, and that the most satisfactory solution of the tie problem is to treat wood so that it will withstand the action of the elements. Accordingly they have decided to construct a large plant for treating ties, bridge timbers, etc., with creosote. This plant will be the largest and most complete of its kind in the world. It will cost about \$270,000.

Power generated at Niagara Falls is to be distributed all over Canada. Bids have been asked on ten thousand tons of structural steel for the Canadian government. The steel is to be used for towers which will support the cables used in transporting the current. Already power generated at Niagara is being sent a distance of more than one hundred and twenty-five miles, and it is the intention of the Canadian government to increase this distance. Towns in every direction about Niagara will be supplied.

American manufacturers are much worked up over the new British law requiring that foreigners who have British patents must establish factories in the British Isles in order to protect such patents. This law goes into effect Aug. 28. A number of American concerns have already arranged to put up factories of their own on the other side or have their goods made in existing British factories. Many, however, do not have enough business to warrant this and will therefore have to sacrifice their rights. The British have always professed that they do not believe in "protection" of any sort, but they have been forced to adopt this protective legislation in order to save their home producers from American and German competition. The new law will be even more effective than a high tariff would be, as it will force all goods to be made in British territory with British labor. This will be quite a blow to American manufacturing interests. There is talk of retaliation, and the Democratic platform in fact advocates this.

By the coming of the autumn no insignificant change will have been made in the forest service, if the plans now counted upon mature, as they probably will. These plans look to the moving of the greater part of the service to the actual scene of operations in the West and will leave only a nucleus of the service in Washington to carry on the executive work of the bureau. This change means the establishment of so-called division offices in six of the large cities of the big Western States, in all of which large forces of the forest service will be quartered. These various divisions will report directly to the head of the forest service in Washington. The cities selected for these division headquarters are San Francisco, Denver, Salt Lake City, Portland, Missoula, Mont., and Albuquerque, N. Mex. This change in the forest service organization has been decided on, it is said, to bring the service into closer touch with the field in which its operations are carried on. Already preparations are under way for the change. There are between 500 and 600 members of the forest service at present stationed in Washington.

Sheet iron is rolled so thin at the Pittsburg iron mills that 15,000 sheets are required to make a single inch in thickness; light shines as readily through one of these sheets as through ordinary tissue paper.

Vienna and Budapest are manifesting a constantly increasing interest in the temperance movement. At a recent series of conferences conducted by the International League of Good Templars, Dr. Forel, editor of *L'Abstinence*, addressing audiences of 3,000 and more persons, said that despite the hostility of officials of these cities, all classes were becoming enthusiastic. In Hungary he had found even the government favorable.

A great world's congress on tuberculosis is to be held in Washington from September 21 to October 12. It is good to know that the expectations of those who planned the congress are to be more than fulfilled, according to present indications, which show that nearly every country on the earth will have its representatives there. Within the last few days the secretary-general has received assurances from Cape Colony, Spain, Newfoundland, Russia, England, Scotland and France that all will have delegates on hand, and the list is growing daily. Lafge good cannot fail to come of this gathering for the consideration of a great world problem.

Lisbon, Aug. 11.—The insistent rumors that the revolutionary propaganda is taking a firmer grip in this country and needs only a master hand to bring about a crisis are given importance by the discovery that recently there has been much smuggling into the country of arms and bombs. The government's efforts to locate the contraband goods have been generally unsuccessful, though today's raids brought to light 100 revolvers and fifty rifles in houses in the suburbs of Lisbon. A suspicious packing case arrived yesterday from Barcelona and was opened outside of Lisbon. It was found to be filled with bombs. The *Seculo* claims that thirty anarchists, recently arrested in Portugal, belong to an important secret society whose headquarters is in New York and which has branches in the leading European cities. It is known in Portugal as the Black Cross Society, and to it belonged the regicides.

With the view of ascertaining the opinions of the business men of the United States on the money problem for the guidance of Congress and its commission on currency reform, the Merchants' Association of New York has taken the first step toward the holding of a convention at which the whole question of currency readjustment may be considered. Circulars have been sent to 7,500 leading firms throughout the Union, suggesting the holding of a gathering in some principal western city. Should the answers prove favorable, the chambers of commerce, boards of trade and other mercantile organizations of many cities will be called to a preliminary conference at which the details of the larger meeting will be arranged. More than 800 business organizations—all those in the United States, in fact—will be asked to send delegates. The chief outcome of the proposed convention is likely to be a currency reform league, which will work for desired changes. It is suggested that the convention be held either in the fall of this year or next spring. The circular expresses the opinion that the currency laws have heretofore been shaped too largely by expediency and too little by the experience and views of business men.

## CREAM OF MAGAZINES

### WARS AND WARNINGS OF WAR.

We referred the other day to a remarkable bulletin of the German military staff on the probable cost of the "next European war." That bulletin was an impressive peace document—in effect, if not in intention. Yet it did not prevent Lord Cromer, whose authority is very great, from solemnly informing the British lords that the danger of a great conflict in Europe in the near future was real and serious, that England would have to fight for its very existence, and that therefore the highest and most immediate duty of any intelligent and patriotic British government was to prepare for war.

These words, though uttered in a speech directed against old age pensions, caused some apprehension and anxiety. They were taken "literally," and the newspapers naturally said: "He refers to Germany." The weight attached to the warning was the greater since Cromer added that "most people who can speak with authority on foreign affairs" fully agreed with him, though discretion imposed limits on his citations and illustrations.

But England was not long left in dread suspense and gloomy fear. Sir Charles Dilke, an authority on foreign politics, boldly contradicted Cromer. There was neither danger nor likelihood of war, he declared, in any direction, and no menacing clouds on the horizon. As for Germany, there was no cause or reason for war between her and England. Cromer himself, noting the comments on his warning, said he had been misunderstood. He had not alluded to Germany and had no particular present "menace" in view; he had been making a legitimate argument against pensions and for "defense" appropriations instead, and meant to remain in the domain of mere generalities.

The man on the streets breathes freely again. War in Europe, after all, is not imminent. The warnings even of the leading statesmen must be taken with plenty of salt. Opposition to pensions, to expenditures on social reform generally, may inspire a terribly "grave" speech which the stock market and the partisan press take too seriously.

The fact is that the world situation is peculiarly favorable to peace just now. The new "understandings," the royal and presidential visits, the arbitration treaties, the progress of constitutionalism, the difficulty of floating foreign loans, the demand for internal reforms, the burdens of taxation are each and all peace factors. The rumors and warnings of war often prove nothing more than the desire to add emphasis to an argument or eke out a thin speech.—Chicago Record-Herald.

### YOUNG TURKEY.

The powers have been busy for many months past in planning the foreign and domestic policy of the Turkish Empire. Austria wanted to run a railroad thru the country from west to east; Russia said if so she must be allowed to go across from north to south; Germany wanted

to build to Bagdad. Great alarm was felt lest some one of the Powers should object to these startling proposals, but to everybody's surprise nobody did, except the Sultan, but he was not consulted. Then Great Britain called attention to the fact—which has been filling the newspapers for the last ten years—that Macedonia was in disorder, and proposed a plan for the virtual administration of this unruly district by the Powers, in the interests, of course, of the Sultan and his subjects. Another flutter in the chancelleries, the proposition preposterous, but again all come to a speedy agreement, and are ready to urge it upon the Sultan with the necessary insistence, when now these fine plans have to be pigeonholed on account of the appearance of a new factor in the problem which the Powers, for all their care, had failed to take into consideration—that is, the people themselves. The Sultan decided that if he had to share his sovereignty he preferred a Parliament to the Powers, so he has granted a constitution and called for the election of a national assembly.

Abdul Hamid knew what to do in this emergency because he had been there before. He himself had been put on the throne by a Young Turkey party after the reigns of his uncle and brother had come to tragic ends within three months. Most of his empire was in revolt, and the Powers were arranging for its partition to their mutual satisfaction.

The new Parliament did not do anything except to find fault with the administration and, having served his purpose, that of giving a vocal outlet to the discontent of subjects and of ameliorating the action of the Powers, it vanished and was heard of no more till now. It only held two sessions, the first opening March 19 and the second December 13, 1877. On the latter occasion, immediately after the fall of Plevna had left Constantinople defenseless before the Russians, the Sultan delivered a speech from the throne filled with such excellent sentiments as the following:

"The salvation of the empire depends entirely upon the complete and sincere carrying out of the constitution. Our greatest wish has been to see all classes of our subjects enjoy the benefits of complete equality and our country profit by the progress of modern civilization. . . . It is by means of complete liberty of discussion that one can arrive at the truth in legislative and political questions and thus protect the public interests. The constitution renders this a duty on your part."

The Sultan could do no better than use the same speech when he assembles his new parliament. The constitution, too, could hardly be improved upon today. It is as good as new, having never been used.

Nobody expects much of Abdul Hamid. He is now sixty-six years old and has spent nearly half his life fooling the people and the Powers. Whether a constitutional government can exist in Turkey depends, not upon him, but upon the men of younger generation who have long been striving to get a share in the government of their country. They

have been deprived of all opportunity for political training and nobody knows whether they have the ability and sobriety essential for their exceedingly difficult task. They have been tolerably successful at assassination for many years. It appears, from the events of the past week, that they have carried a mutiny to a triumphant conclusion. But this does not imply the possession of the capacity for self-government as the present condition of Russia and Persia shows. The young Turks have at last their chance, and if they can give the country a decent administration and keep these turbulent races from cutting each other's throats they will do more than absolutism or benevolent intervention has been able to accomplish.—The Independent.

### AN ENGLISH EULOGY OF OUR TECHNICAL TRAINING.

Our methods of technical training are spoken of in terms that must be gratifying to every American educator, in an address on "Technical Education in America," delivered by Sir William H. Preece before the Royal Society of Arts, London. We quote from an abstract in The Engineering Digest (New York, June). The American boy, the American instructor, and even the American capitalist who finances the schools, all come in for a good word. Says this eminent electrician:

"It is difficult, if not impossible, to make any just comparison between the methods of technical education in America and those at home. The conditions are totally different. Climate, race, commerce, industry, fashion, wants, and aims are different. We are a conservative, archaic nation, well provided with inertia, not wanting in wealth, accustomed to grandmotherly attentions, subject to the traditions of the past, and swayed by the precedents of our grandfathers. America is a congeries of numerous self-governing States, intensely ambitious, enjoying a champagne-like climate, formed of a mixture of all the Celtic, Teutonic, and Latin races of Europe, inspired by a rapid and excessive flood of the wealth of the soil and the demands of a phenomenal inroad of aliens; abounding with advancing commerce and growing industry, and suffering from a great inroad of wealth and an immature system of finance.

"The American boy possesses the energy and smartness of a new race. The European boy is mentally two years behind him. His precocity is assisted by his keenness and his vivacity. He works with an object and a determination to succeed. He throws the same determination into his studies that he applies to his games. He is irresponsible and sometimes a terror. The absolute unfitness of these characteristics to the British boy must be self-evident, but they will account for the differences in the curricula, and the paper set for examination provided for these boys when they become students in colleges and universities. Teachers, like poets, are born, not made.

"The teachers differ but little from those in Europe, but they are excited to great energy by their natural enthusiasm, by climatic influences, and by the reflected encouragement of their receptive pupils. Indeed, many are imported from France, Germany, and the United Kingdom, and I should like to see the reverse operation, for there is much to be gained by a process of blending in professional ranks. We want new blood at home. We have made a bold start here by appointing Dr. Henry Bovey, of the McGill University (Montreal), the rector of our new Imperial College of Technology in South

Kensington, and there is every reason to anticipate complete justification.

"It is in the behavior of the employers and captains of industry that even a greater characteristic is evident. They, in America, not only appreciate, but assist in noble ways, the acquisition of scientific attainments in their employés. The premium system, such a serious check at home, is abolished, and they select only those who can submit diplomas. They fully recognize the advantage of technical attainments, they encourage research. They equip their own laboratories, and they support college and university by financial help and by the gift of machinery.

"The marked distinction in American practise is the adoption of the four-years' course—which we certainly ought to adopt at home. Tho not specified, or even regulated, it is quite evident that in America all are working on fixed methodical lines, and that gradually a national coördinated system will be evolved which will make the United States the best secularly educated country in the world, and its educated policy thoroughly organized."—Literary Digest.

### THE SATISFACTIONS OF THE FARMER'S LIFE.

WHAT I think we have a right to say in behalf of a greater exaltation and love for an agricultural life is this, that in the main it is better adapted to establish in the human heart composure, self-reliance and a general knowledge of wisdom for the mass of wealth producers than any other. If to this we add the dignity, the sense of proprietorship, of him who owns the ground his house is built upon, the gardens that surround it, and the field whose yellow fruits he stores in barns and granaries, we invest the primal calling among men with that "historic nobility that rests upon the possession and use of land."

The Talmud says that "He who walks daily over his estate, each time finds a small coin." We may well agree with Mr. Lowell, who thought the builders of the republic great because they "gave every man the chance to be a landowner, who made the transfers of land easy, and put knowledge within the reach of all." They clearly understood what legal powers of manhood were ministered unto when men were able to hold fee-simple title to their estates, and possessed the Promethean fire to guide and illumine their way.

If the farmer's returns are not great, they possess a degree of certainty by which he is sure to keep the wolf from the door. The fallacy in all of this bewailing the meager income from the fields and orchards of the land lies in the assumption that happiness depends upon goodly possessions. Diogenes, with his tub and shirt, asking Alexander to remove from his sunlight, incited the Macedonian conqueror to cry out: "If I were not Alexander I would be Diogenes." The seat of peace, of content, is in a man's own bosom and not in the mine, the warehouse, the granary, or bank vault.

It is an old test not yet obsolete, "Better is a little with righteousness than greater revenues without right." At the bottom of many a dazzling fortune

lie dishonor, infidelity, falsehood, robbery, betrayal of a friend, and the wreck of the possessions of the unwary. What the farmer gains is laden with sweet sunshine, the zephyrs of spring, and the fostering love of all nature's gentle ministry. So that when one takes account of the compensations, mental and spiritual, that come to him whose daily bread comes from honest toil, over him who lives by his wits or is the Robin Hood of Society, the balance throws high into the air the one who lives by speculation or adventure.

This paper must not end without a brief recognition of the progress in knowledge already made by our farmers, and of the urgent need of larger advances in the same direction. Macaulay tells of the state of agriculture among our English ancestors three centuries ago. Over their rude implements and careless husbandry, their dim perception of the value of the rotation of crops, we are more advanced than were they beyond the primitive tillage of Egypt and Syria. And yet we are assured by Professor Rogers, of Oxford, that the Plantagenet kings, sedulously enacted laws to stimulate and foster industrial and agricultural life.

In our own age we are like the enchanted youth, who woke from deep sleep, the result of a dusty and sun-heated journey, to find himself clothed in royal robes and lord of a palace of wide domains. The sacredly guarded secrets of nature almost in a day had been revealed, and now as in no preceding years are the potent agencies of earth, sea, air and sun bent to the service of man. Occult laws emerge from their dead abode, to become handmaids of industrial life or of refined enjoyment. Isolated facts have fallen into scientific statements. The very nomenclature of the new truths and teachings staggers our memory and the inventions that minister to human need or desire fill ample pages in government reports. While every department of human exertion has been stimulated to intense energy, in no one does this seem so vast, so commanding as in the production of the fields and pastures.

The prodigious possibilities of this great campaign in the western part of the State of Kansas, when a soil so exuberant with plant life is touched by fructifying waters, is now brought before us in a new and urgent form. Beneath a fervid and genial sun there sleep millions of acres of land as rich as the delta of the Nile, and, like that historic valley, whence the storehouses and granaries of the old world drew vast supplies, this western plain demands canals, dams, reservoirs and large machineries, to transmute the spare herbage into carpets of living green. If the watering of our great plains ever becomes a reality, the truth and teachings grouped under the word hydrology must pass into the theoretical and practical possession of our western farmers.

Successful irrigation means an acquaintance with

hydrostatics and hydraulics, with meteorology, in its most extended sense, the laws of heat, light and electricity, geological and geographical facts, and, beyond these, involves a familiarity with plant life and nutrition, and a long train of related sciences, each and all of which join hands with the patient tiller to produce the purple alfalfa, the fragrant garden, and the rustling harvests.

Higher and wider knowledge is the imperative demand of the hour. Thirty-five years ago, when Kansas had hardly one-sixteenth of its present population, the framers of our constitution implanted within that honored document the duty of each succeeding legislature to protect the cause of education, not alone for the children, but for the youth who had passed through the routine of the common schools. This benign provision reflected the sentiment of our people then, and it still holds the lofty regard of those who have since that time made Kansas great and prosperous. The farmer of today ought to be one whose mental prowess and discipline equal the most successful business man, the brightest lawyer, and the most sedate and erudite clergyman. To his vocation science lends her wings, the laboratory opens its doors, invention beckons him forward, and great nature, a loving father and mother, holds out to him a helping hand.

"Honor waits o'er all the earth,  
Through endless generations—  
The art that calls her marvel forth  
To feed the expectant nations."

—*Solon O. Thatcher in Maxwell's Talisman.*

#### BRIGHT SAYINGS OF CHILDREN.

**Logical.** A little five-year-old was begging his mother to buy him a knife. She said, "We will wait and ask papa, for you know a part of you belongs to him."

After a moment's silence he looked up and said, "But the part that wants the knife belongs to you." He got the knife.

Little Ray, four years old, stood by the window, eagerly watching a gopher or squirrel sitting on its haunches, eating from its fore-paws. Suddenly, as it ran off, frisking its tail, Ray called, "Oh, mama, see! he can wiggle his handle and walk on his hands."

Revised Edition of  
**Ropp's New Commercial Calculator**  
**And Short Cut Arithmetic**

The Standard for Store, Farm, Bank or Factory,

5 1/2 x 2 3/4 in.

Greatly improved, enlarged and thoroughly revised.  
 Contains an entirely new system of unique Tables, Short Cuts  
 and Up-to-date Methods.

Unquestionably the most complete and comprehensive Calculator  
 ever published.

Has more than twice the matter, scope and capacity of Ropp's  
 former editions, of which

**Nearly 1,500,000 Copies have been Sold.**

The most convenient and practical Labor-saving work ever used  
 in the business world.

It will make every one independent, sure and self-reliant in all  
 practical calculations.

It will prevent mistakes, relieve the mind, save time and labor,  
 and often loss and trouble.

Its Tables are adapted to all trades and occupations of the city  
 or country.

**The Answer to Your Problem as Quickly as a Watch Shows the Time.**

It also explains and simplifies the principles of Arithmetic, Mechanics and Mensuration.  
 It will make the study and use of Figures easy and interesting to both young and old.  
 It will enable every progressive mind to become an expert, sure and rapid calculator.  
 It will prove a boon to all whose education in arithmetic has been limited or neglected.

**48 Cuts Illustrate the Elements of Mechanics and Mensuration**

It defines about 70 points in "Commercial Law" which every man and woman should  
 know.

It is the result of devising, and improving system after system; of spending thousands  
 of dollars in experimenting; of making millions of miscellaneous calculations, and of doing  
 some vigorous thinking during 38 years, by an analytic, practical and persevering  
 mind.

**It is Especially Designed for**

Farmers, Mechanics, Business and Professional men.

# ALBERTA

¶ Of Alberta a distinguished writer has said:

"North of the International boundary line and immediately east of the Rocky Mountains lies the Province of Alberta—a land blessed with all that is necessary to happiness and prosperity. Between the 49th and 60th parallels and between the 110th and 120th meridians lie 281,000 square miles of possibility. Here are mountains and plains, foothills and valleys, rolling prairies with wooded stretches between, dense forests and grassy meadows, clean, timber-girded lakes and winding brooks, cold mountain streams and navigable rivers, and a soil rich in the alluvial and vegetable accumulations of centuries. And as if not content with these outward signs of her favor, nature has hidden beneath the surface vast deposits of coal and other minerals; she has filled the subterranean reservoirs with gas and oil, and sprinkled the sands of the mountain streams with gold. That no living thing should go athirst, she gathered together the waters of the mountains and brought them to the plains, to be directed by the ingenuity of man to the use of the grazing herds and the planted fields. Then, to crown her efforts and leave nothing incomplete, she brought the chinook wind, warm with the breath of May, to temper the north wind."

¶ In the Medicine Hat District we have a gently undulating prairie. The soil is capable of producing generous yields of all small grains and vegetables in abundance.

¶ The city of Medicine Hat, situated on the Saskatchewan river and underlaid with gas and coal, is destined to be a great manufacturing center.

¶ Why not join the colonies already there and enjoy some of the material benefits as well as help build up one of the largest and best colonies in the Canadian West.

¶ We have excursions every first and third Tuesday of the month.

¶ For particulars and cheap rates apply to

**THE R. R. STONER LAND CO., LTD.,**

(To the left of each name-plate will be found an opening of sufficient size to receive the peg.) Price of Board as above, not prepaid, .....\$4 10
- 1 Twentieth Century Enrollment Card-file Box, containing 100 Enrollment cards, and 8 Guide Cards. Price, not prepaid, ..... 90
- 1 Twentieth Century Offering Box, for 8 classes. Separate receptacles for each class, with provision for name of teacher or class name over each receptacle. Price, not prepaid, ..... 50

\$5 50

Price of Complete Outfit as above, not prepaid, .....**\$5.00**  
100 4-page Explanatory Leaflets free with above Outfit.

### Outfit No. 2

This outfit is suited to a school of 150 enrollment and 20 visitors, and consists of:

- 1 Twentieth Century Record Board of 3-ply Veneered Oak, Varnished. Size 20 by 19 inches, fitted with 150 Brass name-card holders, 150 White name-cards for pupils, 15 Blue name-cards for Teachers, Officers, etc. 150 Gold pegs, 38 Silver pegs, 23 White pegs and 15 Black pegs. (To the left of each name-plate will be found an opening of proper size to receive the peg.) Price, not prepaid, .....\$5 70
- 1 Twentieth Century Enrollment Card-file Box containing 150 Enrollment cards and 16 Guide cards. Price, not prepaid, ..... 1 20
- 2 Twentieth Century Offering Boxes. Each box has provision for 8 classes. Price, not prepaid, ..... 1 00

\$7 90

Price of Complete Outfit as above, not prepaid, .....**\$7.50**

150 4-page Explanatory Leaflets, free with this outfit.

### Outfit No. 3

This outfit is suited to the needs of a school of 200 enrollment. Provision is made for 20 visitors. The outfit consists of:

- 1 Twentieth Century Record Board of 5 ply Veneered Oak, Varnished. Size, 19 by 26 in., fitted with 200 Brass Name-card holders, 200 White name-cards for Pupils, 20 Blue name-cards for Teachers, Officers, etc. 200 Gold pegs, 50 Silver pegs, 30 White pegs and 20 Black pegs. (To the left of each name-plate will be found an opening of sufficient size to receive the peg.) Price of Board as above, not prepaid, .....\$7 40
- 1 Twentieth Century Enrollment Card-file Box containing 200 Enrollment cards and 24 Guide-cards. Price, not prepaid, ..... 1 50
- 3 Twentieth Century Offering Boxes. Each box has provision for 8 classes. Price, not prepaid, ..... 1 50

\$10 40

Price of Complete Outfit, not prepaid, .....**\$10.00**

200 4-page Explanatory Leaflets, free with above Outfit.

NEEDED NOW IN THE GREAT

## **BUTTE VALLEY, CALIFORNIA**

Fine farm land needs only men to farm it. New towns need trades. Here is a chance for all who desire a better living with less work and more health. Best medicine for all common diseases.

### **Land Here Has Great Record**

100 families already located. Note these yields: 27-lb. cabbages—5 tons timothy and clover per acre—8-lb. potatoes—3 crops alfalfa—17-inch radishes—35 bu. wheat per acre—16% saccharine sugar beets—100 bu. oats per acre—19-inch Newton Pippin apples. Markets take all you can raise. Fine shipping facilities. You can get good farms cheap on easy terms.

### **Schools, Churches, Telephones**

Don't decide to buy new land anywhere till you hear from me. All that you could desire in any section is here—3 times better than any worn-out Eastern land. Learn all about it. Write me today—now—for illustrated booklets free—fully descriptive. Address postal to

# COLLAPSED

The history of Venice, the queen of the Adriatic Sea, one of the most picturesque cities of the world, dates back to the beginning of the Christian Era, when the mighty Romans fortified the coast of the Mediterranean as a protection against the invasion of the barbarians. Although stripped in a measure of its political power, it is still one of the proudest of European cities and its many palaces, historical monuments and Campanili or bell towers, gray with age, speak eloquently of its past grandeur. Among its many world-famed towers was the Campanile of St. Marc, whose gilded steeple extended high over the stately church below and which had stood for centuries as a landmark for the seafarers and the thrifty fishermen who dipped their nets in the blue waters of the Adriatic Sea.

The foundation of the Campanile of St. Marc was laid in the 9th century A. D., but it was not completed until about 300 years later. For centuries it has stood, the pride of the Venetians, rearing its lofty tower 323 feet above the ground. It braved the biting winds and storms of the sea and won the admiration of the traveler. On the morning of July 10, 1902, at half past 10 o'clock, a sudden rumbling, followed by a fearful crash, startled the city of Venice. The artisan left his bench, the gondolier rested his oar and everybody rushed out of his home and asked, with blanched face—"What is the matter?" A heavy cloud of dust hung over the square of old St. Marc. The Campanile, the pride of the city, had collapsed. A huge pile of stone and mortar, ninety feet high, marked the place where the famous tower had stood. The celebrated Campanile was no more. In a few minutes the telegraph was busy flashing the news around the world.

Many theories have been advanced as to the cause of the sudden and unexpected collapse of this grand piece of architecture. The concensus of opinion is however, that its foundation had become weakened by the attacks of climate and possible changes on the earth's surface. It was recalled that sometime before, a Board of Supervisors, appointed by the government to look after and inspect such buildings and structures had recommended, after a close inspection of the Campanile, that certain repairs be made. This board was composed of distinguished

architects and engineers. It seems however, that their recommendations passed unheeded, at least for the time being. With the usual governmental red-tape, the matter was delayed and when finally the repairs were ordered, the Campanile had collapsed.

What a striking similitude between this Campanile and our own bodies! We feel frequently a disturbance of the foundation of our bodily structure. We know and realize that it has become weakened by the inroads of disease, impure blood and loss of vitality, but instead of giving it immediate attention, we neglect it until the collapse has come. When your body shakes with pain and your nerves tremble, when your blood is thin, weak or impure, and you feel you are not well—but that something is wrong, that is the time to brace up the foundation, and strengthen the weakened portions. The blood is the elementary principle of life. It is the foundation. If it is not pure and vigorous all organs of the body will suffer and a general collapse will sooner or later take place. It is our duty to look after this and keep our blood in a condition which insures good health. There is only one safe, sure and effective way of doing this and that is through the remedial agents found in Nature's botanical storehouse. That is the only natural way. From pre-historic times, man has by instinct,—and who can say that the All-wise Creator did not plant it there,—sought the herbs of the field as a cure for physical ills.

The originator of **Dr. Peter's Blood Vitalizer** was termed an "enthusiast" on the subject of herb treatment in the cure of the sick. He was proud of the distinction. The success of his methods has surprised not only the laity but the medical profession as well. The record of cures accomplished by his remedy, the Blood Vitalizer, has silenced all argument. It is a remedy which contains the very essence of those botanical agents which time and experiment have proven exert a helpful influence on the human system. **Dr. Peter's Blood Vitalizer** comes in a plain bottle incased in a plain carton, but there is virtue in its homeliness. It is a remedy of positive merit. It is not a drugstore medicine but is supplied direct to the people by local agents appointed by the proprietors.

Chicago, Ill.

## Mr. World and Miss Churchmember

By W. S. Harris

It is a forcible allegory, somewhat after the style of Pilgrim's Progress, but in no sense an imitation of it. Fathers and mothers, it is the book that you should get for your son and daughter, and at the same time read it yourself. You will be stronger for the church after having read it. It illustrates vividly how Satan lures the church member, step by step, from the pure Gospel, till finally he is lost forever. Send in your order at once and you will never regret it. Cloth only.

Our Price, Prepaid .....\$0.75

## 6 PER CENT NET

### ON NORTH DAKOTA FARM LOANS

All loans are first mortgage loans.

No loan is made exceeding 50 per cent of the actual value of the property.

Title in all loans is passed on by reliable Attorney and no loan sent out unless title is perfect.

Interest is collected and remitted each year free of charge.

Write for reference as to my reliability. I will refer you to men that you know either personally or by reputation.

MICHAEL BLOCHEE, Perth, N. Dak.

## CAP GOODS

Our business has almost doubled itself during the last year. We are sending goods by mail to thousands of permanent, satisfied customers throughout the United States. The reason is simple.

**Our Goods are Reliable, Our Variety is Large, Our Prices are Low.**

All orders filled promptly, post-paid. Satisfaction guaranteed or your money refunded. Send us a sample order and be convinced. Write us for a booklet of unsolicited testimonials and new line of samples, which will be furnished free. Send at once to

R. E. ARNOLD, Elgin, Ill.

## PASTOR'S POCKET RECORD

Arranged by Rev. Sylvanus Stall, D.D.

This record affords space for the recording of 63 church officers; 714 members, over 6,000 pastoral calls; 42 communion services; 126 baptisms, 84 marriages, 105 funerals, 273 sermons; 63 addresses; 168 new members, besides ten other departments.

**Ministers.**

You will find this an excellent little volume to carry with you at all times.

It contains nearly 200 blank pages and is bound in black leather, size 3½ x 5½ inches. Very convenient to carry in pocket.

Price prepaid only 50 cents.

**BRETHREN PUBLISHING HOUSE,**  
Elgin, Illinois.

# OVER 200,000 ACRES

of land has been filed under the CAREY ACT in the Twin Falls District, Idaho, since April, 1907.

¶ There is still a large amount of land waiting for the settler in the above district. Also great opportunities are offered at American Falls, at Gooding and other points along the OREGON SHORT LINE RAILROAD.

¶ The Payette-Boise Reclamation Project under the U. S. Government is about completed and will be ready to furnish water to about 300,000 acres of new land in the spring of 1909. These lands can now be bought at reasonable rates and terms, by the settler, and are situated where the country is already partly settled, near good towns, railroads and electric lines.

¶ Rural mail routes and telephone lines are already established. Good schools and churches. No storms or cyclones. Farming is done by irrigation. No failure of crops by reason of too much rain or drought. Fruit crop is abundant every year. The people are happy because they are prosperous.

## Wonderful Possibilities

for homeseekers and investors. Climate Mild. Soil Very Productive.

¶ Alfalfa, Sugar Beets, and grains of all kinds are among the products that yield abundantly. Farm hands, carpenters, mechanics and in fact all classes of workmen will find plenty of work at good wages.

¶ Arrange your plans to go and see Idaho as soon as possible and secure some of this fine land.

¶ HOMESEEEKERS ROUND TRIP EXCURSION RATES are on First and Third Tuesdays of each month in 1908.

¶ WRITE NOW for printed matter and full particulars regarding this great country and how to get there.

No. 34.

## The Oldest College Y. M. C. A.

John W. Wayland, University of Virginia

THE Young Men's Christian Association is said to have had its origin at London, England, in 1844; and the beginnings of the general movement in America were made at Boston and Montreal in 1851; but the first organization of the name among the students and teachers of an educational institution was made at the University of Virginia in 1858. It was during the session of 1857-1858 that the first steps were taken; and in the fall of 1858, soon after the opening of the session of 1858-1859, the organization was completed. Very soon after the movement took shape at Virginia, an organization was made at the University of Michigan; but the one was not an outgrowth of the other, since the Michigan men did not know of Virginia's organization at the time they made theirs.

During the years shortly preceding the Civil War the number of students at the University of Virginia was not only large, but among the numbers were representatives of different religious denominations. The men of different faiths came to see one another, as one of them recently said, "eye to eye and face to face." They of course could not agree on all points of doctrine; but they came to respect one another for their moral worth and their devoted piety. A desire for a closer fellowship took hold of them. Under the system of independent schools, then existing much more strictly than at present, there could be no class organization, as in other colleges, with its consequent association in educational spirit and work; the literary societies, the fraternities, and the other associations of various kinds could not supply the opportunities for co-operation in religious activity. So the University Young Men's Christian Association was a natural outgrowth of the spirit and needs of the time. In the spring of 1858 the desire on the part of the Christian men in college for some method by which they could unite in Christian worship and work became so strong that a number of conferences were held and plans were studied. Of course the organizations at London and elsewhere were known of; and special study of those associations already established convinced the students

of Virginia that similar methods could be very well adapted to the needs of college men.

During the session of 1855-1856 or the following year a temperance hall had been erected at the entrance to the University grounds. This afforded a meeting place for conference and organization. For a dozen years or more it had been the custom to hold a weekly prayer meeting in one of the lecture rooms. Moreover, the faculty and students were accustomed to contribute to a common fund for the support of the college pastor, or chaplain, who in turn devoted himself to stimulating and developing the spiritual instincts of the community. Thus we see that a number of conditions and influences combined at the time under consideration to favor organized activity. A half dozen or more of the professors were warmly sympathetic in the movement, if not actually promotive of it. "The sound of a going" was in the world at large and in the smaller circles of the University.

The conferences of the spring of 1858 were followed by more definite steps the succeeding fall, after the students returned from the summer vacation. On October 12—a date memorable in American history—a constitution was adopted, and thus was formally established the first college Young Men's Christian Association in the world. The objects of the organization were declared to be the promotion of Christian sympathy and brotherhood, the advancement of the moral and religious welfare of the students of the University and surrounding institutions, and the benefits of united effort.

The first president of this first college association was John Johnson of South Carolina, who later became well known as the engineer of Fort Sumter and as the author of "The Defence of Charleston." He died at Charleston April 7, 1907. The second president was Thomas Hume, who still lives. He, together with Herbert Harris, L. M. Blackford, and J. William Jones, took a leading part in the work of organization and in the formation of the constitution. Blackford and Jones also survive, and live at Alexandria and Rich-

mond, Va., respectively. Dr. Jones is well known—famous, indeed—as the author of “Christ in the Camp,” a history of the United States, a life of Robert E. Lee, and of numerous historical papers.

The Association at the University of Virginia was efficient from the beginning. Its workers went out not only into the college at large, but also into the town and surrounding communities, in effective missionary endeavor, Sunday-school work, and kindred forms of activity. Some of these Sunday schools and mission stations were established in the adjacent “Ragged Mountains,” celebrated by the pen of Edgar Allan Poe, where similar forms of religious ministra-

work than can be claimed by any other State university in America.

On October 19, 1905, the excellent new building, Madison Hall, presented to the University Y. M. C. A. by the Dodge family of New York City, was dedicated. The original roll of charter members, as signed in October, 1858, was called, responses being made either in person or by letter. Of the ninety-two men who were members of the Association during the session of 1858-1859, thirty-five are still living; and nearly all who could not be present in person sent letters of remembrance. At a reminiscence meeting Prof. Francis H. Smith, one of the teachers of '58 who gave sym-

Old Temperance Hall, University of Virginia, where first College Y. M. C. A. in the World was Organized.

tion are still continued by teachers and students of the University.

Since its organization the Young Men's Christian Association of the University of Virginia has had in its membership nearly four thousand men. This number would be much larger were it not for the fact that the total number of students was comparatively small during the period of the Civil War and Reconstruction. In recent years the annual Y. M. C. A. membership has much increased. During the session of 1906-1907 the number of members was 430; last year, 1907-1908, nearly five hundred men were enrolled. These figures are said to give to the University of Virginia a larger percentage of its student body enrolled in Christian

pathetic aid to the movement, presided; Dr. J. William Jones made a prayer; Dr. Thomas Hume, second president and one of the founders, made an historical address. Dr. John Johnson, the first president, was still living, but was not present.

In closing this sketch of the oldest college Young Men's Christian Association, it may be of interest to note the names of a few more of the men, taking part in the organization, who afterward became widely known. Dr. John Johnson, Dr. John William Jones, and Professor Francis Henry Smith have already been named. Dr. John B. Minor (1813-1895) the famous professor of law, Albert Taylor Bledsoe (1809-1877), philosopher and author, and Dr. William

H. McGuffey (1800-1873), widely known as the author of a series of school readers and spellers, were among the other teachers who co-operated with the students in the work under consideration. John Cowper Granbery (1829-1907), afterwards a distinguished Methodist bishop, was university chaplain from 1859 to 1861; and John Albert Broadus (1827-1895), president later of the Southern Baptist Theological Seminary at Louisville, Ky., and author of several standard books, was influential in the movement. James M. Garnett, the Anglo-Saxon scholar and the editor of

*Beowulf*, Thomas R. Price, late professor of English in Columbia University, and Charles Augustus Briggs, the famous Hebraist and exegete of New York City, were among the students who took an active part in founding the Association at the University of Virginia. They all builded better than they knew; for the organization that they started has grown through the half century since, until today it is one of the vital and directing forces in the life of the University, and reaches out in its influence throughout the State and into many parts of the nation.

## Westward Empire's Course

Elmer S. Shank

DURING the spring of this year Japan asked the United States to restore some forfeited school privileges to Commodore Perry's fifty-three-year-old America of the Pacific. Since that time thousands of eastern heads have turned more concerned eyes toward our western coast. The writer was one of them. Today still more thousands are watching Rear Admiral Robley Evans as he guides the Atlantic fleet on its peaceful cruise around Cape Horn into the vast and unruffled Pacific. Peace is the mission of that fleet although the world is at liberty to call it an enforced peace.

It is to be hoped that eastern Americans will learn more actualities concerning the residents and the resources of the Pacific coast States during the next four months than all the vagaries they have harbored before. Let it be known from the start that, to the writer, born in Maryland, reared in Illinois and educated in the University of Michigan, together with two years of Ireland, England, Scotland, Holland and Germany, the EAST of my native land is to the WEST what Æsop's dog in the manger was to the hungry horse. The pride of especially the eastern East must gradually go, because her fall—relative to the West—is more imminent than many radical minds contend. While the aging Puritan and Cavalier, Atlantic thoroughbreds, are snuffing away their spare contentment and selfish hoard of narrowness and dollars, the cosmopolitan West is nationalizing, broadening in spirit, in wealth, in political power and commercial strength.

The West is not arrogant. It respectfully tenders its thanks for the capital of the East that started the western railroads and for the greater burden of the public revenue that built the same flower of the American navy now headed this way. But that railroad money was spent here because it would pay better interest than eastern interest, and that fleet comes here because the Pacific coast is the future's valuable coast and therefore the future field of action.

To the people of the Mississippi and Missouri valleys, we, of the far West, are especially indebted. It is you who have helped us most. By populating our districts with enterprising men whose capital built our factories or whose hands cultivated our raw products, the Middle West fathered the youth of the rugged child of the Pacific. From Ohio, Illinois, Missouri, Michigan, Minnesota and Wisconsin the majority of our immigration has come. Chicago, Minneapolis and St. Louis today make our eastern commerce healthy. In consequence they have become more like Portland and San Francisco than like New York, Philadelphia or Boston.

But in the next ten years this youthful West will repay its middle western parent. The coming Alaskan exposition and the outburst of exports to Asiatic ports will astound the Atlantic patrons. The East has already caught the habit of taking its vacations and outings in the West. Each summer it is Yellowstone Park, Mounts "Hood," "Rainier," and "Shasta," the salmon and trout fishing, the health of the mountain forest and the game of size that stirs the blood when met face to face. In the winter it is Yosemite, Los Angeles, Pasadena or Southern Oregon. The vast extent of all that is western comes out in the very topography of the country itself; mountain ranges, valleys, rivers—Columbia for length, volume and beauty,—forests, truly the grandeur is on a plan so great that one may well say that the West is built to the scale of a king while the East was fashioned after a schoolboy.

The geographical location has fashioned a climate unique and unexcelled. The warm Japan Stream has its breezes tempered as they float across the snow-capped coast ranges and drop down into the innumerable large and small valleys beyond. The Willamette Valley has been a paradise to many former Easterners now passing into the threescore decade. The Hood River Valley has become the famous apple climate of America. The Yakima Valley of Wash-

ington, in climate adapted to diversified horticulture, saw a jump of \$1,000 an acre in lands within three years. The Rogue River Valley of Southern Oregon for apples, pears and Tokay grapes is the true Italy of America. The Puget Sound cities, 400 miles north of Chicago's latitude, can almost raise semi-tropical fruits. Throughout Southern Washington, Oregon and Northern California, from rivers, over valleys and foothills to mountains—all that country lying just back of the first coast ranges—is one delightful dream of health all the year round. The climate is a cross between the two season and four season climates with delightful cool nights in summer and almost general freedom from snow in winter. The belts of excessive rain in winter are almost identical with Southern Ireland where rain falls 138 days in the year and than which there are fewer healthier spots in our own world. Clear streams of pure water full of fish that try not to be caught are certainly enchantment above those questionable waters of the Mississippi and Missouri, of which to walk upon the waters of the latter would be no large present-day miracle.

But of more important immediate interest to the average citizen than the ethical beauties of nature and charms of climate are the means of gaining the common man's livelihood. Be it known to those whose narrow view has carped them within some selfish county outside of which they have never been, that Portland is the greatest wheat exporting market in all the world. This means that the Washington and Oregon farmer reaps fifty bushels of wheat to the acre while his eastern relative raises fifteen to twenty-three. When that wheat leaves Portland it is paid for there or at San Francisco and not in Wall Street, New York. If you will examine the effects of the recent financial brainstorm you will notice that after the outburst not one important Oregon or Washington bank went to the wall. Even San Francisco with her titantic undertakings successfully weathered the blizzard.

When Wall Street can see a horizon as distant as this coast and allow some capital to build needed railroads, factories, smelters, lumber mills, power plants, and electric lines instead of tying it up in wildcat stock gambling, cornering or otherwise distorting legitimate grain markets, then the country at large will advance in wealth. An unfortunate circumstance prevents the United States at large from realizing her opportunities in the West. Wildcat mining schemes and tenderfoot blunders of egotistic eastern speculators, who jump at every glittering hillside, then hire incompetent friends to develop mines or lumber propositions, have caused failures and the dissemination of untruthful reports about this country. Another bad situation is the writings by representatives of certain enterprises on the Pacific coast who have axes to grind in some particular locality and in order to exalt cer-

tain small sections falsely decry other localities. If each eastern man who needs a new field for his capital would personally investigate the various coast localities and exercise more sanity in the choice of his associates in less than ten years that territory west of the Rocky Mountains could feed all the United States east of the Ohio River.

Oregon and Washington lead the world in apples. In Liverpool, London, Shanghai, and Vladivostok Oregon fruit has brought the highest price ever paid. The income from Spitzenburg and Newton Pippin apples of Oregon and Washington will be sufficient to build and maintain the American navy henceforth. Therefore, be it remembered that this country cannot afford to insult the Orient. Neither can it afford to neglect the Orient, abuse it, or ignore the lessons it teaches. China's four hundred millions of people are learning to eat our apples, Japan eats them, the Sandwich Islands eat them and so does all Russia that can buy them. W. B. Gafke of Portland seven years ago introduced our apples in the Orient. This year he dispatched 10,000 boxes of Oregon apples to Vladivostok, Mukden and other Siberian points. Today he has fruit in nearly every important city on the Trans-Siberian railroad between Vladivostok and St. Petersburg. America is too strong to live longer merely at home. She must have foreign markets for her surplus products both raw and manufactured. Would that it could be burned into the heart of every American exponent of commerce that the United States needs the friendship of China and Japan. The country at large cannot afford to be deaf to the possibilities of Pacific commerce. It means revenue for the national coffers and quadrupled taxpaying power west of the Rocky Mountains.

Driving the price of United States Steel, Amalgamated Copper, New York Central and May wheat up and down does not increase either the wealth or the resources of this country, but selling abroad the products of our rivers and our soil does increase that wealth. When America sells China \$5,000 worth of steel rails and yellow apples China has what she needs and we have \$5,000, but now when we have the apples and she has the \$5,000 she has what she doesn't need and so do we.

Apples are and will be the leading export fruit. Following them are pears for which the Southern Oregon town of Medford has already received as high as \$4.65 a box in the New York market. Following pears in the Rogue River valley come Tokay grapes raised upon south and west hill slopes under climatic and soil conditions similar to the Johannesburg district on the German Rhine where one seventy-acre vineyard produces \$50,000 to \$75,000 annually. The writer has examined every good American district and that on the Rhine and he finds the Rogue River district best of all. The fruit has already passed the

California Tokay in quality and price. After the three great fruits follow prunes, cherries, nectarines, apricots and figs; the latter producing in some valleys several crops each year. Prunes are the greatest staple. The berries that give two to five crops a year are raspberries, blackberries, strawberries, loganberries and phenomenal berries. Peaches grow like guinea pigs. Such markets as Portland and Seattle furnish good prices for all fruits. In the growing of nuts California is being chased by Oregon in groves of almonds and English walnuts. Peanut fields are no longer uncommon. The residents of the Rogue and Willamette valleys would howl their protest were one not to give a prominent place to Oregon's first great crop, the harvest of the hop yards. Hop picking is the one September industry that calls men, women and children to its home. From town, country and city they flock to engage in the gay and healthful rush of the hop-picking season which is a three weeks' outing and picnic with one cent a pound for picked hops as wages.

It would be vain for one not a veteran to treat in any general discussion mining and lumbering. Enough is said when we speak of the mere genesis or introduction that has been made in removing the billions of dollars that lie hidden or stand mute in the mountains and forests that form the Gibraltar foundation of the wealth in this fathomless West. Copper, gold, coal, zinc, lead and iron can only be bounded by the unmeasured forests of pine, fir, and hemlock. All Americans are wont to boast of the motive power of Niagara. Realize, then, that the power of two Niagaras is today running to sea unmolested in the Rogue River alone.

The Pacific Northwest issues its call to the Anglo-Saxon race in Christian spirit and fervent tones. To those whose duty it is to remain at home it asks a fair study of its political and commercial situation.

*Grant's Pass, Oregon, December, 1907.*

### CHARACTER CULTURE.

C. A. HELM.

THERE was a time when man looked only on the past, when he was sure that all that is desirable in life was the peculiar heritage of ages gone by. He loved to dwell, yet with sadness, on that time in the history of the world when all was peace, happiness and contentment. When the earth produced its bounties without the labor of man, when the attributes of the Evil One had not yet found lodgement in the human breast, when it pleased the gods to leave their exalted abode above the Olympian Mountain and to walk and to talk with the sons of men. Their golden age was in the past, our golden age is in the future. They conceived it to be their highest privilege to extol the past; we know that it is the duty of each one of us to do our

part (and we have a part) toward ushering in that period which we have called "The Golden Age."

And so we as Christian boys and girls are not working without an aim in life, we are not without ideals to which we aspire, we are not devoting the best years of our lives to the drudgery of our books without a well-defined purpose. We are resolved to the extent of our ability to render back to the Giver the talents entrusted to our care, increased twenty, thirty, yea, a hundredfold. While we are resolved to become all that a wise Creator intended us to be, we do not expect to become Lincolns. Our country has needed but one such in one hundred years. Indeed, the world needs but few great men, great in the sense the world calls great, but it does need millions of boys and girls, men and women, who are great in the highest and best sense of the word. We might fail were we resolved to become great in a way that would emblazon our names on history's pages, but we need not fail if we resolve to become great in the purity of our lives, in the honesty of our motives, in doing good to our fellow-men.

As is a people so is a nation. Given a righteous people and there must needs follow a righteous nation. Instantly the highset duty of each one of us becomes clear. It may never be our lot to take an active part in fighting the great battles of the world, but we know that every day there are fought in our hearts, between the contending forces of right and wrong, battles that are making either for our good and our country's glory or for our destruction and our country's dishonor. The winning of these battles is the development of character. Character is a development. Character is a growth. It is not like a garment which can be laid aside at will, but rather like the wool on the back of the sheep it is an integral part of our being. We do right not because it is the best policy, not because it is commanded in the Holy Book, not even because it is right, but because we can't do wrong. It is contrary to our very nature. "Do men gather grapes of thorns or figs of thistles?" "A good tree cannot bring forth evil fruit." Can a precious stone be both a diamond and an emerald? A man is either honest or he is dishonest. He is either true or he is false. He is either right or he is wrong. There can be no compromise between the forces of good and the forces of evil. They are in deadly conflict. Under which banner are we fighting?

When a great battle is to be fought it becomes necessary for the commander to acquaint himself fully with his own resources, to find out all he can about the enemy and to reconnoiter the battle field. Just so it becomes necessary for us to examine carefully our own lives that we may know not only our strong points but, also, wherein we are weak, wherein we are most easily tempted, and, then, holding constantly before us a clear conception of an ideal character, by the help of Omnipotency, the victory will be won.

Let us, then, notice briefly some of the elements of an ideal man. First, as the keystone of the arch of character building we must place that, without which everything else falls in ruins,—*Honesty*. With this there is hope, without it there is none. How often a man must say, "I have a position, but I stole it," "I have honor, but I stole it," "I have a reputation, but I stole it." But no man can ever say, "I have character, but I stole it." Accuracy has been called the twin brother of honesty. The two are logically connected. You may have read of David Maydell. In conversation with James Parton, the historian, he said "Yes, I have made hammers in this little village for twenty-eight years." "Well," replied the great historian, "by this time you ought to make a pretty good hammer." "No, I can't," was the reply, "I can't make a pretty good hammer, I make the best hammer made. My only care is to make a perfect hammer." Take the word hammer out and put the word character there and you have the secret of success of every truly great man.

Accuracy is impossible without industry. It is said that a lazy man is no better than a dead one and he takes up more room. Through infinite wisdom man is not born into the world with fully developed intellect and boundless knowledge. What he will become is left largely to himself. Though he has been given a crude mind he has been surrounded with mysteries, the unfolding of which fits him for his sphere in life. As gold and silver were placed deep in the earth away from the gaze of man, so have those principles, the unfolding of which has been the crowning glory of intellectual achievement, been hid from the human race. When primitive man dwelt on the earth he was surrounded by innumerable mysteries. If he gazed at the heavens by night, the crescent moon gliding noiselessly among the fixed stars was a mystery. If by day, he wondered whence came the sun with its gleaming, fiery disk and whither it went at night. The land, the sea, the air he breathed were practically unknown to him. The race had to prove itself worthy of a knowledge of these things by ages of arduous toil before it obtained the blessings they were designed to bestow and each individual must, to a large extent, repeat the history of the human race before he attains to that position in life which he was designed to occupy. "Genius is nine-tenths hard work." The person of moderate ability who labors faithfully, moment after moment, hour after hour, day after day, is far more likely to win a prize than the brilliant person who labors in a half-hearted way.

Space cannot be taken to dwell on purity, unselfishness, courtesy, generosity and the many other elements that are necessary to make an ideal character. Let us study them as exemplified in the life of Christ, incorporate them into our lives and following humbly in the

footsteps of the Master, we may be sure of success in this life and a successful entrance into the life to come.

*Waynesburg, Ohio.*

### A SONG OF SUMMER.

JENNIE TAYLOR.

Sing a song of Summer, sing it sweet and low;  
Winds, their winding trumpets, softly, softly blow.  
The noisy little streamlet is voiceless in the glade,  
The lazy cattle seek retreat in depths of cool, grey shade;  
Bees among the clover sip honeyed nectar rare,  
The skylark wings his joyous flight to floating cloud-lands fair.

A tangled mass of flowers has scaled the garden wall,  
Floods of sunshine coaxed them, they followed at the call.  
Now and then the raindrops tumble from the sky,  
With the cheery greeting, "Heigh-Ho! Here am I."  
Lads and lassies, happy, through each long, bright day,  
Love the smiling Summer, and wish for her to stay.  
Then sing a song of Summer, sing it low and sweet;  
She, from her store of plenty, strews treasures at your feet.

Tipton, Iowa.

### ALASKA'S NEW INDUSTRY.

THE report of the superintendent of the agricultural station on Kodiak Island shows something of the possibilities before Alaska in the line of agricultural development, up to the point, at least, when the territory can raise the main portion of its own food supply. Particularly of value is that portion of the report which deals with success in cattle raising. The station has a herd of pure-bred Galloway cattle, which is increasing as fast as any herd of its kind anywhere in the United States. They have proved to be fairly good milkers and are good rustlers. In addition to this, their thick hair makes their hides valuable for robes and overcoats. The superintendent insists that a fine Galloway hide grown in Alaska for these purposes will discount the bear skin in beauty and service.

The government plans to raise and sell cattle to settlers at a reasonable figure, and thus encourage, as far as possible, other people to enter into the cattle industry. The superintendent says he has some years of experience to guide him, that the climatic conditions along the southern coast and along the islands are favorable for cattle raising and that there are excellent opportunities for the right men, with some capital, to make a start in it. The country is new and the range is unlimited.

As the range is becoming depleted in other parts of the country it is strange that greater attention has not been directed toward the islands to which he refers, both for cattle and sheep breeding. English companies of large capital have gone into sheep raising in the distant Falkland Islands, which do not present one-half the advantages of the islands of the Aleutian Peninsula, and have been good dividend payers for years.—*Seattle Post-Intelligencer*.

## Around the World Without a Cent

H. M. Spickler

### Chapter XX.

I HAD found the passport on my wheel and delivered it into the hands of the mayor.

The little girl and boy, evidently well acquainted and on familiar terms with the mayor, leaned against his knee, looking over the paper as intently as the big man studied it.

While they were thus examining my passport, I arose from my chair, drew myself to my full height, pulled back the lapel of my coat and revealed there a little silk flag, the Stars and Stripes, pinned there the day I left by a young woman in Illinois—sixty-two years old.

"Arrest me, if you please," said I. "When you trouble me, you trouble my country and Mr. Roosevelt. I am guaranteed support and protection in every country to which I may come. In the morning I will cable to London, to my American Ambassador, Extraordinary and Plenipotentiary! I write for the American press. I propose to tell them of this."

And the little boy and girl wanted to clap their little hands.

The effect was startling. All of my pride of country, her power and prestige, and my own innocence and good will reinforced me. Courage like a bolt of lightning, electrified my words, looks and bearing.

They begged me to forget their undue haste, shook hands with me, and treated me as if I were the President.

Then they told me they were looking for a Frenchman who had escaped from France after killing two policemen! And that did make me feel good!

That night I dined at the mayor's. At his table also sat that little boy and girl, his own children. When the roast veal was put upon their plates as upon mine, they did not eat, but just sat looking at me. The mayor, seeing this, and being humiliated by the lesser intuition he had shown in my personality than his own children had used, would nudge them and say, "Mange, Mon garçon!" (Eat, my boy!) But their appetites, like mine, had been *scared* away.

The next morning I awoke at nine o'clock. The sun was streaming in through my window and strange-

voiced birds were singing in the blossoming cherry trees.

At the home of the teacher that morning I took my breakfast, having the choice of chocolate or wine. While sipping the second glass of rich, aromatic, French—*chocolate!* the master passed across the table a fancy box of cigars from which I was asked to draw several and smoke to his health. These I refused, after which his good wife made me set my feet upon one of her dining-room chairs while she cleaned and polished my shoes with her own hands.

When ready to leave, the villagers came out into the square to see me off. Tears trickled down some of their cheeks. And the little girl wanted to go along with the murderer!

But I must hurry on, as I pass out of the French custom house into the Belgian, where I ride over the country roads paved with large square, blocky stones, making it very rough for the wheel. The dog is the popular "horse" in Belgium, and sometimes as many as four or five dogs are hitched to a wagon, some of them at the tongue, some underneath and others behind, and every one pulling, and not shirking as do horses or cows. There are almost no fences in Belgium. The farms are tended like gardens, or more like flower-beds. Every inch of soil is utilized, and the biggest and best crops are raised in Belgium.

By my guidebook I discovered, as I rode along, that the famous battlefield of Waterloo was just on my right a mile or so to the south. I turned aside and took half of the day to meditate upon this historic ground. A French bullet was picked up here by a guide who showed me around and given to me to carry around the world as a souvenir of the place on the globe where one of the meanest, if also one of the greatest men went down in eternal defeat.

Hurrying on I rode into Holland, where the Dutch wind-mills try to sweep up the earth and fan all of the water out of the Dutch canals, riding all night and all day to reach Germany.

The ride along the Rhine was ideal. On my left was the emerald river, dotted with passing steamers, the banks on both sides rising to mountainous heights, purple with vineyards and crowned by frowning old

castles. The scenery was so wonderful I had no desire to stop when night came but kept riding on through the moonlight.

Some time after midnight I fell asleep on a bench by a wayside inn, and was rudely awakened by a gruff fellow who flashed a dark lantern into my eyes. In the darkness near by I saw the form of another. I was asked questions in German which I could not, or did not care to, understand. "Haben sie gelt?" He asked. (Have you any money?) I thought it was none of his business whether I had any money, or not, but I didn't know what to answer. In Germany you are arrested, when caught out at night, if you have no money. In Chicago you are "held up" if you have it. If I said no, and he was a policeman he would arrest me. If I said yes, and he was a robber, he would take it, and that dark lantern hurt my eyes and somewhat biased my judgment, so I said, "Yah—Nein!" (Yes-No), pretending not to understand his question.

Then he placed his lantern on his arm, like a conductor, and went—not through the train, but my pockets, taking out every single thing I had in them. My money was in a safe pocket, one of the last he would find, so I let him go, just as though I was tickled to have this midnight stranger fumbling me over.

### HOP-SCOTCH.

JOHN S. FERNALD.

IN this hustling age it is not so long a cry from the old to the new, in the matter of years, as we are wont, at first thought, to think, but in the matter of methods the changes amount, in many instances, almost to a revolution.

Within the memory of many now living the home-made held sway and simplicity ruled, but now even the simplest everyday articles are factory made, and the more complicated the arrangements the nearer "up-to-date" are they considered. This is seen in the realm of outdoor sports, in the popular game of golf and the more modest lawn tennis and croquet as compared with their predecessor, hop-scotch, which, in its day, was a favorite game of the young folks. In golf the implements of the game are so numerous that each player must have an attendant, or caddy, to carry along the outfit, while the field, to be acceptable, must be large, elaborate and expensive. And the player who, through ignorance or mistake, uses a stick not having exactly the proper curve or shape for the particular play in hand loses caste among the devotees of the game. The etiquette of the golf stick is only exceeded by that of the spoon at the high-toned dinner, where it is said that many of the guests hardly take

their eyes from the hostess, for fear of using a spoon of a pattern one and three-eighths inch wide when the one next to it, which is one and a quarter, should have been used.

of a pattern one and three-eighths inches wide when the such complications and no costly outfit. The "field"

could be laid out by any one by the use of any stick that would make a mark in the dust of the road, doorway or garden, and in any place where a spot five feet by ten could be found reasonably smooth and free from vegetation. The only appliances of the game were a small stone, or "quoit" for each player. The plan of the field was as shown in the accompanying diagram, sometimes slightly varied in the details, the squares being anywhere from two to three feet each way.

The game could be played by any number of persons, from two upward, either on sides or individually. The first player laid his quoit outside the square

end of the field, and, standing on one foot, kicked the quoit into the space marked "1," and from thence to each of the others in the order as numbered. He kept going until his quoit rested outside the proper space, or he was obliged to put down his other foot to rest. As each player missed, the others followed in turn, the first to get around and out being the winner. In playing by sides the totals of the numbers on which the various players stopped when the winner went out made up the score of the game. A home run was of rare occurrence.

While the game was hard on shoe leather, it was cheap as compared with modern games, even croquet, the simplest of the lot, requiring a factory-made outfit, and a grassy lawn, which must be gone over with the lawn mower frequently, while fashion demands a certain suit of clothes, which must be used for this game alone, and must be changed before the player begins golf or lawn tennis, goes boating, or sits down to a lunch with a few friends.

Belfast, Me.

### THE MUSIC OF OUR WOODLAND BIRDS.

MAN thinks that he is the originator and possessor of all art, that only he has individuality and the capabilities of making advancement. But the animal world around us reveals the fact that many of the things we are proud in the possession of are also, to a limited extent, known to other forms of life than that of man. While it is true that man is the only animal that has been endowed with enough ingenuity to invent instruments that will produce combinations of sounds in which he can pour forth his yearnings and his passions, he is not the only living creature endowed with a voice that may range up and down in liquid notes, trilling and uttering themes and phrases that are a delight to the ear and a solace to the soul. Any mere partial observer who has walked through the woods in the early morning can say something of the "unpremeditated art" of the forest songsters.

Students of bird life tell us that birds have individuality in their singing, that some of the same species will produce more and prettier notes than others, and that some are natural composers, while others go no further than the short range of notes that nature gave them, and others still are mere imitators, unable to produce anything original, but perfectly uttering the notes of other birds. The author of "Wood Notes Wild" declares that he frequently listened to a chewink that sang a theme which was based upon the tune of "Rock of Ages," while a black-throated green warbler sang a slightly modified version of a phrase occurring in "Larboard Watch Ahoy." A Baltimore oriole, according to Mr. Henry Oldys of the U. S. department of agriculture, sang with such similarity to a modern composition that he was prone to think the songster had heard the old tune, "Not for Joe"; a Kentucky bird to which he listened sang a brilliant carol suspiciously like a passage in the late Edvard Grieg's "Peer Gynt" suite.

Mr. Oldys has made a careful scientific study of bird notes, bringing to the aid of science the sympathy of the poet and the skill of the musician. He has transcribed many of the carols of the woodland songsters and can whistle them with a high degree of accuracy from his transcribed pages. No instruments, he says, can correctly reproduce these notes, although the violin and flute come near to doing so. In writing of the birds Mr. Oldys says: "Very often we are wont to ascribe to a bird a character in keeping with the quality of its voice. The sonorous tones of the grosbeak suggest strength and power; the quiet meditative notes of the wood thrush seem to indicate a philosophical, sober-minded nature; the rich, tender contralto of the bluebird is suggestive of a peaceful, affectionate disposition; the plaintive melody of the wood pewee seems to be the sad sigh of the grief-worn soul. Some birds—the song sparrow, the bobolink and the house wren, for instance—appear to be

bubbling over with happiness. Others, such as the meadow lark and field sparrow, are apparently oppressed with the weight of this life's sorrows; while the poor little screech owl utters a wail that might come from the depths of a most profound despondency."

This naturalist has a great liking for the cardinal grosbeak which possesses a remarkably strong clear whistle, only to be heard when he is at home in his native woods; he has powerful, velvety tones without self-consciousness and sings with less premeditation than the thrush, which produces good phrases and beautiful low chest tones, but introduces each of his phrases with a sort of series of clucking notes. He is popular, though, probably because he is a friendly little fellow. "Chicka-dee-dee-dee!" All of us are familiar with the notes of the fluffy little songster, among the earliest birds that come when spring begins to open. He sings a simple little lay at first but later on is able to produce several others, among which is one made up of two clear notes preceded by a remarkably sweet and high note, sounding as if it came from the very source of inspiration.

Mr. Oldys finds more than interesting the individual differences between birds which belong to the same species. In the great Rock Creek park in the District of Columbia he found a wood thrush whose song was made up of a combination of notes that he had never known a wood thrush to use. It seemed to have a fine repertoire of its own composition. He finds more and more as he studies the songs of birds a strong resemblance between them and those of the human voice. Bird and man, he says, are the only two creatures that have separate notes of a determinate pitch in their music and birds alone, of all the animals, are capable of learning to reproduce some of the melodies which have originated with man. Birds of the same species, says Mr. Oldys, have almost as wide a diversity in musical capabilities as individuals of the human race have. "Wood thrushes," he continues, "song sparrows and chewinks particularly show every gradation from mastership to mediocrity in composition, execution and temperament. It is a far cry from the chewink that knows only one short, simple phrase to another chewink that after an effective pause follows a melodious theme in a major key with another in its relative minor key. Some birds, like the canary and mocking bird, have beautiful voices and great skill in using them, but show little or no appreciation of musical form. Others like the wood thrush and chewink, with smaller compass and far less brilliant execution, rank higher as composers."

He notes that the catbird is merely an imitator but a brilliant performer and within certain limitations can imitate any song that he hears. The mock-

ing bird is even more proficient in imitating, and, also, is not a composer.

This naturalist claims that some of the birds are plagiarists and accuses the chickadee of filching notes from the phebe and the katydid. He has met with a meadow lark which sang a song "evidently borrowed, with a slight alteration in time from Handel," while later on another produced a bar or two which bore a remarkable similarity to Sousa's "Washington Post March." These little items serve to introduce a little effervescence into the serious study of nature and anyone who delights in getting into the woods will find it an instructive and amusing avocation to learn to recognize the bird notes and see what similarities to human compositions can be found in them.—*The Pathfinder*.

#### POWER OF THE GOSPEL HYMN.

FOR fourteen years I have had the joy of singing the Gospel, and leading thousands in many lands in gospel song. During this time I have made many discoveries in the realm of sacred song. It has been a fascinating study to watch what songs appeal most quickly to the people and meet their need. From experience I have found that the first quality needed in a gospel song is pathos. The hymn that lacks this soon dies. This is the heart of the secret of the two songs that have become popular all over the world: the "Glory Song" and "Tell Mother I'll be There." In a short space of time they have traveled to the remotest corners of the earth. The "Glory Song" has been translated into seventeen different languages and "Tell Mother I'll be There" into almost as many.

During my recent trip around the world I was going around the mountain peak in Hong-Kong, China, in a native chair, when I met a man who was whistling the "Glory Song." A few days later I went across to an orphanage at Kowloon, and heard the Chinese orphans there sing most sweetly the "Glory Song" in their own language. On the Sunday night we had a gospel meeting in the largest theatre in the city. Those who had arranged the meeting were fearful that we would not have a crowd to such a gathering. They never had secured the building full of white people to such a thing in the history of the city. I went down a half an hour before the advertised time, and they were turning people away by the hundreds because of the pack inside. They piloted me up a back way to the stage. To my surprise the audience were singing of their own accord, the "Glory Song," and just before I went on the platform they started up "Tell Mother I'll be There."

One of the greatest surprises I ever had in my entire work has been in connection with this song, "Tell Mother I'll be There." A friend of mine who is a Christianworker, and a wise one, cut this song

out of a little magazine and sent it to me with the suggestion that I try it in my work. I pasted it in my scrap book, more because of the recommendation of my friend than because I thought there was any merit in it. I often looked at it and thought it was a waste of space in my book. For a year I carried it around and never once sang it. One night I was called on to sing a solo, I looked at the great audience, and saw that the majority were men, and many of them, railroad men. With a longing to help, but with some doubt as to which song to use, I sang "Tell Mother I'll be There." Many men confessed Christ immediately after. One big, hearty engineer who decided for Christ that night came and shook hands with me at the close of the meeting and said: "The sermon never reached me. Their talks did not touch me, but when you sang 'Tell Mother I'll be there,' the thought of my dear old mother on her deathbed two years before broke my heart. I had made her a promise that I should meet her in heaven, and prepare for it. Instead of that, after the funeral I sank deeper and deeper into all kinds of sin, until tonight. Now I have taken her Savior, and am all ready, when God calls, to go to my mother in heaven. Sing that song every night. I will bring the men in and if you will sing that song, we will get them." Every night after he would call out for "Tell Mother I'll be There," and many were brought in through the song.

I have been using it ever since, and have seen as many as one hundred and sixty men at a single meeting rise and confess Christ during the singing of the hymn, before the sermon had been preached.

Everywhere it has been the same. It reaches all classes, because everybody has had a mother. It has been criticised from a musical standpoint and from a literary standpoint; but no song has ever been written to take the place of it. Those who criticise it are unable to replace it with a better.

New hymns are as much needed as new clothes. Many people in religious work fail to discover the power of a bright new gospel hymn. Properly introduced, they will transform a poor Sunday school into a good one, or a dull audience into a bright one. When I choose a hymn the first test I put upon it in my own mind is, will it win men and women to Christ? I seldom use a hymn that does not have a picture in every line of poetry. Even when we have good words and a picture in every line, and the tune does not flow properly and in good range for the average voice, it is a failure. A gospel hymn must have some deep, strong touch that will reach the people in everyday life. The words must follow each other in rhythmic succession. I have often seen a good hymn spoiled by a few ill chosen words. The chorus must have at least one line that clings persistently to the mind, and at the same time carries help for the hard places in life. I have never discovered any kind of songs that touch

the hearts of people, change their lives and brighten their homes like the hymns popularly known as gospel songs. They have such a wonderful way of reaching everybody because they touch the soul. Nothing will so bind and weld an audience together, and make them forget their differences, as a good gospel hymn. I recently heard the Rev. J. H. Jowett say in a speech how quickly our differences would vanish if we were compelled to get up and sing them.

One morning during our mission in Philadelphia I was opening my letters when I came upon the manuscript of a short hymn, and with it a letter saying that the writer had noticed in reading the reports of our meeting in the daily papers that we spoke so constantly about prayer, that she ventured to send a hymn she had written, entitled, "Don't Stop Praying," which had been refused by other publishers. She said that if I thought it would be useful, I might have it and welcome. In a few days I began to use it, and wherever it has been sung it has proven helpful. In a conversation with the composer I asked her what had suggested the thought for the song. She told me that she had had a great deal of trouble, and was so overwhelmed by it she felt that no human power could bring relief. After days of prayer, one morning at breakfast she opened a letter which completely removed her trouble. As she finished reading the good news, the thought came to her which is the title of the hymn, "Don't Stop Praying," and before she had left the table the song, both words and music, were running through her mind, and she sat down and wrote it out that day. The song appeals at once to people who are perplexed and in trouble, and I might say in passing that the majority of people come under one of these heads.

Wherever I use this song I have printed along with it the story from my own experience: I was standing at a bank counter in Liverpool, England, waiting for a clerk to come. I picked up a pen and began to print on the blotter in large letters, two words, which had gripped me like a vice: "Pray Through." I kept talking to a friend and printing until I had the big blotter filled from top to bottom with a column of the words. I transacted my business and went away. The next day my friend came to see me, and he said he had a striking story to tell me. A business man came into the bank soon after we had gone. He had grown discouraged with business troubles. He started to transact some business with the same clerk over that blotter when his eye caught the long column of "Pray Through." He asked who wrote those words, and when he was told, exclaimed: "That is the very message I needed. I will pray through. I have tried to worry through my own strength, and have merely mentioned my troubles to God. Now I am going to pray the situation through till I get light."

Among the many people whom I have met in mission work the last five years, one of the most interesting was a Bible teacher and writer named Miss Ada R. Habershon. She was an earnest worker and helped largely in our meetings whenever her health would permit. One day in conversation with her, I asked her if she would not try to write the words to a gospel hymn. She said she did not do that but would make the attempt if I wished it. As the result of suggestion and conversation she wrote, "Oh, What a Change!" which became one of the most popular hymns of our London campaign. Since then, although frequently suffering great pain, she has developed into one of the greatest living composers of gospel hymns. Some of her songs which have been received with great enthusiasm in America, England and Australia during the past year are: "He Will Hold Me Fast," "The Pilot Song" and "No Burdens Yonder."

These, and many others of Miss Habershon's hymns have been set to music by my friend, Robert Harkness, who, though still a young man, is the best pianist for evangelistic meetings now living, and since he is constantly in the heat of Christian work, his melodies are practical, warm, strong and flowing. He accompanied me during my recent visit to Australia, and a great audience of ten thousand people in Melbourne eagerly caught up one of his songs entitled "Shadows," of which he wrote not only the music but the words. The pathetic words and melody diffused through the audience like a rare perfume which clings insistently. Everywhere it has since been used, in America as well as Australia, it has become an immediate favorite. At the Christian Workers' Conference at Northfield last summer, it was called for constantly. Mr. Harkness gave me the following account of how he came to write it: "I was driving with a friend along the banks of a quiet river on the outskirts of Philadelphia on a delightful April afternoon. The sun was setting, and as we rode along I looked into a placid stream, and saw reflected some magnificent shadow effects. I stopped and drank in the beautiful scene. The outline of the trees bursting forth with new foliage; the tints of gold, and red, and green, combined to make a picture of rare beauty. As I peered into the water, Psalm 23: 4, came into my mind: 'Though I walk through the valley of the shadow of death, I will fear no evil.' 'Yes,' I thought, 'there are shadows in the water, but for the Christian the shadows and the gloom are dispersed. In him is no darkness at all.' On returning to my friend's home I remarked, 'I want to write a song which came to me while admiring the shadow effect in the river.' Asking the Holy Spirit for guidance, I wrote the words to the first two verses, and the chorus, and also the music of the song. The third verse was written several weeks later."—Charles M. Alexander, in *Ladies' World*.

# THE INGLENOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE, ELGIN, ILL.

Subscription price, \$1.00 per Annum, in Advance.

The Inglenook stands for material and spiritual progress. Its departments are: Literary, Editorial, Home, Cream of Magazines, World News.

Its qualities are: Good Sentiment, Moral Convictions, Inspiration.

Its purpose is: To safeguard home life by supplanting and counteracting bad literature.

Its scope of matter is: Scientific, Religious, Educational, Philanthropic, Economical, Sociological and Financial.

Its field is: The World.

Liberal commission given to agents. Sample copies are given upon request. When changing address give both old and new addresses.

Entered at the Postoffice at Elgin, Ill., as Second-class Matter.

## THE TRIUMPH OF RIGHT.

ONLY an abiding faith in the triumph of right will insure to one the full possession of all his faculties for his part in the struggle.

On all sides there is the brandishing of arms and show of strength in the enemy's ranks, and the bold assaults on our strongest citadels and the stealthy laying of mines right under the feet of our bravest men almost paralyze us with fear. But after the day's struggles are well-nigh past, upon our senses falls the "All's well!" of the One who watches over all, bringing peace and rest, and the new day finds us eager for the fray, with the light of victory in our eye.

Where now the haunts of sin flourish and openly lay their snares for unwary feet, there will be found the retreats of those who "watch for souls as they that must give account." Where now the dishonest heap to themselves ill-gotten gains, the honest toiler will enjoy his rightful reward. Where now the profane and blasphemous go unbuked, every tongue shall praise him who has created us and redeemed us.

"For right is right, since God is God,  
And right the day must win;  
To doubt would be disloyalty,  
To falter would be sin."

Let us, therefore, face present difficulties and seeming defeats with an eye single to the ultimate triumph of right. Our courage cannot weaken when we know that "Victory for the Right" is written over every event,—even those in which wrong seems to be conqueror.

## GLIMPSES OF A PAST AGE.

In public speech and through the medium of various publications there is talk, long and loud, about the curses of our present civilization, and the conditions of primitive man are painted in the most attractive colors. Without stopping to think, one might be led by these

extremists to believe that our boasted advancement is such in name only, and that we have gone from unalloyed blessings to incurable woes.

While it is true that civilization has brought with it some things that are in every way undesirable, on the whole its blessings far outweigh the few, even when these are many times magnified, which made the life of primitive man endurable. We have only to notice the results when men of the present day let go of themselves to see whether civilization has been an advancement or not and how far on the road we have come.

One of the blessings of civilization is the great value which it places on human life, bringing into existence the many means for its preservation and protection. And we get a very fair glimpse of primitive man when we see the results where lynch law has prevailed. A few years ago the frequent use of this law caused general alarm and severe measures were sometimes resorted to in order that certain classes might understand that such a law has no place in our present civilization. Not only has it no place in our civilization, but no place where justice and right rule. Sometimes its crimes have been even greater than those it would avenge.

Later, improvement seemed to be made, but recent manifestations of man's ungoverned passion indicate that this mode of lawlessness has not yet been dealt with as it should. Not long ago four negroes were murdered because they were supposed to be in sympathy with a negro murderer. With this precedent it would be difficult to draw the line for such outlawry. Where the trouble has been taken to trace down these men, who have gone back to the ways of primitive man, it has been found that this is a natural outgrowth of their character—that they are about on a level with the worst of the race they would exterminate.

Not only does the country need to use vigorous measures to show how utterly it repudiates such lawlessness, but we as individuals, quiet and harmless as we appear, need to be on our guard, for our hasty and intemperate opinions may fall into soil that will bring a harvest of even greater wickedness than that which we now condemn. If we will be as temperate in our expressions as we would have others be in their actions, we will likely have little to answer for in the way of lawlessness.

## PRESIDENTIAL AND VICE-PRESIDENTIAL CANDIDATES ON THE PROHIBITION TICKET.

HERE are two brief sketches, epitomizing significant details in the careers of the Prohibition national standard-bearers for 1908:

Like many others nominated for president of the United States, Eugene Wilder Chafin, the Prohibition nominee, comes from the farm. And like other nom-

inees, he is a lawyer with a record of success behind him. For seven years he has been a resident of Chicago, and when nominated for president was the candidate of his party for governor of Illinois. Before going to Chicago he lived at Waukesha, Wis., and he was no less popular in his party in that State, for there he was also honored with the gubernatorial nomination. That he met defeat did not discourage him a whit in his great and thorough belief in the final triumph of the Prohibitionists.

Born on a farm near East Troy, Wis., November 1, 1852, he grew to young manhood there and by money he earned and saved through work on a neighbor's farm, paid his way through the University of Wisconsin, from which he received the degree of bachelor of laws. Then he went to Waukesha, where he practiced twenty-five years and although it might have been expected that his light would have been hidden there, he arose to prominence in his profession. He appeared before the supreme court of Wisconsin in fifty cases.

He has been quite active as a lawyer in Chicago also. Last winter, when the United Societies of Chicago, comprising the saloonkeepers and the liquor interests, got up a petition signed by 175,000 people urging the election commissioners to submit to a vote the question whether the State law, on Sunday closing should be repealed, which question in reality was whether it should be enforced, the Prohibition party immediately attacked the proposal, saying that the enforcement of a law was not a question to be submitted to vote and won out in its contention, with Mr. Chafin as their leading attorney.

Nominations for governor have not been the only ones received by Mr. Chafin, for he was nominated for attorney general and congress both in Wisconsin and Illinois. In both States he was active in the society of Good Templars, a total abstinence organization, and in both States was accorded the highest honor, that of grand chief templar. Although a Prohibitionist only since 1881, when he left the Republican party, he always has been a total abstainer. For years he has been a member of the Methodist Episcopal church. He was at one time State president of the Epworth League in Wisconsin.

Mr. Chafin is a writer quite well known. He is considered an authority on Lincoln. A new book, "Lincoln, the Man of Sorrows," which he wrote, is just off the press. He has collected one hundred and fifty lives of Washington and fifty lives of Lincoln. Twelve years ago he published a book, "Lives of the Presidents."

Aaron Sherman Watkins, the vice presidential candidate, is of Quaker ancestry and a product of the farm. He was born in Logan county, Ohio, near Rushsylvania, November 29, 1863. He is the son of William W. and Rebecca Elliott Watkins. He was

educated in the common schools and at the Ohio Northern university at Ada, and at Taylor university of Upland, Ind. He is now vice president of the Ohio Northern university and professor of literature and philosophy, which positions he has held for three years. Prior to going to Ohio Northern university, he was pastor of Methodist churches for twelve years. He taught school six years before he entered the ministry. He studied law with his brother, Judge Watkins, at Huntington, Ind., and passed the bar examination in that State.

Prof. Watkins has had previous political experience. Four years ago he was a candidate for Congress in the Ninth Ohio district and polled 1,100 votes, the most ever counted for a Prohibition candidate in that district. In 1905 he was the Prohibition party's candidate for governor, against Herrick, the Republican candidate, and Pattison, the Democratic nominee. He was again nominated for that office at the State convention of the Prohibition party in Columbus, Monday, July 13. He will withdraw from the State ticket to accept the nomination for the vice presidency. The vacancy will be filled by the State committee.—*The Associated Prohibition Press.*

#### THE MODERN PRAYER.

O Lord, I come to thee in prayer once more;  
But pardon that I do not kneel before  
Thy gracious presence—for my knees are sore  
With too much walking. In my chair instead  
I'll sit at ease, and humbly bow my head.

I've labored in thy vineyard, thou dost know,  
I've sold ten tickets to the minstrel show;  
I've called on fifteen strangers in our town,  
Their contributions to our church put down.  
I've baked a pot of beans for Wednesday's tea—  
An "Old Time Supper" it is going to be.  
I've dressed three dolls for our annual fair,  
And made a cake which we will raffle there.

Now, with thy boundless wisdom so sublime,  
Thou knowest that these duties all take time.  
I have no time to mend my husband's clothes,  
My children roam the street from morn till night.  
I have no time to teach them to do right.  
But thou, oh Lord, considering my cares,  
Will count them righteousness, and heed my prayers.

Bless the bean supper and the minstrel show,  
And put it in the hearts of all to go.  
Induce all visitors to patronize,  
The men who in our program advertise,  
Because I chased those merchants till they hid  
Whene'er they saw me coming—yes, they did.

Increase the contribution to our fair,  
And bless the people who assemble there.  
Bless thou the grab-bag and the gypsy tent,  
The flower table and the cake that's sent.  
May our whist club be to thy service blest,  
The dancing party gayer than the rest.  
And when thou hast bestowed these blessings—then  
We pray that thou wilt bless our souls. Amen.

—Ogden Examiner.

## Obedience

Catharine Beery Van Dyke

### Part Two.

The God of Israel said, the Rock of Israel spake to me, He that ruleth over men must be just, ruling in the fear of God. 2 Sam. 23: 3.

BLESSED are those parents who have heard the Lord thus speak to them whether the message has come to them through the "still small voice" or through some terrible conflict. Blessed is that father or that mother who has learned to regard the children as people, as men that are to be. We must get this vision and hold it else we will often fail to be just and miss our own foothold—that of ruling in the fear of God; and yet we are not to treat our children as though they were already full grown but on their way to maturity.

I wish to show here the folly of two extreme lights in which it is possible to view the immature child. First, to see him only in his undeveloped state as if he were always to remain in that particular stage of growth—to make his clothes, select his playthings and think of his associations and surrounding in reference only to a particular time of his life.

In this light the parents (the mother particularly) are inclined to revel in selfish enjoyment of their baby as they make much of his cuteness and beauty. On the other hand, if they are not specially fond of children, they will consider the worry and bother of dealing with a child that can give so little in return, forgetting that the child is only a baby a very short time, in either case not holding in mind the shifting changes that come with the child's development of body, soul and spirit.

In the second place, there is danger of underestimating the different periods of a real young child's development by having the mind too definitely fixed upon what he shall be when the years of full growth are reached. For instance, I have met mothers who would not punish their children for fear it would cause the children to "hold it up against them" in future years. They would "reason" with their baby rather than to discipline it sharply when sharp discipline was indicated. This shows shortsightedness, weakness in child management, callousness or at least indifference to the best interests of the family and the child.

The golden mean here lies in following (and what more interesting thing can employ a careful parent than to adjust himself to and equip himself for the requirements of the ever-changing disposition, age and character of one who is of his own flesh and blood?) the child's requirements day by day, month by month and year by year with an adequate intelligence, sympathy and force.

Now, some will be almost impatient with this setting of obedience and will be inclined to say: "Why in the world doesn't she tell us how to get our children to obey?" If it were possible to answer this question by giving a recipe the same as for angel cake, I seriously doubt if it would even then be followed. The mother who would attempt to raise her children by recipe and some other person's recipe at that—would certainly make a lamentable failure of it. Before I pass judgment upon a child I try to get hold of the attitude and methods of the mother. A mother who had raised five children was once asked: "What method did you use to train your children so well?" I used five different methods," she replied, "one for each child."

When I see a young mother, however inexperienced in practical contact with children, earnestly and conscientiously striving to delineate in her child's life some noble ideal of her own, I can look beyond the rough exterior of the child, if such should appear, and see the seeds of good implanted which will sometime break the rough shell and spring into beauty and power.

It is not always the child that has been strictly taught to say: "Yes, ma'am" and "No, ma'am" that grows to be the most useful member of society nor, I may say, the most civil or polite or pleasant person in reality. In fact, it has been said that the kindergarten children are not the *good* ("goody-goody," perhaps) children. Yet the principles of child development followed in the kindergarten are taught more systematically than any course of training one is likely to find in the homes of today and the principles themselves are better than most parents are able to formulate.

A few directions may prove helpful to some who are

not inclined to reason with themselves so deeply about these things or who think they are too busy to study the matter scientifically.

1. Try to teach your child to obey by having him follow you. Does that frighten you? If so, well, for it will keep you from being a tyrant.

2. Commands to do distasteful, unpleasant or hard things, those especially which call for self-sacrifice should be kindly and cleverly clothed in requests to execute the thing desired to be done. "Will you close the door Johnnie, please?" Or, "May I bother you, Johnnie, to close the door?" Another way: "I will do this thing while you do that or if you will do that." It is not natural for children to be stubborn when approached in a masterful and respectful way even when asked to do things which they do not want to do or to keep from doing, that upon which they have their desires set. There is so much depending upon the manner.

The other day a lady came to my cottage here in Winona and spoke about being disappointed in getting a certain vegetable she wanted. I happened to have some of the kind in my own garden for sale. I carefully counted out and fixed up a bunch for her and mentally put the price on them. When I handed them to her she said so sweetly and appreciatively: "Now, let me pay you for them, Mrs. Van Dyke, won't you?" That knocked my props out and I said: "No, indeed, I won't." What would you have done? If she had said: "How much are they?" I should have said: "Five cents." I am sure you see my point.

3. When a command is reasonable and has been wisely given, see that it is obeyed from the very youngest to the adolescent, though figuratively the earth quake and the heavens fall.

4. These things I hold most emphatically: Begin when the child begins to grow. Be reasonable, wise and firm.

*Winona Lake, Ind.*

#### CORRECTING HIS OWN FAULTS.

"BUT, mother," said the perplexed young sister when implored not to keep nagging brother so about his faults, "how will he ever get over them if we don't correct him?" It was the very question that the mother had asked herself again and again. Now, like an inspiration, came the sudden answer to her heart and lips, "By and by he will begin to get over them himself." It was a comforting thought, and justified by the experience of many households. Sooner or later, sometimes very suddenly, the young will rouse itself, and without great apparent effort throws off habits which have withstood persistent and wearisome attacks on the part of others. In all minor matters, so far as possible, it is wisest and happiest to wait with patience and hope for this blossoming time, letting

in more of the sunshine of approbation, and forbearing the continual faultfinding which is so chilling to the domestic atmosphere.—*The Congregationalist*.

#### FACE OF A CHILD.

It may not have mattered much,  
And it really was nothing at all—  
A child with that infinite touch  
Of a child with her arm 'round a doll,  
But somehow, wherever I went  
And whatever took place all day,  
Her face was a sacrament sent  
To keep me from going astray!  
Some would not have given a thought  
To so purely a commonplace thing,  
As a child with her visage enfraught  
With the light and the bloom of the spring;  
But it followed me, haunting and sweet,  
And her laughter rang on in my ears,  
And I smiled through the dust and the heat  
And forgot there were sorrow and tears!

It might have no meaning at all,  
Mere fancy, a flash and a gleam,  
But I felt all the day in the thrall  
Of a radiant and lovable dream;  
Just that of the face of a child,  
A glimpse of it passing and then  
The laughter of lips, ringing wild,  
Kept me sweet in my battle with men.

—Baltimore Sun.

#### THEIR DAY.

"WE must have chocolate cake," said fifteen-year old Dot, decidedly, "and no one can bake one like mother."

"And she can make some chicken salad," put in Florry.

"And rolls," said Laura.

"Don't forget the sandwiches," cried Ben.

"Let me see; there's father, mother, Nell, Florry, Laura, me, Billy, Ruth, Daisy—"

"Ben Markham, hush!" said Dot. "Aren't there enough of us Markhams without calling a roll. When we were out in the yard the other day I heard old Mrs. Primrose say to Miss Featherstone that our place reminded her of an orphan asylum, so don't go over our names again, please. Instead of *seven*, we are *eight*—that's all you need to remember."

"Now, about this lunch. I declare this yearly picnic is harder on mother than staying at home."

"I have noticed she looks paler than ever lately," said Nell, a quiet, brown-eyed girl of seventeen and the oldest of them all, "and I've thought of something."

"Divulge your secret," cried Ben, dramatically waving the butter knife.

"All right, I will. You won't like it at first, but if you're the children I think you are, you'll agree."

"Proceed," said Ben, gravely.

"Well, it's about this picnic. We all love picnics, I know, but we love mother better. Now, last year, instead of a pleasant time, what a hard day mother had. Laura fell into the lake, Ben got his ankle hurt, Dot lost her gold ring, and the baby got a fever from the hot sun and was sick a week afterwards. Poor mother, it took her two good days to get that lunch ready, and the day we started off she looked more like a ghost than a good, respectable specimen of motherhood. She looked even worse when it was over. Now, my plan is this: Let us give father and mother the day we had planned for our picnic and let them spend it together."

"Without us?" wailed Laura.

"Without us," solemnly responded Nell.

"We'll tell them we don't want to go."

"And you pretend to be a follower of the 'Father of your Country,'" said Ben, reproachfully. "He never told a—"

Nell laughed. "Well, we don't want to go when we think about it."

"Not that we love picnics *less*, but mother *more*, is that it?" demanded Ben.

"That's it exactly," was the reply. "If mother gets all the things ready for this lunch, she'll be more fit to go to bed. Do let her go alone, dears, just this once. We can go later, and she is so tired."

"All right, we will," chorused the young Markhams. "This one time."

"Mother, dearest, we want you and father to have one free day," said Nell a few minutes later, "so we've decided to send you both to the lake next Thursday without us."

"Without you!" repeated mother, half rising; "but I thought you loved this yearly picnic?"

"We do, but we love you better."

"Last year all day you never had a single peaceful moment, and it took nearly three days to get enough things cooked to fill eight little stomachs. Now, this year you're not able to do it. We children propose to send you and father away for the day. You shan't be bothered with a lunch. There's a little café now on the grounds, and you can order what you like. You are simply to get up, dress and go away with no thought of your unworthy children."

"It sounds lovely," sighed mother, "and, dear, I must confess it, I have been dreading that lunch. I'm almost ready to go to that land where there is no eating or drinking, I'm so tired of it all. But how about your own disappointment?"

"There isn't going to be any," replied Nell, stoutly. "The season is young yet; we can go afterwards. This is to be your day absolutely, yours and father's."

Nell told her father about it that night.

"And you propose to send mother and me away for the day all by ourselves?" he smiled. "I hadn't thought of it, but I would like it. It's been over eigh-

teen years since we've had a holiday alone. You came first and then the others followed so quickly, your mother has been submerged. You're a good, unselfish child to think of it, and I thank you."

Nell helped mother dress for that eventful day. she herself arranged the soft, beautiful hair and adjusted the white waist.

"There!" she exclaimed, as she surveyed the slight, graceful figure, "there's no one so beautiful as my mother. Now, let me pin on this pink rose and you will be finished. Who would imagine," she added, after another fond look, "that you are the mother of eight?"

"Here, father she's ready."

Father took mother in his arms.

"Our day, really?" he said, smiling. "It brings me back to my courting days. You were the sweetest girl!"

"Time's up!" called Ben from the stairway. "The car's coming."

The children all watched them as they walked away, mother leaning on father's arm.

"I wish I could have gone," said little Beatrice, wistfully.

"No, you don't!" cried Nell, lifting her in her arms. "You're going to have cherry pie for dinner. You wouldn't want to miss that."

Arriving at the pretty park on the lakeside, father made mother sit down. It was a clear, beautiful day in midsummer, not too warm, for a cool breeze blew in from the lake. The flower beds glowed with nasturtiums and scarlet geraniums; there were even a few late roses. Everywhere there were groups of people scattered about under the trees, while out on the lake the boats glided back and forth.

"It's beautiful!" sighed mother, lifting her face to the refreshing breeze, "only won't the children—"

But father stopped her.

"I had you before I had them," he answered, gaily. "Now that I've come into my own I intend to keep her for this day. Forget all about bumped heads, bruises, aches and pains that might arise from possible contingencies. Nell will take care of them. No calamity will happen. I've got my sweetheart back again." And so he talked.

Later they went for a long boat ride, and when they came back, father even swung her in one of the great swings. He bought her a box of chocolates and a new book, and by and by, under the fresh, invigorating air, her pale cheeks began to take on a tinge of color, and the old weariness fell away with the hard years; mother's youth came back.

"It's such a lovely world, Harry," she said to father, "and I'm so happy."

And seeing her face, father then and there stooped and kissed her. After a while, in the little café, they had dinner together.

"Anything you like," insisted father, happily laying the menu before her.

"I wonder if fried chicken would be too extravagant?" said mother, doubtfully.

"Not a bit of it," said father. "There's ice cream, too, and watermelon."

And so they dined like a veritable king and queen in the quiet, shady spot, and more than one person looked at the sweetfaced woman in white whose husband was so devoted to her. Few would have guessed that they were the parents of eight healthy, happy children.

Later there were more boat rides, and the sweet companionship that never seemed so dear. The day drifted into evening, and they began to think of home. Father folded mother's shawl gently about her. "Nell," he said, half reluctantly, "we must go, dearest. Has it been good to be here?"

"Good?" Mother lifted her happy face. "It's been the most beautiful day of my life, a second wedding day. I'm going back so strengthened."

The children were waiting for them.

"Mother looks so happy," said Dot, as she came toward them, smiling.

But only Nell understood. "I knew father would help you," she said, as she kissed her mother. "Now that I've found a cure you sha'n't slip back. I'll send you away again, and I'll prescribe allopathic doses of father for your ailments, supplemented by homeopathic doses of your lively, healthy, unreasonable eight."

"Good, Doctor Nell!" cried father, with a tender kiss, putting his arm about his eldest born.—*Home Herald*.

#### BEWARE OF PAMPERING.

It must be borne in mind that the real attractiveness of the home does not in the end depend upon the number of costly things put as toys into the hands of our children. If there is any pitiful sight on earth, it is the sight of a nursery stuffed full of luxurious machine made toys, lavished upon children who rapidly tire of each new possession. The child of the poorest laborer, making mud pies in the back yard, is more happy than some child of the very rich who is possessed of a thousand-dollar toy battleship.—*Selected*.

#### OLD TIMES.

CHILDREN are greatly interested in the events of their parents' early lives. "Distance," in such cases, "lends enchantment to the view." The grandmother often renders important service to the children by telling stories of old times. Those early days have romantic fascination to the little ones whose life has but recently begun. If the story be one of pioneer life in the olden time, children appreciate it intensely,

They become linked to the past by weaving the chain of memory for them, and they gain a sense of solidarity with their ancestors. The family traditions, ideals, and sentiment are conveyed to them, and perpetuated in their thoughts and actions. It uplifts children to be brought into the line of heroic men and women, who stand out on the distant horizon in ideal and beautiful figure. We cannot estimate the effect on the character and standards of children when their ancestors are exalted before them. It is true that such may have been ordinary men and women, but when idealized they become the saints by whose deeds children are impressed and elevated for life's struggle.

—*The Watchman*.

#### SUGGESTIONS FOR HOUSEWIVES.

COLORED goods should be ironed on the wrong side.

Embroidery should also be ironed on the wrong side of a piece of flannel and it should be kept long enough under the iron to dry it thoroughly.

Try rubbing needles up and down in a piece of oiled silk before putting them in the needle book, or keep them in flannel that has been slightly oiled.

Do not lay the scrubbing brush with the bristles upward. The water is allowed to leak into the wooden part and the bristles very soon become loose. Always place it with the bristles down.

Low shoes, when new, often blister the heels by slipping just a little as the wearer walks. To prevent this it is well to rub the inside of the shoe at the heel with soap before putting it on.

Rubber bands are most useful for keeping sleeves out of the way when doing housework. Pull your sleeves up as far as you want them to go and put the bands round your arms over the sleeves.

If a teaspoonful of concentrated lye with a cup of water be put in a kettle whose contents have burned on the bottom and left to stand for a few hours there will be no trouble in removing the burned substance.

To clean paint, dampen a clean cloth in hot water, dip in whiting and rub the paint until the dirt is removed. Rinse well in clean water, dry with a soft cloth and polish with a chamois leather. Paint cleansed in this way looks like new.

To remove blood stains from denim or cretonne pillow covers and pillow ticks where soap and water cannot be used make a thick paste of laundry starch and warm water and cover the soiled place with it. Let it remain until perfectly dry, when it can be brushed off. If the stain has not entirely disappeared repeat the process.

Kerosene is very useful and does wonders for many a housekeeper. A soft cloth moistened with it and used on the furniture in regular dustings will brighten the wood. Many laundresses put a little into the water in which soiled clothes are soaked, and a little

added to the starch will keep the irons from sticking. Kerosene is also good for cleaning enameled bedsteads, bathtubs, sinks, etc.—*Chicago Daily News.*

## The Children's Corner

### HOW GLAD ARE YOU?

ROB AND AMY were perched on either arm of mamma's big chair, looking at the pictures as she cut the leaves of a new magazine. "Oh!" cried Amy, "that's funny!" and she pointed to a little barebacked boy sitting under a stream of water which came from a big pipe just over his bent head.

"Japanese boy washing away the lies he has told," read Bob. "As if he could that way! and I'd rather go in swimming, anyway."

"So would this boy, I don't doubt," said mamma. "The Japanese are very clean people, and spend a great deal of time in the water. But think of his being taught that a lie can be washed away! Poor little chap! It isn't really 'funny' after all, is it, Amy?"

"No, it isn't. It seems 'most as bad as the Chinese children sticking paper prayers on their ugly old idols. Miss Carey was telling us about that one Sunday. If the piece of paper stays on, your prayer is answered; but if it falls off you must buy more of the priest and try to stick them on. And in India—"

"What about India," mamma asked, as Amy paused, her big, dark eyes growing more sober.

"Oh, it's worst of all for little girls there, Miss Carey says. One day a missionary heard a little girl screaming, and there was an old woman pinching her till she was all black and blue, and a man stood and just looked on, and they said the little girl had been married to him, and his mother had a right to pinch her or whip her, and it was all because the man had been sick, and they said the gods were angry with the little girl for something. But the missionary made the old woman stop."

Mamma's arm tightened around her little daughter. "Be thankful every day you live that you are a little American girl instead of a wretched little Hindu child-wife," she said fervently.

"Or a Chinese girl, with your toes doubled under," put in Rob.

"I am glad," said Amy. "I'd just as rather be born in America as you would, Rob."

"Are you both glad in your pockets?" asked mamma, practically.

"Pockets?" chorused the children, wonderingly. Then Amy laughed. "You mean pocket-books, don't you, mamma? Yes, we've been saving up for the missionary collection next Sunday."—*J. C. G., Children's Missionary Friend.*

## For SUNDAY READING

### THE WANDERER'S PRAYER.

JOHN H. NOWLAN.

Great God, who rules through boundless space,  
Yet marks the sparrow's fall,  
Though thou from us hast hid thy face,  
Thy love is over all.

Guard me Lord. Hear me now.  
Unto thee I call.  
Humbly at thy cross I bow,  
Prostrate let me fall.

Thy watchful care upholds me still,  
Rebellious though I be.  
Though I have scorned thy holy will  
Thy love hath sheltered me.

I've wandered far from truth and right—  
I've trod the path of sin.  
My ways are evil in thy sight,  
For evil reigns within.

I feel my weakness and I know  
Temptations press me sore.  
My heart is wrong. I fain would go  
The way of sin no more.

Support me, Lord, my courage fails,  
No other hope I see,  
But cast my sins at Jesus' feet,  
And leave the rest to thee.

Mulberry Grove, Ill.

### THE DEVELOPMENT OF DOCTRINE.

RICHARD BRAUNSTEIN.

JACOB did not know so much about God as did St. John or St. Paul. The wanderer toward Padan Aram was surprised to find Jehovah out of Canaan, but Paul announces to the Greek Gentiles of Mars' Hill that he is Lord of all the earth and more than that has made of one all races of men. True, David in his highest flights claims that the earth is Jehovah's, but what earth? A flat one, the center of the universe—bounded by the mountains of Lebanon and the Red and Mediterranean seas—other adjacent territories were to be tributaries to the Psalmist's earth. There has been as great a development in the idea of God and kindred topics as there have been discoveries in science and inventions in art. If navigators have discovered new continents and countries, so also new volumes of Divinity are found in every age.

One of the greatest helps or hindrances is the concordance. The old method of Bible study is to take a topic, *e. g.*, Faith, then with concordance in hand, run the references, and wherever faith is found, note it down. A passage in Genesis is considered as good as one in Revelation. The idea is to find faith in as many places as possible. No account is taken of the date or authorship of the several books

containing the word—it is all Bible, all unimpeachable! Remembering that the Bible is literature—not a single book, what would be thought of a man who should use such a plan as the one mentioned above, in searching through general literature for some topic, for instance wife or mother just as we sought faith? Now if for faith we search sixty-six different books and forty different authors with thousands of years between and make no allowance for development and progress within that time, let us use the same method in secular literature for wife and mother! But we soon become confused, for we find wife occupies a nondescript position in the different writers, countries and ages. Now she is just a little better than the author's dog; here she is one of a dozen claimants at her master's table; yonder she is the hewer of wood and drawer of water, and here she is the joy of the heart, the light of home, the only one companion of life! Surely the man who quotes indiscriminately and with equal authority from Homer, Seneca, Poe, St. Augustine, John Calvin, Browning and John Wesley and Bernard Shaw, is not far removed from the one who flits unblushingly from Job to St. Peter, from Esther and Judges to the Epistle to the Hebrews, from the imprecatory Psalms to the Sermon on the Mount.

Many of our great thinkers and honest investigators have been driven from the church and from the pales of Christianity by this non-progressive, standpat literalism. When men have questioned Abraham's and Isaac's deflection from the truth, Jacob's craftiness and deceit; Samson's cruelty and lust; Saul's baseness and treachery; David's licentiousness; the Divine permission of national slaughter and revenge, of slavery and polygamy and petty idolatry (of household gods), our fathers bade them lay their fingers on their mouths, saying: "We may not mention the Lord's work—this is the Lord's doings and it is marvelous in our eyes." We have apologized for God, threatened the doubter with ex-communication, etc., when the simplest child of progress might have settled the question by asking the time of day. Shall we never learn that some books are dated "B. C."?

Under the old idea men were moved by the Holy Spirit and were simply graphophones or machines through which the divine spoke. All were agreed on this—disagreement came only in interpretation, hence so many different denominations and sects and creeds.

May we not expect that when men see the beautiful principles of progressive revelation that there will be a manifest movement for unity among believers and thus usher in the answer to Christ's great prayer—"that they all may be one"?

PRAYER is not conquering God's reluctance, but taking hold of God's willingness.—*Phillips Brooks*.

### GRACIOUS INFLUENCE.

A WOMAN after complaining much about finding unsound fruit in her supplies, was one day offered a basket of peaches and a basket of gem melons, accompanied with this assurance, "You will not find a single damaged peach or melon in either of these packages. If you do I will gladly refund the money you paid for them." She found every peach and melon perfect. The housekeeper reported this on her next visit to the dealer's store, and asked why he was so positive in warranting his goods. "Why, because I have found that the farmer who furnished those baskets never sends dishonest packages to market." The farmer's number, among the commission dealer's consignments, was "135." After that the lady always bought No. 135, and the contents of the baskets never failed in measure, condition or quality.

Admiration for the conscientious farmer grew upon her, and literally made her more conscientious herself. She felt ashamed whenever she was tempted to slight her work. Number 135 seemed to be looking at her.

One particular that deepened this impression was the non-appearance in market on Mondays of any baskets bearing the favorite mark. Farmer 135 would not pack fruit on Sunday, the dealer said. The housekeeper's face flushed when that was said. She had never been so scrupulous. His beautiful example represented to her the presence of the sinless Teacher. A good man's life is one of the moral tonics of society. His silent example, is in itself a blessing to the world.—*Faith and Works*.

### THE CRUELTY OF THOUGHTLESSNESS.

MOST of the cruelty of the world is thoughtless cruelty. Very few people would intentionally add to another's load or make his burden in life heavier or his path rougher. Most of the great heart-wounds are inflicted by thoughtless thrusts, flung out often in a moment of anger, when perhaps, we are too proud to apologize or to try to heal the grievous wounds we had made.

Can anything be more cruel than to discourage a soul who is struggling to do the best he can, to throw stumbling blocks in the path of those who are trying to get on in the world against great odds?

No life is just the same after you have once touched it. Will you leave a ray of hope or one of despair, a flash of light or a somber cloud across some dark life each day? Will you by thoughtless cruelty deepen the shadow which hangs over the life, or will you by kindness dispel it altogether? No matter how you feel or what is disturbing your peace of mind, never allow yourself to send out a discouraging, a cruel or an unkind word or thought.—*Success Magazine*.

## Echoes from Everywhere

The total Porto Rican trade during the past year, according to statistics, compiled at the treasury department, amounted to more than \$56,000,000, about \$207,000 over the preceding year.

The combining of the Harriman and Gould railroad lines which was effected recently has called for a good deal more rolling stock, and at least 10,000 steel cars will be supplied within the next three years, the cost approximating \$10,000,000.

In but four Tennessee cities is whiskey openly sold. The persistent violation by the saloonkeepers of every law enacted to regulate the liquor traffic forced the legislature to attempt to drive the saloon from the State. Success is almost complete.

A company of stockdealers in Pennsylvania are making purchases of mountain lands upon which they mean to raise large herds of grass-fed cattle. Already five thousand acres have been purchased and it is their intention to purchase at least five thousand acres more. They claim that the mountain regions of Pennsylvania are as capable of producing grass for grazing as the prairies of the West.

Canada may well pride herself on the great celebration of the founding of Quebec, which has so recently drawn to its close. No untoward incident marred the impressiveness of the occasion. It served to direct the attention of the world to the wonderful development which the Canadians have achieved, and fulfilled its further purpose of drawing more tightly the bonds which join together England and France and the United States.

Old Orchard, Me., August 10.—Amid wild scenes, which at times approached the abandon of zealots of the Middle Ages, 5,000 men and women, alternately shouting and praying, crying and laughing, gave up nearly \$70,000 in support of the missionary movement of the Christian and Missionary Alliance, of which A. B. Simpson, D. D., of New York, is leader. When it was over many of the congregation had all but beggared themselves. Besides the amount collected, one hundred people pledged themselves to go as missionaries to India.

The leading experts of Great Britain, Germany, and Belgium in the prevention of mine accidents have been invited by the American geological survey to come to this country to assist in establishing this line of work here with experimental stations, such as exist in Europe. Last year 3,200 men lost their lives in the mines of the United States, and this is two or three times as great a proportion as were killed in the mines of any European nations. For the year, Pennsylvania alone had 1,514 killed. George S. Rice, consulting coal mine engineer of the geological survey, has gone to Europe to study methods there.

Sculptor Brenner has been called into consultation with the President to design a medal bearing the profile of Mr. Roosevelt to be presented to all employes who see one year or more of continuous service on the Panama canal. It will be about the size of a ten-dollar gold piece, and will be cast in bronze. On one side will be a picture of a ship passing through the canal and the words "Presented by the President," with space left for the name of the recipient.

A singular case under the inheritance tax law is reported from Pennsylvania. A brother and sister were in a railroad accident, the brother being killed and his sister dying several hours later. The brother's property passed to the sister and the State collected \$1,200 inheritance tax; then the property went from the sister to collateral heirs, and another tax of the same amount was levied. Thus the same property paid two taxes the same day.

Paris, Aug. 16.—The naval lieutenants, Colin, Jeance and Mercier, the inventors of a wireless telephone apparatus which recent tests have shown to be superior to anything existing, achieved remarkable success with their new instrument yesterday when they communicated with the wireless station at Raz de Sein, Department of Finistère, a distance of about 310 miles. The transmitted words were somewhat faint but could be plainly distinguished, and the officers are confident that they can make great improvements in the apparatus, which has been the result of only four months' experimentation, enabling the exchange of conversation up to 600 or 700 miles.

For two whole days, Aug. 14, 15, Springfield, Ill., was in the hands of a lawless mob who by murder and destruction of property sought to avenge a brutal assault made by a negro man. By a clever ruse the officers succeeded in taking the man, supposed to be guilty, to the jail in Bloomington, but the brute instincts of the mob found vent in beating several innocent negroes and killing two. Three white men also were killed and a number wounded. Calls were made for State troops, and with fifty-five hundred armed national guardsmen patrolling the streets the mob began to get their sober, second thought.

The Sultan's recent order granting general amnesty to all political offenders who have sought refuge in the United States is looked upon as the most important step he has yet taken, in so far as it relates to refugees in this country. There are about 400,000 Turkish subjects here, of which number more than half are political offenders. Many of these have longed to go back to their country and friends, and may now do so without fear of prison or punishment. It is said by the Turkish consul in Chicago that the proclamation is likely to be followed by a general exodus of Turks from America, and that the number who leave may easily reach 100,000.

Three sharp earthquake shocks, which knocked down more than a hundred chimneys, shattered about forty plate glass windows in the business portion of the city, broke much crockery in the houses and sent people scurrying from their beds into the streets, occurred at Eureka, Cal., Aug. 18. The first and sharpest shock came at 2:58 A. M. It was almost as severe as the one felt there on April 18, 1906. At 3:08 another lighter shock was experienced, followed by a third at 5:30 o'clock. On the Seazy ranch, six miles north of Eureka, the earthquake caused a big fissure in the earth for half a mile. The shocks extended as far north as Blue Lake, twenty-five miles from Eureka.

The international free trade congress is now in session in London. Delegates are present from the United States, France, Germany, Belgium, Holland, Denmark, Italy and Great Britain. Lord Welby, president of the congress, said the idea of protection was advancing in an aggressive manner, but in spite of this the policy of free trade ultimately must prevail. "Free Trade and its Bearings on International Relations," the subject for discussion, was introduced by Winston Churchill, president of the board of trade, who argued that Great Britain was an object lesson. She had pursued the free trade policy, yet she remained prosperous and powerful and it has been found that British goods entered all other countries on as good terms as was secured by any nation by the most elaborate of fiscal weapons.

The last two years show a remarkable falling off in the number of students in the medical colleges and also in the number of such colleges. A recent issue of the journal of the American Medical Association, published in Chicago, contains elaborate statistics from every recognized medical school in the United States. The total number of medical students (matriculants) for the year ended June 30, 1908, was 22,602 a decrease of 1,674 compared with 1907. The decrease over two years ago is 2,602. It is the lowest number since the journal commenced the compilation of such statistics. Several reasons are given for this falling off. The entrance requirements are more rigid; the cost of medical education has been increased, also the length of time required for matriculation; and the demand for physicians does not equal the supply, the profession, therefore, not being as lucrative as it was.

Ira D. Sankey, author of "The Ninety and Nine" and constant companion of Dwight L. Moody in his evangelistic work, died at his home in Brooklyn, Aug. 13. For five years Mr. Sankey had been blind, and nervous prostration and other ills combined to make him a prisoner in his home for even a longer period, so that some people have been under the impression that he had passed away soon after the death of his famed associate. From 1870 until the death of Mr. Moody, eight years ago, the two men carried on evangelistic work together, the one winning people to Christ by his gospel songs, the other by his wonderful power as a preacher. Mr. Sankey was 68 years old. Seven years ago he became a Presbyterian, after having been a member of the Methodist church since boyhood. He left a considerable estate, which had been derived from the sale of several hymn books that he published in later years. "The Story of the Gospel Hymns," his latest work, was dictated to an amanuensis after his blindness incapacitated him. A widow and two sons survive him.

With the work now in progress toward remodeling all of the double-truck cars on the lines of the Chicago City Railway Company into the pay-as-you-enter type a long step has been taken, it is declared, toward reducing the number of street car accidents in Chicago. Orders have been issued to push the work as rapidly as possible, and it is expected that results will be noticeable within a short time. The company now has 300 pay-as-you-enter cars in operation and owns a total of 805 double-truck cars, all of which will be turned into the new model. The Chicago City Railway Company was the first street railway concern in the country to adopt the pay-as-you-enter type of car. Since then they have been put in use in New York, Buffalo, Kansas City, Newark, N. J., and Jersey City.

After a recent meeting of the officials of the Chicago and Alton it was stated that a contract would be placed for a new equipment to the value of about \$1,500,000. The equipment includes 1,000 steel cars, which are required to handle the Alton's increasing coal tonnage. Purchasing agents of the company were in New York for several days, arranging the details of the order. It is understood that the contract for the construction of the cars will be made with the Standard Steel Car Company. Considerable interest was displayed in railroad circles in the Alton's car order, which was taken as an indication of an early revival of the railroad business. There has been no very pronounced improvement in the steel rail situation, but orders placed during the last two weeks are larger than for any similar period for several months. Four railway companies have contracted for about 60,000 tons of rails, while smaller orders will bring the total up to between 75,000 and 100,000 tons.

A great irrigation plan has been laid out for that interammanian country known as Mesopotamia, the supposed cradle of the human race. At one time it was a veritable garden spot, being watered by irrigation from the Euphrates and Tigris rivers. But on account of war, demolition of forests and neglect, the canals have fallen into ruin and no longer do service. It is also claimed that alkali got into the soil, as has happened in some cases in the western part of the United States. But a plan has been put forward for the reclamation of this beautiful region. The center of the country which it is proposed to irrigate is Bagdad and the cost of the two projects put forward will be about \$20,000,000 for one and \$17,000,000 for the other. A return of 16 to 19 per cent on the outlay is expected.

It has often been remarked that there are comparatively few deaths from tuberculosis in mining communities, and scientists assert that this phenomenon may be due to the physiological effects of carbon monoxide, as they notice also that men employed in blast furnaces and gas producers are generally free from pulmonary troubles. It has been suggested that the presence of carbon dust in the lungs may be a cause of production of carbon monoxide, and that this will serve to explain the immunity of miners from the disease. The tubercle bacillus is a creature of extreme tenacity of life. It is encased in a waxy integument and is proof against even nitric acid, but gases are so penetrating in their powers of diffusion that it can well be considered that carbonic oxide might reach the tissues of a creature in a subtle manner, for the gas cannot be perceived.

## CREAM OF MAGAZINES

### MACHINE CHARITY.

With the rapid increase in population and the multiplication of the interests and complexities of life, there is a constant tendency toward system, toward regulation and toward ironclad rules, says the September Delin-eator. Charity, which in its most beautiful interpretation means love, the sympathy and tenderness of one human heart toward another, has become more and more mechanical, affected by the modern impulse, until the term "machine charity" has a sinister and significant meaning.

Machine charity—it denotes the work that is purely official, the work for others from which the inspiration has been banished, in which the individual touch is of the most perfunctory character. The woman who comes for bread needs, also, the touch of the friendly hand, the cheer of the kindly voice, the breath of sisterhood that passes when charity spells love. And, if the woman needs it, how much more the child who is thrust, dependent, defenceless, upon the world? Yet in the grasp of machine charity are nine-tenths of our homeless children. The other tenth—but a small part of the entire number—have through various home-finding agencies found homes where there is no machinery, where they have become sons and daughters of the household happy in a mother's love.

But the nine-tenths—why are they consigned to the machine charity that feeds them, clothes them, teaches them by the ticking of the clock, when homes are waiting, empty, to do all this, and to add to this what machine charity can never give—human love.

This is the age of progress. Ere long the movement to place a child in a home will be a national movement, and the State which neglects this wisest provision for its dependent children will bear a blot upon its escutcheon.

### TO TEACH MORALS IN PUBLIC SCHOOLS.

Distinctive efforts to be taken in the direction of moral training in the public schools were recommended at the recent annual meeting of the National Educational Association in Cleveland. "The forward march of the teachers in this direction is quiet, but it is determined," says the editor of the Chicago Interior, "and it is going to bring about the solution of this great problem." Their principle of action is stated by the writer in these words: "Today the teachers say that the next advance in the school life of the country must put conscience-training decisively above mind-training." The association voicing this demand is described as "preëminently the organ of expression of the common-school teachers of the land," though it has also "a considerable contingent of university and college men." The paragraphs of its resolution which touch this subject read as follows:

"We earnestly recommend to boards of education, principals, and teachers the continuous training of pupils in morals and in business and professional ethics, to the

end that the coming generation of men of affairs may have a well-developed abhorrence of unfair dealing and discrimination.

"The National Educational Association wishes to record its approval of the increasing appreciation among educators of the fact that the building of character is the real aim of the schools.

"We hope for such a change in public sentiment as will permit and encourage the reading and study of the English Bible.

"The highest ethical standards of conduct and of speech should be insisted on among teachers."

The further comment of the Interior is in this vein:

"The outspoken declaration herein for the Bible is especially satisfactory. Many church people, apparently with a sort of fetish faith in the bare sound of the words, urge nothing more than a mere daily reading of the Scriptures in the schoolroom. The teachers, with the brighter light of experience to advise them, put no trust in a routine reading, but recognize that if the Bible is to do any good in the schoolroom it must be studied.

"The only uncertain sound in their declaration is the rather pessimistic allusion to the present state of public sentiment, which they tacitly concede to be against such use of the Bible as they would like to introduce into their work. But they should not misconstrue the quality of that feeling.

"It is not an essential opposition to the book itself. The majority of American parents would be personally most happy to have their children receive the sort of instruction from the Bible which the teachers would like to give. But there has been industriously disseminated through the country the idea that any use of the Christian Scriptures in the schools would infringe the rights of conscience of those who do not believe the Bible as a religious book. And the typical American father, wishing above all things to 'play fair,' will rather forego a desired benefit for his own children than to trench upon the liberty of his neighbor.

"This forbearance is most admirable, but it is not altogether intelligent. The introduction of moral teaching into the public schools, with the Bible as at least one recognized textbook thereof, would, if sincerely managed, not offend the proper principles of religious liberty in the slightest.

"Religion as a personal experience and as a personal hope the State can have nothing to do with. But the social morality which covers justice and truth between man and man in the life here present and visible the State has not only the right, but a positive duty to inculcate.

"That the State is bound to uphold that morality through the wording, spirit, and execution of its laws nobody denies. The laws embody the State's ideals of citizenship. It is the simplest and most impregnable logic to hold that the State should not wait until those ideals are violated before bringing them directly to the attention of its citizens. What it intends to maintain as the

standard of conduct necessary for a just social order in a stable commonwealth it should duly inform its citizens in advance of any temptation to break those standards."

Without controversy the place for the State to set forth its moral requirements so as to most deeply impress the masses of its people is in the common schoolroom, continues the writer, with these additional words:

"The State does not teach the wrong of a selfish and evil act primarily because it is a personal sin. The Church must deal with that phase of human responsibility. The State's interest arises from the fact that wrong deeds disintegrate society, and right deeds consolidate, protect, and perpetuate society.

"So too the State cannot take up the Bible with any idea of sanctioning it for spiritual authority. As a political organism Government has no means of ascertaining that character of the Scriptures. But it is able to take cognizance of the great political fact written all over secular history—that nations which have observed the morality of the Scriptures have been strong nations of persisting vitality and steadfast orderliness.

"The right of the State to teach morals in the public schools, wholly or partly on the basis of Biblical ethics, is at bottom the right of self-preservation, because moral nations live.

"Each State ought by statute to define its own right to instruct its public-school children in the fundamentals of social morality.

"Any court in the land would uphold such a law. It would not be vulnerable to any charge of infringing religious liberty, because it would plainly stop short of touching religion—it would be limited strictly to the State's own undeniable self-interest. That one great sentence in the ordinance of 1787 would alone be almost sufficient legal ground for it:

"'Religion, morality, and knowledge being necessary for good government, schools and the means of education shall be forever maintained.'"—Literary Digest.

### THE JAPANESE IN FORMOSA.

The island of Formosa is just off the coast of China, about fifty miles wide and 240 miles long. It lies a little north of the Philippines. Here, as a result of the war with China, the Japanese, in 1895, became the rulers over 3,000,000 Chinese, who had been there between two and three centuries, and perhaps 100,000 savages, called "Head Hunters," who had been there much longer. The Chinese occupy the western half of the island, which is generally very level; the savages the eastern half, a very rough, mountainous region, with several peaks reaching a height of 12,000 feet. Between these two peoples there has been constant warfare. The savages originally occupied the plains also, but were driven to the shelter of the mountains, where their smaller numbers could hold the Mongolian hordes in check. They are as savage and warlike as ever, and are very much feared by all.

The Japanese found the Formosans (Chinese) in a pitiable condition. They came originally from the vicinity of Amoy, where some of the poorest people are to be found in all China. They were ignorant, suspicious, bigoted, emaciated, impoverished, dirty, and diseased. About 90 per cent were illiterate; all were underfed. The tax-gatherers had taken everything but skin, bone and filth. The amount of disease, especially sore eyes, is still appalling. With the suspicion that grew out of such conditions, added to the natural stubbornness and bigotry

of the Chinese, we can understand that instead of welcoming the Japanese, as the Spanish did the American army in Porto Rico, they gave them weeks of hard fighting, accompanied by rioting and looting among themselves, all after Formosa had been regularly "ceded" to Japan.

My first question was: How many Japanese are here in Formosa? I was answered: "About 100,000." To verify this, and to find out what they were doing, was my constant endeavor, and my conclusion is that the number is fairly stated. As the island will easily support double the present population, there need be no overcrowding for years to come.

The price of Chinese labor in Formosa has increased fully 50 per cent., but is not yet up to the labor standard in Japan; so the Japanese do not try to compete, but confine themselves to keeping stores, hotels, bath-houses, etc., acting as foremen or superintendents of new enterprises, doing the work of skilled mechanics, engineers, and teachers. No Chinaman can come from the mainland without a passport, which you may be sure is carefully scrutinized. The number entitled to enter probably does not exceed the number who leave.

While the Japanese Government employs its own people in most responsible positions, it also employs a surprising number of Chinese. The ticket-sellers, gate-keepers, and guards on the government railway seem to be all Chinese; the engineers and head mechanics are undoubtedly Japanese. I think I am safe in saying that four-fifths of all the railway employés are Chinese, who also do all the common labor in other government enterprises. I found in every city or town of any consequence one Japanese street, a model of taste and cleanliness, for all to look at, if not to imitate at once.

The first change in the condition of the Formosan people was their fuller employment, which was in itself a "raise." Then the actual advance in wages began. I now find their average pay fully one-half more than the same class of people are getting over on the mainland of China, bringing the wages of a man from 13 cents to 20 cents (gold) a day, women and children lower in proportion. An English missionary, long a resident of the island, rather reluctantly admitted to me, although not a bit enthusiastic about Japanese rule, that the people generally now eat three meals a day. We can readily understand that at the former rate of wages and with fewer employed it was not three meals a day.

Justice, the first essential to normal community life, has been established at last; but we need not be surprised if the Chinese sometimes kick at justice itself and sigh for the good old rotten days.

There are now eight ordinary courts and one court of appeals, presided over by Japanese judges, appointed by the imperial government. The important fact about the present courts of Formosa is not the nationality of the judges, but that justice itself for the first time in its history is obtainable by the poorest coolie.—From "What Are the Japanese Doing in Formosa?" by William C. Gregg, in the American Review of Reviews for August.

### MODELS FOR OUR COINS.

THE question is often asked: "Who was the original model?" reference being to the feminine face on some very old or some very recent coin. In the main there have existed but few originals of any of these coin lineaments, and the reason is simple: Coin

designers very rarely use a model. Excepting in cases where absolute portraiture is demanded, as in the coinage of European countries, with its likeness of reigning monarchs, the heads to be found on coins, both ancient and modern, are mere fancies of the designer, idealized femininity typifying some such sentiment as liberty, equality, industry, and the like.

On our own coins of every denomination, for a cent and a half, only three traceable feminine portraits appear. These are Martha Washington, Lady Hamilton, and the young Irish woman of New Jersey who posed for the new St. Gaudens double eagle. But even in this last instance the features are not altogether those of the model; indeed, no artist engaged upon an ideal work ever portrays the model as she exactly is, for something of spiritual quality must go into the making of every artistic idealization. Examine all our American coins bearing a feminine head, from the disheveled lady of 1792 (which, after all, is only a crude caricature of the first president's wife), and you will find the predominating type based upon early Greek profiles.

These were excellent examples to follow, but our native coin designers do not seem to have possessed sufficient skill of hand to preserve the consummate beauty of their Greek models while adapting them to the uses of American coinage.

The nearest approach to a practical coin ideal is that which is on our silver 25-cent pieces and our nickel 5-cent bits, but this head, as already noted, has come surreptitiously by way of modern France rather than straight from the golden age of Hellenic empire. We might do far worse than copy slavishly some of the exquisite heads and figures on the coins of old Greece, or those of the Phoenicians; or follow the careful artisanship of the Egyptians or even the intricately beautiful designs of the Henrys and Edwards and Richards of a later day, and a nearer kinship to the living.—*Bohemian Magazine*.

### BETWEEN WHILES.

**A Brief Introduction.**—"Long introductions when a man has a speech to make are a bore," said former Senator John C. Spooner according to *The Saturday Evening Post*. "I have had all kinds, but the most satisfactory one in my career was that of a German mayor of a small town in my State, Wisconsin.

"I was to make a political address, and the opera-house was crowded. When it came time to begin, the mayor got up.

"'Mine friends,' he said, 'I haf asked been to introduce Senator Spooner, who is to make a speech, yes. Vell, I haf dit so, und he vill now do so.'"

### In Far-off Egypt.

The Sphinx, when appealed to, just laughed and said, "You're not lacking in craft!

You want me to tell  
Who'll succeed Teddy? Well"—

Then she mentioned a name. Was it Taft?  
But there! there's no use of your tryin'  
To pump the half-lady-half-lion.  
I don't feel that I can  
Reveal who'll be the man,  
So I'll leave you to guess. Was it Bryan?

—Robert T. Hardy, in *May Lippincott's*

Though the Sphinx told me who'd make his home in  
The White House next year (lucky omen!)  
I gave her my word  
I'd not tell what I heard.

Still—sh!—William will be his cognomen!  
—Clifton B. Dowd.

"Where is the pain?" asked the physician.  
"Oh, I don't know, doctor!" groaned the patient.  
"It hurts so I can't tell where it is!"  
"Just so," said the doctor, proceeding to fill a small vial from a larger one. "It's a wiseacre who knows where he aches."

Everybody's kickin'  
Kickin' 'bout the heat;  
Kickin' 'bout the prices  
We pay for things to eat.  
Kickin' 'bout the railroads  
An' the government;  
Kickin' 'bout the taxes  
An' the way they're spent.  
Kickin' 'bout the autos  
An' the pace they set;  
Kickin' 'bout the grafters  
An' the pull they get.  
Old mule looks dejected,  
Says in tones demure,  
"When it comes to kickin'  
I'm an amachoor."

**Via Air-ship.**—Employer—"Did you tell Mr. Boreham, who called, that I had gone to America?"

New Office Boy—"Yes, sir; I told him you had started this morning."

"Good. What did he say?"

"He wished to know when you'd return, sir, and I told him I did not think you would be back until after luncheon."—Pick Me Up.

## WANT AND EXCHANGE

---

To accommodate some of our readers and bring them in closer touch with each other, we have opened this "want and exchange" column.

Rates, twenty-five cents per insertion, not exceeding four lines, including name and address. Five cents per line for additional lines. However, no "want" may exceed six lines altogether.

---

**FOR SALE.**—Three shares of Albaugh Dover Co. stock. Has never yielded less than 10%. Will sell for 20% less than Market Value if sold before Oct. 1st. Address J. S. N. care Inglenook.

**WANTED.**—Some good brother with means to buy store building with living rooms above and a first-class stock of dry goods, clothing and shoes. Run on a cash basis in the little town of Manzanola, Colo. Brethren Church in town. Address, J. F. Eller, Manzanola, Colo.

Price per copy, .....5 cents.

**BRETHREN PUBLISHING HOUSE,**  
Elgin, Illinois.

### **NEFF'S CORNER**

The railroad people here are now at work on a concrete powerhouse in which electricity will be generated with which to furnish light and power for the coal chutes, passenger and freight depot and roundhouse. They will soon erect a \$135,000.00 ice plant where ice will be manufactured for re-icing the through refrigerator fruit cars from the Pacific coast. And these are but a small part of the improvements under way and in contemplation by the great Santa Fe Railway system at Clovis. It will take several years to complete the work already planned here. For this and other reasons the town continues to grow and property values keep climbing up. If you want to make an investment that will bring you splendid returns, write me.

**JAMES M. NEFF,**  
Clovis, New Mexico.

Revised Edition of  
**Ropp's New Commercial Calculator**  
**And Short Cut Arithmetic**

The Standard for Store, Farm, Bank or Factory,

5½ x 2¾ in.

Greatly improved, enlarged and thoroughly revised.  
 Contains an entirely new system of unique Tables, Short Cuts  
 and Up-to-date Methods.

Unquestionably the most complete and comprehensive Calculator  
 ever published.

Has more than twice the matter, scope and capacity of Ropp's  
 former editions, of which

**Nearly 1,500,000 Copies have been Sold.**

The most convenient and practical Labor-saving work ever used  
 in the business world.

It will make every one independent, sure and self-reliant in all  
 practical calculations.

It will prevent mistakes, relieve the mind, save time and labor,  
 and often loss and trouble.

Its Tables are adapted to all trades and occupations of the city  
 or country.

**The Answer to Your Problem as Quickly as a Watch Shows the Time.**

It also explains and simplifies the principles of Arithmetic, Mechanics and Mensuration.  
 It will make the study and use of Figures easy and interesting to both young and old.  
 It will enable every progressive mind to become an expert, sure and **rapid** calculator.  
 It will prove a boon to all whose education in arithmetic has been limited or neglected.

**48 Cuts Illustrate the Elements of Mechanics and Mensuration**

It defines about 70 points in "Commercial Law" which every man and woman should  
 know.

It is the result of devising, and improving system after system; of spending thousands  
 of dollars in experimenting; of making millions of miscellaneous calculations, and of do-  
 ing some vigorous thinking during 38 years, by an analytic, practical and persevering  
 mind.

**It is Especially Designed for**

Farmers, Mechanics, Business and Professional men.

## WEBSTER'S IMPERIAL DICTIONARY

New and Up-to-date

Reset from New Type

Thousands of New Words

THIS IS THE ONLY NEW AND COMPLETE  
WEBSTER DICTIONARY ISSUED

Since 1890. For it is the Only "Webster" in which common sense and discrimination have been shown by the editors in the use of capitals. In the Imperial all proper names begin with capitals and other words with small letters. It is strange that so important a feature should have been overlooked in the other Websters—but it was. This is but one of the hundreds of illustrations of the thoroughness with which Webster's Imperial has been prepared.

It is the best and Most Practical, as well as the latest Complete Dictionary of the English Language, giving the Spelling, Pronunciation, Etymology, and Definitions of Words, together with thousands of Illustrations.

# ALBERTA

¶ Of Alberta a distinguished writer has said:

"North of the International boundary line and immediately east of the Rocky Mountains lies the Province of Alberta—a land blessed with all that is necessary to happiness and prosperity. Between the 49th and 60th parallels and between the 110th and 120th meridians lie 281,000 square miles of possibility. Here are mountains and plains, foothills and valleys, rolling prairies with wooded stretches between, dense forests and grassy meadows, clean, timber-girded lakes and winding brooks, cold mountain streams and navigable rivers, and a soil rich in the alluvial and vegetable accumulations of centuries. And as if not content with these outward signs of her favor, nature has hidden beneath the surface vast deposits of coal and other minerals; she has filled the subterranean reservoirs with gas and oil, and sprinkled the sands of the mountain streams with gold. That no living thing should go athirst, she gathered together the waters of the mountains and brought them to the plains, to be directed by the ingenuity of man to the use of the grazing herds and the planted fields. Then, to crown her efforts and leave nothing incomplete, she brought the chinook wind, warm with the breath of May, to temper the north wind."

¶ In the Medicine Hat District we have a gently undulating prairie. The soil is capable of producing generous yields of all small grains and vegetables in abundance.

¶ The city of Medicine Hat, situated on the Saskatchewan river and underlaid with gas and coal, is destined to be a great manufacturing center.

¶ Why not join the colonies already there and enjoy some of the material benefits as well as help build up one of the largest and best colonies in the Canadian West.

¶ We have excursions every first and third Tuesday of the month.

¶ For particulars and cheap rates apply to

**THE R. R. STONER LAND CO., LTD.,**

MINNEAPOLIS, MINN.

# A RARE OPPORTUNITY

## TO MAKE BIG MONEY

- ☐ We want to place the sale of our popular floral Wall Mottoes in the hands of an active agent in your community.
- ☐ Several hundred agents are now at work and report splendid success. One person ordering as many as 750 at one time.
- ☐ In appearance these mottoes come nearer to an oil painting, of the most expensive sort, than anything else. They possess a rich gloss that adds wonderfully to their attractiveness when in position upon the walls.
- ☐ The lettering is clear and distinct and can be read across the room.
- ☐ The size, 12x16, makes them suitable for use in any home. Unlike many pictures or mottoes they do not fade, and lose their bright and attractive colors. They can readily be dusted should they become a trifle soiled, or can be cleaned whenever desired with a damp cloth.
- ☐ These mottoes will last for years, and continue to give pleasure and good cheer to all.

### Ten Mottoes and Ten Designs

#### 1. Be Ye Followers of God as Dear Children.

A very attractive design with groups of children. The poem "Jesus Was a Little Child" neatly printed in one corner adds much to make this picture a very desirable one for the children.

#### 2. Be not Weary in Well Doing.

This design is composed of a beautiful scroll, two birds and their nest, and beautiful flowers, all in colors.

#### 3. Christ Is the Head of this House.

The flower on this motto is a large beautiful orchid, which gracefully overhangs the lettering.

#### 4. God Bless Our Home.

#### 5. In God We Trust.

The design used with these texts is pansies in natural coloring. The lettering is artistically shaded and beautifully harmonizes with the flowers.

#### 6. God Is Our Refuge and Strength.

#### 7. Home, Sweet Home.

This beautiful design is sure to be a good seller. No. 6 represents God as a refuge for the soul, and should be in every Christian home. No. 7 is one of the most popular mottoes known to the English speaking world. It is always in demand. Can be sold anywhere to anybody.

#### 8. Love One Another.

#### 9. The Lord Is my Shepherd.

The motto for these texts has a delightful arrangement of forget-me-nots and crimson roses on a black background. Very artistic.

#### 10. What Is Home Without a Mother?

This has long been a favorite motto and is still in great demand. The beautiful scroll design, artistic lettering and delicate flowers make this an attractive motto and a good seller.

# BARGAINS IN BIBLES

## For Sunday-School Pupils

### Sunday-School Scholars' Bible

International Self-Pronouncing.

A very appropriate present to a boy or girl. A Bible arranged on the plan of a Teachers' Bible, except that the Aids to the study of the Scripture are in simple language and embrace subjects in which young students find interest. This Bible is printed from easily read large Minion type, with all proper names or "hard words" accented and divided in syllables, thereby facilitating pronunciation. An aid of supreme importance to young people. Thirty-two new pictures illuminate and explain the text. These illustrations are new and so appropriate that they cannot fail to be most instructive to young scholars. In addition to these features this Bible contains many other new and valuable helps.

MINION TYPE, Six Maps. Size  $4 \times 6\frac{1}{4}$  inches.

# OVER 200,000 ACRES

of land has been filed on under the CAREY ACT in the Twin Falls District, Idaho, since April, 1907.

¶ There is still a large amount of land waiting for the settler in the above district. Also great opportunities are offered at American Falls, at Gooding and other points along the OREGON SHORT LINE RAILROAD.

¶ The Payette-Boise Reclamation Project under the U. S. Government is about completed and will be ready to furnish water to about 300,000 acres of new land in the spring of 1909. These lands can now be bought at reasonable rates and terms, by the settler, and are situated where the country is already partly settled, near good towns, railroads and electric lines.

¶ Rural mail routes and telephone lines are already established. Good schools and churches. No storms or cyclones. Farming is done by irrigation. No failure of crops by reason of too much rain or drought. Fruit crop is abundant every year. The people are happy because they are prosperous.

## Wonderful Possibilities

for homeseekers and investors. Climate Mild. Soil Very Productive.

¶ Alfalfa, Sugar Beets, and grains of all kinds are among the products that yield abundantly. Farm hands, carpenters, mechanics and in fact all classes of workmen will find plenty of work at good wages.

¶ Arrange your plans to go and see Idaho as soon as possible and secure some of this fine land.

¶ HOMESEEKERS ROUND TRIP EXCURSION RATES are on First and Third Tuesdays of each month in 1908.

¶ Colonist One-Way Cheap Rates to points in Idaho, Oregon and Washington in effect daily from Sept. 1st to Oct. 31, 1908 inclusive.

¶ WRITE NOW for printed matter and full particulars regarding this great country and how to get there.

## Why the Presidential Term Should Not Exceed Four Years

William L. Judy

Two distinct factions were found in the famous Constitutional Convention of 1787. They were diametrically opposed to one another. Their difference dates from the Revolutionary War. The conservative faction—those who inclined toward a monarchical form of government—had a more friendly feeling for the mother country than had the radicals, who were bitterly opposed to anything that savored of English.

What should be the length of the President's term of office? The question naturally provoked much discussion. The one party would have him elected for life, like a king, but not hereditary. The other did not want any central ruler at all. The difficulty was compromised and the term made four years.

In what follows we shall endeavor to show the wisdom of the framers of the Constitution in limiting the term to four years. The two main divisions of the discussion are: I. *A four-year term is conducive to democracy.* II. *A campaign every four years is a valuable educator of the people.*

I. *A four-year term is conducive to democracy.* The corner-stone of the American Republic is the rule of the majority. This majority means the majority not of a privileged class but of the entire body of voters. The people are their own kings. They possess the supreme power. Public opinion dictates the governmental policies. It is our boast that we rule ourselves. America more than any other land has attained nearest the ideal democracy. Just in proportion as the wise rule of the majority becomes more and more a fact, we are approaching closer to the ideal democracy.

Through the selection of officers the people exert their power. By this means they can place in power the men and the issues they want. To incur popular disfavor is to lose one's job. Consequently the officeholder must do the bidding of the people, if he wishes to continue in office. If he does not stand for the rights of the people, if he does not perform honestly

and well the duties of his office, if he has deceived the people, he is undone; for the public can soon rid themselves of his nefarious rule. *At the election booth they seal his fate. Their all-powerful ammunition is the ballot.* If the President should prove himself worthless and merely a tool of the politicians, in a short time the country can rid itself of him and choose a new man. He does his best that he may secure the popular praise and perhaps that he may have another term.

II. *A campaign every four years is a valuable educator of the people.* Ignorance is the curse of humanity and especially of democracies. Education brings truth and happiness. Therefore, to rule wisely the ruler must be intelligent. America has made her people her sovereigns. They rule, and in proportion as they are intelligent they rule wisely and well. An uneducated voter can do great harm at the election booth, for he is the prey of demagogues and of corrupters of elections. *No successful democracy is possible where the people know not how to rule.* The education of the people as a whole brings a wiser rule. Hence, anything that teaches the citizen more about his country, its needs, and how best to meet those needs, is a valuable educator of the people.

Presidential campaigns are unique. From the time the nominating conventions are held in the early summer until election day during the first week of November, the American people become very patriotic. Politics and political issues make up the burden of their talk. Newspapers wage fierce battles. Every issue tells how large will be the sure majority of their candidates. Stump speeches give an opportunity for the lips of the orator to utter an abundance of patriotic eloquence and nonsense. Torch-light processions fill the streets at night. Badges adorn everybody's coat. Campaign literature and political pamphlets flood the country. It's hurrah! hurrah! for each one's candidate and Salt River for all the others.

Every four years such a patriotic outburst takes

place. The citizen interests himself in the issues. Each candidate tells the voter that he is best fitted for the office. In order to know whom to choose, the voter must learn of their respective qualifications. He must be acquainted with the needs of the nation and, furthermore, what man will best meet those needs. The enormous output of party pamphlets and campaign literature serves a good purpose. They enlighten the public to a great extent. The newspapers arouse enthusiasm. Everybody must talk politics and so must know politics. Nothing else in our political life can so vitally interest the people, and at the same time make them more intelligent in governmental affairs, as the presidential campaigns every four years. This valuable education in political ways and means is a feature that should be had not once in four years but every year and in fact all the time.

Garrett, Pa.

### FISHES' LUNGS.

N. J. MILLER.

EVERY one knows that the respiratory organs of fishes are the gills, *i. e.* filaments attached to bony arches. Yet the average man gives various answers as to how the water flows over the plimose structures. Some perhaps might say the animal opens its mouth so the water may run through over the gills and out at their clefts; others guess the water flows in the opposite direction. The fact is the animal in water is

Lateral View of Fish. The Arrows Show the Direction of the Flow of Water Over the Gills.

always opening and shutting its mouth. The former action allows the water to enter the mouth and the latter forces it over the gills and through the gill clefts. Should the mouth be held open in the water for a long time, the fish quite likely would drown or suffocate since the water would not wash the gills sufficiently even though the head were upstream, the favorite position of the animal. The position, with head downstream, makes breathing easier for the crayfish, but the opposite, head upstream, is the more helpful for the fish.

Though the gills are respiratory organs, they are not true lungs. Nevertheless some fishes have true lungs which originate from the ventral side of the esophagus and lie dorsally beneath the backbone. One of these, *Creatodus*, lives in the Burnett and Murray rivers of Australia. It is from four to five feet long and lives in the deep holes or pools in which the water in dry seasons becomes stagnant because of the

decomposing vegetable matter. Though supplied with gills to gain sufficient oxygen for breathing, at such periods the animal comes to the surface to gulp air into its lungs. In spite of its large lungs the fish would suffocate if outside of the water.

The African lung-fish, *Protopterus*, lives in the White Nile, Gambia and Niger Rivers. It is supplied with gills and two lungs; in the same position as the air or swim-bladder of our common fishes. During the rainy seasons it prefers shallow water and comes to the surface at short intervals to gulp in air. During dry seasons, from August to December, it lies in burrows about eighteen inches deep in the mud, en-

Section of (c) Fish Showing Swim Bladder (a, b) and Its Relative Position to the Esophagus (c) and Stomach (s). A Tube (s) Connects the Inflated Organ With the Esophagus.

closing itself into a mucous and mud capsule or cocoon having a small opening. Through the aperture the air passes to its nostrils, thence to its lungs. Fishes similar to this live in Brazil. They are, so palæontologists say, the remnants (less than five per cent of our present fishes) of the lung-fishes which swarmed the seas in earlier times, designated for convenience as the Devonian. From the rocks in Ohio many have been excavated ranging from ten to twenty-six feet in length. "There were giants in those days."

Now the lungs of those fishes occupy the same position and have about the same origin as the air or swim-bladders of our common fishes. So morphologists tell us the latter, although not breathing organs, are homologous to true lungs. They lie beneath the backbone and are inflated with gases secreted from the blood in their walls. In the suckers and some others the swim-bladder lies almost free in the body cavity and is constricted in the middle; while in the garpikes and some others a tube leads from the esophagus to the inflated organ. In these cases it partially is used for breathing since air enters it and the supply of blood vessels is great.

The swim-bladder, though a retrograding lung, has primarily a hydrostatic function. The inflated organ renders the fish, volume for volume, the same weight or the specific gravity as the water in which it lives. By properly manipulating the size of the organ the fish may rest stationary in quiet water at any depth. Should the bladder be decreased in volume by the compression of the animal's sides, thus increasing its specific gravity, an easy and rapid descent to the bottom of the water is effected; and should the organ

expand the animal may rise part way or entirely to the surface. Though the air-bladder is regarded as a retrograding lung, it clearly is concerned largely in adjusting the specific gravity of the fish to meet some of the varying demands in its environment.

#### ALPHABET OF AMERICAN AUTHORS.

G. FEGLEY.

##### XX. Bayard Taylor.

BAYARD TAYLOR was born January 11, 1825, at Kennett Square, Pa., and was the son of Joseph and Rebecca Way Taylor. An ancestor, Robert Taylor, came to America with William Penn, consequently he was of Quaker descent. Other of his ancestors were German. He was educated at the academies of Westchester and Unionville and wrote rhymes at seven, and was an industrious writer at twelve. He was not inclined either toward school-teaching or farming, his father's occupation, and was apprenticed to a printer at the age of seventeen, and began contributing poetry to various periodicals.

At nineteen, having studied French and Latin at odd times, and having a desire for travel, with \$140 in his pocket, advance pay for letters to several Philadelphia papers, he went to Europe on a pedestrian tour. Horace Greeley agreed to print some of his letters in the *New York Tribune*, provided they were not descriptive, and that Taylor had been in Europe "long enough to know something." The year he started he published a volume of poems under the name "Ximena." In 1846, the result of his two years' tramping over Europe was published as "Views Afoot; or, Europe seen with Knapsack and Staff." He was an expert artist and illustrated whatever took his fancy, having his pencil always in hand.

Failing to make a success of his Phoenixville *Pioneer* on his return, he went to New York in December, 1847, and secured a position on the *Tribune*, and in 1849 became a stockholder. He went to California in 1849 to investigate the scenes of the gold excitement, the result of which appeared in 1850, "El Dorado; or, Adventures in the Path of Empire." Then he traveled in Egypt, Palestine, Syria, Asia Minor, and in 1854 published the account in "A Journey to Central Africa," and "The Lands of the Saracen." Then he went to India and China, and joined Commodore Perry's voyage to Japan, and published "A Visit to India, China and Japan." Then he traveled in Germany, Norway and Lapland, and in 1857 published "Northern Travel." Then he traveled in Greece and Russia (where he was secretary of legation), and in 1859 printed "Travels in Greece and Russia." In 1868 he was in Switzerland, the Pyrenees, and Corsica, and in Egypt and Iceland in 1874. "At Home and Abroad," in two series came out in 1859 and 1862, "Colorado" in 1867, "By-Ways

of Europe" in 1869, "Egypt and Iceland" in 1874. "History of Germany" was printed in 1875, and an edition with additional chapters by his wife has since been printed.

Much he wrote is filed away with the government archives and will never be printed. All the time he was "globe-trotting" and writing books he was writing poetry and novels. Aside from poetry, his works he called "pot-boilers," written for support of himself and family. His greatest attention was given to poetry of which he wrote a great deal. Except his longest poems (translation of Goethe's "Faust," and the "Masque of the Gods," and "Prince Deukalion"), and the drama of "The Prophet," all his poems, more or less lengthy, and numbering two hundred and sixteen have been issued in one compact volume of 341 pages. His novels were "Hannah Thurston," "John Godfrey's Fortunes," "Joseph and His Friends," and "The Story of Kennett," all of which seem to be more or less autobiographical.

He married on her death-bed a beautiful girl named Mary Agnew, to whom he was greatly attached, and seven years afterwards (in 1857) married Marie, daughter of Professor Hansen, the Gotha astronomer. They lived very happily together at his home in Kennett where he was unceasingly working. He also found time to deliver many hundred lectures. He was appointed American Minister to Germany by President Hayes in 1878, but served only seven months, dying December 15, while sitting in his arm-chair in his library. He was worn out by overwork, dying in the prime of life.

His translation of "Faust" places him upon the "bench of honor" with Longfellow and Bryant. He is especially noted for the diversity and style of his writings, each particular book appearing to be cast in the nationality of which it treats, grave, gay, didactic, strenuous, placid, or venturesome, all is swayed by the pen of a master-hand. Among his most popular poems are "Song of the Camp," "Bedouin Love Song," "Amram's Wooing," "The Quaker Widow," and "Lars, a Pastoral of Norway."

Worthy of mention: H. D. Thoreau, nature; J. T. Trowbridge, boys' stories; Celia Thaxter, poems; Maurice Thompson, poems and essays; George Ticknor, history and biography; Moses C. Tyler, essays; J. R. Tyson, essays; D. P. Thompson, novels; Rev. W. M. Thomson, "The Land and the Book"; Charles Thomson, biblical translations; Benjamin Tefft, prose and verse; W. L. Thompson, poems and songs.

Bryan, Ohio.

IF every day we can feel, if only for a moment, the elation of being alive, the realization of being our best selves, of filling our destined scope and trend, you may be sure that we are succeeding. — *Bliss Carman* in "The Seed of Success."

# The Pennsylvania White Pine Consumptive Sanitarium

Mary E. Canode

In Two Parts. Part One.

Is there hope for the consumptive? Is it possible to rid the State of the dreadful disease? These are the questions which the Commonwealth of Pennsylvania is trying to answer in a most practical way. And if reports of the past several years count for anything, it would seem that there is hope for the incipient consumptive's restoration to health on the mountains of Pennsylvania as well as in the mountainous regions of our western States or in the warmer climate of the South.

In its battle with "The Great White Plague," the medical fraternity has done much in the line of

clothing for bodily protection and taking outdoor exercise, that surplus food may be converted into strong muscular tissue.

In order that its afflicted citizens may be placed under favorable conditions to take the above treatment, the State of Pennsylvania has established its Sanitarium on South Mountain, Franklin County. Its location is a portion of the "South Mountain State Forestry Reservation" and is under direct control of the State. Franklin County is in the middle of the extreme southern tier of counties. Through the eastern edge of the county extends South Mountain.

On the west side, nestled in the valley at its base,

six miles north of Waynesboro is the little town of Mount Alto. Going east to the mountain one enters Mount Alto Park, established and formerly owned by the late Colonel Weistling, but now a portion of the Forest Reservation. To the left of the entrance to the park is located the academy at which young men are educated for the work of forestry. Ascending the mountain, passing through the park, over the brow

A Winter Scene at what is Known as the Lower Camp.

discovering causes, preventives and treatments of the disease, though as yet it continues unable to prescribe any curative in the way of drugs or medicines. But the conclusion has been reached and the facts proved that the disease can be arrested and made to partially or entirely disappear through the now well-known "open-air treatment." Investigations have shown that the destructive germ which causes the disease, feeds upon and tears down weakened tissue and that the victim's only hope of offsetting its work of destruction is by eating plenty and more than plenty of strong food in order that tissue may be built up more rapidly than it can be destroyed; having access to much pure air and sunshine which seem to be the effective destroyers of the germ; wearing good, warm

of the ridge, down the east side, making a trip of four miles southeast from the station, the visitor finds himself at the Camp Sanitarium, right in the midst of the fifty thousand acres of Forest Reservation.

Its origin dates back but a few years and has been known as the South Mountain State Camp Sanitarium only since June 1903. Some years previous to that time Dr. J. T. Ruthrock was so impressed with the idea of outdoor treatment for consumptive patients that he established a small private sanitarium. Incipient consumptives came to the camp, underwent treatment as best they could under the inconvenient conditions and in a short time were able to go away improved in health or entirely cured. Because of the good

work it was doing the camp's reputation increased. Widespread interest was aroused until in June, 1903, the Commonwealth of Pennsylvania purchased the camp, put Dr. Ruthrock in charge and commenced improvements. The camp thus started as an experiment is now regarded as a "triumphant success."

In its earlier stages the camp was merely a number of shacks lining either side of a street. These were occupied by individuals who were obliged to do their own cooking and housekeeping. Because of this crude way of living, not many, and only the stronger patients, could be admitted. But the camp and its reputation grew year by year and with increased interest in the camp increased appropriations by the State legislature made it possible to so improve the camp that at present all the original crudeness has disappeared. Neat cottages have replaced the rude shacks and tents; a large dining hall and kitchen with their cooks and waiters serve the afflicted ones who are so little able to do their own cooking. Capable physicians and trained nurses watch over the patients and everything is done which modern science and all its resultant conveniences can do to make the place as sanitary as possible.

The original camp, established by Dr. Ruthrock, now known as the upper camp was found to be rather higher in altitude than desirable for all-winter habitation and the lower camp was established a quarter of a mile down the mountain. And yet more recently a permanent settlement has been located between the other two. From the camp physician's report we quote: "The altitude is about 1,650 feet above the sea level. The hills rise up like the sides of a basin some 300 or 400 feet above it. The basin is opened up by mountain passes to the southwest and northeast and east, is well wooded and watered, and has a sparse collection of houses scattered over its area. The woods afford good hunting and the streams are well supplied with brook trout. The summer temperature is very seldom oppressive, there being a buoyancy in the air during even our hottest days that is most invigorating, and our nights during the warmest weather are comfortably cool. During the winter months the temperature as a rule falls somewhat below that of the lower lands on either side of us, though it has several times been observed during the past winters that the mercury was lower in Cumberland Valley than it was with us in the camp, due to the tendency of the colder, heavier

air to descend the mountain slopes. The coldest weather of the unusually severe winter of 1903-1904 was sixteen degrees below zero."

So it is that the patients are at all times favored with pure, ozonic air that has been "filtered through miles of forests" and such air as one never breathes elsewhere than on these mountains.

In order that our readers may form a clearer conception of the intent and conditions that have brought about this philanthropic measure on the part of the State we again quote at some length from the report of Dr. A. M. Ruthrock. Dr. Ruthrock is the son of Dr. A. T. Ruthrock, original founder of the camp, and is camp physician appointed by the State and an enthusiastic promoter of this worthy cause.

"The camp was started in June, 1903, as an experiment. \* \* \* It is a well-known fact that there are thousands of people in the Commonwealth, suffering from tuberculosis in its earlier stages who abandon hopes of restoration to health because their means do not allow them to seek more distant locations which have an established reputation for the cure of the disease. As it is impossible for them to go there for health

A Few Buildings at what is Known as the Upper Camp.

this camp was opened with the object of bringing health to them, if possible, and thus prove that outdoor life in Pennsylvania is quite as likely to work a cure for consumptives as living in the open air in any other part of our country. Furthermore, the fact being once established that tuberculosis can be cured in the mountains of Pennsylvania, efforts will be made to cure the patients by the same methods of treatment at or near their own homes. \* \* \* Indeed, it may be said that one of the most beneficial discoveries of recent years in this direction is that the cure of consumption by proper food and proper living is possible and probable in almost any district of the State.

"Health must be worked for. One reason why better results as a rule are obtained in the treatment

of disease in public institutions than at home is because the inmates are under control and obliged to observe rules and conditions upon which restoration to health depends. The authorities in charge of the camp have a personal interest in every inmate of the camp and desire nothing so much as to be instrumental in helping them.

"There are limitations to the power for good in the open-air treatment of tuberculosis. When a consumptive suffers from severe hemorrhages, from night sweats and has become emaciated, we do not knowingly accept him or her as a patient in the camp."

The above extracts from the report show the original object of and principles upon which the sanitarium was established. From the original idea of treating only incipient cases has grown another and larger idea of protecting others against the contraction of the disease and the further, even more philanthropic, if more pitiable, idea of establishing a place where the hopelessly afflicted ones may be taken and tenderly cared for to the sad end. An account of these more recent improvements will be given in our next paper.

### POETIC FORMS.

JOHN H. NOWLAN.

You may never be called upon to write poetry, yet a study of poetic forms will help you to better understand the poems you read.

In attempts to distinguish between poetry and prose many definitions have been given. One author says,— "Poetry is the language of the imagination." Aristotle,— "Poetry is imitation by words," Matthew Arnold says, "Poetry is the noble and profound application of the ideals of life." According to Ruskin it is the presentment, in musical form, to the imagination, of noble grounds for the noble emotions."

A careful study of the above definitions may help to eradicate the idea that a poem is a composition in which certain lines end with a similarity of sound. Rhyme is by no means a necessary adjunct of poetry.

While it is more possible to classify each poem than to exactly classify all prose, yet the greater part of it may be classed under one of the following heads,— epic, lyric and dramatic.

An epic is a narrative poem of elevated character, treating of the adventures of a hero or heroine, and often embracing many events and minor characters. It is simple in construction and makes no attempt to enforce a moral. The Greek "*Iliad*," the Latin "*Æneid*," and the English "*Boewulf*" are noted examples of this form.

The lyric deals with feelings rather than events. It is concentrated in form and movement as compared with the epic. The epic is confined to dactylic hexa-

meter, heroic couplet, or heroic blank verse, while the lyric has many forms. Some of the most important forms of the lyric are the hymn, the ode, the patriotic song, the love song, the lyric of nature, and the sonnet.

A hymn is a short lyric of unrestrained religious feelings, as, "Jesus, Lover of My Soul," by Wesley.

Ode is from a Greek word meaning song. Edmund W. Gosse defines it as, "Any strain of enthusiastic and exalted lyric verse, directed to a fixed purpose, and dealing progressively with one dignified theme." Wordsworth wrote to "Duty," Shelley "To a Skylark," Byron to "Venice," and Burns to "Despondency" and "Ruin."

The patriotic lyrics, or as they may be called, patriotic hymns, abound in every country because the lyric is well suited for the expression of deep and intense love of country. "Scots Wha Hae Wi' Wallace Bled" by Burns, and "America" by Smith are good examples.

Love songs abound exceedingly in our literature. "O Fairest of the Rural Maids," by Bryant, "Oh, My Love's like a Red, Red Rose," by Burns, and "She was a Phantom of Delight," by Wordsworth, may be cited as illustrations.

Nature lyrics are sometimes found alone, and sometimes combined with other forms. Browning's "The Year's at the Spring," is an illustration of the simple form, while Milton's "L'Allegro" is a reflective nature lyric.

A sonnet is a lyric that deals with a single lofty thought within the compass of fourteen lines. Strictly speaking, the sonnet has two parts, the octave and the sestet. The subject is elaborated in the octave or first eight lines, and in the sestet or last six lines the conclusion is drawn. "Conquest" in the INGLENOOK of Dec. 27, 1904, and "Opportunity" by John J. Ingalls will illustrate this species of writing.

A drama is a poem of the epic kind, but so adapted that the parts may be spoken and acted as if they were actual occurrences. The greatest dramatist of the world was Shakespeare.

Some familiar forms of mixed character are the legend, the allegory, and the ballad.

The legend is a mythical story that has its foundation in tradition. Some of the various kinds are national, as Layamon's "Brut"; church, as Chaucer's, "The Prioress' Tale," historical, as Longfellow's "Hiawatha," and supernatural, as Coleridge's "Ancient Mariner."

An allegory is a prolonged metaphor, as Bunyan's "Pilgrim's Progress."

Ballads, or folk songs, give one incident in the life of a central character and are written in an easy verse. There are ballads of tradition, as "Chevy Chase"; domestic ballads, as "Annie of Lochroyan"; and ballads of superstition, as "Demon Lover."

*Mulberry Grove, Ill.*

## Around the World Without a Cent

H. M. Spickler

### Chapter XXI.

JUST whether the man was "holding me up" or acting as a loyal policeman of Germany, I did not know. He was going through my pockets in a most rude manner, looking at this trinket, opening that note-book, feeling the knife and toothpicks as if they were contraband.

When he came to the pocket in which the money had been concealed I intimated that his further search would be as fruitless and he withdrew his hand just before his fingers touched a snug purse, fat with gold and silver, earned in Britain.

When I showed him my bicycle passport he touched his cap, like a real gentleman, and was off down the road, leaving me to gather together my scattered senses, unlock my wheel and push it along the fragrant river by early morning moonlight, taking my breakfast at the Lorely Hotel.

I remember the beautiful words of Henry Heine:

I know not whence comes this feeling  
That I to sadness am so inclined;  
A legend of days departed  
I can not chase from my mind.  
The air comes soft, the breeze is falling,  
And peaceful flows the Rhine.  
The hilltops all brightly gleaming,  
In evening sunlight shine.

And yonder sits a maiden,  
Of wondrous beauty rare,  
With gold and jewels sparkling  
She combs her golden hair.  
With combs of bright gold she combs it  
And sings with mournful sigh.

And then the boatman, lovesick, happens along and is dashed to death as he goes over the rapids with his eyes fastened upon the charming maiden.

The last two days into Berlin I rode two hundred and twelve miles, visiting two imperial universities en-route and carrying fifty pounds of baggage. In Berlin I walked through the classrooms of Von Humboldt, Hegel, Schleremacher, Neander, Mommsen, where there were 10,000 students. A ride down the street, "Unter den Linden," and over eastern Germany's roads brought me, one evening, into the little town of

Beyrouth, nine miles north of the old city of Nurem-bourg.

Here I hired out to a farmer for one dollar and forty-four cents a week.

I was called out of bed at four in the morning, to chore around, cut grass and feed swine until five-thirty, when the hired girl stuck her head out of the window and called out: "Kaffee gekommen!" and the hired boy said to me, "Kaffee gekommen, Americanerin; wir haben Kaffee Augenblick!" ("The first breakfast has come, American. We will take our breakfast immediately.") Then we went in and sat down to our *Kaffee gekommen Augenblick*. Black coffee it was, with no sugar and less cream, and one solitary bun. The first morning I called for a second bun and the men seemed surprised to see me get it. But how slowly she walked in from the pantry to the dining-table! She was dramatizing for a purpose. I had asked something she could not continue to grant. She was telling me so in the language of the actress. My! How she held to that bun, as if it had been a five-dollar gold-piece! The next morning when I called for it again I was surprised that I did not get it. The last act of the drama had been played. There were no more buns coming.

Then we went out into the fields and hoed up hops until nine when the hired girl brought us another breakfast, *Früestück*, consisting of rye bread, salt pork and seven schooners of beer. Beer never looked so tempting to me in all my life. I was working so hard. I was hungry and thirsty both. Besides people in America had told me that German beer was good,—that women and children drank it there like we drink water in America. But I refused the beer and demanded milk instead. "Ha! Ha!" the men laughed and said, "Milk is swine drink. Milk is for babies. Beer will make you strong."

"You drink your beer," I said, "I'll take my milk. We'll see who is the stronger in a day or two."

When I made this challenge I trembled, for how could I ever make it good! The men had worked so hard that morning I was almost played out. How my back ached and my hands blistered! I had been riding

the wheel with my feet! But you don't hoe hops or anything else with your feet. My arms were weak. But I had made the challenge and the men had accepted it. It remained now for me to "put up or shut up." Tee-total temperance was on trial. I know I would have liked the beer or almost anything, to fill up on. But I repeated my wish for the milk. It came.

We worked until twelve o'clock and then went in to dinner,—*Mittagessen*—and sat down to the table in the center of which was a big basin filled with soup,—the best soup of my life, with no knives, forks or napkins, nothing but a big wooden spoon to dip up and pour down the soup.

That afternoon my strength began to come, though the soreness of my muscles was only equal to that of my tired body. But I was earning twenty-four cents a day and getting five meals a day in the bargain. At four the hired girl came out again with our first supper, *Abendessen*, of stink cheese, black bread, six schooners of beer and ONE OF MILK! We worked until almost sundown and then kept on working until after sundown! When it grew so dark we couldn't see to hoe we dragged our bodies into the house, did the chores, and at nine o'clock sat around that same wooden table to eat soup from the same dish. But it was not the same soup we had for dinner. No, we ate all of that. Neither was it like that soup. It was hot water in which a little hotter pepper had been thrown and some stale rye bread,—floating around like gunboats!

The men ate little or none, but I had to fill up on something, and as I swallowed it between ugly faces, the boy sitting by me would say, "Nicht gut, Amerikanerin! Nicht gut!" "Yaw," I would reply, and keep on "slopping the pig."

All Rights Reserved.

### GET BUSY!

LEON F. BEERY.

IN this age of hustle and bustle and hurry and flurry, when everybody uses all his powers and resources to get ahead of the other fellow, and when all one's success depends upon his ability to push ahead and make a way for himself, a man, in order to make for himself any name or fame at all, and in order to be in the top rank both socially and in business, must ever do one thing,—“get busy.” The world does not wait for the man who sits down and waits for opportunity to come his way, and who thinks that people ought to give him a chance, but it swings right along, carrying everything with it, admiring those who have made a name and ignoring those who sit idly by and do nothing.

When in college a lot of new students come in, thus making an excellent field of work for the literary so-

cieties, the several societies, if they want to keep up their individuality and standing in the school, have nothing to do but to “get busy.” If the president of some large firm or corporation has been away for some length of time, and returning finds a mass of mail and other matter to be attended to, he must, in order to keep the business going “get busy.” A great crisis is impending on a nation. The whole nation is in a state of doubt, anxiety, and confusion. The leader or leaders of the nation see the importance of the affair, and immediately “get busy,” and perhaps avert the calamity.

According to God's plan of creation, all men were made with one thing at least in common, if they possessed no other,—the image and likeness of the Creator himself. This one thing was to be the means of uniting all men and nations in one brotherhood, and of preserving the relation of man to man. Indeed it would be a sorry-looking world if all humans were different in form and nature, and one man would have to look on another as he would on a lower class animal. Imagine, if you can, a crowded thoroughfare in a large city, crowded, indeed, with men and women, but crowded nevertheless with all shapes, sizes, and forms of creatures, some walking on two legs, some on four, some creeping and crawling, and others created in shapes of which we can form no imagination. One would scarcely know, in passing another creature, whether he were passing a human being like himself, or an animal farther down the scale of creation.

This common bond of union between men is necessary for the existence at all, for any great length of time, of the human race. Yet if every individual had been created with the same temperament, ability, and manner of thinking, this would be a slow, unprogressing, inactive, even degenerating world. There must be sometimes clashes of opinion and thought, in order to create competition and keep the business of the world in motion. If there were no differences of mind and sentiment and opinion, this world would come to a dead stop, for want of something to talk about and take interest in.

As a consequence of this difference of temperament and ability in mankind, every man born into the world cannot choose the same vocation, cannot endure the same hardships and trials, cannot achieve the same greatness and renown. That “some people are born great, some achieve greatness, and some have greatness thrust upon them,” is a very true saying. The good fortune does not fall to every one to possess the ability and inclination to make himself famous. Some become renowned without much apparent effort or struggle on their part; others gain a name by years of hard work and study, and physical and mental exertion; while still others, no matter how long nor how hard they labor, no matter how persevering they are, are

never so fortunate as to feel that they are in the upper rank of society and business of any kind.

The members of this last class, however, are very few. There is one thing above all that is the keynote to success in life, and if a man follows this motto faithfully, and puts his whole heart and soul into his work, he will almost invariably win out. That thing is this—"Get busy!" That motto, if stamped upon the mind of a man so that no obstacle or discouragement can deface it, is sure to bring success to that man.

By using this motto Noah (if the modern colloquialism can be honorably applied to so noble a character), seeing the imminent danger to himself and the world, and taking the advice of One who is all-wise, saved himself from that awful flood which destroyed all mankind because they would not harken to God's voice: Peter, on that famous day of Pentecost, having received inspiration from on high, reaped a wonderful harvest of souls for the church: Alexander went from one city to another and from one nation to another, capturing them for his kingdom, conquering the whole known world, and would have continued conquering if there had been more worlds: Caesar, finding himself confronted by dangers from the various tribes of the north, and realizing that quick and heroic action was demanded for the maintenance of the Roman Empire, gathered together his scattered forces, trained them, and soon slaughtered the Helvetian hosts, conquered the German tribes, driving them back to their former home, in the next year pushed on into Gaul and by his masterful command of his troops, and by the wonderful capability of his legions, subdued one tribe after another, even the powerful Nervii, afterward conquering the Venetii by his ingenuity, and returned to Rome a glorious and triumphant monarch: Lincoln, a wonderful man, seeing the great curse that the slave trade was bringing upon our nation, called together his advisers, considered the matter deeply and quickly, came to a conclusion, drew up the Emancipation Proclamation, and set free thousands upon thousands of poor, abused, reviled, and tortured slaves: and by using this motto, any young man or woman can, though surrounded by difficulties, make a success of himself or herself, and become famous.

*Huntingdon, Pa.*

#### NATURE'S TEACHINGS.

JOE STEPHENS.

As I stand beside the waters  
Of the great and mighty deep,  
And behold its white-capped billows  
Which forever bound and leap;  
I am filled with profound wonder  
At the force of one strong wave,  
And my thoughts turn to the founder  
Who them formed and power gave.  
Then, I turn while meditating,  
And view the landscape, fair—

The forests, the hills, and valleys,  
Glowing with rich beauty there.  
These scenes cause my thoughts to deepen,  
And my mind looks far and wide;  
For an answer to the question—  
Who, of men, could these provide?

In the evening as I stand there,  
And the sun has ceased to shine,  
A more majestic picture  
Bursts upon this gaze of mine.  
The heavens are all illumined  
With glory beyond compare;  
Each glimmering ray of brightness  
Is telling its story, there.

Now, no longer will I ponder  
O'er the theories of man;  
For the Lord Almighty ruleth,  
He it is who only can.  
Kind Father, forgive my doubting;  
May I henceforth do thy will,  
For thy teachings found in nature,  
Are enough the world to fill.

Portland, Oregon.

#### PUZZLE OF AGES SEEMS SOLVED.

PERPETUAL motion is apparently demonstrated in California at a pumping plant installed by W. L. Hollingsworth & Co., on their Lomita tract, which is located on the main road between Redondo and San Pedro. In an effort to devise a plan whereby the natural gas bubbling up through the water could be disposed of, a hydraulic engineer discovered a method to utilize it for fuel. It has proven a distinct success and the unique spectacle is presented of a huge engine pumping water and gas from a 600-foot well and transforming the gas into units of energy.

W. H. Frost, president and general manager of the Western Gas Engine Company of this city, is credited with perfecting the invention that makes it possible to pump water that is strongly impregnated with natural gas. His device, which is to be patented, is expected to render waste lands productive and add millions of dollars in value to large tracts which it has been impossible to irrigate on account of the quantity of marsh gas in the water strata.

Although the pumping plant has been in operation only a few weeks, the owners have received letters of inquiry from many interested persons, and the Western Gas Engine Company is almost overrun with orders for the installation of similar machinery.

Frost hit upon his device through accident. After demonstrating that Lomita is abundantly supplied with underground water, the Hollingsworths decided to drill a well upon a slightly knoll that was of sufficient height to send water under pressure over the entire tract.

F. W. Langley, local manager of the United Iron Works, was given the contract for a powerful centrifugal pump. The drill went down several hundred feet until water was struck. The pump was in-

stalled and it worked perfectly until gas began to pour into its chambers, stopping the action. All were discouraged for it had been impossible to pump water where gas is found in any large quantity.

The problem was explained to Frost. He experimented and after several failures, invented a simple apparatus for removing the gas. It worked to perfection.

He then planned a large separator which should release the gas from the water. This was also a success, although at its first trial air became mixed with

Water Entering Tank Over Which is Gasometer, Where Water and Gas Separate.

the gas, causing an explosion that shot the big iron tank high into the air.

When the separator had been repaired and the pump again started, the tract owners and representatives of the companies which supplied the machinery gathered to watch operations. The separator sent a stream of gas into the air, while 1,000 gallons a minute of absolutely pure water were carried into a covered reservoir. The gas was then carried to the gasoline engine by vacuum process and supplied power.

"The pump is pumping itself," exclaimed the enthusiastic engineer, G. M. McIntosh. Although a little distillate is used in connection with the gas at the present time, later it is expected that more than enough gas will be generated to run the entire plant, and furnish light as well.

"Gas was first discovered when one of the workmen touched a match to the discharge pipe," stated Frost yesterday. "Its presence explained the failure to get satisfactory results from the pump. The problem was to get the excess of gas out of the mixture so as to handle both the water and the gas. The well was drilled to a depth of 680 feet. There was a fine flow of water. But as soon as the pump began to work, it developed one-fifth volume of gas, making it impossible to pump the water. I installed a device for get-

ting rid of the surplus gas. Then the pump, which is a centrifugal two-step Eclipse, worked to perfection.

"Next the mixture of gas and water was pumped into the separator and converted into spray. The gas, separated from the water, was led back to the engine room, and the water poured through a flume into the reservoir."

An analysis of the gas shows it to be a hydro-carbon of 800 British thermal units.

Since its successful installation a number of pump experts have visited the plant to witness its operation.

C. B. Hollingsworth is enthusiastic over the prospects of securing enough natural gas to furnish light for the entire Lomita community in time.—*Los Angeles Times*.

### "DARLING NELLIE GRAY."

Do you like the old songs best? Is it because they are better in musical quality than the new ones? or is it because they are pleasantly associated in your memory with old and dear friends, and carry you back home again, where you sang as freely as a bird, if not as sweetly?

Some of the old songs will never be forgotten entirely. Like paintings by the old masters, they may become laden with dust of years, and for a time lost to sight under the piles of newer and grander songs, but their worth will, sooner or later, bring them up again for the admiration of those who have not forgotten quite, or whose hearts inherit their tastes from those who heard and appreciated.

It is not merely the words, nor the measure and swing of the music that makes a song good and causes it to take hold upon the hearts of the people. No, not that alone. It must be true to life—to some life—a real heart story.

You may not readily recall the name, Benjamin Russell Hanby, or even Ben Hanby, but you surely have not forgotten "My Darling Nellie Gray."

True 'tis a far cry back to 1859-1860, yet there are those who will hear this good old song—hear it swelling and echoing sweetly in memory; and the words and tune come back to them so clearly and with such force that they find themselves humming the dear old strains again, to the surprise of the young folks, maybe, or to the delight of those who have only heard tell of the once famous song.

But what made it famous? There is nothing wonderful in its lines, or nothing so very striking in the air, yet upon the whole it has, or had, wonderful power for a song, and it lived longer than many that made more noise in the world and had great names to help get them along.

It must have possessed the spirit of its author, as great works of art possess the spirits of those who create them, and successfully defy imitators to trans-

fer them, even to more stylish or more highly-finished abodes.

Was it Ben Hanby's spirit that gave the old song its power to touch the hearts of so many? Was it his gentle soul that carried the song into so many homes and sent it ringing down the years? Has the spirit departed from it, or can you still feel its gentle power as you hum the tune softly while you read again the once familiar lines?

There's a low, green valley on the old Kentucky shore,  
There I've whiled the many happy hours away,  
A-sitting and a-singing by the little cottage door,  
Where lived my darling, Nellie Gray.

**Chorus:**

Oh, my poor Nellie Gray, they have taken you away,  
And I'll never see my darling any more,  
I'm sitting by the river and I'm pining all the day,  
For you've gone from the old Kentucky shore.

When the moon had climbed the mountain and the stars  
were shining too,

Then I'd take my darling Nellie Gray,  
And we'd float down the river in my little bark canoe—  
While my banjo so sweetly I would play.

One night I went to see her, but she'd gone, the neighbors say,

The white man bound her with his chain—  
They have taken her to Georgia, to wear her life away,  
As she toils in the cotton and the cane.

My canoe is under water and my banjo is unstrung,  
I'm tired of living any more;

My eyes shall look down, and my songs shall be unsung,  
While I stay on the old Kentucky shore.

My eyes are getting blind, and I cannot see my way,  
Hark! there's something knocking at the door,  
Oh, I hear the angels calling, and I see my Nellie Gray,  
Farewell to the old Kentucky shore.

**Chorus to last verse:**

Oh, my darling Nellie Gray, up in heaven, there they say,  
That they'll never take you from me any more;  
I'm coming, coming, coming as the angels clear the way,  
Farewell to the old Kentucky shore.

The following story of the song and sketch of the author was found in a stray copy of a Missouri paper, the *Chillicothe Tribute* of December 15, 1892. The editor, H. L. Ambruce, was schoolmate and chum of the author of the song, and this is his tribute to his friend and brother, whose soul was full of music and whose heart was ever throbbing with generous impulses.

"Looking through 'Beautiful Gems' the other evening, a volume containing poetical and prose selections from the best authors, my eye fell upon 'Darling Nellie Gray.' The memory of my school days was quickened. I read with deep interest the following prefatory note:

"There is a little green mound and a marble slab in a secluded corner in the Otterbein Cemetery, about twelve miles from Columbus, Ohio, which marks the grave of the author of that famous ballad, 'Darling Nellie Gray.' The seclusion of the tomb, the neglect

shown it by all, save a few relatives, and the general ignorance of its location, form another illustration of the forgetfulness of the human race. Notwithstanding the grave of the author of 'Darling Nellie Gray' is forgotten and neglected, his own beautiful ballad has sculptured out for him a monument which will endure the changes of centuries to come.'

"This ballad was written and set to music away back in the fifties, by Benjamin Russell Hanby, while a member of the senior class at Otterbein University, Westerville, Ohio. The writer of this sketch was a student in this university in 1859-1860, and often heard Ben Hanby sing 'Darling Nellie Gray,' and the soft tones of

'I'm coming, coming, coming as the angels clear the way,'

as it came in happy cadence from that grand soul of grace and melody, is to him a sweet and cherished memory. At that time there seemed to be divine agencies at work, and among them were divine music and divine song. The morning of the heroic age of our civilization was approaching. 'Darling Nellie Gray,' contained a sentiment and touched a responsive chord in millions of hearts. I need not, nor do I care to dwell upon the inspiration of that sentiment. The divine agencies referred to solved the problem, though blood and tears had to flow, or rather paved the way for its solution.

"Ben Hanby, as we used to call him over thirty years ago, graduated with honor, and later entered the ministry in the United Brethren Church. His was an angelic soul, but it did not tarry long upon the earth. Before he reached the noon of life he went singing through the Gates Ajar, and for aught we know, as he neared the passage way the language of his song was:

'I'm coming, coming, coming as the angels clear the way.'

"It is human fate, and I believe 'tis true, that then he received a crown of rejoicing from the prince of the house of David. Ben Hanby loved the beautiful in nature, and the sweet in character. His ideal life was the child life. He loved it for its guilelessness. His mission as a preacher and a teacher seemed to be directed among the children, and he won them by the simple and tender music that flowed from his soul. Every child in the village was his friend.

"When the life of this brilliant and sweet-tempered soul, scholar, and poet went out; when the author of 'Darling Nellie Gray' was consigned to the tomb, many were the tearful tributes paid to his life by the children with whom he loved so well to mingle."  
—*Watchword*.

"THE best proof that you have given God your heart is that you do not withhold your hand."

# THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE, ELGIN, ILL.

Subscription price, \$1.00 per Annum, in Advance.

The Inglenook stands for material and spiritual progress. Its departments are: Literary, Editorial, Home, Cream of Magazines, World News.

Its qualities are: Good Sentiment, Moral Convictions, Inspiration.

Its purpose is: To safeguard home life by supplanting and counteracting bad literature.

Its scope of matter is: Scientific, Religious, Educational, Philanthropic, Economical, Sociological and Financial.

Its field is: The World.

Liberal commission given to agents. Sample copies are given upon request. When changing address give both old and new addresses.

Entered at the Postoffice at Elgin, Ill., as Second-class Matter.

## TO THE RESCUE.

PRESIDENT ROOSEVELT, in his desire to improve conditions wherever improvement is needed, has not overlooked the farm and its needs. He realizes the important place the business of farming holds in the life of a nation and he sees too that in general it is not held in the estimation it should be and therefore cannot do all the good it might do.

The first hint we had that the President was studying the conditions of rural life, especially as it was related to the drift to the cities, was given in one of his messages. To some the subject hardly seems worthy the attention of our chief executive, but we do not see how he could make even a superficial study of the condition of the country over which he presides without seeing that for some reason the agricultural world is not measuring up to its capabilities.

Recently the President has proved his deep interest in the subject by appointing a committee to look over the field and submit a report before the end of December. Of course in the time allowed the committee cannot enter upon any extensive investigation. "All that it is expected to do is to give us a summary of what is already known, a statement of the problem, and the recommendation of measures tending toward its solution."

There is no one but will admit that there is a problem in the working world largely involving the rural class. A glance at the opportunities for leading a useful and prosperous life held out by the country and at the poverty-stricken masses in the cities will convince any one of this fact. But that the problem is to be solved by any great improvement in the condition of the farming class, some of us will not admit. Farmers, though not the most favored, are the most fortunate class in the United States. They have all manner of machinery for lightening their labors, rural delivery and telephones for bringing them into close communication with each other and

with the outside world and horticultural societies, institutes, etc., for increasing their knowledge of their profession as well as for the cultivation of the social side. Besides, able scientists are giving them invaluable aid in all branches connected with their work.

Additional improvement in the farmers' condition, as some people look upon improvement, would only tend to effeminize the class and take from them their well-deserved title as the backbone of the nation. Aside from one prevailing condition,—that which compels the farmer to take what is offered for what he sells and pay what is asked for what he buys,—there is little that remains to be desired for him.

To find the trouble and go about to remove it, one must go outside the rural class. The search will doubtless be much more successful than the efforts that follow, for there is a large class of people who are constitutionally opposed to hard work of any sort and of course until they are made over they will never do for the farm. Then there is another class who are willing to work, but they have to have lots of company; they do not work for the work's sake, but that they may keep up with the crowd. Life would not be worth anything to them if there was not always some place to go and somebody to see. These people "would just die" if they had to live on a farm. As to our boys and girls, reared on the farm, deserting it for the city life, they had some good reasons for doing so years ago, and the habit of looking down upon the farmer has become so deeply rooted and the glamor spread over life in the city so hard to remove, except by experience, that it will take some time for the current to turn, now that conditions have changed. The interest the President will succeed in arousing on the subject will do more for this class than any other, and the country of course will be the gainer. But we believe that good will come from the move in many other ways also, and we are glad that it has been undertaken.

## IN THE NEW FIELD OF CONQUEST.

Most of the people now living will doubtless see the time when man's conquest of the air will be complete. Already it is an assured fact and only time is needed for man to become acquainted with his invention in its natural element, and to make such minor improvements as may be suggested to him in his trial flights.

Earth and water have been under the conquering hand of man even before history began to record his doings and in all ages he has puzzled his brain over the tantalizing dream that the air could be conquered likewise. But he has been slow in realizing his dreams. Prophecies have been made that such and such a date would see him flying through the air with the ease and safety of a bird, but each time the

date has had to be moved farther into the future. Now, however, though the flights have been like those of a fledgeling, thousands of people can bear witness to the success attending them. Various governments also have, in a very material way, expressed their confidence that the fledgeling will ere long skip the air with all the powers of a fully developed bird.

Two machines, built on entirely different principles, are in the field and both are approaching the goal of success at about the same time. The one is the dirigible, or motor, balloon, a machine which, "like the fish and submarine boat, is of the same gravity as the medium in which it floats." The other is the aeroplane, a machine which, "like the bird and kite is heavier than the medium." At present Count Zeppelin stands in the front ranks of those who are bringing success to the motor balloon, while the Wright brothers and Henry Farman have already become famous as aeroplanists.

Prizes are constantly being offered to encourage the perfecting of the machines, and though large fortunes have already been lost in the various attempts there seems to be no lack of money at present for those who have won some degree of success. This shows how much the people are interested in the work. Several weeks ago, when Count Zeppelin's machine was destroyed by fire during a storm, after he had met the requirements of the German government and a messenger from the government was on his way with a draft for \$125,000 to purchase what was now in ruins, within twenty-four hours nearly half a million dollars was raised by popular subscription to build new machines. By the time this reaches our readers, our government will probably be in possession of the motor balloon now owned by Captain Baldwin who is sure he can satisfy the Signal Corps which is to pass on the merits of the machine.

"Unfortunately, the first thought that comes to men when a new force is put into their hands is of the increased power of destruction it gives to the individual." That is why the various governments are so much interested in the airships. Germany, for instance, would be mistress of the air as England is of the sea. However, peace has a way of taking over for her own purposes the instruments invented by war, and we may live in hope that this invention, though encouraged to success and laid claim to by the war spirit, will take its place, with the sword and spear, in the peaceful pursuits.

#### FATHER AND SON.

I had a father; when he was alive  
I did not greatly care his will to please;  
I did not know his habit was to strive  
For me his son upon his bended knees.  
My careless eyes found him but commonplace,  
And thus untreasured chances passed away

Of watching time—consummate artist!—trace.  
A character like Christ's in "common" clay.

Then he appeared a Philistine, too stiff  
To sympathize with my superior mind;  
But now, when he is dead, it seems as if  
He were a vision-seer, I the blind.

He knows now all the secrets of the grave  
Versed in profounder than Hegelian lore;  
He wears the crown God gives to those who brave  
The world's contempt and all its sneers ignore.

And I who could so lightly talk with him,  
Confronting wisdom with youth's insolence,  
Would give all that I have to talk with him,  
And think a great boon won at small expense.

I did not know how fervently he longed  
In me deep-cherished hopes to realize,  
Too late I see it now, the love I wronged,  
Then in my reach, now out of reach, the prize.

Though they are lost, which might have once been won,  
Rich opportunities I cast away,  
I trust that even now he sees his son  
Tracking his footsteps to the land of day.

Then will I tell him what I had to keep  
Buried within my breast, a life-long woe;  
And he will say: "My son! my son! why weep?  
I have forgiven it so long ago."

—Author Unknown.

#### THREE WORDS OF STRENGTH.

There are three lessons I would write,  
Three words with a burning pen  
In tracings of eternal light  
Upon the hearts of men.

Have Hope. Though clouds environ round,  
And gladness hides her face in scorn.  
Put off the shadow from thy brow,  
No night but hath its morn.

Have Faith. Where'er the bark is driven.  
The calm's disport, the tempest's mirth;  
Know this, God rules the host of Heaven,  
The inhabitants of earth.

Have Love. Not love alone for one;  
But man, as man, thy brother call,  
And scatter, like the circling sun,  
Thy charities on all.

Thus grave these lessons on thy soul,  
Hope, Faith, and Love, and thou shalt find  
Strength when life's surges rudest roll,  
Light when thou else wert blind.

—Schiller.

"If I ever dared to vote for a saloon," Dr. J. Wilbur Chapman said in Philadelphia, "I'd hang my head in shame and then hand in my resignation as a member of a Christian church. Men of this caliber are not wanted in the church. Neither are the men wanted who are afraid to express themselves from the pulpit. Any preacher who is afraid of any person in his congregation is not fit to be a minister of the Gospel."

## Parental Instruction

Flora E. Teague

THE wise man's advice to parents, "Train up a child in the way he should go: and when he is old he will not depart from it," is most valuable to parents in every sense of the word. Probably a lack of proper parental training in many homes is bringing about many of our present evils. On the whole I do not believe that our young people today are any worse than those of past generations. In many ways they are wiser and better. But I am positive that through proper instruction and advice from those who are bearing the responsibility of parents, our young men and maidens might be improved upon. So, too, might they have been in the past. Therefore, before advising our youthful readers in selecting ways of pleasantness, peace, and profit we will talk to the fathers and mothers awhile.

Begin early in character moulding of your little ones. Do not nag and constantly find fault, but reason with them in language they can understand. This plan will leave lasting convictions in the minds of your children in regard to right and wrong acts.

Be careful about showing favoritism. It is not always best to hold up a good and obedient child as a grand model to brothers and sisters who have entirely different temperaments,—temperaments that make it hard to be always good and obedient. Do not force the older ones to always yield to the youngest, and thus aid in making him a selfish, domineering little prig. Teach each one to honor and respect the rights of others.

It is natural for pious fathers and mothers to desire perfect children, but do not insist on making "goody-goody" children of them, or "sissies" of the boys. Let young America have free rein occasionally, but as in driving a spirited horse, "keep him in the road."

Encourage conversation with your children. Commend a well-expressed even though childish opinion. Refrain from too frequent bidding them to be silent when you wish to speak. Gain such silence by securing deference and honor in them for you. Win their confidence early. Let them hear from your lips

the first knowledge gained in regard to the sacred functions of our bodies. Teach them gentleness and good manners. Be courteous yourselves to each other, to your little ones, and to those with whom you come in contact. It is painful to lovers of children to witness impudent acts in those who you feel should have been better trained.

Put your children at ease in the parlor, at the table, and elsewhere. Many little tender hearts have been deeply pained at their own awkwardness in new and trying positions. Give your children opportunities of mingling with people of culture and refinement, and thus help them acquire these desirable attributes. Advise them in their selection of companions. Teach them to be kind and helpful to all, but select as boon companions, pure, clean, cultured young people. Show them the results of bad or low company. Teach them above all things to respect sacred things. Do not permit them to handle good books carelessly. Let them learn to handle God's Word reverently and lovingly. Help them see the reasons for abstaining from levity and wrong-doing in God's house. Teach them to treat respectfully the aged, the poor, the crippled, the helpless. Cultivate a feeling of sympathy in their hearts for those who need aid. Teach them to be truthful, honest, and self-reliant. Begin early by giving them opportunities to rely upon their own resources and judgment. Teach them that "The fear of the Lord is the beginning of wisdom."

Cultivate all these commendable qualities yourselves, and you will have children that will rise up and call you blessed and your hearts will rejoice in them.

Lordsburg, Cal.

### A LITTLE LESSON IN GUIDING.

"COME baby, and kiss Auntie," said the visitor as she took the proffered chair, stretching out her hands toward two year old baby Robert, who was busy making the acquaintance of the latest addition to his nursery menagerie, a fine Teddy bear.

The little toddler turned at the sound of the loved inviting voice, bounded forward, his arms filled with his precious possessions, but alas mamma's rocker was in his way, the little feet tripped and over he went really more scared than hurt.

"Bad chair to hurt our baby," said Aunt Nellie, "We'll whip it," suiting the action to her words. "No, no," exclaimed the wise little mother, laying a restraining hand on her sister's arm, as she lifted the child, giving him a sympathetic caress. "Poor chair," continued mamma, patting it gently, "it didn't mean to hurt Robert, and he is well now."

The little fellow understood, smiling through his tears the tiny hands went out in a caressing movement, imitating his mother, while the rosy lips murmured, "No, no."

Aunt Nellie was silent, but her features expressed her interest in the little episode. Later when her idolized nephew had forgotten his woes in peaceful slumber she referred to the scene by asking, "Kate aren't you a bit overparticular in your zeal to bring up your offspring in the right way?"

"I hope not," was the reply, "one can hardly be too careful in such a responsible task. I see you are still thinking about me differing with you a while ago when Robert fell. I hope you are not offended?"

"Oh no, I am not displeased, but I can't see where was the harm in giving that chair a few taps. I fancied it would divert the little lad's mind and possibly afford him some satisfaction to know it was punished for his discomfort," replied Aunt Nellie.

"Undoubtedly the mind is diverted by suggestion," assented the mother, "but to me your act was wrong because it was teaching the child, in a thoughtless way, to retaliate when his thoughts could be just as easily diverted into a good channel and a forgiving spirit implanted or encouraged. It must be remembered that children are wonderfully imitative and easily influenced by example."

"Yes, I admit some of them are regular little monkeys," replied Aunt Nellie laughing. "You remember Margaret Putnam, how careful her mother is to teach her to use good language and to be kind to others. Well on my way here as I passed near her father's house, I heard her call out to a little playmate, 'Grover McKinley, come to me this instant or I'll beat you severely.' I said to her 'Why Margaret, I am surprised to hear you speak in such a cross tone to such a dear little playmate.' 'Oh,' she replied, 'I am not mad, I was just playing he is my little boy and calling him the way his mother does.' I was greatly amused for she is such a little tot."

"Such mimicry in children is laughable, but it has its serious side nevertheless," responded the mother, "for what seems trivial to us is forming character for good or evil. I think if I teach or encourage my child to strike an inanimate object for a seeming

inflicted injury, later on he may develop brutal instincts and think it right to abuse those younger or weaker than himself and show cruelty to dumb creatures, a very undesirable trait of character."

"I never thought of such far-reaching possibilities," returned the auntie.

"That is because you have never given the subject your serious attention," said her sister. "Every thoughtful mother and careful observer cannot fail to notice that the present age is more keenly alive to the importance of early careful child training than ever before, realizing that the infant of today is the man of tomorrow, that the future prosperity, happiness and power of our country depend upon the proper education of the children, physically, mentally and spiritually."—*American Motherhood*.

#### AN APOSTLE OF THE BIG FAMILY.

"ONE of the greatest curses of this country," says the Rev. Michael G. Esper, of St. Joseph, Michigan, "is the one-child family." Father Esper holds that the avoidance of care, expense and responsibility and the love of ease and pleasure is "a common American disease, very contagious at that." In one of his speeches that has lately attracted considerable attention, he said that the Teddy bear craze was bad for little girls and tended to destroy some of that maternal instinct of which the country stands in such need. He went on to say that the mother-instinct is going out of fashion anyway, and that this was helped by the substitution of bears instead of dollies that have to be dressed and undressed and loved and kissed in the good old way.

Certainly the Teddy bears have found favor only among the little girls in America, for a German captain who recently brought over a cargo of them, made in the Fatherland for American consumption, said that the girls over there can't be persuaded to give up cuddling their dolls. So the bears come over here, where, Father Esper says, maternal instinct is dying out even so far as the poor dolls are concerned.

#### RAG CARPET LINOLEUM.

HAVE the carpet cleaned and mended, then stretch and tack in a dry place. Then take two quarts of flaxseed and boil in two gallons of water until it becomes a jelly. Take an old broom and go all over it with the hot jelly until the carpet is thoroughly soaked. Let dry two or three days and boil your flaxseed again, and repeat as many times as required to make it stiff, leaving it to dry each time. Next paint it with some good reliable paint, giving it two or three coats. This homemade linoleum will last for years, if you are careful not to get water under the edge, and give it an occasional coat of paint.—*Selected*.

## PRESERVING TIME.

Said Mr. Baldwin Apple  
 To Mrs. Bartlett Pear,  
 "You're growing very plump, madam,  
 And also very fair.  
 "And there is Mrs. Clingstone Peach,  
 So mellowed by the heat,  
 Upon my word, she really looks  
 Quite good enough to eat.  
 "And all the Misses Crabapple  
 Have blushed so rosy red  
 That very soon the farmer's wife  
 To pluck them will be led.  
 "Just see the Isabellas;  
 They're growing so apace  
 That they really are beginning  
 To get purple in the face.  
 "Our happy time is over,  
 For Mrs. Green Gage Plum  
 Says she knows unto her sorrow  
 Preserving time has come."  
 "Yes," said Mrs. Bartlett Pear,  
 "Our day is almost o'er,  
 And soon we shall be smothering  
 In syrup by the score."  
 And before the month was ended,  
 The fruits that looked so fair  
 Had vanished from among the leaves,  
 And the trees were stripped and bare.  
 They were all of them in pickle,  
 Or in some dreadful scrape,  
 "I'm cider," sighed the apple;  
 "I'm jelly," cried the grape.  
 They were all in jars and bottles  
 Upon the shelf arrayed;  
 And in their midst poor Mrs. Quince  
 Was turned to marmalade.

—Philadelphia Times.

## USES OF AMMONIA.

I HAVE often read of the great aid rendered the housekeeper by ammonia, but, as happens in the case of much of other good advice, it was absolutely thrown away on me until quite lately. I one day went to work to clean the silver, and as there was quite a little of it, I was prepared for a long job, and a most disagreeable one. An old aunt who was with me proposed a wash in strong soapsuds with a dash of ammonia; when lo! at the expense of a good washing and wiping, it was restored to the sideboard with a lustre I had never been able to obtain with polish or whiting—and unlimited elbow grease. More, the filigree work was cleaned perfectly, without any of the white sediment left, to get out. The knives, forks and spoons have to have a little rubbing with whiting to remove the discoloration, but nothing to what was usually required.

We have two lamps, fancy ones, with lots of brass work about them, that were beauties originally, but time and usage had dulled their beauty. The next

day after my silver experience, I got those lamps, took them to pieces all I could, and gave them a good soaking and rubbing in some fresh suds and ammonia; result, two lamps as good to look at as new. Moreover, I save every bit of suds, no matter how dirty (and one would be surprised to see how the color will come off such articles), to water the plants. I have an asparagus tenissimus that has always made a healthy but slow growth, but since I have taken to adding a little ammonia to the water occasionally, it has put forth eleven new leaves, and it is only a short time, too.

Another thing I have found exceedingly useful and cheap, too, is borax. I can do two washings with borax easier than one without; and I have used a good many powders and highly advertised soaps. I put the clothes soaking before breakfast, if possible, soaping well. After the dishes are cleared away, I give them a light rubbing out, and put them in the boiler in a cold suds, to which I add a little borax, the quantity, of course, regulated by the amount of water and the bulk of clothes. By the time they have boiled ten minutes, they are washed, and are ready for sudsing and rinsing, and will dry very white and clean-looking.

And one more thing for ammonia I had nearly forgotten to mention it, a little added to the bath water when one is very tired gives one such a fresh, clean feeling; it is as good as a nap in my experience.—*Selected.*

## TWO WAYS OF USING GRAPES.

PRESS enough Concord grapes through a sieve to make a quart of juice. Mix half a pound of sugar with a pint of water, and simmer to a very clear sirup. Add the juice of the grapes as well as the juice of one lemon, and, finally, about half a cupful of tapioca that has already been properly softened. Cook slowly until the tapioca is clear; cool near the ice, and serve with plenty of whipped cream.

An excellent breakfast dish may be made by combining Concord grapes with homing or farina. Stew the grapes until they are very soft, then press through a sieve, that all but the seeds and skin may be extracted. To each quart of pulp add a teacupful of the cereal and a little salt, and cook for fully three-quarters of an hour in a double boiler. It is better to make this dish the day before it is to be used. In that case it will have time to harden, and may be served cold, in slices, with sugar and cream.—*The Delineator.*

## SOME USES FOR SALT.

For removing egg stains from silver, salt applied with a soft cloth will act like magic.

If salt is rubbed on fruit stains when they are fresh all trace of them will disappear in the washing.

A pinch of salt added to the whites of eggs will cause them to whip in half the time usually required.

A pinch of salt added to ground coffee just before the cooking accentuates the natural flavor of the berry and gives "body" to the drink.

Greens used for salads should be thoroughly rinsed in salt water to dislodge possible insects or their eggs too small to be seen by the naked eye when picking over the greens.

Sprinkle salt over a dingy carpet before sweeping and the transformation wrought will convince the most skeptical of the value of salt as a cleanser all along the line.

Everybody knows, or at least should know, that nothing is so effectual for putting out fire in a burning chimney as salt. To kill weeds apply boiling hot salt water in liberal quantities. To remove grass from brick walks sprinkle freely with salt and let stand several days.—*Exchange*.

#### TO FRESHEN DRY DOUGHNUTS.

JOHN S. FERNALD.

DOUGHNUTS, or crullers, that have become dry and hard may be made soft, and nearly as palatable as new by laying them in the oven a few minutes just before they are wanted for the table. No more should be so treated than are likely to be eaten at that meal, as after cooling, the last estate is worse than the first, and they do not generally respond readily to a further treatment.

GREEN CORN CAKES—To one quart grated corn (raw) add yolks of three eggs, cup sweet cream (milk may be used, adding tablespoon butter), one cup flour, the well-beaten whites, teaspoon baking powder; bake on griddle and serve hot. Some use a handful fresh breadcrumbs and not so much flour.

#### THE CHILD THE HOPE OF THE RACE.

THERE is nothing in all the world so important as children, nothing so interesting. If you ever wish to go in for some philanthropy, if you ever wish to be of any real use in the world, do something for children. If you ever yearn to be truly wise, study children. We can dress the sore, bandage the wounded, imprison the criminal, heal the sick, and bury the dead; but there is always a chance that we can save a child. If the great army of philanthropists ever exterminate sin and pestilence, ever work out our race's salvation, it will be because a little child has led them.—*David Starr Jordan*.

ACCEPT what approves itself clearly to your own mind. Teach nothing because others teach it. — *Wm. Ellery Channing*.

### The Children's Corner

#### WHY SUSIE WAITED.

LET'S say our prayers out loud, Susie," said Mabel, as the two little sisters were getting ready for bed one night.

"All right," answered Susie. So the two said their "Now I lay me me" and their "God bless papa and mamma" together. Then Mabel jumped right up on her bare feet, but Susie still kneeled a quiet little while by the white bed.

"What were you waiting for, sister?" asked Mabel.

"Why, I was listening for God to answer," said Susie; "don't you 'member Miss Josepha said we musn't hurry over our prayers? She said that was like the little boy that knocked at her door once, and then ran away before she could open it. So now I always wait to see if God wants to say anything to me."

"Did he say anything to you tonight?" asked Mabel, looking startled.

Susie nodded.

"Oh, Susie! What?"

Susie didn't answer just at first, because it is not easy to talk about what that little inside voice says. But in a few minutes she said in a low tone, "You know we said, 'God bless all my friends,' and right away I thought of Sadie Burwel, 'cause we had a fuss today; and while I waited, God said, 'Tell her you are sorry.'"

"Will you tell her?" persisted the eager little questioner.

"Yes, of course, I must tell her."

Mabel crept into bed quietly, saying to herself that she would wait for God's answer, too, and wondering if he would tell her to confess about breaking mamma's cutglass flower vase.—*Home Herald*.

### For SUNDAY READING

#### "ENOUGH TO SHOW THE WAY."

[This poem was written by Professor Romanes, one of the greatest scientists of the nineteenth century, who, after years of skepticism, became before his death a humble Christian.]

Amen: now lettest thou thy servant, Lord,

Depart in peace, according to thy Word.

Although mine eyes may not have fully seen

Thy great salvation, yet surely they have seen

Enough of sorrow and enough of sight

To show the way from darkness into light:

And thou hast brought me through a wilderness of pain

To love the sorest paths if soonest they attain:

Enough of sorrow for the heart to cry

"Not for myself, nor for my kind am I,"

Enough of sight for reason to disclose—  
 "The more I learn the less my knowledge grows."  
 Ah! not as citizens of this one sphere,  
 But aliens militant we sojourn here,  
 Invested by the hosts of evil and of wrong  
 Till thou shalt come again with all thine angel throng.

As thou hast found me ready to thy call,  
 Which stationed me to watch the outer wall,  
 And, quitting joys and hopes that once were mine,  
 To pace with patient steps this narrow line,  
 Oh! may it be, that coming soon or late,  
 Thou still shalt find thy soldier at the gate;  
 Who, then, may follow thee till sight needs not to prove,  
 And faith will be dissolved in knowledge of thy love.

### "ISAAC—A CHARACTER SKETCH."

JOSEPH S. REISH.

ISAAC, a patriarch of the Hebrews, was born, as near as we can tell, in the land of Canaan in the year B. C. 1898.

His name means "He will laugh," and he was so named because of the joy that his birth occasioned.

His father's name was Abraham and his mother's Sarah.

An important event which happened a while before his birth, and worthy of mention here, is that his birth was foretold to his parents by the Lord himself; and we are told that they both laughed at the idea of having a son born to them at that period of their lives as they were beyond the age limit of bearing children.

At his birth the ages of his father and mother were one hundred and ninety years respectively.

The next event of importance in his life happened when he was about twenty-six years old, according to Josephus, when he was miraculously saved by the Lord from an untimely death upon the altar of sacrifice which was dedicated unto the Lord.

At the age of forty-one, according to the best chronologists, he was married to his first cousin Rebecca and when he had attained the age of sixty he became the father of twin boys whom he named Esau and Jacob.

On account of a famine in Canaan in B. C. 1804 Isaac, at the age of ninety-four, moved into Gerar, a place which is supposed to have been not far distant from the place of his birth, and in a short time he became a man of great influence and wealth.

It was while in this country that one of his chief characteristics, a strong desire for peace, was strongly shown in that he sacrificed his right to property in order to prevent strife and contention:

When one hundred and thirty-eight years of age, as he was becoming old and was already blind, he desired to bestow his blessing upon his eldest son, Esau, but through the stratagem used by his wife and her favorite son, Jacob, it was conferred upon Jacob, his younger son.

In the year B. C. 1718 Isaac died at Hebron, being one hundred and eighty years of age, and was buried in the cave of Machpelah by his sons, Esau and Jacob.

Thus ended a life of which we know but little and which the majority of people think was obscure and unimportant and even some suppose that his name is mentioned in the annals of the sacred book only as the connecting link between that of his father, Abraham, and of his son, Jacob; but when we make a close study of his life and character, of which this article is but a brief sketch, we find that he was successful owing to the fact that he strove to live a peaceable and godly life; and now, after 4,000 years, his name still survives and is inscribed among the great of the earth because of his loyalty to righteousness and his simple goodness.

Not ten per cent of the men of any age obtain a world-wide reputation and the applause of their fellowmen, while the remainder, over ninety per cent, are classed as common or unimportant characters; though the latter may live a successful life as readily as the former, and undoubtedly oftentimes do, for true success oftentimes is attained in obscurity.

"Rare gifts are needed, the world could not live without them. But it is not rare gifts that make men happy. It is the common and simple and universal gifts; it is health; it is fresh air; it is the friend; it is the kindness that meets us on the journey; it may be only a word, a smile, a look; it is these common and everyday, and simple things, all coming to us in common from God; it is these and not any rarity of blessing that are God's ways of making man happy and successful," and if we would obtain success we must obey the laws of success.

Though we are not applauded by our fellowmen as much as we imagine we should be, and though we have not accumulated as much of this world's goods as we have desired, both of which are set up as standards of success by some in this world, let us learn a lesson from the life of Isaac and be content with our lot, if we are an unimportant personage, and live for the cause of right under all circumstances.

Who works for glory misses oft the goal;  
 Who works for money coins his very soul.  
 Work for the work's sake, then, and it may be  
 That these things shall be added unto thee.

—Kenyon Cox.

Christ says, in substance, "Seek ye first the kingdom of God and his righteousness; and all the necessary things of this life shall be added unto you."

### THE PENNY-WISE MAN.

GRUDGED gifts are not gifts at all. They are close-fisted, mean-spirited attempts to buy religion at a bargain. Most people learn that when they buy clothes or

houses or animals cheap they usually get a cheap article for their money, but the same folks will not realize that religion which they buy on the "penny down and a penny a week installment plan" is not the best all-wool-and-a-yard-wide goods.

To point out some of the defects in this goods is a duty which has been too long neglected. In the first place all religion should have a good deal of faith woven into it, but the cheap article has very little—so little, in fact, that people who buy it are afraid that the good Lord would let poverty overtake them if they should put a nickel more than usual on the plate.

Then, religion should have a basis of brotherly love. Instead of love, the cheaper forms of religion contain a shiny and showy imitation. Its smoothed surface looks very well under the artificial lights on prayer meeting night, and it rustles well during an exhortation. But some keen observers have noticed that it doesn't stand severe weather.

Further, real religion should be cut after a liberal "good works" pattern. But the cheap article is cut on very scant lines, hardly ample enough to go around the owner. It can never be stretched to protect a neighbor, and as it grows older, it is very apt to shrink.

From what has been said, it is plain that this is not the kind of religion for hard, everyday wear. For certain purposes it can be made to serve, but there is no need of such economy. The real religion can be purchased without price—free to those who cannot pay, costing others only what they are able to spend. A word to the wise—don't try to bargain in religion.  
—*Home Herald*.

CONSCIENCE punishes our misdeeds by revealing to us our guilt and ill desert. It will not permit us to enjoy the love of one whom we have secretly betrayed. It will not suffer us to take pleasure in the esteem of our fellows, when we have fallen below the standards which they cherish. It cannot be put off, or cheated, or bribed. For it is inside us; it is an aspect of ourselves; and to get away from it is as impossible as to get away from or around ourselves. Repentance, confession, and attempted restitution are the only offerings by which offended conscience can be appeased,  
—*William De Witt Hyde*.

#### "IF IT WERE NOT SO."

"FEAR not" is very common in the Bible. It is often in the mouth of messengers from God. Our Savior used it much.

George Ebers truly says that man has nothing harder to bear than uncertainty, and generally when suspense looks forward to bad rather than to good news, and bearers of ill ride faster than messengers of weal.

What a message of assurance the Gospel brings to

the trembling, fearful one! Its effect is seen for instance in Paul when he says: "I know whom I have believed and am persuaded that he is able to guard that which I have committed to him."

Into the face of the uncertainties of life we may quietly look as we think of the abiding God and thus we may dwell in the secret place of the Most High. He will not deceive us. If there were cause for worry he would inform us. He emphatically tells us there is not, so let us rest the matter there and fear not more.  
—*Bible Record*.

#### WAIT UPON THE LORD.

THERE are heart sicknesses known to earth more real and distressing than any physical malady. Times there are in each human life when the sharp sword pierces to the very center of the soul. Speaking after the manner of this world, the agony seems greater than can be borne. What then? Shall we sink down in despair? No. There is a better way. Summon thy soul to new courage and patience. Say to thy soul within the thick shadows, even where no light enters, "My soul, wait thou only upon God."—*Spurgeon*.

#### FOR THE FUTURE.

THE secret of happiness is inward. People had good times when there were no friction matches, no brilliantly illuminated streets, no steamboats or railroads, no sewing machines, no postage stamps, no comfortably heated homes, no telegraphs or telephones. The elements of happiness are not in things, but in human nature itself. But the fairer conditions, the greater opportunities, in which the marvelous modern inventions afford to the masses of our humanity, should augment our joy and expand our hopes. The most obvious fact of human history is that of progress. The race is following a flying and a growing ideal. It is inspired and saved by hope. Every helpful invention, every improvement of sanitary conditions, every new ray of intellectual and spiritual illumination, every scientific achievement, every amelioration of physical suffering, every new avenue of enjoyment, every victory of righteousness, every faithful deed in lowly and lofty places, increases the splendor and the power of our vision of the future.—*Sel*.

"TEMPTATION," once said Henry Ward Beecher, "is like a spark. If it falls upon water, no harm is done; but what if it falls upon powder?" It is not what is in the temptation, but what is in us, that makes all the difference in the world. If the mind is filled with good thoughts and the heart with pure desires, temptations will be harmless. We are responsible for many of our temptations, because we have invited them by not having ourselves filled with the love and spirit and grace of Jesus Christ.

# Echoes from Everywhere

Abyssinia has established a postal department. This is not so much news to the world at large as is the fact that the land of the Negus did not have such a department. However, it is another mark of the progressive spirit of Emperor Menelik, whose dusky features are portrayed on the stamps.

A new Zion, to be known as the New Jerusalem, is soon to be founded in Missouri. It will be established as soon as contributions to buy 100,000 acres of land flow into the coffers of James Alexander Dowie, brother of "Elijah" Dowie, and "Healer" Schrader, who have formed a co-operative healing agency with headquarters at St. Louis.

Postmaster General Meyer intends to campaign in behalf of postal savings banks. Mr. Meyer has given close study to the subject and is enthusiastic in his support, and with his party committed to the project in its platform he is encouraged to appeal for votes for what he considers as promising a new field as the postoffice department has ever entered.

The city council of Cleveland, Ohio, has agreed that the municipal traction company, which has been charging a fare of three cents, shall charge a straight cash fare of five cents, tickets to be sold at three cents. This rate is to continue until the "pay-as-you-enter" cars are in stalled. The May and June deficit of the company is given as a reason for the change.

The Danish explorer, Capt. Ejnar Mikkelsen, recently arrived in Copenhagen after spending two years of exploration in the waters which lie to the north of Alaska, his object being to find out whether a deep sea lies in that region or a stretch of land. He and his companions sailed 50 miles off the Alaskan coast and when they sounded for bottom, could find none; 60 miles farther they had the same result. They then turned to the southeast and succeeded in finding bottom which they followed to the east until forced to turn back on account of the swiftness of the current.

A medical investigator of Boston announces that tea, that good beverage which created such a turmoil in Boston harbor century before last, is a rank enemy of germs, especially typhoid germs. He says he placed the typhoid bacilli in cold and lukewarm tea and at the end of four hours they were greatly diminished, while by the expiration of 24 they were completely destroyed. "The value of this finding," says the Boston Transcript, "is obvious to military surgeons. Sterilized water may become infected after it is placed in the canteen. Canteens which have once been filled with infected water may retain the infectious germs for some time. In filling the canteens with tea the infection with typhoid bacilli would, after a few hours, says a military surgeon, be almost nil."

Twelve and a half million dollars are thrown away every year in Germany by the poorer classes in the purchase of pernicious penny dreadfuls, according to a statement just issued by the Durer Union, which is engaged in a campaign against the growing tendency in Germany to read trashy "literature." The secretary of the union vouches that 8,000 established booksellers and 30,000 peddlers are engaged in selling sensational serials and books containing complete tales of a very low order. No fewer than 750,000,000 of these "stories" have been sold in the course of a single year.

Uncle Sam's investments in fairs and expositions have not thus far brought him any great satisfaction and his little experience at Jamestown will probably confirm the growing distrust which the old man has for such institutions. For out of the million dollars which he loaned to the officers of the fair, only a little over one-tenth has been paid back. In the general federal court litigation which is going on in Norfolk over the affairs of the exposition, the government has filed a petition asking for protection as a creditor and claiming priority of payment over the other claimants.

The great oil-well conflagration which broke out at Tampico, July 4, continues to defy all efforts to get it under control. Powerful pumps from the United States were taken to the scene and set to work pumping enormous quantities of mud and sand into the roaring vortex of flames, but according to latest accounts no appreciable reduction was made in the blaze. The flames continued to leap up 1,500 feet into the air. Several American oil well experts have visited the scene. They all concur in the opinion that the fire consumes 100,000 barrels per day. The crater is 300 feet in diameter, and it is estimated that more than 5,000,000 barrels of oil have been destroyed up to this time. It is valued at \$1 per barrel.

The American Sabbath Union has issued an appeal to employers to make a change in the week or two of vacations that is given to employes during summer. It suggests that instead of vacation beginning Saturday and closing on the Sabbath, it could begin on Friday evening and the employe could report for work on Monday at noon or Tuesday morning after vacation. "This plan," says the appeal, "would allow the clerks or employes to reach their destination, avoiding all travel on Sunday, either way, and yet have the full vacation. The moral principle involved in the inculcation of the vital truth regarding the Sabbath day as the bulwark of our homes and our land, would infinitely more than compensate for the material loss of a few hours' service. It is sincerely hoped the business men of our land will see their way clear to put the above into practical operation."

In the Atlantic Monthly Mr. J. O. Fagan makes some interesting comparisons between British and American railroads. He shows that in the year 1906 a total of 1,200,000,000 passengers were carried on British railways on 27,000 miles of track, against 800,000,000 passengers carried on American railways on a mileage of 200,000. As regards accidents the same writer says that if we take the year 1906 we find that there were 13,455 collisions and derailments in the United States, and only 239 in Great Britain. In the same year 146 passengers were killed and 6,000 injured in the United States, against 58 passengers killed and 631 injured in Great Britain. The number of employes killed and injured in train accidents was respectively 13 and 140 in Great Britain, against 879 and 7,483 in the United States.

The French branch of the International Cremation Society has published a report in which it deplors the fact that in spite of its efforts cremation is not yet popular in France. The number of incinerations is larger each year, but the increase is so small as to be scarcely perceptible. In the provinces this form for the disposal of the dead is scarcely used at all. Practically all the cremations in France occur in Paris. America, says the report, has the largest number of cremations. There are 36 crematories in the United States, and these last year consumed a little less than 4,000 bodies. Germany is next in order with 15 crematories and an incineration list of nearly 3,000. The Argentine Republic, with 976 cremations, occupies third place. Switzerland cremated 721 bodies. Seven hundred and five were incinerated in Great Britain, but there were only 451 cremations in the four crematories of France, in Paris, Marseilles, Lyons, and Rouen. Italy, with 30 crematories, only incinerated 442 bodies.

#### INTENSIVE AGRICULTURE IN DENMARK.

Denmark, which is not larger than the French province of Brittany, has a foreign commerce of more than \$200,000,000 annually. In 1901, Denmark exported, in round numbers, 29,000 horses, 123,000 head of cattle, 111,000 tons of fresh and salt meat, and 79,000 tons of butter. According to the last census the country contained 487,000 horses, 1,840,000 cattle, 877,000 sheep, 1,457,000 hogs, and 11,553,000 hens. In 1906 the exports of fresh eggs amounted to 428 millions. The arable area amounts to 7 million acres, and the moorland has been reduced to one million acres. The average farm contains less than 8 acres. The cultivated area is distributed as follows: 41.5 per cent in grain, buckwheat, peas, beans, and vetches, 46.7 per cent in clover and grass, 5 per cent in potatoes and root crops.

M. Tisserand, in communicating these facts to the French agricultural society, described the condition of the Danish farmer, the abolition of taxes on small holdings, the agricultural schools and laws, state loans to farmers, the syndicates, and the establishment of a ministry of agriculture, with expert chiefs, a veterinary service and government inspection of butter. He also emphasized, however, the important part played by private initiative in the development of Danish agriculture. There are numerous general and local agricultural societies of all kinds.

These facts show how much science, patriotism, and the efforts of a free, enlightened, and industrious people can do to develop the resources of a country.—Scientific American Supplement.

#### STILL DOING GOOD WORK.

The entrance of Dr. William Osler upon his sixtieth year of life calls attention to the fact that there are many men who since 1905, when his chloroform theory was promulgated, have distinguished themselves beyond the age of three score. Among them, as set forth by the New York World, are:

Rear Admiral Robley D. Evans, who at the age of 61, in the fall of 1907, took the American battle ship fleet from the Atlantic to the Pacific on schedule time, without injury to a single vessel.

J. P. Morgan, who when over 70, by sitting up days and nights, stayed the financial panic in the fall of 1907. To do this Mr. Morgan held sometimes three or four conferences, in as many different places in this city, in a single night.

Justice David J. J. Brewer of the United States Supreme Court, who by his speeches throughout the country when 70 years of age did much to thwart the third-term movement for Roosevelt.

John D. Rockefeller, who when 67 laid out his \$33,000,000 general education board scheme of college endowments.

Henry M. Flagler, vice-president of the Standard Oil Company, who at the age of 78 carried to completion his marvelous engineering scheme of uniting the myriads of islands on the Florida keys with a railroad, an extension of the East Coast system, and continued uninterrupted until last month his active control of the Standard Oil Company, the biggest and most complicated private business enterprise in the world.

Mrs. Russell Sage, who, when well past 60, fell heir to the vast fortune accumulated by her husband, has established the Sage foundation, with an endowment of \$10,000,000, for sociological research, and vies with Miss Helen Gould in the variety of her benefactions and the industry with which they are promoted.

Mark Twain, who, though over 72, is as indefatigable and as successful in his chosen field of literary activity as most authors of half his years. Mr. Clemens travels a great deal here and abroad, keeps a secretary and an amanuensis constantly busy.

Andrew Carnegie, now, when past 72 years of age, is still exceedingly active in the promotion and systematization of big charitable and educational projects. The great steel master, after the Osler theory was promulgated in 1905, and when past 70, planned his \$10,000,000 teachers' foundation, and added materially to the effectiveness of the Carnegie Institute at Washington.

Joseph G. Cannon, Speaker of the House of Representatives at Washington, at 72 went through one of the most strenuous legislative sessions without falling sick a day, or even flagging in his manifold political activities. He was seriously spoken of as a presidential candidate.

A. J. Cassatt, dead now but a few months, who, when over 60, laid out that tremendous system of tunnels and terminals which mark the Pennsylvania terminal system in New York as the costliest and most novel in the world.

General Booth, head of the Salvation Army, who, when 78, made a tour of the world, revisiting America, making many speeches and undergoing weeks of fatiguing religious campaigning.

James Bryce, who, at 79, is the British ambassador to America, a man of great activity. He has delivered many public addresses since he came here, and talks and moves about with the zeal, eloquence and activity of a man of 50.

## CREAM OF MAGAZINES

### THE USE OF SULPHUR IN FRUIT.

The demand for pure food laws has been generously responded to by nearly all the States in the Union. But unless there is reform in the demand for pure food, these laws, like many others, will be void after the newness wears off.

The pure food law of California restricts the use of sulphur in curing fruits. The public still demand bright, light colored fruit, hence the fruit men are in a dilemma.

At present no healthful substitute has been found that will preserve the color of the fruit nearly as well as did sulphur. The outlook at present is, that the canners will have to pack more fruit, and the wage earning class must either pay tribute to them or be without fruit. Thus a good and beneficial law will work a hardship on the very people it should help, besides forcing an industry that employs hundreds of men and women out of business.

People will never demand pure food and purchase it on merit alone unless the true facts regarding preservatives and coloring agents are presented to them.

The fruit grower who dries his own fruit, and the farmer who makes a business of drying fruit have only two valid reasons for using sulphur. The first is that it preserves the color so that it is a salable product. Dark colored fruit, that is, natural dried fruit, is not salable at any price. The buyers would laugh at a person who offered it for sale. Value of the product of the orchard is not according to the quality of fruit grown on it, but according to quantity of sulphur the fruit has absorbed. If bright and nice looking it commands the top price, if dark, even a little dark, the buyer shakes his head, "too dark, can't handle it." The grower's second reason is that knowing he can bleach the fruit with sulphur, he can let the fruit attain full size by ripening. This reason is to him a purely economical one, but to the consumer it is one of vital importance. All fruit should be fully matured before it is used, either fresh, dried or canned. But is it? Not by any means. The canner calls for fruit that is firm, which means green; if it is near ripe the grower is docked, and his fruit goes as second or third class fruit. The only way to get ripe fruit is to let it hang on the trees until ripe, then dry under a good hot sun. But this will be dark in color; it will not appeal to the eye, but just let the taste be judge for awhile and you will be perfectly satisfied that the eye is a faulty judge of what should go into the stomach.

The Californian who dries fruit for his own family use is sensible enough to dry it in the natural condition. Ask why he does not sulphur it, and he will tell you he prefers the taste of the fruit to that of sulphur.

To make his fruit salable the dryer has no alternative, under former conditions, than to use sulphur. The color must be retained at the cost of both the taste and nutritive qualities of the fruit. But who is to blame? Not the dryer surely, for as we have seen, his reasons were purely economic in character. Personally he prefers the natural

taste of the fruit himself, but he cannot dictate to those who purchase what he has to sell. Who, then, is to blame, is it the middlemen; the grocers, or is it the purchasers themselves?

Every reasonable person must admit that the consumers of any commodity are the ones who create the demand for it. If through lack of knowledge they create a demand for what is injurious, then it is the duty of those who have the knowledge to disseminate it for the good of humanity.

The question is, has sulphur any place or use in the human organism? Does it nourish the body, prevent or cure disease, or fill any other use? Decidedly not; it is an incompatible, and the human organism has no use for it, or any other drug, either, as food or medicine. When they are forced upon it nature doubles her energy to get rid of them; if there is not sufficient reserve force then the physical succumbs and we say the man is dead.

Sulphur converts the sugar element and all the natural fruit juices into a sour acid that forms the basis for rheumatism and its allied ailments, paralysis, etc.

Under the sulphur bath the fruit undergoes a complete chemical change, the cups are filled with this sour acid, and it is doubtful whether a hog would eat of it just as it leaves the bath. Much of the acrid taste is carried off by the sun in drying, but sufficient remains to cause trouble for those who eat it.

These facts are given in order that consumers of dried fruit may know what they are purchasing. If you are buying apples, peaches, apricots or plums of a bright yellow color they are sulphured, for they cannot be made to retain the color without. Just as quick as fruit is cut and exposed to the air it commences to take on a darker hue, which increases with time of exposure. Apples that are dropped from the slicer into salt water will retain a fairly good color if evaporated, but if exposed to the sun, they, too, grow dark. As a rule they are dropped into salt water, then put through the sulphur box before going to the evaporator.

Ripe fruit that is dried in the sun is pure and wholesome, and it contains more life-giving qualities than all the canned fruits in existence. Independent of its value as a solvent, it absorbs valuable elements from the sun and air, that nothing can approach in value as a spring tonic and blood purifier.

Its only disqualification is that it is not attractive to the eye. But it is not necessary for the eye to be judge. As a servant it is valuable, as are all the senses, but man should not allow either the sense of sight or taste to dominate over his intelligence. If intelligence, combined with reason, is allowed to select what the body needs to keep it in health, we need not fear, for results will prove the wisdom of placing the responsibility where it belongs. Let the call for pure food be made in plain language. Then all engaged in the preparation and marketing of foodstuffs will know that purity and quality have first place, appearances second.—Health.

### IS OPTIMISM PLAYED OUT?

Optimism may do very well for life, but it plays havoc with literature, according to the almost simultaneous voicings of an American and an English critic. We Americans are full of hope and sunniness, and we can't abide the lack of those qualities in our literature. Consequently we reap our proper harvest in inanity or something next to that. Mr. Charles Leonard Moore in *The Dial* (Chicago, July 16) puts it this way:

"Optimism is a habit of mind rather than an idea. I do not know whether Americans have more hope and sunny expectations than other races, but we talk and preach them more. I think this rose-colored outlook, whatever effect it may have on life itself, is detrimental to literature. It banishes tragedy and all great and serious thought. It makes our art of all kinds thin and flat and savorless. How are we going to make bricks without straw?—how produce great effects without great means?—how project rounded figures without shadow? Our optimism and lack of depth are largely due to our material success, and to the fact that we have never known, as a nation, defeat, despair, and crushing grief. In a literary way, it has been taught us by Emerson. The New England prophet is a delightful 'friend of the spirit,' but the attempt to build either great lives or great books out of his preachments would be like carrying out smoke in a hand basket."

Curiously enough, almost the same plaint is raised by a writer in *The Nation* (London), who, after charging that "the want of truthfulness with which problems of sex are regarded in middle-class England reacts unfavorably on the work of our novelists, who may be salacious or suggestive, but not sincere," adds this:

"What weighs on our novelists with even greater pressure is the optimistic idealism which has the greatest aversion for any picture of life that is sombre, tragic, or even uncompromising. This mental temper of our average reader makes directly for lack of depth in our novelists, and we have only to glance through the newspapers to see how little the dark, ironic side of life, the sin, the suffering, the tragedy of the modern world, find their rightful place in the work of the English novelist. While we equal the Continental schools in studies of character, and perhaps excel them in the variety and originality of our novels of domestic life, we are far inferior in the novel of psychological analysis.

"Dare we hope for a more unflinching gaze at the realities of life from the younger school of writers? The question is one of popular pseudo-realism versus true realism, and false romanticism versus true romanticism. Current literature reflects very faithfully the feeling of the day, and the dominant class of reader now asks only to be amused and distracted, and to have his prejudices and illusions respected. Should our national prosperity have to meet the rude shock of a European war, or grave peril to any part of the Empire, we should immediately see arrive a far more serious school of writers to interpret for us the handwriting on our walls."—*Literary Digest*.

### CLOTHING FOR THE TROPICS.

The question of devising a suitable fabric for wearing apparel suitable to tropical climates, which shall shield the wearer from the actinic rays of the sun, is one that has occupied conspicuous attention during recent years. A thin white material is generally selected for this purpose, preferably "white duck"; and although it promotes a certain degree of coolness and comfort, it does not suc-

ceed in fulfilling healthy conditions. Discriminating Nature has provided the native in the torrid belt with an effective protection against the sun in a skin pigmentation which absorbs the actinic rays, so that their dangerous effects upon the constitution are counteracted. Consequently, the native is able to continue his labors without the slightest signs of fatigue during the hottest time of the day, when the white man is practically prostrated, or at any rate refrains from carrying out his duties from motives of self-preservation.

Investigation has shown that the piercing actinic rays striking the neck and back exercise a highly dangerous effect upon the spinal column and the nerve centers, which react upon the organs of the stomach, promoting such maladies as indigestion, which in turn react upon the brain, and in time completely undermine the physical condition of the body, until at last collapse results. Experiments have proved that if only the natural pigmentation of the native is artificially produced in the clothing of the white man, he experiences no more harmful effects than the former, since the long or heat rays in themselves are quite innocuous, so far as effect upon the constitution is concerned. The degree of protection secured by pigmentation has been decided by practical investigation, and it was found to have strong absorption qualities in regard to the actinic or short rays, the degree of pigmentation being proportionate to the intensity of the light prevailing in the native's accustomed environment. A thin layer of the skin was obtained, and the spectrum of an electric arc between two iron poles photographed after the rays had passed through the layer. It was found that the dark brown skin of the Hindoo entirely absorbed all the rays of shorter length than 3,600. From the result of these observations, it is obvious that the white man when in the tropics should wear black, red, or orange colored clothing owing to its preventing the passage of the short rays.

The white man, however, has a strongly developed aversion to wearing aught but white clothing, but this offers no protection whatever to the harmful actinic rays. Numerous efforts have been made to provide a non-actinic backing to such material, but the disadvantage to such a fabric is that its weight and thickness are unduly increased.

Recently, however, a British inventor has succeeded in devising a process in which the non-actinic material or threads are interwoven with the white and other colored surface of the textile and in such a manner that while the weight and thickness of the cloth are not increased, no evidences of the red material are observable on its external surface. The prevention of the threads of the red material penetrating the outer face proved the most difficult task, but this has now been successfully attained. The fabrics, to which the distinctive name "Solaro" has been applied, are either of wool, or cotton, or mixed, the former being most preferable for cold or moist climates, and the cotton where a dry heat prevails.

By means of this invention, the resident in the tropics has the same facilities in the choice and patterns of textiles for clothes as those living in temperate climes. All the various cloths and latest fashionable styles can be reproduced in "Solaro" with perfect success and comfort, and the facility is already much appreciated, as it enables one to secure a welcome relief to the monotonous white. Moreover, the material is also shower-proof and has a remarkable capacity for resisting heavy thunderstorms, mists, and so forth. Waterproofing is not secured by means of rubber or chemical solution, but is due to a secret process in the manufacture of the yarns employed.

In this way there is no interference with the ventilation of the cloth. Although an excellent sun-repellent fabric, it is equally applicable for winter wear, while it has a high standard of durability. It is suitable for all external garments for either sex, and it compares in price with the best qualities of cashmere. Its hygienic properties have been fully appreciated by the examining board of the British Institute of Hygiene, while, moreover, it is sealed at the British Colonial Office for officers appointed to the tropics.—Scientific American.

#### LEGAL BREVITIES.

A NOTE dated on Sunday is void. A note obtained by fraud, or from one intoxicated, is void. If a note is lost or stolen, it does not release the maker; he must pay it. An endorser of a note is exempt from liability, if not served with notice of its dishonor within twenty-four hours of its non-payment. A note by a minor is void. Notes bear interest only when so stated. Principals are responsible for their agent. Each individual in partnership is responsible for the whole amount of the debts of the firm. Ignorance of the law excuses no one. It is a fraud to conceal a fraud. It is illegal to compound a felony. The law compels no one to do impossibilities. An agreement without consideration is void. Signatures in lead pencil are good in law. A receipt for money is not legally conclusive. The act of one partner binds all the others. Contracts made on Sunday cannot be enforced. A contract made with a lunatic is void. Written contracts concerning land must be under seal.—*Selected.*

#### SPIDER EATS BIRDS.

FAR up in the mountains of Ceylon there is a spider that spins a web like bright yellowish silk, the central net of which is five feet in diameter, while the supporting lines, or guys, as they are called, measure sometimes ten feet or twelve feet. The spider seldom bites or stings, but should any one try to catch him bite he will, and, though not venomous, his jaws are as powerful as a bird's beak. The bodies of these spiders are very handsomely decorated, being bright gold or scarlet underneath, while the upper part is covered with the most delicate slate-colored fur. So strong are the webs that birds the size of larks are frequently caught therein, and even the small but powerful scalp lizard falls a victim. A writer says that he has often sat and watched the yellow monster—measuring, when waiting for his prey, with his legs stretched out, fully six inches—striding across the middle of the net, and noted the rapid manner in which he winds his stout threads round the unfortunate captive. He usually throws the coils about the head until the wretched victim is first blinded and then choked. In many unfrequented dark nooks of the jungle you come across skeletons of small birds caught in these terrible snares.—*Selected.*

#### BRIGHT SAYINGS OF CHILDREN.

When Willie saw a peacock for the first time he said to his mother:

"Oh, mama, you should have seen it! Electric lights all over the ferns and a turkey underneath!"

Jamie was begging his father for a second helping of preserves. "When I was a boy," said his papa, "my father only allowed me to have one helping."

Jamie was silent for a minute, and then asked, "Aren't you glad you live with us now, Daddy?"

Edwin, aged four, owned a picture-book in which a fierce-looking cow was running after a small boy. He looked at it a long time, then carefully closing the book he laid it away. A few days later he got the book again, and turned to the picture. Bringing his chubby fist down on the cow, he exclaimed in a tone of triumph, "She ain't caught him yet!"

**He Was the Parents.** Little Bertram had always longed for a live pet, but as he lived in an apartment building, he had to be satisfied with toy animals.

Later his parents moved to the country and Bertram became the happy possessor of a kitten. He hugged it close and remarked, "At last, I am the parents of a living creature!"

Marjorie, aged nine, had not been having very satisfactory reports from school. Her father finally said, "Marjorie, for the first hundred you get I'll give you a dollar." Time went on and the reward could not be claimed. One day the child was taken violently ill. Her mother sent for the doctor. When he had gone, Marjorie said, "Mama, am I very ill?"

"No, dear, your temperature is a little over a hundred, but the doctor thinks you will be all right in a day or so."

Smiles broke through Marjorie's tears.

"Now, mama, I can have my dollar. Papa said he would give it to me if I could get a hundred in anything."

—The Delineator.

Five copies, postpaid, .....10c

**BRETHREN PUBLISHING HOUSE,**  
Elgin, Illinois.

**NEFF'S CORNER**

I have built twenty-four houses since I came to Clovis and the demand is better than when I began. Renters almost fail over each other to get a property at \$8.00 per month that would cost you \$350.00, or at \$10.00 per month the property that would cost you \$450.00. If you have money to invest or if you have an income from which you would like to invest a small amount each month where it will bring you good returns, it will pay you to write me. Address

**JAMES M. NEFF,**  
Clovis, New Mexico.

**The Saloon Under the Searchlight**

By George R. Stuart.

"A bright, breezy, thought-compelling little book with not a dull line in it. Full of suggestion and inspiration for one who would have a part in the fight against the saloon, a fight that grows in strength and popularity every day."

"Sledge hammer blows by Dr. Stuart on thirteen or more aspects of the saloon question. The arguments and illustrations are original, often unique, and always right to the point."

"I find the book one among the best I ever read on the subject. I can recommend it and wish it were possible to place a copy in every home in the land."  
—Eld. D. L. Miller.

"I have just finished reading that splendid little volume, 'The Saloon Under the Searchlight,' by Geo. R. Stuart. I find it interesting and valuable. It commends itself to me because of its simple, plain, practical and true statements. I solicit for it a wide circulation, and a careful perusal. It cannot fail to do good."—Eld. P. J. Blough, Member of Temperance Committee.

**Every Minister**

of the Gospel will have occasion to use some of the arguments presented by Mr. Stuart, who turns the light on in full force and lets the reader see what a monster evil the liquor traffic really is.

There is enough in the book, if people can be induced to read it, to drive the saloon out of every village town and city in the United States.

# ALBERTA

---

¶ Of Alberta a distinguished writer has said:

"North of the International boundary line and immediately east of the Rocky Mountains lies the Province of Alberta—a land blessed with all that is necessary to happiness and prosperity. Between the 49th and 60th parallels and between the 110th and 120th meridians lie 281,000 square miles of possibility. Here are mountains and plains, foothills and valleys, rolling prairies with wooded stretches between, dense forests and grassy meadows, clean, timber-girded lakes and winding brooks, cold mountain streams and navigable rivers, and a soil rich in the alluvial and vegetable accumulations of centuries. And as if not content with these outward signs of her favor, nature has hidden beneath the surface vast deposits of coal and other minerals; she has filled the subterranean reservoirs with gas and oil, and sprinkled the sands of the mountain streams with gold. That no living thing should go athirst, she gathered together the waters of the mountains and brought them to the plains, to be directed by the ingenuity of man to the use of the grazing herds and the planted fields. Then, to crown her efforts and leave nothing incomplete, she brought the chinook wind, warm with the breath of May, to temper the north wind."

¶ In the Medicine Hat District we have a gently undulating prairie. The soil is capable of producing generous yields of all small grains and vegetables in abundance.

¶ The city of Medicine Hat, situated on the Saskatchewan river and underlaid with gas and coal, is destined to be a great manufacturing center.

¶ Why not join the colonies already there and enjoy some of the material benefits as well as help build up one of the largest and best colonies in the Canadian West.

¶ We have excursions every first and third Tuesday of the month.

# A RARE OPPORTUNITY

## TO MAKE BIG MONEY

☐ We want to place the sale of our popular floral Wall Mottoes in the hands of an active agent in your community.

☐ Several hundred agents are now at work and report splendid success. One person ordering as many as 750 at one time.

☐ In appearance these mottoes come nearer to an oil painting, of the most expensive sort, than anything else. They possess a rich gloss that adds wonderfully to their attractiveness when in position upon the walls.

☐ The lettering is clear and distinct and can be read across the room.

☐ The size, 12x16, makes them suitable for use in any home. Unlike many pictures or mottoes they do not fade, and lose their bright and attractive colors. They can readily be dusted should they become a trifle soiled, or can be cleaned whenever desired with a damp cloth.

☐ These mottoes will last for years, and continue to give pleasure and good cheer to all.

### Ten Mottoes and Ten Designs

#### 1. Be Ye Followers of God as Dear Children.

A very attractive design with groups of children. The poem "Jesus Was a Little Child" neatly printed in one corner adds much to make this picture a very desirable one for the children.

#### 2. Be not Weary in Well Doing.

This design is composed of a beautiful scroll, two birds and their nest, and beautiful flowers, all in colors.

#### 3. Christ Is the Head of this House.

The flower on this motto is a large beautiful orchid, which gracefully overhangs the lettering.

#### 4. God Bless Our Home.

#### 5. In God We Trust.

The design used with these texts is pansies in natural coloring. The lettering is artistically shaded and beautifully harmonizes with the flowers.

#### 6. God Is Our Refuge and Strength.

#### 7. Home, Sweet Home.

This beautiful design is sure to be a good seller. No. 6 represents God as a refuge for the soul, and should be in every Christian home. No. 7 is one of the most popular mottoes known to the English speaking world. It is always in demand. Can be sold anywhere to anybody.

#### 8. Love One Another.

#### 9. The Lord Is my Shepherd.

The motto for these texts has a delightful arrangement of forget-me-nots and crimson roses on a black background. Very artistic.

#### 10. What Is Home Without a Mother?

This has long been a favorite motto and is still in great demand. The beautiful scroll design, artistic lettering and delicate flowers make this an attractive motto and a good seller.

**CALIFORNIA BUTTE VALLEY LAND COMPANY**

MACDOEL, CALIFORNIA

# OVER 200,000 ACRES

of land has been filed on under the CAREY ACT in the Twin Falls District, Idaho, since April, 1907.

¶ There is still a large amount of land waiting for the settler in the above district. Also great opportunities are offered at American Falls, at Gooding and other points along the OREGON SHORT LINE RAILROAD.

¶ The Payette-Boise Reclamation Project under the U. S. Government is about completed and will be ready to furnish water to about 300,000 acres of new land in the spring of 1909. These lands can now be bought at reasonable rates and terms, by the settler, and are situated where the country is already partly settled, near good towns, railroads and electric lines.

¶ Rural mail routes and telephone lines are already established. Good schools and churches. No storms or cyclones. Farming is done by irrigation. No failure of crops by reason of too much rain or drought. Fruit crop is abundant every year. The people are happy because they are prosperous.

## Wonderful Possibilities

for homeseekers and investors. Climate Mild. Soil Very Productive.

¶ Alfalfa, Sugar Beets, and grains of all kinds are among the products that yield abundantly. Farm hands, carpenters, mechanics and in fact all classes of workmen will find plenty of work at good wages.

¶ Arrange your plans to go and see Idaho as soon as possible and secure some of this fine land.

¶ HOMESEEEKERS ROUND TRIP EXCURSION RATES are on First and Third Tuesdays of each month in 1908.

¶ Colonist One-Way Cheap Rates to points in Idaho, Oregon and Washington in effect daily from Sept. 1st to Oct. 31, 1908 inclusive.

¶ WRITE NOW for printed matter and full particulars regarding this great country and how to get there.

## Wonders of the Rockies: In Colorado

Fred V. Kinzie

### I. Some Rocky Mountain Cities.

DENVER, the capital of the State of Colorado, stands on an elevation of nearly 5,200 feet above sea-level. The city is situated in a picturesque position, with the extensive plains to the east, the majestic mountains with their snow-crowned summits to the west and lofty Pike's Peak raising its head in the south. Denver is cosmopolitan in character, drawing people from all over civilization because of the healing climate.

This city was first started in 1858 by gold hunters, and thus she grew to be "The Queen City of the Plains," with a population of 175,000. It is also proud of its clean streets and thoroughfares, many large and up-to-date hotels, still not built on the plan of our eastern sky-scrapers. Also a large park owned by the city furnishes a resting place for the citizens of Denver, as well as a zoological garden for the entertainment of the visitor.

One hundred and eighteen miles south of Denver is Pueblo, a thriving manufacturing center. It is rightly known as the "Pittsburg of the West," as here are located the Minnequa Steel Works, great smelters for the reduction of gold and silver ores, and many mills and shops. Among its public buildings is the Mineral Palace, containing perhaps the most complete and attractive collection of mineral specimens and ores in the world.

Farther on to the west is Colorado Springs, a fashionable city, delightfully situated on a plateau at an altitude of 6,000 feet. This city of 30,000 inhabitants is a famous health resort, to which beautiful hotels with extensive parks and grounds contribute not a little. The attractive surroundings, broad avenues, shady streets, splendid drives and pure air, all help to make it one of the most popular resorts of the West.

Colorado Springs, Colorado City and Manitou, although three distinct cities, are very closely connected by trolley and bus lines. Manitou is also a celebrated

pleasure resort, beautifully located at the foot of Pike's Peak with the ever-inspiring, ever-interesting mountains towering up on every side. Here is found the Cog Road Depot, from which the ascent to the summit of Pike's Peak is made. Manitou is famously noted for its highly-charged soda, iron, and sulphur springs. It is proud of a number of fine hotels and a very healthy climate. A beautiful driveway leads across the mesa to Colorado Springs. This is used by many tourists.

Across the range, some distance from Manitou, is the beautiful mining town historically known as Cripple Creek. Here are found innumerable mines which have been clustered around the site of the original discovery of gold in 1887. Some twelve towns are located in this region, known as the Cripple Creek District, of which Cripple Creek and Victor are the principal ones, and altogether it is Colorado's greatest gold camp.

Leadville, another prosperous mining town, is famous for its carbonate beds which were discovered in 1876. This wonderful city first became known to fame in 1859 as California Gulch, and was one of the richest gold fields in Colorado at that time; but the camp was afterwards nearly abandoned until the discovery of carbonate.

Farther west, at the junction of the standard-gauge main line and the narrow-gauge line of the D. & R. G. R. R., is the beautifully-situated little town of Salida, at an elevation of 7,049 feet. Its location, near the hot medical springs, and the delightful climate make it an extremely popular health resort.

One thing of curiosity that attracts almost every tourist's eye, and especially at night, is the name of the town displayed by electric lights, at the top of Tenderfoot Hill, just opposite the town from the depot. The hill is perhaps a thousand feet or more high, and these bold letters shine from its summit. It did not only attract our eyes, but also our party, and having to wait some three hours on our train

we concluded to investigate. We thought it would be no trick at all to climb to those lights which seemed so near, but being deceiving as all mountains are, we were soon seeing our mistake. Being strangers, we just started right up the hill, not knowing there was a footpath there. We toiled up the steep hill-side for full half an hour, not resting often nor long at a time in our ambition to reach the top first. We were within seventy-five feet of the top before we ran onto the footpath. We were amazed at the size of those letters when we did get there. There was a sort of porch built up from the ground and the lights were above this. Many names were carved on the wooden structure, showing that we were not the only foolish ones, as we had at first supposed.

The moon was shining at its best and the view we had was especially grand. In the west was the Collegiate Range, Sangre de Cristo Range to the south, while in the southwest could be seen Ouray and Shavano. Going down we went by way of the path, and landed at the bottom safely, and repaid for our trouble, but very much exhausted.

The town of our destination was reached after a delightful, twenty-four-hour ride through some of the most awe-inspiring mountain scenery in the State. After leaving the last cañon and riding about ten miles through the so-called level country, we entered the town of Montrose, where we were to make a few weeks' stay. Montrose has no special attractions worth speaking of, although with an enterprising population it is growing rapidly. But it is located in a country that not only now is a thriving fruit and grain country, but in five years will rank with any agricultural land in that part, if not in the whole State.

This district, of which Montrose is the principal town, is known as the Uncompahgre Valley. The soil in this valley will grow, with few exceptions, any fruit, grain or vegetable that is raised in the eastern States which I have been in. The most-grown crop is alfalfa, besides the great apple, peach, pear, plum and apricot orchards. While there I visited a fruit, vegetable and grain display which proved to me that, though rocky the land, there was something in the soil under the rocks. One among the many things seen there, was a row of eight apples that measured one yard. In another place were displayed alfalfa stalks that had grown to a height of eight and ten feet. And so on; everything seemed nearing perfection.

The climate here is extremely helpful to those with weak lungs and therefore many come to this valley in the hope of prolonging their lives. The mountains are within ten to thirty miles on every side. On the western side of the valley the land rises and drops off, forming a sharp bluff which overlooks a long narrow valley. This makes a grand view from the

edge of this small precipice, the side of which is composed of many smooth, red, sandstone rocks. On these are to be seen the signatures and pictures of Indians. Tradition tells that at one time there was a war, perhaps in the adjoining valley, between two tribes of Indians, and this seems to have been their bulletin board. It is therefore called "Picture Rock."

(To be Continued.)

## ALPHABET OF AMERICAN AUTHORS.

G. FEGLEY.

### XXI. T. G. Upham.

THOMAS COGSWELL UPHAM was born in Deerfield, New Hampshire, in 1799. He attended Dartmouth College where he graduated in 1818. Then he went to the Seminary at Andover and studied theology. He became professor of mental and moral philosophy at Bowdoin College at Brunswick, Maine, in 1824.

He is chiefly known by his three-volume work on Mental Philosophy, which for many years was used as a textbook, though for a number of years it has been losing its popularity. The first volume treats of "The Intellect"; the second, "The Sensibilities"; and the third, "The Will." He did not pretend to put forth a new system, or to aim at any particular originality, but merely set forth a well-digested exhibition of generally-received doctrines, admirably and clearly arranged in systematic order for the purpose of instruction. He also published "Outlines of Imperfect and Disordered Mental Action," "Principles of the Interior or Hidden Life," "The Life of Faith," "Essay on a Congress of Nations," "American Cottage Life," and a number of others, all written in his usual clear, cogent, and sometimes epigrammatic style. He died in 1871.

Worthy of mention: Rev. C. W. Upham, theology and biography; May J. Upshur, prose and verse.

## SWEET CLOVER.

How dear the pale sweet-clover bloom,  
How sweet its faintly spiced perfume!  
What memories it brings to me  
Of all loved things that used to be;  
Of gardens old where sun and shade  
Beneath the rustling poplars played,  
And winds moved gently to and fro,  
And silken poppies loved to blow,  
And mignonette with fragrance fraught  
Grew in a feathery tangled plot.

It brings me back beloved days,  
Dim twilight hours and moonlight ways,  
Dear hands, long folded to their rest  
That stored the snowy linen chest  
With garden clover; faces fair  
That looked with gladness on me there;  
Old loves, old griefs, old joys and tears  
Come back to me from out the years,  
Childhood itself, a summer rose,  
I find where the sweet clover grows.

—L. M. Montgomery.

# The Pennsylvania White Pine Consumptive Sanitarium

Mary E. Canode

In Two Parts. Part Two.

BREATHING the odors of the pine has long been considered a remedy for throat and lung diseases. Because of its location in the midst of white-pine forests the sanitarium was so named.

In continuing the article of last week, we aim to give a comprehensive idea of present conditions as they may be found by one visiting the camp.

Mr. and Mrs. Andrew F. Klee, manager and matron of the camp, may be found comfortably located in their private cottage. Mr. Klee was himself a tuberculosis patient who found relief at the camp

where we permitted a liberal allowance of exercise, the man walking, during the latter third of his stay, four or five miles a day. Since leaving he has shown no return whatever of the trouble."

The length of time for a patient to stay is arbitrary, ranging from several months to a year. Previously, when staying meant expense, even though that expense was made as light as possible, the patient usually remained only until his degree of improvement seemed to be rapid enough to warrant his return home. But the present conditions which admit of every one's remaining until the danger period

is past and without one cent of expense, encourages a longer stay, thus giving the treatment a fairer trial. The few rules of the camp are strict but not severe, and only such as one would expect must be observed at such a place. The most exacting, of course, pertain to sanitation and precautions against the spread of contagion. No patient is expected to leave the camp grounds without permission. Windows must be kept open day and night; winter and summer. Every patient must be out of doors at least six hours every day. Men and women are not to visit each other's cottages. Strictest morality and cleanliness are required. Religious services are enjoyed by the patients each

Patients Taking a Sun Bath. They Must be Out of Doors at Least Six Hours Every Day.

some years ago. Dr. A. M. Rothrock has general charge of the sanitarium and his yearly reports are published as part of the State Forestry Reservation Report. A strict account is kept of each patient's condition and improvement and reported in tabulated form. An instance of a typical case reads: "The patient was with us 149 days. When he entered his weight was 139¾ pounds and when he left, he tipped the scales at 191 pounds, wearing light summer clothing, a gain of 54¼ pounds. His normal weight was 153½ pounds and his best previous weight was 158½ pounds. When he entered camp his chest measurements were: expiration, 31½ inches, inspiration 34½ inches. On leaving, his chest expiration was 32½ inches, inspiration 38½ inches. This was a case

Sabbath. Inmates of the camp play the organ and join in the singing. A good library and the latest magazines furnish excellent reading matter for all. No spitting on the ground is allowed either in or out of camp. The management so arranges that no one need indulge in that dangerous habit. Out-door games are allowed for amusement and exercise and in the spring a plot of ground is furnished each patient to cultivate as he chooses. Some of the patients indulge in long mountain walks. Not over four persons are allowed to assemble in one cottage at one time. Even the air of the open rooms must not be vitiated by too much poisonous breath. The best and most sanitary bedding is furnished. Soft,

thick blankets of the finest make are used instead of mattresses.

The patients are allowed to eat anything servable. A day of camp life is given in the following extract from the camp physician's report: "Our routine of camp life is a simple one and one which has given us very good results. At 7 o'clock in the morning the rising bell rings and at 7:30 we have breakfast. At ten o'clock raw eggs and milk are served and at noon comes dinner. At 3 in the afternoon eggs and milk are again served, and 5 o'clock brings the supper hour, followed again at 7:30 by the eggs and milk. At 8:45 the bell rings for all to go to their quarters and at 9 the retiring bell is rung. Wednesdays and Saturdays all are examined by the camp physician, who makes also on other days two sets of rounds, one in the morning, the other in the evening, to see if anything is needed. On Wednesday mornings all are weighed and the weights are recorded in the history book along with the other facts pertaining to the patients. \* \* \* As has been stated earlier in this report, we give three full meals a day, believing we obtain better results therefrom than if a lesser number were given. Especially, in our opinion, is it better in cold weather, to keep a tubercular patient just as well fed as possible. The long hours spent sitting out in the cold demand plenty of the best and most nourishing food; otherwise so much of the food goes merely to keeping up the body temperature that not sufficient can be spared for the building up of the system in its fight against the disease itself."

The improvements made as a result of the State appropriation the past year have been extensive and still more will follow. A sewerage system and purifying plant was put in during the past winter and completed this spring at a cost of \$25,000. To one firm has been let a contract to erect sixty-six buildings cottages and pavilions or "airing places" which are being erected at the present time. Of this number forty are cottages, size 27×27, containing four rooms each, separated from each other by dividing halls. Contracts for twenty additional cottages may be let to the same firm. These buildings will cost the State in the neighborhood of \$57,000.

To another firm has been let the contract to erect a new dining-hall, laundry and storage room all included in one building, at a cost of about \$55,000.

Further plans are being made to build an infirmary, three hundred feet in length,—away off to one side

of the camp—to which hopeless cases are to be taken from crowded city districts and uncomfortable homes in order that they may receive the tender care, too often denied such pitiable sufferers on account of attendant poverty, and for the purpose of removing danger of infection of the home and neighborhood.

This is what Pennsylvania is doing for its tuberculosis sufferers. While it is engaged in the grand work of preserving and restoring its forest life, it is trying to do the still nobler work of restoring and preserving health to its citizens.

*Mt. Morris, Ill.*

### THE MYSTERIES OF INSTINCT.

THE mysteries of "instinct" are being enquired into in the course of another series of investigations lately commenced by the Carnegie institute. The abil-

A Pattern Cottage. Between Forty and Sixty of this Kind are Being Built Now.

ity of the newly hatched turtle to run directly toward the sea, without losing time groping in a landward direction, has been one of the phenomena of instinct long a puzzle to science. At the institution's new laboratory of marine biology at Tortugas, Fla., this problem has been lately attacked by Davenport Hooker of the laboratory staff. After experimenting with loggerhead turtles, he finds that they are born with an instinct to go down hill and in the direction of the greatest light. Either leads the little animals to the sea, as the shores on which they are hatched always slope down toward the ocean and as the reflected light from the water is always greater than that from the land. Neither the sound of the surf nor the smell of the sea guides them. This has been proved by eliminating the direct ray of the sun, after which little turtles, if upon a level surface, move in all directions with equal readiness, although but twenty

feet from the water, and where both the smell and sound of the sea are distinct.

The nesting instinct of birds is being studied at the station by Prof. John B. Watson. "Sooty terns" and "noddles" carried from Tortugas all the way to Cape Hatteras, 850 miles northward, and there liberated, have found their way back to their nests. A labyrinth of "problem boxes" had also been arranged so that terns had to puzzle their way through them to reach their nests. After successive trials they have succeeded in overcoming all such difficulties and have reached their nests without giving up. Others have as successfully worked their way to their nest through a specially designed "maze."

The web-forming instincts of spiders are being investigated by Dr. James P. Porter of Clark college, who has a grant from the institution. It is found that of the species under investigation the young of a given species all start to build a similar kind of web, whose design is uniformly altered as they grow older. Thus, the zigzag, or "winding stair," of the webs of the young is curved about the center, but as they grow older they reduce this design to a single zigzag. The side screens of the webs show characteristic changes with age.—*Chicago Tribune*.

#### JUSTICE.

RICHARD SEIDEL.

Where are the men for this dark time,  
Strong men and women for the right?  
Firm leaders in the coming fight  
Of right and wrong in every clime.

Where are the noble and the brave,  
Who love their country, free from blame  
Who weep to see their country's shame  
Nor stop to be a party slave?

Oh, give us men of honest deal  
Who scorn a bribe, and hate a lie!  
And statesmen, who would rather die  
Than from their country's treasure steal.

God grant that those who rob the poor,  
When outraged Justice strikes the blow,  
May never sink in hells as low  
As thousands of these slaves endure.

O man, how long wilt thou withhold  
The help thy brother sorely needs?  
Go, bind the broken heart that bleeds,  
And give from out thy stores of gold!

Oh! shame upon a cringing press,  
That dares not brand the wrong it sees,  
But pamper'd with the rich men's fees,  
Withholds a mighty power to bless.

I know not, in the coming strife,  
The way that Justice will pursue;  
I only know, if we are true,  
We shall not vainly give our life.

"LEISURE is sweet to those who have earned it, but burdensome to those who get it for nothing."

#### BOG-DWELLERS.

MRS. M. E. S. CHARLES

IN the bogs and along the banks of small streams, where the willows trail their long, slender boughs in the water, grow some of our most peculiar forms of vegetable life. That curious class of plants known as insect-eating plants, is composed strictly of bog-dwellers.

In the marshes of Northern Michigan, where the half-floating, decaying logs lie in the sunshine, is found the most common and most wonderful member of this family of plants. It also grows in moist sandy spots along the New England and New Jersey coasts. This is the little sundew, which Darwin thought a worthy object of long and patient study.

A rosette of five or six small, spoon-shaped leaves lies close to the ground. From the center of this cluster arises a stem which bears small, white flowers.

The surface of the leaves is covered with a number of tiny, sensitive glandular hairs of a reddish color, to the tip of which adheres a drop of sticky fluid. That these drops may always be present it is necessary for the sundew to live where there is plenty of water for the roots to absorb, so that there may be no lack of gems to crown the leaves. These drops attract insects, and the instant the feet of one touches a gland the motor impulse is communicated to every gland on the leaf, while the poor victim is hopelessly clogged by the sticky fluid. The more the insect struggles, the more it excites these glands, and the more fluid pours out from them until wings and feet are so entangled that the insect can no longer move. Soon the leaf rolls up enclosing the captive. The gum stops up the tiny holes in the insect's sides through which it breathes, and it dies.

Meanwhile this fluid becomes somewhat changed in its character, and is, so far as can be ascertained, almost identical with the digestive fluid of animals. After several days the leaf will expand, all trace of

the insect will have disappeared, digested and absorbed into the life of the plant.

Another dweller in the bogs which catches insects and eats them, is the Venus's flytrap. It abounds in the marsh lands near Wilmington, North Carolina, and botanists say it is found native nowhere else. It much more readily adapts itself to changed conditions than does the sundew, hence is more often seen in choice collections in conservatories where it is grown as a vegetable wonder.

The leaf of Venus's flytrap is in two stories. The first story is a sort of broad footstalk; the second is the real leaf, and the part that forms the trap. The midrib forms a hinge which enables the leaf to open and close. It is nearly circular, about an inch in diameter, and edged all around with stout, sharp bristles. When an insect brushes against one of these bristles, the leaf-flaps close with a quick motion, the bristles interlocking as they cross from side to side.

If not successful in capturing the intruder the leaf presently opens out as before, ready for another trial; but when an insect is captured, the sides of the trap flatten down upon it and it requires considerable force to open it. All over the face of the leaf-flaps are the glands which secrete the digestive fluid. The glands differ from those of the sundew in that they must absorb nitrogenous matter before they can secrete the fluid. The insect is gradually digested and the leaf again expands showing no trace of its food.

On the edges of black pools and in sphagnum swamps of our Eastern and Middle States is found the familiar vegetable trap—the pitcher plant. In this plant the leaves are formed into hollow tubes, larger in the middle and tapering toward the base; these are always supplied with water in sufficient quantity to drown all insects which are unfortunate enough to be entrapped. A row of honey-bearing glands running up the outside of the tube tempt in-

sects to climb to the top, where they are almost sure to tumble to the bottom and meet their fate. If one is of a persevering nature and makes an attempt to climb the sides of the tube, he finds his escape cut off by a number of innocent-looking hairs pointing downward, and which nearly surround the top of the pitcher, making it easy enough to get in but impossible to get out.

Darwin made many interesting experiments with this class of plants, feeding them with tiny bits of raw beef, and he found that some which ate too greedily showed signs of suffering from indigestion. They changed color, refused to eat and finally died. Growing in such situations as these plants do, they cannot get some needed element of food which most plants draw directly from the soil, and in this way supplement the food gathered by the roots.

#### HARNESSING THE WINDS.

DENMARK, a low country lying between two seas, has plenty of wind, and it is utilizing it on a scale that has never been equalled before. Windmills have been used for time out of mind to pump water and to grind grain. Their appropriation of the unlimited power rushing by them has been restricted, as it has not been possible to store the power or to combine effectively the force of several windmills or make the hurricane's surplus energy do duty in days of calm.

These defects are cured by converting the wind power into electricity and equalizing its use through the storage battery. Denmark is taking advantage of this to convert its wind power into electric power for commercial purposes. It is stated that a wind of fifteen miles an hour will produce eight horsepower, and that a twenty-mile gale will develop eighteen horsepower. As the power of many windmills can be concentrated and made to serve a single plant, there is infinite possibility in this resource in any section blessed with frequent winds of considerable force.

The United States has abundant wind-swept territory. The seashores, prairies and highlands everywhere have an unlimited supply of this force. It can be converted into electric power and combined and stored for use as readily here as in Denmark. The utilization of this wind power would lessen the drain on our diminishing wood and coal supplies, and supplement the water power as a means of furnishing the land with electric energy for commercial purposes.—*Philadelphia Press*.

"REALIZING possibilities is the soul of optimism, and optimism is the soul of living."—*The Circle*.

## Around the World Without a Cent

H. M. Spickler

### Chapter XXII.

THE next morning at four o'clock we butchered a hog. As the knife was drawn from its throat the housewife wobbled out and held a basin to catch every drop of its blood. By the way in which the dogs stood and looked on I presumed the blood was to be for them. But that afternoon, when the girl brought out our supper I found that the blood had been mixed with the liver and made into a sort of sausage for us, and the four-legged dogs had to go hungry.

The third day on the farm the men fell behind

but I always refused the beer and stuck to my principles to the end.

The work was the hardest kind of manual toil, but from the second day I easily led the men. The milk had triumphed, and they knew it. When the week was over, the farmer wished to reëngage me, offering as an inducement the same big wages,—\$1.44 a week! Two of his men who worked right along with us, married men, received less than this,—one of them only eighteen cents a day, and both of them took their breakfasts at home! Had I the time I might have been able to find some German farm hands who were actually paying the farmer something to leave them work on his farm, who boarded themselves entirely at home.

German Farmer Plowing with Cows. Note the Rows of Apple and Cherry Trees along the Road.

and stopped oftener to talk. I was just beginning to find my muscles and to enjoy the hard work.

"Come on!" I said, when they put me in the lead, "hoe up your row there, you beer drinkers." When I got too far ahead I sat down in the shade of the hops as they wound up on the tall crooked poles. Sometimes I would be almost asleep when they came up to me. The milk was helping me to find my Yankee strength. German beer was helping them to lose theirs. Sometimes the girl would pretend to forget about the milk and bring beer instead,

chest were usually bare. When I rolled over, it was sure to go off if I did not hold to it, and when I but took a full breath, off that cover would go. The third time it fell off was getting-up time, four o'clock, and so it acted like an alarm-clock,—an alarm that "went off" three times a night!

After this rest, I was glad to take my wheel again. How I shot around those curving hills, with cherry and apple trees lining both sides of the perfect roadway! Part way down a mountain I halted at a spot where two deer darted across the way and

plunged into the forest below. The woodland was all about me with the silver stream, crossed by an arched stone bridge, half hidden by the trees, in the distance.

That was the most wonderful springtime I ever had. May and June had tumbled me from skies of blue into valleys of green. I had been up and down every hill in Germany, along every stream, the Rhine, the Weser, the Oder, the Elbe and the Danube, and my lungs were strained with draughts of fragrant air from red and blue and pink flowers, twenty acres of them in one field, the kind of flowers that grow elsewhere only in art galleries.

My spring began in Ireland, then in Scotland in fuller bloom and faster and faster it burst into flower in merry England. Then after chasing that same spring over France, Belgium and Holland I had four weeks of it in Germany. When spring was passing in one country I hurried into another, and was living four or five lives without growing older in any of them. I was seeing the strangest sights of human customs and human faces, blent with the prettiest scenes and the most varied, with nothing to do but look and ride.

On one side of the cherry-lined roadway I saw a woman, hitched to a plow, with a cow. On the other side were sixteen women and one man hoeing side by side in a forty-acre field, while behind them strode a man with a long-lashed whip.

There is only one way to see these countries and that is by cycle or auto. No other tourist got so much out of his trip as I was getting. He enjoyed his wine and beer less than I enjoyed my black bread and spring water. He pretended to be rich. Everybody knew I was poor. People set but one foot to him, the best, I got both! I followed the geeseherders, worked with the milk cows, choked on the black bread and slept in the country bed.

And how I coasted! For thousands of miles those rubber tires, so soft and springy, flew without a flaw. All the other wheels along the way were equipped with two brakes. Mine had only its coaster brake. But with both of their brakes no one dared to coast with me. While going at a terrific speed down a dangerous hill a gentle pressure on my "New Departure" would bring me to an instant control. I had never seen those hills before and didn't know what was farther on, if anything, but while the rapidly passing scenery, unfolding in undulating panorama on each side, hill and valley opening to me their enchanting visions, desired me to pause, the more fascinating and unknown, but bewitching landscape ahead, half hidden by the azure of the wooded mountains, made my wheel take grade after grade as though it were a motor car! So perfect the roadway, so sure my wheel. I sat on its back a master, with eye as calm as a quiet

brook. Nature and I were one. My wheel, tested so often, became my confidante. Over her back I threw the lines and let her leap and plunge and sing for very joy, with the breeze bruising my face as I shot through the artificial hurricane and up and around the other hill, so intoxicated with the delight of going fast that like dangerous wine wants more as more is taken.

#### MODEL SCHOOL MANAGED BY A WOMAN.

"SEEING is believing," and proof against which there is no argument. We are impressed more by what people do than by what they say. The very center of attraction, that which interested everyone more than anything else on the recent program of the County Teachers' Association of Illinois at Macomb, was the country school taught by Miss Mabel Carney, a mile and a half west of the normal school. "When I stepped into the hall it seemed to look like a home," said one teacher to the writer, "and those desks in the schoolroom looked out of place; with them out it would be like a home." Others mentioned the neatness and homelikeness of the place.

The hall was clean and bright with its light colored linoleum and walls in a good shade of green paint; it could not be told from a hall of a dwelling. The room had a large bay window with a cosy seat and cushions. Two good pictures, one being "The Gleaners," hung above the blackboard. A piano stood across one corner. New single desks, plenty of new blackboards, a bulletin board, two low tables and several small chairs down in front, curtains, rugs and everything appropriate to the work done there.

The new basement was built of concrete blocks and the floor of concrete. A furnace occupied one corner and two tables were in the rear; these were used for manual training and meals. The floor was left clear of benches for whatever work or play might be desired. Off one end was a small storeroom, and a larger coal bin. There is a good board walk to the door, the well is completely covered with a large flat stone; the old coal house is gone, and the yard has been much improved.

But the conditions two years ago are told as follows by Director F. G. Bonser, of the Macomb normal training school:

"The paper was old and dingy; the blackboards cracked and useless; the plaster missing in spots; the window panes broken and gone, and paper patched; the seats old and double, and elaborately decorated with 'the jack knife's carved initial'; the stove an ordinary unjacketed affair. The teacher's first work was sweeping cob-webs, scrubbing floors and stove-polishing. The yard was large and well shaded, but marred in front by the presence of the usual dilapidated coal house. The outbuildings were mere shells, disgracefully open and scant of boards."

Pres. Alfred Bayliss of the Macomb normal school knew Miss Carney as a country school teacher of unusual success and thorough normal training, and he secured her to develop this typically needy rural school and make it a training school for student teachers. The only financial help given the district is that of providing the teacher. The reconstruction cost the district \$568. The boys painted the house and fence and put on the basement ceiling, made a book-case, work tables, and other pieces of furniture, and the piano was to be paid for largely by the children's efforts.

Prof. Bonser says that "what has been done here can be done anywhere, by any teacher who has the real teaching stuff, and who knows what a school really ought to be and have." But the social extension is better still. Prof. Bonser said to the association:

"The teacher has gone out into the homes of the patrons to see their needs and to get their view points, and to carry to them the view points and desire of the school to be a living, helpful thing in their work and in their whole lives. Mothers' meetings have been held, evening meetings for entertainment, social intercourse and general improvement. A girls' culture club, including young women outside of the school as well as girls in school has been formed. Money-making socials have been held. The teacher has enlisted the help of everyone of her 30 to 35 children, and every patron who can aid in any way. And the results are worthy all the effort. The school's influence has changed the lives of the people in matters of dress, of household decoration, of keeping front yards and back yards, of ventilating rooms, of attendance on lectures and entertainments in the neighboring city; of their reading, of their farming, and of their plan for the higher education of their children. This school is literally socializing and spiritualizing the school district."

No salary is big enough to pay for such work. The teacher's principal pay is in seeing this whole community respond to her magic touch and make so fine a growth toward the new country life of the new farmer, in thus holding out to many a student and visiting teacher a new picture of what a country teacher can do, and in knowing that these teachers will repeat some part of it in their own districts. Under the charm of such rich return she scarcely knows that she does the work of two or three.

What is the secret of this teacher's power to enlist a whole community in such a happy improvement? Once upon a time she picked up a great ideal and an ambition of the same size, and with the growth of these her soul is not her own. She gives her very self in making the lives of the children "large and lovely." She cannot be made to see that these new things are impossible and goes right ahead and does them. She has gone to the pains to get a thorough

normal training that puts a plot into all her work, an edge to all her implements and a steady hand to use them. Among the incidentals are an emotional nature and an outgo of influence that but for these unconventional traits might pass for magnetism.

This is a dangerous and dynamic combination. Let others beware of contracting such a gravitation or "something will be doing" in their locality.

Some idea of the practical and interesting work done is seen in the manner of studying about a home. The teacher and class made trips to look at homes, talked about the plan of a house; visited furniture stores, studied the lighting and plumbing. They studied not merely an ideal place, but what could be done now under immediate conditions.

A class is assigned work and sent to the basement to do it, or left to study while the teacher goes to the basement to hear a class. Sometimes a class or two recites out under the trees. The teacher trusts them and they respond to her faith. She explains it, "They care for the school as much as I." Sixty visitors have been present at a time, and twenty-four county superintendents have visited this school. Students elect to take their teacher training here.

From gross carelessness in dress, thinking that anything would do for school, the children have come to show taste and pride in appearance. Miss Carney "gets acquainted with the children" and makes them know she "cares for them," the pith of it being that she does care for them. In teaching music she had the children learn about some of the great composers and the masterpieces; from this big general appreciative side they came down to the details; the children have learned to play good things, not merely "ragtime."—*Selected.*

#### "BOY WANTED."

PEOPLE laughed when they saw the sign again. It seemed to be always in Mr. Peters' window. For a day or two—sometimes only for an hour or two—it would be missing, and the passers-by would wonder whether Mr. Peters had at last found a boy to suit him; but sooner or later it was sure to appear again.

"What sort of a boy does he want, anyway?" one and another would ask; and then they would say to one another that they supposed he was looking for a perfect boy; and in their opinion, he would look a great while before he found one. Not that there were not plenty of boys—as many as a dozen used sometimes to appear in the course of a morning, trying for the situation. Mr. Peters was said to be rich and queer, and for one or both of these reasons, boys were anxious to try to suit him.

"All he wants is for a fellow to run on errands; it must be easy work and sure pay"—this was the way they talked to one another; but Mr. Peters wanted something more than a boy to run errands. John

Simmons found it out, and this is the way he did it. He had been engaged that very morning, and had been kept busy all the forenoon at pleasant enough work; and although he was a lazy fellow, he rather enjoyed the place.

It was toward the middle of the afternoon that he was sent up to the attic, a dark, dingy place, inhabited by mice and cobwebs.

"You will find a long, deep box there," said Mr. Peters, "which I want to have put in order. It stands right in the middle of the room—you can't miss it."

John looked doleful. "A long deep box! I should think it was!" he said to himself, as the attic door closed after him. "It will weigh a ton, I guess; and what is there in it? Nothing in the world but old nails and screws, and pieces of iron, and broken keys, and things—rubbish, the whole of it. Nothing worth touching. And it is as dark as a pocket up here, and cold besides. How the wind blows in through these knot holes! There's a mouse! If there is anything I hate it's mice! I'll tell you what it is, if old Peters thinks I'm going to stay up here and tumble over his rusty nails, he's much mistaken. I wasn't hired for that kind of work."

Whereupon John bounced down the attic stairs three at a time, and was found lounging in the show window an hour afterwards when Mr. Peters appeared.

"Have you put the box in order already?" was the gentleman's question.

"I didn't find anything to put in order; there was nothing in it but old nails and things."

"Exactly. It was the nails and things that I wanted put in order. Did you do it?"

"No, sir, it was dark up there and cold; and I didn't see anything worth doing. Besides, I thought I was hired to run errands."

"Oh," said Mr. Peters, "I thought you were hired to do as you were told."

But he smiled pleasantly enough and at once gave John an errand to go downtown; and the boy went off chuckling, declaring to himself that he knew how to manage the old man; all it needed was a little standing up for his rights.

Precisely at six o'clock John was called and paid the sum promised him for a day's work; and then, to his dismay, was told that his services would not be needed any more. He asked no questions. Indeed, he had time for none, as Mr. Peters immediately closed the door.

The next morning the old sign, "Boy Wanted," appeared in its usual place.

But before noon it was taken down and Charlie Jones was the fortunate boy. Errands—plenty of them! He was kept busy until within an hour of closing. Then, behold!—he was sent up to the attic to put the long box in order. He was not afraid

of a mouse nor of the cold, but he grumbled much over the box. Nothing in it worthy of his attention. However, he tumbled over the things, grumbling all the time, picked out a few straight nails, a key or two and finally appeared with this message:

"Here's all there is worth keeping in that box. The rest of the nails are rusty, and the hooks are bent or something."

"Very well," said Mr. Peters, and he sent him to the postoffice.

What do you think! By the close of the next day Charlie had been paid and discharged, and the old sign hung in the window.

"I've no kind of a notion why I was discharged," grumbled Charlie to his mother. "He said that I wouldn't suit. It's my opinion that he doesn't want a boy at all, and takes that way to cheat. Mean old fellow!"

It was Crawford Mills who was hired next. He knew neither of the other boys, and so did his errands in blissful ignorance of the long box until the second morning of his stay, when, in a leisure hour he was sent to put it in order. The morning passed, dinner time came, and still Crawford had not appeared from the attic. At last Mr. Peters called him. "Got through?"

"No, sir, there is ever so much more to do."

"All right. It is dinner time now. You may go back to it after dinner."

After dinner he went back. All the short afternoon he was not heard from, but just as Mr. Peters was deciding to call him again he appeared.

"I've done my best, sir," he said, "and down at the very bottom of the box I found this."

"This" was a five dollar goldpiece.

"That's a queer place for gold," said Mr. Peters. "It's good you found it. Well, sir, I suppose you will be on hand tomorrow morning?"

This he said as he was putting the goldpiece in his pocketbook.

After Crawford had said good-night and gone, Mr. Peters took the lantern and went slowly up the attic stairs. There was the long, deep box in which the rubbish of twenty-five years had been gathered. Crawford had evidently been to the bottom. He had fitted shingles to make compartments, and in these different rooms he had placed the articles with bits of shingle laid on top, and labeled thus: "Good screws," "Picture Nails," "Small Keys," "Somewhat Bent," "Picture Hooks," "Pieces of Iron whose use I don't know," and so on through the long box. In perfect order it was at least, and very little that really could be called useful could be found within it.

But Mr. Peters, as he bent over and read the labels, laughed gleefully, and murmured to the mice: "If we are not both mistaken, I have found a boy; and he has found a fortune."

Sure enough, the sign disappeared from the window, and was seen no more.

Crawford became the well-known errand boy of the firm of Peters & Co. He had a little room neatly fitted up next to the attic, where he spent the evenings, and at the foot of the bed hangs a motto which Mr. Peters gave him. "It tells your fortune for you, don't forget it," he said, when he handed it to Crawford; and the boy laughed and read it curiously: "He that is faithful in that which is least, is faithful in much." "I'll try to be, sir," and he never once thought of the long box over which he had been faithful.

All this happened years ago. Crawford Mills is errand boy no more, but the firm is Peters, Mills & Co.—a young man and a rich man.

"He found his fortune in the long box of rubbish," Mr. Peters said once, laughing. "Never was a five dollar goldpiece so successful in business as that one of his has been; it is good he found it."

Then, after a moment of silence, he said, gravely: "No, he didn't; he found it in his mother's Bible: 'He that is faithful in that which is least, is faithful also in much.' It is true; Mills the boy was faithful, and Mills the man we trust."—*Selected*.

#### A BOAT MADE OF NEWSPAPERS.

ON July 13 of the present year there might have been observed, sculling leisurely from the mouth of the Raritan River into New York Lower Bay, a bronzed and weather-beaten boatman, whose racing shell, because of the fact that it was covered from stem to stern with the printed headings of newspapers representing practically every corner of the globe, made an immediate bid for notice and closer inspection. The boatman was Capt. George W. Johnson, fifty-eight years of age, but looking forty; and his polyglot boat, built by himself of some three thousand newspapers, had served to carry him during the preceding two months on a 1,200-mile trip from St. Augustine, Fla., to New York harbor, practically the whole of the trip being made on salt water, and not a little of it on the open sea. Of course, the greater part of the route followed lay in inland waters, although in crossing some of the sounds the little craft was at times many miles from the nearest land. Thus, in crossing St. Andrew's Sound, an open stretch of six miles had to be crossed, and five miles across St. Symon's Sound. After entering Chesapeake Bay, Capt. Johnson followed the west bank to Annapolis, whence he rowed across the 12-mile stretch of water to the east shore. Another reach of 12 miles was made in crossing the mouth of the Potomac River. Naturally, he hugged the land pretty closely, being usually from fifty feet to a quarter of a mile from shore.

The little craft was built during the month of April at St. Augustine. The frame consists of a

keelson of wood,  $\frac{1}{2}$  by  $\frac{3}{4}$  inch, and gunwales,  $\frac{7}{8}$  by 1 inch; and it is divided into thirteen water-tight compartments by twelve bulkheads  $\frac{1}{4}$  inch,  $\frac{1}{2}$  inch, and 1 inch in thickness, according to position. The method of laying on the paper shell was as follows: molding strips  $\frac{1}{4}$  by 1 inch were laid longitudinally from bulkhead to bulkhead, being fastened to false battens nailed around the edges of the bulkheads. Upon this form, of which the battens and molding strips alone were temporary, the paper shell was built up. The first set of sheets was laid with a 3-inch lap, and the successive layers were put on with a 1-inch, 2-inch, or 3-inch lap, as the case might be. After the first sheet was in place, it was carefully shellacked over, and the next sheet laid down carefully and smoothly upon it. The process was repeated, until there were thirty thicknesses, involving the use of three thousand pages, the final thickness of the shell being about  $\frac{1}{4}$  of an inch. A special shellac of three pounds to the gallon, much thicker than the usual painter's shellac, was used. The deck was built up of eighteen thicknesses of paper. In placing the last layer on both the hull and the deck, care was taken to expose the headings of the papers, and as these represent all the countries of Europe, papers from places as widely separated as Egypt and Japan, to say nothing of papers from every State in the Union, from Nome, Alaska, to San Diego, Cal., the little craft has a decidedly cosmopolitan flavor. The boat is twenty feet long, twenty inches beam, six inches deep, has three inches draft, and three inches freeboard. When it was first placed in the water it weighed ninety-one pounds; at present its weight is one hundred and fifty pounds.

The adventurous captain of this small craft, who was formerly a printer on Frank Leslie's, is one of the oldest of the well-known scullers on the Harlem River, and was one of the organizers of the Nonpareil Boat Club. Careful attention to diet and a wholesome outdoor life, with abundance of exercise, show their effect in his fine physique.—*Scientific American*.

#### A LESSON IN GIVING.

NANNIE had a bright silver dollar given her. She asked her papa to change it into dimes.

"What is that for, dear?" he asked.

"So that I can get the Lord's part out of it." And when she got into the smaller coins she laid out one of the ten: "There, I will keep that until Sunday." And when Sunday came, she went to the box of offering in the church vestibule and dropped in two dimes.

"Why," said her father as he heard the last one jingle in, "I thought you gave one-tenth to the Lord."

"I said one-tenth belongs to him, and I can't give him what is his own; so if I give him anything, I have to give him what is mine."—*Selected*.

# THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE, ELGIN, ILL.

Subscription price, \$1.00 per Annum, in Advance.

The Inglenook stands for material and spiritual progress. Its departments are: Literary, Editorial, Home, Cream of Magazines, World News.

Its qualities are: Good Sentiment, Moral Convictions, Inspiration.

Its purpose is: To safeguard home life by supplanting and counteracting bad literature.

Its scope of matter is: Scientific, Religious, Educational, Philanthropic, Economical, Sociological and Financial.

Its field is: The World.

Liberal commission given to agents. Sample copies are given upon request. When changing address give both old and new addresses.

Entered at the Postoffice at Elgin, Ill., as Second-class Matter.

## "BOOKS TAKEN UP."

AGAIN the sound of the school bell is heard in the land and troops of boys and girls are filling the playgrounds and halls with the sound of their merry voices.

Again the earnest teacher is brought face to face with her responsibilities and in view of them almost unconsciously makes a hasty calculation of her ability to discharge them with credit, planning wisely for the strengthening of the essentials in which she is weak.

Again the father and mother are reminded that their little kingdom is not an independent one, but is so related to others that its highest good can only be secured by their hearty coöperation with those who are working for the good of all.

In short, the whole nation is at work, and the work is of such a nature as to bind the people closely together, thus assuring its ultimate success. All that is yet needed is that each one, as he takes up his part of the work, shall be true to his conception of the ideal toward which all are working.

Vacation, with its various recreations, now holds a more important place than formerly in the educational world. Once it was endured as a period of enforced rest from the all-important pursuit of book knowledge. Now the whole twelve months is rather looked upon as the school year, the addition being a three-months summer school in which the scholar has innumerable opportunities for maturing and testing the many practical things considered in the schoolroom.

To be sure, vacation owes its importance to its power to further the ideas aimed at in the school term proper, but it is found that this is increased when the scholar follows his own inclinations which after all have been largely created or molded in the schoolroom. Boys and girls at the end of a school year no longer have handed out to them the solemn warning that if dust is allowed to gather on their books

during vacation they will be in the way of reaping all the woes of one who wantonly wastes his time.

Beliefs as to what really constitutes an education are continually changing, the present tendency being to include much that is really practical. *To know* is coming to be synonymous with *to do*. Squeers' method is becoming universal. This view of the matter has much to commend it. Besides giving the scholar an easy entrance upon his life work, it tends to tear down the great wall of misunderstanding between student and manual worker, giving dignity to all honorable work in the eyes of the former, thus blotting out, in a measure, all classes and castes.

Altogether, we have great confidence in the successful working out of the present system of education. And while some mistakes are being made, we see no reason why the boys and girls of our land, through the help of the schools, may not with an onward stride carry on the work of the world when it is entrusted to them.

## DOING OUR BEST.

FAILURE to bring success out of one's efforts is attributed to various causes. Frequently the reason given is a sort of excuse for the worker, as, that he was a misfit, his ability lying in some other direction. Or, his handicap may have been imposed by the peculiar circumstances surrounding the case.

It must be granted that we are not all equally fitted for the same kind of work, and also that "circumstances alter cases." But we are master of circumstances at some stage of their course oftener than we are compelled to admit, and our unfitness for some particular kinds of work should, in a good many cases, for the sake of truth, be given another name.

Most of us, if we study ourselves seriously, will have to confess that if defeat comes our way, it will be because of the lack of a hearty appetite for our work and a lack of concentration. We believe it would be safe to say that most failures could be traced to this latter cause. One may love his work, he may think he is especially fitted for it, and yet he may have fallen into such a habit of dawdling that he accomplishes only a small per cent of what he is capable of doing. That one may get some idea of how much he loses by this lack of concentration, let him watch himself awhile and see how many thoughts are encouraged that are foreign to the subject in hand, or how many unnecessary steps are taken.

Sometimes we court results that are less brilliant than we might win, because we are satisfied with simply doing well. We seem to think that merely to do well will bring us a passing grade when in fact we have no right to expect merit for anything short of our best. We owe the world our best and we need it ourselves for the full development of our charac-

ters. In the final summing up we will find that all we can do amounts only to "that which was our duty to do."

### THE LOAD TOO HEAVY.

WHEN I was a lad of sixteen I worked for a farmer who drew his winter's firewood from a lot some three or four miles distant from his house. The house adjoined the public highway at the top of a short, steep hill, down which it was necessary to go on the way to the woodlot. In those days most of the farmers in that section used oxen almost exclusively for teaming purposes.

On one of these trips an unusually heavy load was placed on the wagon. As the oxen were large and strong, it was not thought that they were overburdened. In fact, they made no difficulty in drawing the load until they were nearly home and had reached the beginning of the hill. This left but a short distance from the farmhouse yard. When this point was reached the oxen appeared unable to draw the load. Each attempt to urge them up the hill was fruitless. They seemingly exerted all their immense strength to perform the task, and though literally stimulated with voice and lash it did no good.

It was provoking to be so near and yet be unable to get any farther. However, as a last resort, I was told to go into a nearby field, yoke up a young pair of oxen that were grazing there, and bring them to the assistance of the others.

As I did so, I prepared to connect a chain from the yoke of the young oxen to a ring in the end of the tongue of the wagon. But I was told not to do so. The farmer said he believed that the oxen hitched to the load could draw it easily enough if they were only a mind to. So I merely placed the oxen I had gone for at the head of the others. At the command of "Haw, gee, get up there!" with a touch of the lash on their broad backs, they pulled the load up the hill without difficulty or apparent expenditure of undue strength. I have always believed that they thought they could not do it, and that it was the impression of having assistance that enabled them to overcome an otherwise impossibility.

This reminiscence of years ago often comes to me as a forceful reminder of the fact that failures to accomplish certain ends frequently have direct connection with the thought or idea of impossibility. Apart from the curiosity of this case, as it relates to dumb animals, it has but little value if we cannot profit from it as a lesson for our own guidance in the performance of the difficult tasks of life.—*Farm Journal*.

THE passion for cheapness must not be dignified by the name of thrift. Thrift is to abstain from buying things we cannot afford.—*Selected*.

### A LOVE DREAM.

RICHARD BRAUNSTEIN.

Two souls met in a far-away land,

The beautiful land of a dream—

And plighted their troth in forget-me-nots,  
That grew by a sunlit stream.

And the two souls met again on earth,

And vowed for aye to be true,

Then drifted away, on the silent stream,  
To a land o'er the star-flecked blue.

And two souls met in the endless world,

Where love-life forever dwells,

And plighted their troth for eternity  
In the fairest of immortelles.

### WHERE PLEASURE IS.

You may think you are enjoying all the good there is in life

When you bend your mind to winning big rewards in business strife.

You may think you're having pleasure when you play the social game,

Or imagine you are happy as you reap rewards of fame.  
You may watch the gold and glitter of the ever passing throng,

And imagine life is pleasant as a summer evening's song.  
But in this life's greatest pleasure you will never have a part

Till a baby's tiny fingers reach and twine about your heart.

You may think that gold will purchase all the good life has in store;

You may think that life is living but to reach and grasp for more.

You may travel foreign countries, you may sail the ocean's foam,

And imagine greatest pleasure may be found away from home.

You may lead in the procession marching on to great success,

Or imagine you are happy in the battle's storm and stress,  
But towards the goal of pleasure you've not even made a start

Till a baby's tiny fingers reach and twine about your heart.

Oh, the lights of home! How pleasant when the tired worker sees

Beams that flash to him a welcome through the nodding, bending trees!

Oh, the home sounds! How the music rings and swells upon the air

When the little home's door closes, shutting out the toil and care!

Oh, the laughter of the children! How it lifts the weary load

From the worker's tired shoulders as he rests beside the road!

What a wealth of love and pleasure from the very moment start

When a baby's tiny fingers reach and twine about your heart!

—The Commoner.

BE not so ready to charge ignorance or mistake upon others as to suspect yourself of it.—*Dr. Isaac Watts*.

## To Our Boys and Girls

Flora E. Teague

I AM a friend to the young people. For thirty-five years I made them a study. I entered into their joys and pleasures, and spent many happy moments with them. I tried not only to stand in the position of instructor to them, but also as a warm, loving, helpful friend and guide, a counselor, a confidante, and many a heart-sore lad and lass have I mothered. My interest is still with them, though I have but comparatively few opportunities now in coming in contact with them.

I have not forgotten my own happy, youthful days. Neither have I forgotten some embarrassing situations caused by the lack of broader training, nor some thorny paths into which I allowed my restless feet to wander. Many of those unpleasant things I would now gladly recall if I could. Since I cannot do so I feel it would be a good thing to come to my young friends with a heart full of love and thus try to assist them in avoiding some of the hard places in life, as well as to tread in safe and pleasant paths.

Awkward and embarrassing moments when we did silly things instead of wise ones do not afford us pleasant recollections. In fact, we would like to blot them out of our memories. Yet how helpful they were to us when further equally perplexing situations confronted us, we shall likely never know. Many of these difficulties might be overcome more often than they are, were we not so rash and impetuous. Let me, therefore, advise you to cultivate coolness and calmness. Avoid rashness of speech or deed. You will thus be saved many unhappy moments.

Do not be too anxious to be seen or heard. Do not fear your ability and greatness will not be recognized unless you force your presence or speech upon others. "Speech is silver, but silence is golden," is a very truthful old adage.

Be closely observant. Notice what the cultured and refined do to make themselves agreeable and attractive companions. Do not be too anxious to be popular. Never do things for effect. Do not disgust your associates by flattering them to make yourself popular. Be yourself. Be true to your convictions and principles even if you must stand alone.

Do not be too argumentative. If you are a fluent talker, do not force yourself upon others all the time. You can gain as many friends by being a good listener to the conversation of others as you can by trying to do too much of the entertaining. Be kind, courteous, and considerate. These qualities always win friends. Do not persist in running jokes. No one likes to be held up to ridicule. While many may smile at your wit in a joke, no one thinks any kinder of the joker. Don't tell too many "That reminds me" unless you wish to become a bore to your friends. Refrain from talking "nothings." Read enough good literature to carry on conversations in lines of helpfulness and interest. Do not gossip. That is vulgar and low. Avoid giggling, a disgusting habit that young girls are prone to fall into. Be not brazen or presumptuous; neither cringe, but feel that you are an American citizen worthy of respect and consideration if you are gentlemanly or ladylike in your conduct.

Treat all respectfully, but select your boon companions from among the pure and best.

Lordsburg, Cal.

### THE HOME.

IDA M. HELM.

THE home is the necessary basis of all civilizations. From the home come our presidents, statesmen, ministers and all leaders, and from the home the masses of humanity come to act together in service for country and society and they go back to the home for rest and recreation. But for development and right living, life cannot be confined to that basis alone.

In Oriental, ancient civilizations, still remaining, the seclusion of women is absolute, they are incarcerated behind the purdah veil, not to be seen or heard of outside the home; the seclusion prevents the mind from expanding, the original narrowness is retained and ignorance and selfishness are the characteristics of these imprisoned women. They are kept like dolls and "the effect of the home and nothing else upon these women has been precisely what it would have been on men,—cramping dwarfing, blind-

ing, choking, keeping down the higher human instincts; keeping up the punitive instincts which ought long ago to have been reduced to their true proportions as but a small part of real human life." The men, untrammelled, have been free to go and come as they pleased and according to the proportion of their freedom has been their growth; thus the disadvantage to the race of the development denied women has been partly counteracted by the advantage of freedom and growth extended to the men.

England and America have the freest women, and nowhere can there be found more ideal, happy homes, and those nations lead the world's advancement. England and America, have not lost their homes, they are loved and enjoyed and they find scope for action according to the advancement of the home makers.

The modern woman is not content with the home for her only field of expression, she needs outdoor exercise for physical health and strength, and the mind for full development must have freedom, it must be let out. All its powers must be exercised the same as the muscles and tissues of the body. The world is moving, it is making rapid progress, the evolution of industry is wonderful, and we would not think of going back to the primitive ways of doing our work, such as using the cradle and hand-rake in harvesting, and using the spinning wheel and old-fashioned fireplace and living in little log cabins. Both women and homes must respond to the impulse of growth.

Women owe a service to the whole world, they have other duties besides their personal ones; human beings are social creatures and the social service needs our attention. And we have civic duties. Many of our women are confined to the grade of domestic servants, and many have homes of poverty and they must toil and drudge from day to day to earn a scanty living; their energy is absorbed in ceaseless drudgery; they have no time or ambition to cultivate their mind powers; they cannot rise to a broad view of life's problems. The government as well as women owe a duty to such homes. Such homes represent the one extreme, and the other side is the butterfly. One of the most pitiable human beings to be found is a rich and idle woman, one who will work neither in her home nor outside of it, but who lounges in gaudy frippery, displaying her vanity in dress, and in home and furnishings, receiving all the kindnesses and benefits that human labor and skill can do for her and like the Dead Sea giving nothing in return, not helping a single creature—unless it be a pug dog—and not trying in any way to fulfill the mission for which she was given a place in this world. She is not only standing in the way of some one else, she is standing in her own way. She cannot become the noble being that her God-given possibilities call for;

in the contemplation of these personal affairs she falls far short of expanding her mind powers. The divorce problem is confronting our nation today. Many wealthy women, as well as those of the poorer classes, have two living husbands. And their social standing is not hurt one bit. I shall not speak of the immorality of this. In the days of our grandparents it was not thus. To them nothing was held more sacred than the marriage vow. Why do we hold it less sacred than they did? Is our standard of morals lowering?

How often money or position is sought after in marriage and this very thing makes the holy bond less sacred; lives are left empty and they will starve with millions of money, high degrees and grand houses. Love and congenial companionship is what the human heart yearns for. "Can two walk together except they be agreed?"

More than beauty is required to insure a happy matrimonial journey through life, the delicate arts of home making must be understood. Mrs. Davis tells about a reception she attended in Jersey City where the guests were the owners and employees, and their wives, of a great publishing house. Here were brought together, socially, men and women whose education and circumstances were widely different. She says: "The marked feature of the assemblage, and it was very marked, was the superiority of the men to the women." Mrs. Davis said to her host, "These women actually seem to belong to an inferior and more ignoble race than their husbands," and she asked him if he could explain it. "The men and their wives," he said, "were probably on a level when they were married. But our business tends to educate and develop every man employed in it. He is brought every day into contact with the news of the world and learns much insensibly of books and of great movements of science, politics and religion. His wife, on the other hand, keeps her interests shut in her home,—her kitchen-maid, her clothes, and the gossip of the neighborhood. Very likely they do not realize that one of them is walking out of doors and the other in a dark little tunnel. But so it is. You see the result." If women would, besides keeping the inner circle bright, take an interest in the things of the outside world, they could at least keep better step with their husbands and they would not be worse home-makers for it. Good books and papers can be had at a small cost and they help one so much.

If at home men make a secret of their business affairs and their wives have no knowledge of how much money they have a right to spend, the man has no right to place all the blame on the wife if the outlay is more than he can afford.

Then there is religion, perhaps they have neglected to make room in their home for the One who always

brings peace and joy. No home is complete without the loving All-Father. He will guide the affairs of home aright and keep the fire of love aglow on the hearth of home.

Ashland, Ohio.

#### THE PARENT'S PROFESSION.

"ARE the great majority of men and women ready for their children when these come to them?" asks Christine Terhune Herrick in the *Woman's Home Companion*. "Would you commit to the care of the average parents an important enterprise in which you were especially interested, and to which they had given no more study than they have to parenthood, secure that right feeling and good intent would insure an ultimate happy result?"

"In spite of the apparent light-heartedness with which the responsibility is usually assumed, it is not an easy thing to be a parent, to fill this position into which men and women rush without a tithe of the thought and preparation they would bestow upon a calling of infinitely less importance. To take charge of the bodily welfare of a little child is no such trifling matter that a heedless girl with no knowledge of life forces, of hygiene, of dietetics, or of ordinary sanitation should assume it as lightly as she would the care of a new doll. More perilous even than this are the issues involved in the drill of a child in habits of obedience by a woman without self-discipline, in self-control by a woman who does not know herself, in knowledge by one who is herself an infant in her perception of all that underlies life and death, mortality and immortality."

#### TO CLEAN A CLOGGED SINK.

If the pipe of your kitchen sink becomes clogged, place your hand over the drain, being careful to hold the sides of the hand and tips of the fingers firmly on the sink. Allow water to the depth of one inch to run into the sink, then raise and lower the palm of the hand until you think the impediment has been removed. After this, pour a quart of scalding water and soda down the pipe. This will carry away any waste that remains.—*The September Delineator*.

#### UNFERMENTED GRAPE-JUICE.

A good recipe for making unfermented grape-juice is as follows: Five pounds of thoroughly ripe grapes; wash clean and pick from the stems. Put over them three pints of cold water and cook in a porcelain-lined kettle. When sufficiently cooked strain the juice through a bag made of cheese-cloth. Add one pound of granulated sugar; heat to a boiling point, and bottle in clean sterilized bottles. Treated in this way there will be very little sediment, but in the course of a few weeks a small amount will form. If it is desired to get rid of this the juice can be

put in large bottles or jugs until the sediment has formed, after which it can be drawn off by a tube, and after sterilizing again put in bottles. I think it is customary with the merchantable product to get rid of the sediment in this way.—*Farm and Fireside*.

#### WHAT SHALL WE THINK ABOUT?

Pessimism leads to weakness,

Optimism leads to power.

—Professor James.

"I DON'T believe our thoughts have any effect upon the body," said a young girl to me not long ago.

"What made the color leap to your cheeks when your aunt found fault with you yesterday?" I asked.

"Why, she made me angry. I thought"—

"And your thoughts made the blood rush to your face?" I interrupted.

"Well, I suppose—of course we know thoughts affect the blood in the body some, but,"—and then, realizing the thoughtlessness of her remark, the girl blushed again.

We in the twentieth century are beginning to suspect that it makes a great difference to us—body, mind and spirit—what sort of thoughts we are entertaining from day to day. We are giving more credence than formerly to the saying that "Sorrow kills and joy makes alive." We notice that worry makes wrinkles, that sad thoughts dull the eyes and glad ones brighten them, that fear contracts the chest and bows the figure and courage expands the chest and makes us hold up our heads. We observe that our thoughts get into our voice in some inexplicable way and make it sound weak and irritable or strong and joyous, according to the tenor of the thoughts. These observations lead us to wonder if our thoughts are not at work elsewhere in the body, building it up or tearing it down, making it a healthy body or a diseased one.

Physicians recognize that thought has great power over the body. Dr. Gorham, in an article on the Physiological Effect of Faith, says: "It is a well-known physiological fact that fear may temporarily interrupt any or all of the functions of the body."

\* \* \* The digestion of food, the beating of the heart, the excretion of tears, etc., are profoundly interfered with by fear. \* \* \* The sympathetic system is not controlled by will, but always disturbed by fear and as truly encouraged and stimulated by faith." In this same article he tells us that fear, jealousy and anger are likely to throw the whole digestive system into wild confusion.

We can all bear witness to the truth of these words. Can we not recall instances when our appetite was suddenly taken away by hearing bad news; when we were made ill by being terribly angry; when we forgot all about some indisposition because a dear friend appeared unexpectedly?

If history and science and our own experience testify to the fact that thoughts have power over the body, does it not behoove us—being ignorant in regard to the extent of that power—to cultivate an attitude of happiness, to give the right of way to cheerful, courageous, uplifting thoughts rather than to those that are morbid and fearful? Our thoughts are much like sheep, one follows another and they all obey the will. Let the will but persist in recalling them from forbidden paths and starting them along the highway where the outlook is inspiring and, in time, they will go along that way from force of habit.

What a difference it would make to our lives were we to begin today and think of God—*persist* in thinking of him as really existing and looking out for his children. We do not need to make a great fuss about it but simply "take comfort in him," as James Russell Lowell expresses it.

And in regard to our friends—why not rejoice in them all—those that are free from the limitations of the flesh and those that are within our sight? The former are still our own and the latter are not so indifferent as our doubting hearts would sometimes lead us to think.

Last of all, let us believe in ourselves. Let us look upon ourselves not with disparagement or with egotism, but with faith. Let us think of ourselves as valuable members of society and as necessary to the world. The wise man in Proverbs says, "As he thinketh in his heart, so is he." Let us beware, then, lest, in regarding ourselves as weak and impotent, we really become so. Was it Walt Whitman who said, "What we think, we are forever building in our character"? Whoever said it spoke its truth. Moreover our thoughts are forever building themselves into the character of our neighbors; for thoughts have a way of communicating themselves without going through the formality of speech.

In conclusion, since our thoughts are written in our face and reflected in our voice; since our characters bear witness to them and our neighbors are influenced by them; since our very health testifies to their potency, let us heed the words of Paul: "Finally, brethren, whatsoever things are true, whatsoever things are honorable, whatsoever things are just, whatsoever things are pure, whatsoever things are lovely, whatsoever things are of good report; if there be any virtue, and if there be any praise, think on these things."—*The Congregationalist*.

#### TO SHARPEN SCISSORS.

WHEN your scissors get dull try sharpening them with a slate pencil, for, of course, you do not know how to grind them yourself, and they must be ground just right or they will not cut any better.

To sharpen a pair of scissors, take a long, soft slate pencil. Hold the scissors in your left hand

and begin at the top of the blade where they are screwed together. Hold the scissors so that the blade you are sharpening will have the ground side turned toward the left hand. Now draw the pencil steadily across the blade from left to right, drawing the pencil downward and out toward the point at the same time. Do this several times on each blade. When done, whet them on a fine oilstone, always whetting toward the point, or they will not cut.

Sharpening scissors with a slate pencil is almost equal to grinding them, and is very quickly done. Any woman can soon learn to do it with a little practice, and save herself the worry of trying to cut with a dull pair of scissors.—*The Housekeeper*.

#### VEGETABLE IMMIGRANTS.

Celery originated in Germany.  
The chestnut came from Italy.  
The onion originated in Egypt.  
Tobacco is a native of Virginia.  
The nettle is a native of Europe.  
The citron is a native of Greece.  
Oats originated in North America.  
The poppy originated in the East.  
Rye came originally from Liberia.  
Parsley was first known in Sardinia.  
The pear and apple are from Europe.  
Spinach came from Arabia.  
The sunflower was brought from Peru.  
The mulberry tree originated in Persia.  
The gourd is probably an Eastern plant.  
Walnuts and peaches came from Persia.  
The horse chestnut is a native of Thibet.  
Cucumbers came from the East Indies.  
The quince came from Crete.  
The radish is a native of China and Japan.  
Peas are of Egyptian origin.  
Horse-radish is from Southern Europe.

—*John Hancock Satchell*.

#### WHAT PEOPLE SLEEP ON.

"I DON'T want to go, mamma," grumbled Robbie, as the clock struck eight and his mother said, "Bed-time, my boy."

"I haven't any use for a bed, anyhow, for I'm not a mite sleepy."

"You would sing a different tune in a couple of hours, if we let you sit up," remarked the father, as he glanced up from his evening paper. "Even a bed such as is used by savages would be welcome then."

"What kind is that, papa?" asked the wide-awake boy.

"Their bed is generally on the ground, only made

soft with piles of leaves or boughs, or sometimes the skins of animals," was the reply, as he laid aside his paper and took Robbie on his knee. "The East Indians are a little more civilized, and sleep on the floor on light mattresses, which they roll up and put away in the morning."

"Tell me what some other folks sleep on," coaxed the boy, to gain a little more sitting-up time.

"Well, my son, I don't think you would like the Japanese bed very well, either, for it is merely matting, and the pillow is a wooden rest which fits closely to the neck. The Japanese women have their hair done up very elaborately, and, sleeping in this way, they do not have to arrange it every day, as your mother does," explained the father. "The Chinese have low bedsteads just raised above the ground. The Germans have bedsteads, also, but they are shorter than ours and, instead of sheets and blankets, are covered with a second mattress made of down, and sometimes they sleep between two feather beds."

"My! but that would be jolly on a cold winter night!" exclaimed the boy. "But tell me some more, papa," urged he, as his mother glanced up and he feared she might say, "Bedtime, Robbie," again.

"In ancient times," continued he, with a knowing smile at his wife, "in Palestine the bed was a simple kind of couch, used for reclining on during the day and sleeping on at night, and this couch was readily moved from place to place. The simplest kind of bed yet invented, however, except the Oriental rug spread on the floor, is one frequently to be seen in America. The bedstead consists of a folding tressel, constructed with canvas, on the principle of a camp stool, with a movable headboard at one end to hold the pillow. Its great advantage is that it can be folded up and put away when not in use."

"Why, papa, don't you remember? we had one of that kind when we went camping last summer," reminded Robbie.

"So we did, but I had forgotten," was the ready assent. "But, to go a long way from home again, I was going to say that the Romans do not like dust to fall on their faces during the night, and so they have canopies over their beds, and many are still used in England. Among the humbler classes straw is still used for beds, for there is an old superstition that no person could die peacefully on a bed of the feathers of game birds—but now, my boy, you really must go to your own nice bed," and giving Robbie a good-night kiss, he resumed his reading.—*Sunday School Advocate*.

"THIS is the time of year when a city man dreams of the agricultural life and has a nightmare every time he thinks of having to mow the lawn."

## For SUNDAY READING

### GLAD TIDINGS.

MARY C. STONER.

Oh, the wondrous, wondrous story  
Of our gracious Lord and King,  
Of the blessed gift of pardon  
And the peace his love doth bring.

Showing Christ the precious Savior  
To the soul who's lost in sin,  
Giving life from death's deep darkness,  
Bringing peace and joy within.

Oh, the goodness, love and mercy  
That could bring our spotless Lord  
To the death of vilest sinners,  
For the souls who scorn his Word.

May we feel the costly ransom  
To our sinful hearts applied,  
Find within the precious fountain  
Cleansing in the crimson tide.

Oh, may praises, happy praises,  
Fill the soul that's cleansed from sin,  
May the life so safely rescued  
Other wand'ers gently win.

Hold, our Savior, in thy keeping,  
These unworthy lives of ours,  
Grant thy great, unmeasured fulness,  
With thy boundless saving pow'rs.

Ladoga, Ind.

### LIFE BY DEATH.

OLIVE A. SMITH.

IN the natural world we are familiar with this paradox. We know that animal life depends upon vegetable death, and that vegetable life depends upon animal death. We know that there is a continual sacrifice of vegetable to animal, and of animal to higher forms of animal life. We know that animals feed upon each other. Even man, who considers himself essentially a spiritual being, nourishes his temporal life by eating the flesh of animals.

It is death which makes life possible. The death which attends the coming of autumn makes possible the new life of spring. The falling leaves decay and form a mould which protects the plant until the returning season of leaf, and bud and blossom. The seed that is planted must decay before the new life can begin. "That which thou sowest is not quickened except it die."

In a thousand ways we are made conscious that a lower form of life may imprison a higher form, and, that the death of the one must precede the active life of the other. The larva imprisons the beautiful butterfly, and that glad, free life cannot begin until the prisoner dies. It is a marvelous miracle,—this relation of life and death. Yet we are

so familiar with its phenomena that we cease to wonder, and, when we are called to pass through those experiences which fill our hearts with anguish, we find it hard to see that there is love at the foundation of the great principle of life by death.

If the endless sacrifice of mineral to vegetable, and vegetable to animal, is so simple why should we believe that the sacrifice of the physical to the spiritual is hard? If it is natural that the lower form of life should lose itself in the higher form, why can we not believe that the material life as naturally loses itself in the purely spiritual existence? "There is a natural body, and there is a spiritual body." Everything in our human experience points to the faith that our real life, which is spiritual, is developed and perfected through a sacrifice of the material. "It is sown a natural body; it is raised a spiritual body."

As the larva imprisons the butterfly, so we may trust the body imprisons, or, at least, limits, the life of the soul. The soul cannot reach its perfect development until it is freed from the limitations which the material life imposes upon it. Life is rich in symbols which would teach us that this existence is only a beginning; a suggestion of the real life. "It doth not yet appear what we shall be."

To our human eye, death is fraught with shadows. But the eye of faith, which sees it as the gateway of life, robs it of its terrors. We dare to hope that, some day, our spiritual intelligence will enable us to see death as it is,—a mere incident in the development of the soul that passes, and the souls that remain.

With this eye of faith, the great Conqueror of Death came to earth as a little child, lived and walked, and talked with men, suffered and died in his efforts to teach them the application of this great principle. His life was the only perfect example of the sacrifice of the lower to the higher. He was the only perfect illustration of the truth of his own words, "He that loveth his life shall lose it; but he that loseth his life shall find it." And because he lived in absolute harmony with this principle, he was able to prove himself the conqueror of death, and to strengthen our faith in that which lies beyond the tomb. Through his life and words, we see the glory of the principle of life by death.

*Emporia, Kans.*

#### ANYTHING BUT A SCRAP HEAP.

THE Rev. Howard W. Pope tells the story of a Christian blacksmith who had had a good deal of affliction, and was challenged by an unbeliever to account for it.

This was his explanation: "I don't know that I can account for these things to your satisfaction, but I think I can to my own. You know that I am a

blacksmith. I often take a piece of iron and put it in the fire, and bring it to a white heat. Then I put it on the anvil, and strike it once or twice to see if it will take a temper. If I think it will, I plunge it into the water, and suddenly change the temperature. Then I put it into the fire again, and again I plunge it into the water. This I repeat several times. Then I put it on the anvil, and hammer it, and bend it, and rasp and file it, and it makes some useful article which I put into a carriage, where it will do good service for twenty-five years.

"If, however, when I first strike it on the anvil, I think it will not take a temper, I throw it into the scrap heap, and sell it at a half-penny a pound.

"Now, I believe that my heavenly Father has been testing me to see if I will take a temper. He has put me into the fire, and into the water. I have tried to bear it just as patiently as I could, and my daily prayer has been: 'Lord, put me into the fire, if you will; put me into the water, if you think I need it; do anything you please, O Lord, only, for Christ's sake, don't throw me into the scrap heap.'"—*Selected.*

#### FLETCHER'S RULES.

THE Rev. John Fletcher, vicar of Madeley, a divine of deep piety and greatly beloved, drew up for his guidance the following rules for daily self-examination:—

1. Did I awake spiritual, and was I watchful in keeping my mind from wandering this morning?

2. Have I this day got nearer to God in prayer?

3. Has my faith been weakened by unwatchfulness, or quickened by diligence?

4. Have I walked by faith and seen God in all things?

5. Have I denied myself in all unkind words and thoughts? Have I been delighted in seeing others preferred?

6. Have I made the most of my precious time as far as I had light, strength and opportunity?

7. Have I kept the issues of my heart in the means of grace, so as to profit by them?

8. What have I done this day for the souls and bodies of God's dear saints?

9. Have I laid out anything to please myself when I might have saved the money for the cause of God?

10. Have I governed well my tongue this day, remembering that in a multitude of words there wanteth not sin?

11. In how many instances have I denied myself this day?

12. Do my life and conversation adorn the Gospel of Jesus Christ?—*Selected.*

# Echoes from Everywhere

Aug. 28 witnessed disastrous floods in various parts of the South. In the Southwest there was a cloudburst on the Cimarron River and a number of dwellings at Folsom, N. M., were washed away and fifteen persons drowned. At Augusta, Ga., there was great loss of life and property from floods and fire and the Carolinas were also visited by destructive floods. Altogether it is believed that over one hundred lives were lost and the property loss will amount to more than \$2,000,000.

The conviction of Tilak, leader of the anti-British forces in India, by the high court at Bombay, on the charge of sedition, and his sentence to six years' banishment and a heavy fine has brought on a fresh crisis. As a demonstration of sympathy, 20,000 mill hands in Bombay went on strike. Rioting ensued and Europeans were stoned and jeered, a magistrate's house attacked and a mail train held up. The troops were called out and had to fire solid shots into the crowds with fatal effect before order was restored.

While the death rate of England has been declining steadily for the last few years, for the last three months it is 13.3 in the 1,000, which is 1.8 below the corresponding quarter of the previous ten years. Lunacy, on the other hand, is increasing in a marked degree. This year's ratio of certificate lunacy is 1 in 286. Ten years ago it was 1 in 309. The tables show a higher proportion of female insane. Marriages have also declined, being 16.8 per 1,000 against an average rate in the previous ten years of 17.4. The birth rate shows a decrease.

The census bureau has issued preliminary figures on the result of the denatured alcohol law during 1907. While this law exerted no disturbing influence on the market value of such products as charcoal, acetate of lime, pyroligneous acid, etc., says the bureau report, its effect on wood alcohol was immediate and striking, resulting in a decline of more than 55 per cent in the market value of this commodity—from an average value per gallon of 34 cents, in 1906, to 15 cents in 1907. Otherwise, little or no evidence of the law's operation is discernible in the statistics of the industry for the country as a whole.

The fourth Esperanto congress has been in session in Dresden, Germany, for a week. Before adjournment it was decided to hold two congresses in 1909, one at Chautauqua, N. Y., and the other at Barcelona, Spain. It is presumed that the leading spirits in this movement for the adoption of a universal language will visit both conferences. Hundreds of the delegates from Europe who might not be able to go to America will be able to attend and to derive advantage from the meeting at Barcelona. At the recent congress great enthusiasm was shown for the new language; hymns were sung, sermons preached, and addresses delivered in Esperanto.

Many of us make a great "to do" about too much armament, etc., and yet the truth of the matter is that we are literally beating our weapons of war into plowshares and other useful instruments to help the farmer, the builder, and the housewife. The government always uses the very best steel in making cannon, so that as soon as these weapons are out of date it can sell them to foundries. At the foundries the old cannon are broken up and remelted after which they are made into plows, structural iron, roofing, household tinware, and a dozen other things of a peaceful nature.

Reports from Teheran, Aug. 27, say the insurrection is in full swing in the southern and western parts of Persia. All the tribes in Persian Khurdistan have raised the banner of revolt under the leadership of the constitutionalists and demand the immediate convocation of a parliament; otherwise they threaten to declare for independence. The government offices are falling into the hands of the revolutionists, and a large number of soldiers have been killed. The town of Kerman is entirely in the hands of the revolutionists, the government officials having either fled or submitted. The vice-governor has been captured.

The Cunarder "Lusitania" has added to her glory by beating her former short course record from Daunt's Rock, outside Queenstown, to Sandy Hook lightship by 3 hours and 40 minutes. Her new time between the starting and finishing lines of the course is, adding five hours for the difference between our own and the British clock, 4 days and 15 hours. Her best previous performance, also over the short northern course, which was completed on November 2 last, was 4 days, 18 hours and 40 minutes. On her best day's run, on the nautical day ending at noon on Monday, when she covered 650 nautical miles in 25 hours and 20 minutes, her average speed was 25.66 knots.

The world's largest bottle factory is at Düsseldorf, and in his report on the trade of the district (Westphalia and the Rhenish provinces) Consul Koenig, gives some particulars of the company which is, conjointly with other German and continental manufacturers, introducing the "Owen patent glass bottle machine." The latter will, says the consul, revolutionize the manufacture of glass bottles in all the factories, and he expects that the art of blowing glass bottles by hand will have become extinct in about ten years' time. The export trade of the Düsseldorf glass works is large. The Rhenish Westphalian coal syndicate was unable to supply the Düsseldorf glass factory with sufficient coal last year, and the board of directors were forced to import considerable amounts of coal from the United Kingdom at enhanced prices. There is now a regular trade of coal from the United Kingdom, chiefly from Newcastle, up the Rhine to Düsseldorf.

According to Governor Fort of New Jersey, the disregard for anti-gambling laws and Sunday laws has brought about a condition which he terms a "saturnalia of vice," in Atlantic City, the largest seashore resort in the United States. The governor threatened to call out the troops unless the laws were enforced. The laws were observed Aug. 30 without the help of the troops and will be, it is said, until the laws are changed. Those affected by the laws believe there will be a change as they are sure that public sentiment is with them. Evidently public sentiment needs something. The country could get along very well without its Atlantic Cities where only pleasures of the most degrading sort satisfy.

According to a dispatch from Peking, Wu Ting Fang, the Chinese ambassador to the United States, may be recalled because his public utterances in this country are thought indiscreet by the high Chinese authorities. Wu Ting Fang has been twice appointed to the United States, first in 1896 from which appointment he was recalled in 1902; he was appointed the second time about a year ago. Wu Ting Fang is very popular in the United States, and as there is keen rivalry between the Japanese and Chinese representatives at Washington, it is thought in diplomatic circles, that the former are working to bring about his recall. He speaks English with hardly a perceptible accent and for five years practiced law in the English courts at Hongkong.

The International Harvester Company has formed a society to provide for employes when ill or disabled by accident and to make definite payments to their families in case of death. By the terms of the organization each employe of the concern contributes 2 per cent of his earnings to the general fund and becomes a member at his first payment. He is insured against any ailment which may overtake him, receiving half his salary in event of illness or disability. His death also is provided for, and if a man dies while in the service of the company his heirs receive two years' wages. The loss of both eyes, hands or feet also entitles him to two years' salary. In the event of death by illness his family receives one year's wages. Membership in the society is optional with the employes, and in joining it they do not waive any legal redress against the company in case of personal injury. Old age pensions are also figured into the benefits, and it is provided that at sixty-five years any employe who has put in twenty years of service may retire on an allowance of one per cent of the average annual pay received during the last ten years of his service.

The new Sing Sing which New York is erecting on the highlands of the Hudson will be palatial in its appointments and far better in its accommodations than a large per cent of criminals are accustomed to enjoying. Thirty acres of land will be covered by this big prison and it will easily accommodate 2,000 inmates. Great air spaces will surround the building and it will be only about four stories high, preferring to spread out instead of towering up. Up-to-date lighting and sanitary facilities will be incorporated in the new Sing Sing; the cell walls will be of enameled steel and those of the halls of enameled porcelain; in each cell there will be a lavatory, stationary washstand, running water, and a single bunk. It is claimed that the locking device to be adopted will be too difficult for the wits of the most experienced lock-picker. The keeper will lock each cell, then the supervising officer will interlock them, and finally from the warden's office they will be interlocked again.

Reports from England and southwestern Europe, Sept. 1, gave accounts of a terrific storm which swept over those parts with disastrous effect. Many seashore resorts were damaged and a number of boats driven to shore and wrecked. Only five were saved out of one crew of thirty-two whose boat was wrecked.

The United States weather bureau's meteorological summary for August, issued last week, shows that the rainfall for the thirty-one days was 3.33 inches in excess of the average for the month for the last thirty-eight years. The total was 6.35 inches. There were five thunderstorms in the month, occurring Aug. 11, 12, 15, 16 and 17. The highest velocity of the wind was forty-nine miles per hour, from the southwest, on Aug. 12. The highest temperature was 96 degrees, Aug. 3, and the lowest 58, Aug. 23.

Net earnings of the Elgin National Watch Company for the fiscal year ended April 30 last were approximately \$650,000, equal to 13 per cent on the \$5,000,000 stock outstanding, a decline of \$250,000 from net earnings of the previous year. Nothing could better illustrate the suddenness with which the panic paralyzed the business of such a highly specialized industry as watchmaking than a comparison of gross sales in December and February. For December gross sales totaled \$400,600, a high record month. Two months later, in February, gross declined to the lowest point ever touched, \$125,000 for the month, a fluctuation of nearly 70 per cent. The gross earnings of the two big watch manufacturing companies of the United States, Waltham Watch and Elgin National Watch, are about the same. Waltham Watch has a somewhat larger foreign market, however. In point of net earnings the companies are not widely separated, although the larger capitalization of the New England company makes its share earnings much less than for the Elgin company.

#### An Electric Moth Trap.

The Saxony authorities have discovered what would seem to be an excellent way to put an end to the caterpillar plague which is having such a disastrous effect on the local forests. They have discovered a method to catch the brown nun moths that lay the eggs from which the caterpillars come in enormous quantities. They make use of what they call the electric light trap. This consists of two large and powerful reflectors placed over a deep receptacle and powerful exhaust fans. The whole has been erected on top of the municipal electric plant at Zittau. At night two great streams of light are thrown from the reflectors on the wooded mountain sides half a mile distant.

According to the Electrical Review the results have been astonishing. The moths, drawn by the brilliancy, come fluttering in thousands along the broad rays of light: When they get to a certain distance from the reflectors the exhaust fans take up their work and with powerful currents of air swirl them down into the receptacle. On the first night no less than three tons of moths were caught. It has been decided to build another trap on the Rathaus Tower, and the fight with the moths will be continued.

The forests of central Europe have, from time to time, been ravaged by raids of moths from Russia, whose larvae denude the trees of their foliage. The splendid pines of the Lausitz Mountains are this year threatened with destruction.—Scientific American.

## CREAM OF MAGAZINES

### SCHOOLS AND SCHOOLING FOR THE MAJORITY.

"It is little short of a crime," said the Rev. R. A. White in a debate at a school management committee meeting in Chicago over a proposed change in the grammar school work, "to teach a boy a vocabulary suited to a literary man and turn him into a business office unable to spell the commonest terms used by business men."

Dr. White has laid his finger on a weak point of the American public school system as it has developed—a weak point whose presence a noble ideal explains but whose continued toleration that ideal cannot justify or excuse.

The ideal is that every American child shall have an equal chance for every sort of career, so far as the public schools can open the door of opportunity. Now, that is a fine ideal, which it is not at all necessary to relinquish. In arranging school programs, however, it is necessary to consider certain concrete facts which have been often disregarded.

The American people have ever put foremost the successes and triumphs of the intellect as of greatest worth. Certain dull observers to the contrary notwithstanding, no people take a less grossly materialistic view of what success in life really means.

This attitude is reflected in our public school programs and in the directions in which they have developed. They are, as a rule, built on the assumption that the average boy will be able and will desire to go on to college and into one of the professions—that his wish will be to become a brain worker rather than a hand worker.

Yet the facts are that not only is it impossible to have a world in which the majority could live by their heads rather than their hands, but also that a large majority of children contemplate with impatience and resentment any suggestion of the long training necessary for success in the learned professions and in brain work generally. There are always exceptions, but any one who has the gift of getting the confidence of children can easily satisfy himself that the great majority of boys, and girls, too, who quit school at 14 do so not reluctantly, but gladly.

The prize of staying on in school does not seem to them worth the price. They wish to escape from subjection to elders and teachers. Their desire is to get out in the world and begin immediately in some way to win an independent place in it by doing the work which beckons to them, and thus reaching sooner the personal freedom which to us all is life's greatest good.

The trouble with our common school programs is that they contain too much of the wrong kind of foundations, put in on the assumption that every child might, should, or would like to go on into the high school and then into college.

Now, it is not at all necessary that the natural ambitions of any child for higher education should be thwarted, nor any door of opportunity closed to the humblest. All that

is necessary is that instruction in the subjects of which knowledge is required for any sort of success shall be given first, and where the majority can and will obtain it. Other instruction may and should be offered, but it should not be forced upon those who do not really desire it.

We need to reconsider our common school programs, and to put in them not what an intellectual minority think every child ought to know, but only what the majority really want, call for, and find indispensable. The rest can come afterward for those who seek it because they desire it.

We cannot by much schooling compel a child to be other than what its natural instincts make it desire to be in life. By such methods we may spoil a good mechanic and get an incompetent physician or spoil an excellent salesman to make a shyster lawyer.

What the majority of children may desire to be and the way of life in which they will find the greatest happiness and most content for themselves, and thus be most useful as citizens, should be more considered than it has been of late years by many professed educators.—Chicago Inter Ocean.

### SUPPLY AND DEMAND IN LITERATURE.

The adage that the demand creates the supply does not hold true of genius. The supply is never adequate and not altogether of the right kind. Great men do not always appear in the crises of their country's need. Sometimes the country has to get along the best it can with very mediocre men in its direst straits or fail for lack of better. Necessity is too often childless. We could give a list of a hundred inventions which are all much needed now and probably quite practicable, but which may be delayed for many years. So it is not fair to assume, as is generally done, that the tone of the literature of the day represents popular taste. It is only as near to popular taste as the public is able to get. The public has more reason to complain of the service it gets from its servants, the authors, than the housewives of their maids.

If one year the historical romance is all the rage, and the next everybody is reading novels of the future, if stories of domestic scandal go out of fashion suddenly and stories of financial scandal come in, this does not mean that the taste of the people has undergone a spontaneous and simultaneous change. It indicates that some literary genius has arisen who was personally inclined to write on the new subject. The supply of stories of Indian life was fully equal to the demand at the time when Kipling wrote the first of his "Plain Tales from the Hills." Religious questions were not being discussed with any special avidity when "Robert Elsmere" appeared. The most observant critic would not have detected any signs a year ago of such a general yearning for more metaphysics as to cause James' "Pragmatism" to sell like a novel.

The literature of a nation is controlled by the initiative and referendum. But in this case they are in separate hands. The authors have the initiative and the people the referendum. The people have the power to veto, but not to amend. They have to take whatever an author chooses to offer them or reject it altogether.

The evils of our literature are not due to the stringency of social control, but rather to the lack of it. We rarely hear of a writer being forced to violate his conscience by writing indecent plays or poems or stories to satisfy an imperious popular demand for such. On the contrary, we have to listen to the continuous complaint by authors that the public is too prudish and will not permit them to write on the salacious or abnormal themes toward which their taste inclines them. Artists are not compelled to paint scenes of carnage, disease, cruelty and licentiousness by the hard-hearted academicians of the hanging committee or by the desire of any large number of their fellow-citizens to buy them for their homes. The patrons of grand opera are not the strictest sect of moralists, yet there is no reason to think that they have a decided preference for incestuous adultery and necrophilism. But they do want great music, and since they are dependent on Wagner and Strauss for this, they tolerate, with more or less pronounced aversion, Siegmund and Salome. The scenes of *Die lustige Witwe* are better suited to a Viennese than to an American public, but its tunes are irresistible—and unescapable. In short, any morbid, abnormal, decadent, or immoral tendency manifested in literature or art may generally be traced to some individual who has taken advantage of his genius to force his personal perversities upon the world; and in so far as the literature and art of a people remain pure and sane it is due to the restraining influence of popular taste. In violations of good morals and good taste the genius is the tempter and the public the more or less willing victim. There is, of course, a public for any eccentricity, but it is not the best nor the largest of the publics to which the man of genius may cater.

Because our food is adulterated and there is filth in our milk and ice, it does not follow that we prefer it so. That our poetry is pessimistic and our novels come to bad ends does not prove that we would not read cheerful books if we could get them.—*The Independent*.

#### ELEMENTS OF GOVERNING POWER.

It should not be so, perhaps, but the individual's standing as a teacher depends very largely on his ability—or lack of it—to manage his school so that there shall be no friction, and govern it in a way that will not call harsh criticism down upon him. And it is no small thing to be able to govern well and wisely. It is rather uncommon to find a teacher whose government is all that could be desired. What are the elements of governing power? As the writer sees it, to govern well—and that means to govern easily, is to have, first, an idea of what constitutes an orderly, well-governed school. A lack at this point is fatal, and *The Schoolman* does not hesitate to repeat what it has often said in substance: Very little can be done to aid the teacher who is short on a sense of order and system; and there are such persons trying to fill the position of teacher. It would be a kindness to such a teacher—more than a kindness to his pupils, if city or county superintendent would be both prompt and frank to advise the taking up of some other kind of work. But given a fair idea of what constitutes good school government, the next element of governing power is a

fixed and settled determination—not an angry resolve—to have a well-governed school. There must be constant watchfulness, yet not a sort that your pupils may call playing the spy. There must be good-natured, cheerful, quiet persistency toward the desired end. There must be a certain kind of courage that will make it easy to speak plainly yet pleasantly to prospective offenders. It is to be regretted that in most cases the ability to speak to pupils about personal conduct, without being angry, or making pupils angry, does not come to the teacher until he is old enough to begin to think of quitting the business. All matters of government should, as far as possible, be fairly settled at the close of each day. There must be determination to do one's duty as he sees it and equal determination to do no useless worrying about results. There must not be that worse than senseless practice of teaching school during the day, and lying awake at night trying to devise plans for governing the school. You will know what is meant by this last statement if you can remember the time when you fell asleep while resolving that if a certain boy gave you half a chance next day you would avail yourself of the opportunity to even things up to date with him.

And having said as much as may be said about the elements of governing power, it would still be necessary to say that the best evidence one could give of having the elements as a part of his equipment would be the quiet, well-ordered everyday life that he shows—not only to his pupils, but to all the world.—*Interstate Schoolman*.

#### CENTENARIES OF 1909.

Next year will have a peculiar interest because of the remarkable group of famous people who first saw the light precisely a century before, says Lyndon Orr in a recent number of *Munsey's Magazine*. In calling the birth-roll for the year 1809 the writer emphasizes a long list of musicians, historians, statesmen, inventors, scientists, men of letters, poets, soldiers, and sailors, all of more than ordinary interest and many of whom have left a lasting mark. Music is represented by Mendelssohn (born February 3) and Chopin (March 1), and science by Darwin (February 12), who developed the theory of evolution. Cyrus McCormick (February 15), the inventor of the reaping-machine, began his life in this momentous year, as did also the two noted confederate fighters Joseph Johnston (February 3) and Raphael Semmes (September 27).

The great names in letters to be commemorated are Edgar Allan Poe (January 19), Alfred Tennyson (August 6), Edward Fitzgerald (March 31), the translator of Omar Khayyam, Oliver Wendell Holmes (August 29), Kinglake (August 5), the historian of the Crimean War, and Park Benjamin (August 14). Gladstone and Lincoln likewise both saw the light of day during the year 1809. Gladstone was the last survivor of this famous group, and Mendelssohn the shortest-lived. Mr. Orr further discusses the centenaries as follows:

"Most of the anniversaries will be celebrated very widely both in Europe and the United States. Chopin will have special honors paid to him in Warsaw and in Paris. Undoubtedly the University of Virginia will hold commemorative exercises for Poe, as one of its most distinguished sons; while New York, where he spent the greater part of his literary life, will probably arrange an impressive memorial celebration. The natural place for a commemorative pageant in Tennyson's honor would be Eppingford in the Isle of Wight, where he wrote so

many of his most famous poems, or Aldworth, in Surrey, where he died. Harvard will, undoubtedly, give appropriate honor to Holmes, because Cambridge was his birthplace and because he was a Harvard man.

"Recognition of Gladstone's centenary will be, to some extent, an affair of party, though throughout all Great Britain there will doubtless be a fitting recognition of his statesmanship. But with regard to Lincoln, there are two places peculiarly marked out as suited to public observances upon a scale of truly national impressiveness. One of these places is Springfield, in Illinois, which was his home at the time when he was called to the Chief Magistracy of the United States, and near which his body now lies in a massive mausoleum. The other place is Washington, where, throughout four years of incessant strain and anguish, he won the glory which has placed him among the immortal heroes of humanity."

\*\*\*

THERE are men who bless God every day for their early hardships, which challenged their manhood and brought out the best that was in them. Let your boys win their spurs.—*Rev. David Smith.*

## Between Whiles

**Going Back Again.**—Rip Van Winkle returned from his long sleep looking fresh as a daisy and made his way to the village barber-shop, not only because he needed a haircut and shave, but also because he wished to catch up on the news.

"Let's see," said he to the barber after he was safely tucked in the chair, "I've been asleep twenty years, haven't I?"

"Yep," replied the tonsorialist.

"Have I missed much?"

"Nope, we bin standin' pat."

"Has Congress done anything yet?"

"Not a thing."

"Jerome done anything?"

"Nope."

"Platt resigned?"

"Nope."

"Panama Canal built?"

"Nope."

"Bryan been elected?"

"Nope."

"Carnegie poor?"

"Nope."

"Well, say," said Rip, rising up in the chair, "never mind shaving the other side of my face. I'm going back to sleep again."—Success.

✽

## Keen Scent.

Mrs. Jones was in the habit of giving Henry a large piece of chocolate cake whenever he came to see her; but one day when she was expecting company, she left the cake uncut, and did not offer him any.

For a time Henry waited, and then remarked, "Mrs. Jones, it seems to me I smell chocolate cake!"

Mrs. Jones laughed, and, going to the cupboard, cut him a tiny slice. "That's all there is for you today, Henry," she declared, as she returned with it.

"Thank you, Mrs. Jones," said the child, politely, disappointed, and then added, with a great sigh, "Seems strange that I could smell so small a piece."—Youth's Companion.

**He Liked This Camphor.** Little Harry had not been talking many months when he expressed himself this way upon one occasion. He had often smelled of camphor, but one day got a bottle of perfumery and was delighted. "Mama," he said, "this funny camphor makes me good breathing."

**NEFF'S CORNER**

I have built twenty-four houses since I came to Clovis and the demand is better than when I began. Renters almost fall over each other to get a property at \$8.00 per month that would cost you \$350.00, or at \$10.00 per month the property that would cost you \$450.00. If you have money to invest or if you have an income from which you would like to invest a small amount each month where it will bring you good returns, it will pay you to write me. Address

**JAMES M. NEFF,**  
Clovis, New Mexico.

**The Saloon Under the Searchlight**

By George R. Stuart.

"A bright, breezy, thought-compelling little book with not a dull line in it. Full of suggestion and inspiration for one who would have a part in the fight against the saloon, a fight that grows in strength and popularity every day."

"Sledge hammer blows by Dr. Stuart on thirteen or more aspects of the saloon question. The arguments and illustrations are original, often unique, and always right to the point."

"I find the book one among the best I ever read on the subject. I can recommend it and wish it were possible to place a copy in every home in the land."—Eld. D. L. Miller.

"I have just finished reading that splendid little volume, 'The Saloon Under the Searchlight,' by Geo. R. Stuart. I find it interesting and valuable. It commends itself to me because of its simple, plain, practical and true statements. I solicit for it a wide circulation, and a careful perusal. It cannot fail to do good."—Eld. P. J. Blough, Member of Temperance Committee.

**Every Minister**

of the Gospel will have occasion to use some of the arguments presented by Mr. Stuart, who turns the light on in full force and lets the reader see what a monster evil the liquor traffic really is.

There is enough in the book, if people can be induced to read it, to drive the saloon out of every village town and city in the United States.

**PRICES AND BINDINGS.**

Paper, .....20 cents  
Cloth, .....35 cents

**BRETHREN PUBLISHING HOUSE,**  
Elgin, Illinois.

# **WANTED**

## **5,000 Missionaries**

---

It would be difficult to secure enough ministers and lay missionaries to make weekly visits in the thousands of homes where their calls would be appreciated. But it should not be difficult to find 5,000 of our readers who will send us one or more subscriptions to the Gospel Messenger as per our

### **Two Trial Offers**

For the purpose of helping you introduce the Gospel Messenger in homes where it is not known, we announce the following very liberal terms to trial subscribers.

### **For 25 Cents**

We will send the Gospel Messenger to a new subscriber to Jan. '09 for 25 cents. By ordering now you secure four months for the price of two months. For \$1.00 you can send the Gospel Messenger into 4 homes for the remainder of the year. Try it.

### **For \$1.50**

We will send the Gospel Messenger to a new subscriber to Jan. 1910 for \$1.50. Order today and you will receive the paper for nearly 16 months for the regular yearly subscription price.

### **Act To-Day**

and you will extend the influence and circulation of the best religious journal published.

**BRETHREN PUBLISHING HOUSE, Elgin, Ill.**

# ALBERTA

¶ Of Alberta a distinguished writer has said:

"North of the International boundary line and immediately east of the Rocky Mountains lies the Province of Alberta—a land blessed with all that is necessary to happiness and prosperity. Between the 49th and 60th parallels and between the 110th and 120th meridians lie 281,000 square miles of possibility. Here are mountains and plains, foothills and valleys, rolling prairies with wooded stretches between, dense forests and grassy meadows, clean, timber-girded lakes and winding brooks, cold mountain streams and navigable rivers, and a soil rich in the alluvial and vegetable accumulations of centuries. And as if not content with these outward signs of her favor, nature has hidden beneath the surface vast deposits of coal and other minerals; she has filled the subterranean reservoirs with gas and oil, and sprinkled the sands of the mountain streams with gold. That no living thing should go athirst, she gathered together the waters of the mountains and brought them to the plains, to be directed by the ingenuity of man to the use of the grazing herds and the planted fields. Then, to crown her efforts and leave nothing incomplete, she brought the chinook wind, warm with the breath of May, to temper the north wind."

¶ In the Medicine Hat District we have a gently undulating prairie. The soil is capable of producing generous yields of all small grains and vegetables in abundance.

¶ The city of Medicine Hat, situated on the Saskatchewan river and underlaid with gas and coal, is destined to be a great manufacturing center.

¶ Why not join the colonies already there and enjoy some of the material benefits as well as help build up one of the largest and best colonies in the Canadian West.

¶ We have excursions every first and third Tuesday of the month.

¶ For particulars and cheap rates apply to

**THE R. R. STONER LAND CO., LTD.,**

440 Temple Court

MINNEAPOLIS, MINN.

# A RARE OPPORTUNITY

## TO MAKE BIG MONEY

☐ We want to place the sale of our popular floral Wall Mottoes in the hands of an active agent in your community.

☐ Several hundred agents are now at work and report splendid success. One person ordering as many as 750 at one time.

☐ In appearance these mottoes come nearer to an oil painting, of the most expensive sort, than anything else. They possess a rich gloss that adds wonderfully to their attractiveness when in position upon the walls.

☐ The lettering is clear and distinct and can be read across the room.

☐ The size, 12x16, makes them suitable for use in any home. Unlike many pictures or mottoes they do not fade, and lose their bright and attractive colors. They can readily be dusted should they become a trifle soiled, or can be cleaned whenever desired with a damp cloth.

☐ These mottoes will last for years, and continue to give pleasure and good cheer to all.

### Ten Mottoes and Ten Designs

#### 1. Be Ye Followers of God as Dear Children.

A very attractive design with groups of children. The poem "Jesus Was a Little Child" neatly printed in one corner adds much to make this picture a very desirable one for the children.

#### 2. Be not Weary in Well Doing.

This design is composed of a beautiful scroll, two birds and their nest, and beautiful flowers, all in colors.

#### 3. Christ Is the Head of this House.

The flower on this motto is a large beautiful orchid, which gracefully overhangs the lettering.

#### 4. God Bless Our Home.

#### 5. In God We Trust.

The design used with these texts is pansies in natural coloring. The lettering is artistically shaded and beautifully harmonizes with the flowers.

#### 6. God Is Our Refuge and Strength.

#### 7. Home, Sweet Home.

This beautiful design is sure to be a good seller. No. 6 represents God as a refuge for the soul, and should be in every Christian home. No. 7 is one of the most popular mottoes known to the English speaking world. It is always in demand. Can be sold anywhere to anybody.

#### 8. Love One Another.

#### 9. The Lord Is my Shepherd.

The motto for these texts has a delightful arrangement of forget-me-nots and crimson roses on a black background. Very artistic.

#### 10. What Is Home Without a Mother?

This has long been a favorite motto and is still in great demand. The beautiful scroll design, artistic lettering and delicate flowers make this an attractive motto and a good seller.

# THE INGLENOOK

*To be glad of life because it gives you the chance to love and to work and to play and to look up at the stars; to be satisfied with your possessions, but not contented with yourself until you have made the best of them; to despise nothing in the world except falsehood and meanness, and to fear nothing except cowardice; to be governed by your admirations rather than by your disgusts; to covet nothing that is your neighbor's except his kindness of heart and gentleness of manners; to think seldom of your enemies, often of your friends, and every day of Christ; and to spend as much time as you can, with body and with spirit, in God's out-of-doors; these are little guide-posts on the footpath to peace.--Henry Van Dyke.*

# Don't This Make Your Mouth Water? Honest?

PENNY for your thoughts—your first thought after seeing this. Now look here—didn't you think of the days gone by, when you were young and such strings of fish could be caught in this country? Sure you did. Wasn't that fun?

Well this is a late picture. Just taken the other day in Butte Valley by Mr. Root. It is not necessary to introduce the parties to many of you, for anybody who has had the good fortune to hear Cora Miller sing will recognize her at once. She is now Mrs. Stahley and this is her husband, and this is their one day's catch. Thousands of you have seen and heard Cora, and if you will write her and ask her, she will tell you all about it. She used to live at North Manchester, Ind., and then for a long while at Nappanee, Ind., but now they live in Butte Valley. You may address her at Macdoel, California.

It's easy enough to get pictures of fish. There are lots of them. You can't always tell where they came from, but here are the folks you are acquainted with and their own catch and you may rest assured that they were caught there. Say, how would you like to have two or three of these fried with some of that cabbage you saw last month? What? Did not see it? Look at this page in August 11 Inglenook. Come along with us on the next excursion. Address,

GEO. L. McDONAUGH, Omaha, Nebr.

## WEBSTER'S IMPERIAL DICTIONARY

New and Up-to-date  
Reset from New Type  
Thousands of New Words

THIS IS THE ONLY NEW AND COMPLETE  
WEBSTER DICTIONARY ISSUED

Since 1890. For it is the Only "Webster" in which common sense and discrimination have been shown by the editors in the use of capitals. In the Imperial all proper names begin with capitals and other words with small letters. It is strange that so important a feature should have been overlooked in the other Websters—but it was. This is but one of the hundreds of illustrations of the thoroughness with which Webster's Imperial has been prepared.

It is the best and Most Practical, as well as the latest Complete Dictionary of the English Language, giving the Spelling, Pronunciation, Etymology, and Definitions of Words, together with thousands of Illustrations.

Full Sheep Binding with Patent Index.

Revised Edition of  
**Ropp's New Commercial Calculator**  
**And Short Cut Arithmetic**

**The Standard for Store, Farm, Bank or Factory,**

5 ½ x 2 ¾ in.

Greatly improved, enlarged and thoroughly revised.  
 Contains an entirely new system of unique Tables, Short Cuts  
 and Up-to-date Methods.

Unquestionably the most complete and comprehensive Calculator  
 ever published.

Has more than twice the matter, scope and capacity of Ropp's  
 former editions, of which

**Nearly 1,500,000 Copies have been Sold.**

The most convenient and practical Labor-saving work ever used  
 in the business world.

It will make every one independent, sure and self-reliant in all  
 practical calculations.

It will prevent mistakes, relieve the mind, save time and labor,  
 and often loss and trouble.

Its Tables are adapted to all trades and occupations of the city  
 or country.

**The Answer to Your Problem as Quickly as a Watch Shows the Time.**

It also explains and simplifies the principles of Arithmetic, Mechanics and Mensuration.  
 It will make the study and use of Figures easy and interesting to both young and old.  
 It will enable every progressive mind to become an expert, sure and rapid calculator.  
 It will prove a boon to all whose education in arithmetic has been limited or neglected.

**48 Cuts Illustrate the Elements of Mechanics and Mensuration**

It defines about 70 points in "Commercial Law" which every man and woman should  
 know.

It is the result of devising, and improving system after system; of spending thousands  
 of dollars in experimenting; of making millions of miscellaneous calculations, and of doing  
 some vigorous thinking during 38 years, by an analytic, practical and persevering  
 mind.

**It is Especially Designed for**

Farmers, Mechanics, Business and Professional men.

it was he who sold this vast tract to Thomas Jefferson, then President, for the small sum of \$15,000,000.

So with the political death of Napoleon France seems to have abandoned any idea of ever attempting again to chase the false gods of imperialism and has spent her great energies in the much better pursuits of emancipating her own people and developing her home life, and national happiness.

When Charles X came to the throne of France, he was an exponent and practitioner of the old absolutism. By 1830 the people were up in arms, thus instituting the second revolution. As a result of this revolution a parliamentary government was established.

But this parliamentary government was unsatisfactory, because the membership was restricted to men of wealth. An attempt to better this condition was made, but it ended in failure. By this time France was again at arms and the third revolution,—the revolution of 1848—was upon the nation.

This revolution resulted in popular and universal suffrage and all now looked well for the future of

every turn, all of which remind one of the flowing of blood, and the scenes of carnage.

Since the revolutions with their blood and destruction have passed away and France has become a real republic, the tracks of desolation and destruction have given place to modernization of the city and the country. Paris, more than any other city, long endured the course of wholesale demolition in order that freedom, science and sunlight might replace the oppression, ignorance and gloom of the old régime and tendencies.

Now, the desire to beautify the city has become a passion, and the work has been very effective. Paris is located in a beautiful place on the seine where natural beauty easily harmonizes with architectural

Seine, with Notre Dame.

France. But just at this period of her political evolution, Napoleon III, the ruler, became very arbitrary. The people remonstrated strongly. Finding no succor in remonstrating, they took up the revolutionary movement again in 1871, which resulted in permanent republican institutions throughout France.

In all of these events Paris has figured. In fact she has figured in many of the wars that not only worked out and shaped the destiny of France, but of all Europe. Almost every old building in Paris is a scene of some historical event. The visitor in Paris is astounded at the number of places of historical interest that are found on every hand. The number of monuments, too, is surprisingly large and among them are found those of Charlemagne, Abelard and Heloise, Joan of Arc, Henry IV, Louis XIV, and Napoleon. Arches, statues and Napoleonic columns are seen at

skill. By careful drainage the city is converted from the once unhealthful place to one of the most healthful of cities. The sewage system is of such an admirable construction and so adequate that it is visited and traversed by tourists. The sewage here, as in Berlin is emptied onto a municipal farm which is conducted just as the one is conducted at Berlin. The city streets have been widened, excepting places where historic old buildings stand, which buildings are patriotically protected by the city government. The buildings erected are all architecturally perfect and all tend to give to Paris the distinguished stateliness that the most beautiful city in the world may desire.

Some of the places which are noted for their beauty and grandeur are the Seine with the Notre Dame, Luxembourg, the Grand Opera House, the Palace de la Concorde and the Eiffel Tower.

Thus Paris today is modern, and is made so by the liberal democratic spirit of her citizens. The spirit of democracy is the dominant spirit not only of Paris, but of all France. Yet while this is true, it can not be said that all of France is given over to democracy, for throughout the republic there are still adherents to the pretensions of the old régime. They are in the minority, but yet they figure in the political affairs of the nation. One of these, a descendant of the French king, now resides in England, but calls himself the King of the French Empire.

But the tendency toward democracy and liberalism may be said to be more popular in France today than

expense artistic and humanitarian enterprises calculated to increase the well-being of its citizens."

In national politics the administration is sane and well founded. The nation has recently made a bold and progressive step in separating the state from the church, and by so doing has scored a great point for the Liberal policy.

In education the nation is well balanced and well advanced. The University of Paris is known the world over for its influence in science, literature and culture.

The art schools, schools of music, the National Library and the Cluny Museum, all add to the

Luxembourg, Paris.

ever before. In fact, the government of the people, by the people, and for the people is the only government in the world, at this age that is growing in favor. The general world unrest that has been mentioned in these articles so often seems to be caused by a world-wide desire of the people to rule themselves. We believe that this desire pervades the political atmosphere of the world, and when it comes and takes its hold upon the people, it seems to us that the greater navies and armies will be largely a needless luxury instead of a glaring necessity as they are today. If this is the cause of unrest, it will some time show that France is the light that is to lead Europe out of the wilderness of Autocracy, Militarism and Despotism.

At any rate, the democratic tendencies have taken such a hold upon the people of Paris that it pervades their municipal affairs in every phase. The municipal policy seems to be one "of encouraging what is most beautiful in modern city life; of providing not only the necessities of civilization, but also the finest fruits of culture and art; of carrying on at public

great educational influence of the city and nation. The art of beautifying grounds is found in such places as the Gardens of the Tuileries, the Champ. Elysées and the Bois de Boulogne. The profit-sharing custom in the Bon Marché is an encouragement to private individuals. The private individual in Paris, as in Berlin, is the one for whom the very government itself seems to run. Yet this individual must stand up for the city, must obey the law and must make himself a useful and respectful citizen, or Paris will deal with him as an enraged parent should with an undutiful offspring.

The striking difference noticeable between the French Government and other European governments of which we have spoken is that in France the Liberals, or the friends of the masses, have the controlling power in the government. This is true throughout the nation. In Germany such a condition exists only in the city governments, while the national government is a mixture of autocracy and despotism, but drifting toward socialism. We noticed that in the German cities, great care is taken of the individual.

He is educated in arts, religion and morals. He is encouraged toward thrift. He is protected by a model government. And he is happy and content. As a result the nation boasts of her intelligent citizens, her thrifty people and her international well-being.

And the same condition is seen in France, not only in the cities, but in the entire country. The people are free and as a result they are thrifty, intelligent, patriotic and strong in influence, in art, education, and civil affairs. And we may conclude that liberty, even at the expense of blood, pays, and pays well, for with it a nation is intelligent, safe and influential, and without it a nation is tottering, browbeaten and wicked.

Can we draw a picture vivid enough to contrast democratic France with despotic Turkey or autocratic Russia? We hear so much about wickedness in Paris.

of but endured on every hand, for little else exists.

The contrast is great. But what Paris has, she has purchased with her own blood. What Constantinople has she has submitted to since the day when the Turk won undisputed control of the city. And the difference is great. The former is conscious that she is not yet perfect, but far from it, and is animated with a desire to strive for better things and in the striving, achieve new perfection. But the latter desires little, and thinks little of her condition. Being untutored in the science of government and the ethics of a religion that teaches perfection, she rises not above the tutoring of the three requirements of her own spiritual belief and thus lazily lives in a channel unbidding for any self-thinking race.

Place de la Concorde, Paris.

But would we dare to say that Paris, with her culture, her art, her education, her free press, her great resorts for higher class public amusements, her great churches and cathedrals where the people look up to the Divine Artist, and where beautiful parks and natural resting places are spread out for the comfort of her people and with her police protection and her respect for law and order,—I say,—would we dare to say that Paris is more wicked than Constantinople, with her dark, narrow streets, her filth, her wild dogs, her beggars, her robbers, her murderers, who lurk behind the debris and rubbish on every hand, her dishonest officials, her press censorship, her corrupt police, her disrespect for law and order, her despotic old emperor, and her mosques which are his tools, and all the things which pertain to a degraded and unhappy people?

Oh, no! In Paris if there is wickedness it goes before the public, but in Constantinople it is unspoken

But her influence is not great, and is declining, while the influence of Paris, and all popular governments is growing with the speed of the winds. Paris is pushing out for new light with which to crown the old, and whether or not she may reach it, the trend of events goes to show that her influence will inspire a more perfect light elsewhere in the world. She has taught Berlin, she has taught all parts of the world, and much may yet come from the spirit of Liberalism that she has shed abroad, for the prophet out of his own country availeth much.

"We must not hope to be mowers,  
And to gather ripe golden ears,  
Unless we have first been sowers,  
And watered the furrows with tears.

"It is not just as we like it,  
This mystical world of ours,  
Life's field will yield as we make it,  
A harvest of thorns or of flowers."

## QUACKERY

J. F. Studebaker, M. D.

IN the practice of medicine physicans like men of other professions have ideals. Plato was so energetic in the exposition of idealism that he is known to this day as the great idealist. He belonged to the generation of Greek master intellects. Their language, philosophy, poetry and art are still an inspiration to us. Their ideals were lofty and their realization of them was not disappointing. They sought perfection. This was Michael Angelo's ideal. It was asked one day of this great Italian sculptor and painter, while he was tediously chiseling away almost imperceivable bits of marble from the face of a statue, why he spent so much time with trifles. He replied: "Trifles make perfection and perfection is no trifle."

The medical fraternity as a whole stands for lofty purposes. Ethical physicians respect the rights of each other; seek the best modern means for the protection of the health of the community; and give frank and honest opinions in cases of illness, all conclusions being clear of misrepresentations. Such motives at once put them above the advertising specialist who handles his business as a commodity, his success (financial, the sole purpose of his vocation) depending largely upon whether he is a good salesman, having sufficient commercial sagacity and adequate semblance of medical skill to delude his patients. Such a man uses all the enticing and attractive means to get new "customers."

It may not be known what the qualifications of a medical quack are. It may not be understood by all what exceptional and innate ability, what a culmination of all the strong traits of character of his predecessors, what an exemplification of brilliant scholarship in his college or university studies (if he were ever within the walls of an educational institution) are necessary to be a professional quack, a tactful advertiser and a diplomat of rare talent to ensnare people with his baited tongue.

In a recent investigation in Germany it was found that nearly all men having methods of quackery in their profession had not only a poor preliminary education but also a very meagre training in the medical sciences. One can readily see that such, fettered by poor morals, would not be conscientious in preparation for life work. The same thing is largely true in the United States. Not a few have been convicts and punished by confinement for years in a penitentiary for offenses committed against medical and other laws. Occasionally some one has changed his name as frequently as he thought necessary to avoid meeting justice face to face. Others have bought bogus

diplomas or stolen bona fide papers and inserted their name instead of that of the owner, the latter being removed by chemical process so perfectly that no defacing could be recognized with the naked eye. The writer knows a Chicago man who was arrested by the Illinois State Board of Health, August 1, on the charge of selling a bogus diploma for \$75 to a drug clerk. He signed his name as — — —, A. M., M. D., president of the board of trustees. He has been suspected for a number of years of selling bogus diplomas for literary and scientific degrees even as low as \$5 (cheap education). Without fail these are owned by charlatans.

Such are the men who have always imposed upon the public. From this body of talented and public-spirited men come most of the traveling specialists, advertising themselves as doctors of extraordinary ability, possessing knowledge of efficient remedies unknown and unobtainable by others and knowing that the people are not conscious that everything in medical science is open and available to all careful and wide-awake physicians. The secrets of medicine belong to the days of uncertainty, the age of mythology. The twentieth century triumphs in the dissemination of facts.

They will tell you that their training and experience have been so great that within a few minutes a diagnosis can be made. The large minds of the profession know that this is colored, for diseases appear in some individuals in an obscure form, requiring a number of days of the closest study and observation to determine the true character of the malady.

As a rule, the quack is another form of confidence man and he knows how to play the game. The attack is not made upon him to protect other men interested in medicine, but it is in the support of worthy principles. All doctors have the same privileges as he, but the majority are far above quackery. The true American physician advocates that his success should depend upon results and his strength as an individual and citizen in the community.

Quacking men are barred from membership in medical bodies of any consequence, as the American Medical Association or any State and county medical societies. They are below the standard of such organizations.

The medical profession alone cannot eradicate quackery, but the laity must coöperate. Quacks will thrive as long as people retain the disposition to listen to the oily tongues of strangers. It is remarkable that so many, particularly the country folk, will

trust their lives and the lives of those most dear to them to strangers whose ability and morals they do not know. Their good business sense would prohibit them signing a stranger's paper or note.

Resident physicians to be successful are compelled to constantly "plug" on account of lively competition and to keep abreast of the most modern ideas and methods. They are aware that good work now may result in an extensive practice later. It has been observed that the local advertising doctor is short-lived in towns under thirty thousand, for invariably people in the course of time find that he is superficial in every way.

Summing up quackery, we would include all pretenses, undue means to gain prominence, and any form of trickery. No matter whether it be loud signs; swinging, moving or stationary electric or colored light displays; high-stepping "speckled horses"; brightly lettered buggy panels; an appearance of a great rushing practice, as fast driving without a good cause; spoken or written words of one's capacity or cures; the alarm expressed of a ravaging and horrifying disease which does not exist; or "no cure, no pay" (gambling on life)—all is quackery.

(The sarcasm present is to be taken as only plain talk.)

*Ft. Dodge, Iowa.*

#### AN APPRECIATION OF SAMUEL JOHNSON.

WILLIAM L. JUDY.

THERE has never lived a greater man who had more hereditary obstacles and hindering environments to overcome than did Samuel Johnson, the eminent English author and man of letters (1709—1784). An incurable malady, an inheritance to him, disfigured his countenance. Sloven in habits, corpulent in body, and rude in manners, the appearance of the man was nigh detestable. The blessing of good health was never his to enjoy. The mental, moral, and physical peculiarities that afterward distinguished the man were very discernible, even in infancy.

Thru most of his life he was continually struggling against dire poverty. And when he spoke of want and its attendant miseries he knew whereof he spoke. The "bread-and-butter problem" was long his main concern in life. Ever and anon it goaded him on to hard and hated work. On one occasion it is said he walked the streets of London all night, not having the means to procure the poorest lodging.

Johnson's make-up was one of contradictions. Along with his poverty he possessed an over-proud spirit. One can readily see the result of such a union: it made him haughty, scornful, and impolite. While in attendance at Oxford, Johnson lived in rags. One morning he found a pair of shoes at his door.

He cast them away in a fury, yet no one needed them more than he.

The one redeeming trait was his powerful intellect. It overcame his bodily infirmity; it carried him through all misfortunes. The most brilliant star of light in his writings is the mighty intellect he displays. The pompous style is of little worth but the mind of the man, linked with a never-bending will, mark his works.

Melancholy by nature, poverty and pride made him a hypochondriac. At times he would gaze on the town clock for hours without being able to tell the time. Many men in his condition would have despaired of life. But his indomitable will and sincere heart upheld him.

His last years were spent in great comfort and happiness—a sweet revenge for his former sufferings. A pension made him able continually to indulge in his constitutional indolence. His pen was laid aside and his talents employed in brilliant, witty, and attractive conversation. Here at ease we can behold the real Johnson.

Were it not for his satellite, James Boswell, Johnson might have been obscured. He is a noted instance of the immortalizing power of a biographer. Though his writing may sink into oblivion, yet his life, his conversations, and his habits will e'er be remembered. A bundle of eccentricities and peculiarities, a man of rude and uncouth ways, yet under them all there beat a tender heart true and honest to himself and his fellow-men.

Johnson was the towering figure of the English literary world for the greater part of the last half of the eighteenth century—the undisputed dictator in the realm of letters. The showy style and the long words soon tire the reader. "He always made the fishes talk like whales," as Goldsmith wittily remarked.

His chief works are: *Rasselas*, *Lives of the Poets*, *The Vanity of Human Wishes*, and a *Dictionary of the English Language*. Of these *Rasselas* is most read. The titles of the others indicate their nature. The *Dictionary* was the first of modern ones.

*If greatness be measured by the extent to which one has surmounted obstacles and hindrances in his path, Samuel Johnson certainly deserves to be ranked among the greatest of the great. He secured his hard-earned fame and fortune solely on his own merits. He will be remembered in time to come, not so much as a great author, but rather as a great man, a great personality, a great character.*

*Garrett, Pa.*

"A WIDER field of work doesn't always mean greater usefulness. It is possible for a man to 'spread himself' until his work doesn't amount to much."

## Around the World Without a Cent

H. M. Spickler

### Chapter XXIII.

I HAVE now visited the German cities of Cologne, Coblenz, Mayence, Frankfurt on Main, Homburg, Marburg, Cassel, Göttingen, Eisleben, Halle, Leipsic, Wittenberg, Potsdam, Berlin, Dresden, Chemnitz, Nuremberg, Würzburg, Heidelberg, Carlsruhe, Strasburg and hundreds of towns and villages, walked through seven of the great impérial universities here, sat with the students and saw the professor enter with head reined to the ceiling or sighted along the floor or out of the window,—anywhere but at his students. —I have been in museum, laboratory and gymnasium, gone to the rooms with the students and eaten with them at their tables. I have visited hundreds of homes and sat in the little benches of the common school scores of times. At one school the teacher,—Lehrer, he is called in German,—left me in charge of his boys and girls. I called the German class and heard the pupils read from the Third Reader, but not on the floor as I expected. I said I heard them. Any one might. Even a deaf man could have heard most of the pupils. These German children have big, fat lungs, and they know how to use them most effectively. The boys were a little more graceful in their positions on the floor, for the girls flung out their arms, with elbows sticking out like a bat's wings, making me smile. Each stopped when a period was reached, the next one taking up the sentence and reading only to the end of it. Only one stood at a time, and by his desk, for as their turn came, each arose from his seat and stood in the aisle, reading with as much seriousness as though he were in a pulpit. I marked each pupil one hundred per cent. So far as I could tell, one did about as well as the other.

When the teacher came back I had gotten a "bead" on one of his prettiest girls who sat on the left side near the queer stove. She was a real German girl, a beauty, with the fairest of complexion,—that fascinating pink that plays over the cheeks and below the blue eyes of the typical German girl,—a glow of soft color that makes you smile in deepest adoration of her infinite loveliness and draw near her in spite of your

dignity. But the teacher entered. I wish I had locked the door. In another minute I would have found some excuse for going to her desk. She couldn't have run away, and probably wouldn't if she could have, and while I kept the other pupils at their own work I might have held her wee, soft hand, as I guided it over the paper on which she was pretending to be very busy writing out some copy in German capital letters. She was not a coquette, this charming German pupil of mine, neither was she flirting at all with the new teacher. That's what made it so interesting,—this falling-in love with this simple, unaffected German girl. She just acted as though my looking into her deep blue-sea of eyes was one of the duties that the teacher had imposed upon me before he left the room. I did not shirk my duty.

When I entered this school, as in other instances here on visiting German schools, the pupils all arose from their seats, standing by them, and repeating in concert a sentence or two of something which I have imagined to be taken from the Bible. When I left the school room they invariably rose again, and as I passed out of the door held open by the teacher in charge, they hurled another Bible doctrine at me.

Their dress was usually of the poorest and cheapest of cloth, and many of the children were apparently suffering from stomach-ache, the ache that is caused by emptiness, for they looked as though they were about famished. There is little of the American jollity in the school life of these children. They go to school because they have to, like any other children, but in going they make of it the most serious sort of penance, with little mouths drawn into the most solemn firmness as the steady but dim looking eye pores over the unattractive pages of the German school books. In nearly everything they read has been put something about God, or worship, or diligence, and often without any idea to make the reading interesting, the smallest boy must flounder through long, turgid sentences that have been quoted, with all their solemnity, from the Book of books.

We were standing in the play-ground in front of the schoolhouse at noon. The bell rang and the

children started to go in,—just as if they had been so many links in a chain. Every boy, as he passed the teacher and visitor, raised his cap and made a little bow or looked towards the teacher and me. One of these, at the end of the line, rushed by without removing his cap. He was already inside and was going to his seat, but the teacher called him back. He came out, and after a severe rebuke, he put his cap on in front of us, then took it off,—because he had to,—and entered the second time. No one of the pupils seemed to notice the little bit of discipline that the teacher was giving the boy, none laughed or even smiled. It was one of the ordinary things of the German empire,—this obedience to authority, unquestioned and stereotyped. So much did I feel this weight of respect for custom and rule, that as I stood there after the unruly but now obedient pupil had entered, I half feared the same teacher would find something to rebuke in his visitor. When I saw the soldiers marching through the streets, every one walking just like every one else in the ranks, every one carrying his gun just like his fellow soldiers carried it, every one turning in exactly the same spot on the corner, in precisely the same way, and every one trying to look just like every one else looked, humping the back, or raising the chin, or twisting the neck, I realized the fountain head of this clock-work instruction. It begins in the home, develops in the school and goes to seed in the army. When it comes to America,—this solemn routine of dutiful custom,—it catches the first whiff of the breeze of freedom, fills its giant lungs with American ozone and twenty-four hours later the German automaton has become a free-working Yankee.

Last night I heard the sweetest melodies played by the German orchestra in its beautiful park, and the sixth number was "Overture zu Fingalshöhle" by Mendelssohn,—*whatever that may mean*,—but today I am listening to far sweeter music, the melody of the street. I am sitting in the open window of my large room on the shady side of the street, on the second floor, so that I get a fine view of all that comes before me. It is market day. What a glorious day is market day to the German people and their visitors! Everybody comes to town then and everybody sells something, and everybody buys something. Stalls, covered with boards or canvas, are built all around the square or along a wide street. Almost everything that is sold in the shops is sold here on market days. Fruit and vegetables are most in evidence. Women usually attend the stalls, women dressed in bright calico, tying up little bundles for girls wearing fluttering ribbons who are walking about below me in broad-brimmed straw hats. Up to my dreamy ears floats the soft music of this German street,—up through the flowers and trees,—so soft and low, so quaintly pastoral my ears catch no distinct voice, or word, or

thought, save of the summer monotone of summer people in their summer marketing.

I can stand it no longer,—this melody of the street, and I go down to buy five pfennig worth of delicious German candy that looks like gingerbread with maple sugar dripping through it, and tastes like—more! My! if I just had the money, I would buy more of it for it is as pure as the air, without any adulterants. How funny to stand here and watch the German candy maker at work, and then to step up with the rest of the Germans and lay down a piece of money, just like their money, and ask for some German candy, or some German cakes! How queer all this, when you are an American, and riding a wheel, and getting along magnificently, with little German boys and German girls standing around, some of them looking at you, and some of them buying the candy, the clear white sun shining down upon everything, the pure German air coming off from the wooded hills around the town, the water for all the people, spouting from two spouts, running out to something that looks like a pump without a handle,—a wooden post with a hole through it and two big spouts, one on the east side, and one on the north side, of this square-German-post-pump-without-a-handle. The water in this town, as in most of the mountain villages, is brought down from the mountain until it flows out of this drinking fountain in the square. Always running, it is always cool, always clear, and always the best water for drinking.

This closes Germany. Next week we cross the Rhine into Switzerland and study the Alps and Swiss people.

#### LIQUOR MEN ARE BARRED.

THE national convention of the Catholic Total Abstinence Union which closed a few days ago in New Haven, Conn., adopted strong resolutions against the liquor traffic and against the evasion of the rules which exclude liquor dealers from membership in Catholic societies and which forbid the use of liquor at their meetings. One paragraph of the resolutions says:

"Catholic periodicals that cannot live without liquor advertisements should die. Let them not drag down the Catholic name in their greed. We earnestly suggest that Catholic organizations which exclude saloon keepers from membership and which forbid the use of liquor at their meetings should not tolerate the formation of clubs within their membership which despise the letter and spirit of those laws that have been made by their organization for the honor of the Catholic name."

The same papers containing this intelligence also have a news item to the effect that the great council of the Improved Order of Red Men, has adopted resolutions barring saloon keepers, bartenders, brewers and all others connected with the manufacture or sale of intoxicating liquors.—*Illinois Issac*.

# Wonders of the Rockies: In Colorado

Fred V. Kinzie

## II. Garden of the Gods.

As was stated in my first article, a fine driveway leads from Manitou, through the Garden of the Gods to Glen Eyrie and over the mesa to Colorado Springs. Carriages, automobiles and the old, reliable steed—the burro—are used as conveyance for tourists. A half-hour's carriage ride brings you to the entrance of this wonderland. The visit requires about three hours; but many more can be well spent, admiring this great work of nature. Here are singular rock formations, many of which have been separated from the rest, stand alone and project high into the air. Sometimes a large boulder of gray granite is found on a cliff of dark red stone. The red predominates here, as in most other places in the Rocky Mountains.

The Buena Vista Drive, Showing the Eastern Gateway.  
(Garden of the Gods.)

The garden is well named for it is certainly a garden of gods. Many of the formations reminded the writer of the idols and gods of the heathen in India, China, Japan and elsewhere, which we hear so much about.

In this garden the famous Balanced Rock is located. This being the main attraction, many people come to this place for the sole purpose of seeing this huge rock balanced on a four-foot, triangular base of clay. The rock is twenty feet in width, thirty feet high and as many feet in length, and estimated to weigh about five hundred tons. It is the most-photographed object in the United States. It stands on a small knoll at the north end of Mushroom Park, near the center of the garden. Four burros ("The Balanced-Rock Quartette") are kept here which tourists mount to have their pictures taken in front of Balanced Rock. One of these burros is said to have been photographed over 53,000 times.

Seeing this wonderful rock and its beautiful surroundings, brings to mind the appropriate poem written by J. L. McDowell:

"Long, long ere time's relentless task began  
Of measuring life by a mortal span,  
Ere sun and moon, with radiance bright,  
To heavenly hosts revealed the might  
Of Eternal Mind in his wise plan  
To create a world—and then a man—  
Voiceless was the barren earth, and cold  
The waters deep which o'er it rolled.

"Dread glaciers ground their sullen way,  
And volcanic fires empoisoned day;  
Then restless seas affrighted fled,  
And mountains grand appeared instead,  
While rugged peaks soon towered on high  
To appall the sense and please the eye.

"All this we know, for oft we see  
Full many a witness, mute like thee,  
Oh, wondrous rock on thy narrow base,  
Poised, as it were, for a leap in space,  
While far below winds the work of man,  
He of creation's inspired plan—  
Who in wonder, awe, does gaze on thee,  
The work of Nature's God as well as he."

Near Balanced Rock is a large ledge of rock, by the side of which is a small store where souvenirs and refreshments may be purchased; also seats are here for the accommodation of the visitor. On top of this rock four telescopes are placed. Through one

Steamboat Rock, Forming West Gateway  
(Garden of the Gods).

may be seen the Summit House on Pike's Peak, ten miles distant. Another shows up very distinctly the Printers' Home several miles distant. The third is directed toward the "Kissing Camels" at the farther side of the garden and the other one is directed upon a rock which resembles a lion's head.

Next to Steamboat Rock is the Old Man's Wine

Cellar, where near the opening in the rock are formations resembling barrels.

Mushroom Park is also an interesting place. Its location is near the Balanced Rock and is noted for its many formations resembling toadstools and mushrooms. The reason for the curious shapes which many of the rocks assume seems to be that the rocks are formed of different composition of material; some which withstands the weather, wind and rain while other portions crumble away, leaving the stratum of rock poised on a base much smaller than itself.

A well-kept roadway leads through Mushroom

Toadstools. (Garden of the Gods.)

Park called Buena Vista Drive. Most of the objects of interest are seen from this splendid drive-way as you pass along. One of these objects which is much noticed is the Siamese Twins; another rock specimen showing the actions of the weather upon different compositions of rock. They stand on Grand View Hill and are about fifty feet in height. Many of the compositions in the garden are of small diameter and rise in the air to a great height. Among those pointed out separately are the pillars of rock known as the Three Graces (faith, hope and charity). These rocks are about one hundred and twenty feet high. Another group of rocks similar in formation to the Three Graces is called the Ruins of Montezuma's Temple which is about two hundred and twenty feet in height. Still another separately-pointed-out rock of similar shape is Cathedral Spire, also known as Needle Rock. These remains are supposed to be several layers of stone turned up edge-ways by some prehistoric upheaval.

The highest rock in the garden is called the Tower of Babel and well deserves the name. It is quite large at the base and divides into several smaller peaks at the top, ranging in height from three hundred and fifty to four hundred feet.

Many other formations appropriately named, but sometimes requiring a strong imagination to see the resemblance, are the Frog, Baggage Room, Aunt Dinah, Anvil, Japanese Temple, Hound's Head, Chicken, Deer Head, Hanging Rock, Porcupine, Ant

Eater, Bee Hive, Washerwoman, Sailor's Cap, Bear and Seal, Napoleon Bonaparte, Washington and Chariot, Sentinels, Gypsum Rock, Stage Coach and Lady of the Garden. The list, perhaps, could be extended into the hundreds, but this, we think, is enough to give the reader an idea of what is to be seen in this richly-adorned earthly paradise. A description or photograph cannot give an adequate conception of the grandeur of Nature's work as here shown. Go yourself, dear reader, see, admire, and exclaim, How beautiful God has made this world!

(To be Continued.)

## THE OAK'S AUTOBIOGRAPHY.

JOHN H. NOWLAN.

TREES are the only form of vegetable life that bind within their bark a record of their life history. To the experienced forester this record is as plain as a written diary.

There, bound within its bark, we can see the record of years of prosperity and years of privation. Periods when the tree almost succumbed to adverse climatic conditions or the inroads of its neighbors. Then there are periods of favorable climate or triumph over competitors. There are records of injuries from the elements or other causes.

Come go with me to yonder magnificent red oak which has just been felled. Measure the breadth of the stump—almost four feet. Do you see that little black dot in the middle? That represents the first year's growth. Around it the wood is arranged in more or less regular rings, each the product of one year.

Count the rings. Exactly 225. When the acorn from which it grew dropped from the parent stem the red man was lord of the plains and hills. The following spring, 1682, while it was peeping out from the dead leaves heaped on this hillside, La Salle was starting on his journey down the Father of Waters, building Ft. St. Louis on the Illinois river and Ft. Prudhomme on the Mississippi. There was not an English settlement west of the Allegheny Mountains, and Ft. Crevecoeur was the only settlement in the State.

For several years its growth was rapid, then came a period of about sixty years when growth was slow. Seasons were unfavorable, or surrounding trees robbed it of the essentials of life. From here outward the rings are wider, indicating more favorable conditions.

But the *width* of the annulation is not the only fact revealed by our examination. Forty-five yearly growths have been added to the original, but the next is incomplete. A blackened arc-reaching one-fourth around the tree indicates an accident presumably the result of a forest fire.

Bravely the tree set to work to repair the injury, concentrating the greater part of its energies at the vital spot. Some of the additions on the side near the wound show a growth of almost two inches, while on the opposite side the growth is scarcely perceptible. Each year shows the breach less and twenty years later it was hidden. It had passed the century mark by thirty years when we note a break—several rings have been broken. Perhaps an Indian cut into it, but from the nature of the wound it was more probably a bolt of lightning. The wood was shivered, but soon the wound was healed and no scar left.

On the north side of the stump do you see that large black spot? That is the mark of an axe. Note the fact that about ten inches apart the rings begin to turn inward, showing that the tree began to repair the cut. There are sixty-seven rings from that point to the bark, hence the cut was made the year Vandalia ceased to be the capital of the State. An examination of the fallen stem shows the sloping upper cut to have been made several inches above, and that it penetrated the tree about six inches. That was an unsightly scar, but by concentrating its building material almost entirely at that point by the end of the twelfth summer the annular growth was again entire. The cavity was filled with a barky formation, which, aided by the rapid growth, made a large knot on the tree below which we directed our saw and consequently laid bare the bottom of the cut.

Forty-five years ago a three-inch strip of bark was removed, but in three years the edges of the bark had united and in two more the wood was again complete.

One more thrust was made six years ago, a wound one inch wide having been made, but the birds nested in its boughs two seasons only till it was hidden.

Yesterday the saw glided to and fro across its mighty trunk and the wedge reluctantly followed, widening the breach, till, finding resistance useless, the aged monarch apparently leaped high in the air and plunged down the hillside to its present resting place and revealed the above facts.

Let us learn this lesson. We should not judge our fellow-man, for we cannot know his trials and temptations. How he met and surmounted them we cannot know here, but perhaps in some future life all will be as plain as this diary of the oak.

*Mulberry Grove, Ill.*

#### BETTER EDUCATE THE "UNDER DOG."

ALL honor to those good men and women who are endeavoring to teach the homely trades and industries to those boys and girls whose lot otherwise would be one of gross ignorance and misery, if not

vice. We have an interesting letter from Prof. C. D. Griffin, who is in charge of a business and industrial school at Semmes, Ala., and some things he says show very startlingly the great need there is for schools—not colleges and high schools and "finishing" seminaries but plain schools to teach the rudiments of practical knowledge. Many of the adults in his neighborhood, he says, can neither read nor write, and he mentions one man who had actually never heard of George Washington, or of Niagara Falls and other great natural features of the country.

Yet this man was not one of the "ignorant foreigners" about whom so much complaint is being entered, but an "American," and he had contributed twelve children to the population of his country. The intellectual classes have few or no children, and it is the poor and ignorant and alien classes that are being mainly left to carry on the nation and national institutions. This is as it should be, for it would be worse if the perpetuation of the racial stock were trusted to the tender mercies of the anemic, effete, overcultured, hypersensitive members of society. Nevertheless, if the great bulk of the future nation must come from low parentage, then it becomes vital that the children of such parentage shall be trained in a wholesome way so that they shall be in some measure fitted for the responsibilities destined to be placed upon them. Don't forget that it is the children of the blacksmiths, the day-laborers, the brakemen, the small farmers, the backwoodsmen that for the most part are going to be our future business and professional men, statesmen, and even presidents—and not the sons of millionaires, eminent scholars and great public men.

The crying demand today is for the education of the lower common people, and this education, as we have said, does not want to be in the form of refinements of literary learning but in the shape of training of hand, eye and heart in the great cause of practical doing and generous, self-sacrificing goodwill. The call is for more good and worthy workers in the humble pursuits of life, and not for more lawyers and editors and storekeepers and bankers and well-dressed officials of the thousand and one sorts. Those who have waked up to this demand and are doing what they can to meet it are indeed pioneers in a veritable Promised Land of good works.

Our schools as organized today tend to drive out rather than attract the very boys and girls who are most in need of the training. They need to be "reformed together" in this sense. But the change cannot be made suddenly. Our more progressive communities are seeing the trouble and beginning to provide the cure, and the time is not far distant when all our courses of study will be made much more practical, more usable, and more human. God speed the day.—*The Pathfinder.*

# THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE, ELGIN, ILL.

Subscription price, \$1.00 per Annum, in Advance.

The Inglenook stands for material and spiritual progress. Its departments are: Literary, Editorial, Home, Cream of Magazines, World News.

Its qualities are: Good Sentiment, Moral Convictions, Inspiration.

Its purpose is: To safeguard home life by supplanting and counteracting bad literature.

Its scope of matter is: Scientific, Religious, Educational, Philanthropic, Economical, Sociological and Financial.

Its field is: The World.

Liberal commission given to agents. Sample copies are given upon request. When changing address give both old and new addresses.

Entered at the Postoffice at Elgin, Ill., as Second-class Matter.

## WHEN WE WORK FOR MONEY.

THERE are times, undoubtedly, when a person would be justified to work for money alone, but the man who is so avaricious that he will not turn his hand unless there is to be more money gained than at his present calling should be an outcast in society, so far as his moral worth is concerned, for such a person is a vandal and a thief. He can be bought and sold, and fluctuates in the trial balances of life just as more or less coin is measured up against him. He belongs to the Judas tribe.

Then there are some people, who will work at anything if there is a just compensation, but the compensation must be in sight before they can be engaged, because they are not of such a nature as to want to contribute something to the world's good. They want present pay for everything. They cannot be bought and sold so readily, if at all, as the first class, but everything is done on the basis of a money consideration.

The first class we term heartless, while this second class we term cold-hearted.

But there is another class of people who take real delight in contributing of their spare time and talent to some good cause, and when convinced of the need, they do not hesitate to inconvenience themselves in order that some one else may be benefited.

Which class does the world need most?

Which of these three classes do you prefer?

Which class do you belong to?

H. M. B.

## EDUCATIONAL NOTES.

NOT many centuries ago education was so woven into religious devotions that the proper development of intellect was neglected. Next the devotional and educational phases of life were divorced, the state taking the intellectual and the church the devotional.

We are working on that basis now with indications of a slight modification.

For citizenship, scholarship and good fellowship it is being slowly discovered that intellect in the absence of a moral framework to direct intelligence, is not what society needs. Intelligence is not the end of education. Education is only a means to an end and that end is a fuller, more useful and more valuable character in the sight of God and man. An education that seeks dollars only is not a commendable education. Nor is that one which alienates the possessor from his less fortunate fellows. That only is education which leads its owner to contribute his additional powers, acquired and inherited, to the development of his fellows.

Goodness is the end sought for through government enactment, civil authorities, parental control, church tactics and legislative bodies. Education which does not quicken and evolve the good qualities of human nature, falls short of its purpose, and this is the present charge against modern education.

The moral standards which have been ripened through ages of experience and codified in the Bible are being demanded by educators as fit for incorporation into the public school curriculum, and man's intuitive sense of righteousness will sooner or later teach Bible truths to his pupils whether the Bible is read in the public schools or not. Natural facts taught out of all relation or connection to the purpose and object of creation is obviously wrong and leads to erroneous conclusions, just the same as it would be to teach the Constitution of the United States today out of all relation and connection with its origin and purpose. What would the fifteenth amendment mean as a fact to be recited without teaching its past history? What would it amount to to give lessons on money by simply analyzing the metal of a silver dollar, telling of its mintage and purchasing power without telling of the need of money as a medium of exchange?

So biology, mathematics, historical events and moral standards must be taught as a small counterpart of a vast universe of beings demanding spiritual obligations as well as needing knowledge and accomplishments for present use. And all of this was designed and is administered in terms of personality. Hence, if nature is adapted to personal needs it must be mysteriously operated by personal authority.

This personal relation, which we sustain to each other and to the unseen hand which governs the whole universe to the good of all persons, is a part of education and an important part,—the main part. For an educated mind which knows nothing of his origin and obligation to forces outside of himself knows little of himself and has no worthy end for his education, so that, traced to its final analysis, education means to

learn of God. The Bible long ago, said that "the fear of God is the beginning of wisdom." Scholars have not and never will improve on that analysis, and there we leave the subject. When educators lead in that direction they deserve a following. When they divert souls from that path they deserve denunciation.

H. M. B.

#### WITH OUR READERS.

THE preceding articles were written by the late editor of the INGLENOOK, H. M. Barwick, and intended for these pages. In several numbers of the magazine, which appeared after his death, we published editorials written by him, but these were overlooked at the time. We give them now to those for whom they were written.

Mr. Spickler's articles will continue to the end of the year. We feel that our readers are getting a special treat in these articles, as the writer has gone out of the beaten track of the globe-trotter in his travels and brings us into very close touch with the country and people as they really are. You would do your friends a favor by getting them to follow these articles with you.

"Man's Littleness," in prose and verse, is written by the same author. It is interesting to compare the two versions.

#### MAN'S LITTLENESS.

JOHN S. FERNALD.

"AN undevout astronomer is mad." These words, penned by Young in the middle of the eighteenth century, are emphasized daily by the advocates of modern science, not alone in astronomy, but in all branches in which man tries to discover the laws and apply to his own use the forces of Nature. He is indeed mad who can investigate any branch of natural science and not recognize in all its ramifications, the work of the mind referred to in Isaiah 55: 9, "For as the heavens are higher than the earth, so are my ways than your ways, saith the Lord."

When God said to Abram (Genesis 15: 5), "Look now towards the heavens and tell the stars, and if thou be able to number them . . . so shall thy seed be," he showed mankind the uselessness of trying to fathom the extent of the universe. With all the improved instruments and methods of the present day man is able but to peer with his vision into space so far as to show him that he has but worked upon the borders of the great sea of astronomy. Well has the Psalmist said, in Psalms 8: 3, "When I consider the heavens, the work of thy fingers, the moon and the stars which thou hast made; what is man that thou art mindful of him?"

In the great fields of chemistry and electricity, in which man's greatest achievements are manifest, he has but applied laws and forces created and maintained by the Great Maker of all. Every new dis-

covery but confirms the fact that man has but crossed the threshold of knowledge in these branches. Of the earth and its structure, its rocks and its waters, its inhabitants, man, the beasts of the field, the birds of the air and the fishes of the sea, man's boasted knowledge is rudimentary. Each and every creature, both animal and vegetable, is constructed and maintained by laws best adapted to its particular use. Man, himself, in his own body, presents a masterpiece of mechanism the study of which cannot fail to excite feelings of reverence for the mind that could conceive it.

In microscopic investigation, the opposite of astronomy, we find still further evidence of the futility of man's attempts to comprehend the works of God. Every advance in the line of microscopic investigation shows conclusively that even as it is in the larger and more easily discernible things of the creation, so it is in this: man has but worked along the shoal waters of a deep and boundless sea of knowledge. As Pope says, in his Essay on Man:

"All are but parts of one stupendous whole  
Whose body Nature is, and God the soul."

#### MAN'S LITTLENESS.

"An undevout astronomer is mad." So, too, is he  
Who, in the realm of science Nature sees

In any of her forms

And learns not there man's littleness

Compared with the great Mind that made

And governs all.

He sees the earth a speck, and e'en our sun  
And his attendant train as but a corp'ral's guard  
To the vast host of orbs that march through space.  
The utmost limit that man's eye can pierce,  
With all the aids his science can produce,  
Shows but the near horizon of the ocean vast  
Of the great universe.

The ocean liner plowing through the main,  
The rushing car on land or in the air,  
Are triumphs of man's skill in fitting for his use

The powers of Nature.

Fire and water, and the lightning's strength  
Are chained to do his bidding,

Yet at best he can but use, in an imperfect way,  
The gifts of God.

To know himself is more than man can know;  
His body, mind and spirit all beyond his ken,  
Yet he's but one of Nature's many works,  
Each built its mission to fulfill through untold ages.  
The beasts, the birds, the fishes, and the trees  
And insects of the air.

Each gives a life-time study to the man,  
Who, when old age o'ertakes him, can but say:

"I've just begun."

The untold regions of the starry sky,  
The minute structure of the insect form,  
Are two extremes, 'twixt which man finds for study  
Nature forms whose name is legion.  
Forms whose structure and whose laws he can but know  
In an imperfect way.

Yet all were made, and all are kept at work  
Supported and sustained by that great Mind  
In whom we live, and move, and have our being.

## “When a Young Man’s Fancy Turns to Love”

Flora E. Teague

THE transition period of the boy is a most wonderful and interesting study. In infancy you will find him tender and affectionate as his sister. In early childhood he instinctively becomes coy and backward in making manifest his feelings. In fact, he sometimes tries to palm off a kind of rude bluntness instead of affection.

Later on he shows a kind of contempt for girls and womankind in general. After this he reaches the callow and awkward stage. He begins to be particular about his ties, the blacking of his shoes, and the parting of his hair. His interest in girls and young women begins to grow. Wading through a deep depressing slough of awkwardness and bashfulness, he cultivates the acquaintance of the gentler sex.

Fortunate, indeed, will our boy be now if sometimes thoughtless friends blind their eyes to the change in him and do not add to his mortification by teasing him about his girl friends or his present moods and make-up. Fortunate, too, will he be if his girl friends are of the right sort, and his boy friends too gentlemanly and too well-bred to engage in evil thoughts and conversation regarding conduct of the sexes in general.

At this time if our boy has been blessed with wise and loving parents who are not only parents but confidential comrades, he will have a stronghold to fall back upon for help and advice. Do not forget, my boy, that no one can love you as much as your own dear mother. No one can give you better or more wholesome advice. You may not feel so free to go to father, but remember he has trod the path you are now treading and can tell you some helpful things that even mother does not know or does not understand.

Are you blessed with sisters? You then have one of the most helpful aids that can be found. Their knowledge of their own sex can be invaluable to you. They have been too well reared to select as their chums noisy, boisterous girls. Neither will they wish you to do so. Such girls, almost unconsciously to

themselves will often make the best of boys wild or even worse.

Never associate with girls of questionable reputation or known impurity. You would not desire such for a wife. Neither will a good, pure girl desire a loose character for a husband. Women should demand purity of men as strong as men demand it of women.

Respect yourself too much to be too familiar with your girl friends. It is very annoying to the timid and modest young girl and may lead to evil with the bolder. Consider it unmanly to mingle with those who permit or invite familiarity.

Be too much of a man to even listen to conversations bordering on the unseemly, much less engage in them. If you are the right kind of a young man, your associates will respect your wishes in this respect as well as others and refrain from engaging in talk or deeds bordering on evil, while in your presence.

Some one has said, “We are a part of everything with which we come in contact.” How necessary it is then that we be on our guard.

When visiting lady friends be gentlemanly enough to respect early retiring hours. Do not remain so late that hints must be given you to depart. Be wary of the girl who encourages late hours.

Do not poison the atmosphere surrounding ladies with a foul tobacco breath, or the curling smoke of your cigar. Ladies may permit it even though it be disagreeable to them.

It is not best to be too generous in the use of money on girl friends. The ones who think more of your money than they do of you may encourage your lavishness. The girl who truly respects you will feel annoyed by a too lavish display.

Don’t be “Hail fellow, well met” with every girl. A male flirt is contemptible. Neither think that one girl is a sample of all girls. I believe thoroughly in young people having a broad acquaintance before falling head over ears in love. Study closely the likes

and dislikes of your attraction. See if they harmonize well with your own.

If you truly honor and respect your lady friends, never aid in placing them in questionable positions. You may be perfectly innocent, but peculiar situations make many people wonder, to say the least.

Don't continually talk silly nonsense. Some day that will grow very stale. Draw out the depths of intelligence and culture you can find that is of interest to you. Discuss your religious beliefs. See if you can dwell together in unity on this point. Oh, the unhappy homes because many perplexing questions have not been called out and settled at an earlier time.

Learn to be tidy, cleanly, and self-reliant. Wait on yourself. Be a mother's boy and helper. A youth who is considerate of his mother and sisters is a prize and a manly one. A girl may trust such an one.

*Lordsburg, Cal.*

### THE MOTHER.

Wherever life is quickened and brought forth  
There she does mother-service, though no child  
Born of the flesh lies warm within her arms.  
Wherever she has yielded with a love  
Divine, unstained by self, her woman's soul  
To give some other soul its sustenance,  
There she has known the agony and the joy.  
Although no babe with pink, sweet hands clings fast  
To her own hand. A thousand women give,  
Self-satisfied, with mother-instinct rife,  
Their offspring to the world. Brutes do the same.  
This woman, to the love-light in whose eyes  
No child smiles back, has looked so deep and true  
Into the souls of men, that where the wound  
Rankled the sorest, she has healed and staunch'd.  
This woman, on the breast no babe has warmed,  
Has pillowed those heart-sick with heavy life.  
God sets upon her head the mother-crown.

—Florence Kiper.

### DICKY.

DICKY DEAN sat on the low doorstep, his tousled head resting on two plump hands, a picture of entire dejection. Long shadows stretched on the lawn, for the sun had begun his downward course. The busy bees droned their working song as they sipped the precious store, bright-colored butterflies flitted from flower to flower, and big bluebottles lazily buzzed here and there. All seemed peaceful and quiet in the late summer afternoon; but on the heart of the little man sitting so forlornly there, a deep shadow had fallen.

He yearned for sympathy and love, that love which had been so freely bestowed on him in the first years of his little life, when he had been his mother's all. Many, many years ago, it seemed to him, as he looked back on it, before Katherine or the baby had come to them. Then his wee will had been law in the home, but now, somehow, everything was altered. A

great change had swept over the household, since Katherine and the baby had come, and his sensitive nature craved the many demonstrations of motherly love that had so cruelly, yet unintentionally, been denied him.

The baby had been very restless the night before, so his mother must not be disturbed from her much-needed nap.

He rose and tiptoed around the veranda and peeped in the nursery window. Yes, there she was, resting so peacefully on the big davenport, with the little one beside her. He felt lonely, and tears, unheeded, ran down his cheek. He wished he was not too big to cuddle down on the other side of her and rest his head on her arm, just as the wee baby was doing.

He thought of that sweet time, so long ago it seemed like a dream of some other world, where mothers still held their six-year-old boys in their laps, and they were not always told to be still or, "Do go out and play, you are so noisy."

He tiptoed back to his seat on the steps. After all it was not so fine to be the big brother ready to begin school.

Just then tiny footsteps were heard on the gravel walk and three-year-old Katherine danced gayly alone over the stones, bearing in her arms her precious Susan Ann.

"Brudder, see—" But alas, for those uncertain little feet, stumbling, she fell right before him. Poor Susan Ann! only a tangled mass of flaxen hair remained to tell of the beauties that had been; and the poor little mother held up one chubby thumb, all cut and bleeding.

Dicky sprang to help her up; but she pushed him away and poured forth such a volley of shrieks and screams that Molly left her preserving in the kitchen and came running to the rescue.

"Brudder did it, naughty brudder."

Molly gathered up the little child in her arms and shook a warning finger at Dicky.

"You're a bad, bad boy, to hurt your little sister so."

"O Kitty, I didn't, you know I didn't," he began; but, somehow, he did not feel like arguing, and besides, it would do no good, for Molly loved Katherine and would hear nothing against her. So he merely stood and watched them go in again.

Through the open window he could hear Molly soothing his little sister, and now and again he could catch fragments of their conversation as, "Brother was naughty, little pet."

He leaned his head against the post. What did make it ache so, and those funny little shivers that ran up and down his back?

In the white house across the way a mother sat

rocking her little boy, and singing pretty childish songs. How comfortable they looked! He wished his mother would rock him so and sing; but, then that other little boy had that awful thing. What was it now? O yes, the measles. Dicky wondered what the measles were. He had heard the doctor tell his mother there was an epidemic of measles a few days before; but just what it was he did not know. Perhaps, some great monster with shining eyes and large white teeth. Charley, across the way, had it, and yet he looked happy, so happy in his mother's arms. Dicky almost wished it would come to him and make him sick, because, maybe, his mother would feel sorry for him and love him again.

In the great oak, a robin was feeding her young. How gracefully she flew down in search of food, then up, up to the impatient babies! Dicky watched her until, finally, the little birds were satisfied, and their noisy peeping stopped. Then the mother spread her wings and gently, very gently, gathered her little ones beneath her. Not one left out, all, under the mother, near her soft downy breast.

Dicky wished he might be a little bird and cuddle under those warm wings, just as those little babies were doing.

He gathered his jacket about him. What made him feel so chilly, this warm summer day?

He thought he would go in; perhaps there was a great fire somewhere. He rose to his feet. How tall he seemed and how funny his knees shook as he walked!

No one noticed the little fellow as he quietly stole into the big Morris chair near the hall grate; but only blackness peered back at him from the fireplace instead of the bright coals. He thought he had better not bother Molly, and besides his head felt so queer; he would just lean back on the soft cushions awhile and rest.

The great mission-clock on the landing chimed four, then five, and still the little man rested undisturbed. Then mamma, refreshed from her sleep, passed through the hall on an errand to the kitchen, and saw him huddled there. But Dicky did not see her, as surprised and then alarmed at his quiet attitude, she bent over him, calling his name and trying to arouse him. Neither did he know when, with Molly's help, she carried him up to his own little bed and sent for the doctor.

What he did remember was, when, on opening his eyes, he saw his mother and doctor bending over him, talking in subdued tones. Just one word reached his ear and brought a strange feeling with it—measles. Then it had come to him! But his own dear mother was there, stroking his head, with tears in her eyes—all for him. It had come to make him sick, and that was what made him feel so queer;

but he felt a delicious thrill of happiness, for now he would be first again. His mother would hush the noise, so he could sleep. Molly would bring him choice bits on the silver tray, and even Katherine would tiptoe about, with big eyes full of awe.

"Measles O Mamma, I am so glad. Now you will love me again."

Then suddenly on the mother's heart a great light seemed to burst, and she understood all. Throwing a blanket tightly over the little boy, she took him in her arms and carried him to the big rocker near the window.

Lower and lower, dropped the little head, until it rested heavily on her arm, but on his fevered lips rested a sweet smile of contentment. His mother was rocking him to sleep once more, and singing as she used to do.—*American Motherhood.*

#### GETTING OUT OF BED.

DON'T jump up the first second your eyes are open. Remember that while you sleep your vital organs are at rest. The vitality is lowered, and the circulation is not so strong. A sudden spring out of bed is a shock to these organs, especially the heart, as it starts to pumping the blood suddenly. Take your time in getting up. Yawn and stretch. Wake up slowly. Give the vital organs a chance to resume their work gradually.

Notice how a baby walks. It stretches its arms and legs, rubs its eyes, and yawns and wakes up slowly. Watch a kitten wake up. First it stretches out one leg, then another, rubs its face, rolls over, and stretches the whole body. The birds do not wake up and fly as soon as their eyes are open; they shake out their wings and stretch their legs, waking up slowly.

This is the natural way to wake up. Don't jump up suddenly, don't be in such a hurry; but stretch and yawn, and yawn and stretch. Stretch the arms and legs; stretch the whole body. A good yawn and stretch is better than a cold bath. It will get you thoroughly awake, and then you will enjoy the bath all the more.—*Family Doctor.*

#### TO IRON SHEETS.

ONE of the greatest "time-savers" on ironing day is the knowledge of "How to Fold a Sheet," and I find that very few people know how to do this, even though it seems so simple. So many women iron one side of the sheet, then refold and iron the other. Minutes are money, oftentimes, and especially when a basket is well rounded with unironed clothes. Instead of folding the sheet in the "old-fashioned" way, bring the upper and lower hems together, then fold from right to left, having the upper hem of sheet on the outside. In this way the whole upper

half of the sheet is ironed without refolding, and really that is all that is necessary, for when the sheet, ironed in this way, is on the bed, one cannot distinguish that the lower half hasn't been smoothed.

Try this and see what a really practical idea it is.—*Table Talk*.

#### THE PRACTICING GROUND FOR VIRTUES.

COURTESY can exist without love, but love without courtesy quickly gets bedraggled and haggard. For the maintenance of love few notions would be more favorable than this that home is a good practicing ground for habitual courtesy, neglecting which we shall make a poor show on field days.

"Love-making" is a poor, wilted term which generally provokes a smile. I would raise love-making to a fine weaving art, at which none could laugh, and I would employ all hands in the home at this busy loom, says the author of "The Four Pillars of the Home." Love-making is not only the finest of the fine arts, but it is the sweetest of good employments. Thoughtfulness is the warp, and activity the woof; the design which grows on the piece is very beautiful to see.

In the torn garment of home-life, hard hearts and unloving natures tear rent after rent until it is all in tatters, but love never lets the rents grow large; its busy needle patches them up, and by an art it must have learned in Heaven, scatters the loveliest sprays of embroidery and silver work about the darn, so that what threatened destruction has proved to be a strength and a beauty, and the garment has become a symbol of love's power, instead of the jagged rags which witness to love's defeat.—*Exchange*.

#### THE DRUMMER OF THE WOODS.

EARLY one morning in September I heard shrieks and patterings in Davy's room, and very softly the little boy rushed up to my bed and held before my half-shut eyes a bird of this description: "Above, olive brown, barred with black; crown and sides of neck, bluish gray; red crescent on nape; 'mustache,' black; rump, white; beneath, pale brown with pink and yellow tints, each feather bearing a spot of black; breast with conspicuous black crescent; shafts and under surface of wings and tail, golden yellow; length, about twelve and one-half inches"—and to the words of the well-known Nuttall I venture to add my own, to the effect that Davy's acquaintance looked to me, for the moment, about two feet long! and as for his bill, it reminded me of a crowbar. But, of course, after I had rubbed my eyes I beheld merely a flicker. Davy himself, however, said that the bird's bill really was long and strong, and that

it came very near making a puncture in the "anatomy" of my little friend just as he was persuading the living tool box to go into a pillow case.

Just how the flicker manages to make so much noise when he is digging a nest passage or tapping for worms I cannot quite make out. I realize that the force of his head-blow is enormous, but even his large bill is nothing like even the smallest size of a tack hammer. I am sure that I could hammer a hollow log all day without being heard very far. Again, the flicker does not always rap hollow trees. So he is a problem for me, if not for others.

The flicker is also known by the names of the clake, high-pole, yellow-hammer, golden-winged woodpecker, pigeon-woodpecker, and many others. His nest is not really a nest at all, but a tunnel in a decayed tree—perhaps an apple tree, perhaps an oak. If he doesn't find a cavity ready made, he sets to work with his pick-like nose, and has actually been known to drill through solid oak for a distance of fifteen inches. One woodpecker tunnel, eight inches in diameter and eighteen inches deep, was found in a living sassafras at a height of fifteen feet from the ground. A month was required for the completion of this piece of engineering, as the newspapers would say of a railroad tunnel. Half a dozen snow-white eggs rested on the fragments of wood which fell from the sides of the passage. Sometimes the young flickers object to leaving their cozy den for the school of wing trials, and as a consequence the mother bird is obliged to coax at the entrance for hours together. The tunnel nest is anything but tidy, yet the flicker himself is one of the neatest of birds. How pleasant it is to know that the father-drummer is just as anxious as the mother to feed the nestlings!—*Sunday-School Advocate*.

### For SUNDAY READING

#### DISAPPOINTMENT.

"Disappointment—his appointment,"

Change one letter, then I see  
That the thwarting of my purpose  
Is God's better choice for me.  
His appointment must be blessing,  
Tho it may come in disguise,  
For the end from the beginning  
Open to his wisdom lies.

"Disappointment—his appointment,"

Whose? The Lord's, who loves me best  
Understands and knows me fully,  
Who my faith and love would test;  
For, like loving earthly-parent,  
He rejoices when he knows  
That his child accepts, unquestioned,  
All that from his wisdom flows.

"Disappointment—his appointment,"  
 "No good thing will he withhold."  
 From denials oft we gather,  
 Treasures of his love untold.  
 Well he knows each broken purpose  
 Leads to fuller, deeper trust,  
 And the end of all his dealings  
 Proves our God is wise and just.

"Disappointment—his appointment,"  
 Lord, I take it, then, as such,  
 Like the clay in hands of potter,  
 Yielding wholly to thy touch,  
 All my life's plan is thy moulding,  
 Not one single choice be mine;  
 Let me answer, unrepining—  
 Father, "Not my will, but thine."

—Author Unknown.

### THE PROCESS OF REVELATION.

RICHARD BRAUNSTEIN.

We have become so accustomed to the Book that we rarely stay to ask a question concerning its origin and process of making. Such an abnormal reverence has attached itself to the Book that to ask about its birth is considered a preliminary stage of infidelity or at least Higher Criticism.

But things do have a beginning. Suppose the reader should this morning for the first time stumble upon the Bible. Stripped of its halo—for the moment—what questions would we ask?

I venture to suggest that our thought would resolve itself into such a question as: What is this—a single book or collection of writings? Is there any connection between the parts? Who wrote them? When? To what people? Under what conditions? For what purpose? Why are they called Holy? Who said they were? It is just such a line of rapid fire questions that the Book is now facing and justly so.

There are many so-called religious or sacred books in the world. Each nation has them. Why are these bound in black and with divinity circuit set as the standard of conduct, the rule of faith and of practice? Speaking more to the point, why pass over all the sacred books of the nations and take a few from an obscure province of Jews and demand universal acceptance of them?

Before answering questions, let us stop a minute and approach the question from another standpoint. No one claims that Jehovah literally handed the book out of the skies—not even the Old Testament or any book in it. That is to say, there was a day when it did not exist; then there was a beginning with only one book, written by some one, then two, three, and so on until the Jews had a greater number of them than we have in our present Old Testament. Now, among the Jews, religion occupied the highest place. They were the ones preëminently noted for their sacred organization. Their tribes were united in one common worship, one theocracy one national church. And

this church had its hymns, its worship, its laws and its history. It also had its councils. And it was at these councils that a book was endorsed by prophets and voted "Sacred." A book must have a very high standard of morals (as they thought) to be included in their list or canon of scripture. Often, after a book had been voted in, a later council would vote it out.

Philo, the learned Hellenistic Jew, who lived at Alexandria, Egypt, just twenty years B. C., tells us of the sacred books of the Scripture, and mentions the books of the Old Testament, practically as we have them in our Bible. So also do Josephus and others.

The Rabbis wrote their laws, traditions and sayings in the Talmud, and here again we find our Old Testament books recorded as sacred. The Talmud also informs us that the Jews organized their great church councils just after the restoration from exile. These councils were composed of 120 members of the most scholarly and devout men of the day. The council kept tab of the list of sacred writings and had its regular meetings until after the book of Malachi was written. Then as prophecy slumbered and no book could be enrolled without the prophet endorsement, Malachi closed the canon of the Old Testament.

So the Church of the Jews voted the Old Testament *Sacred* and the Church of the Christian voted the New Testament *Sacred*. But the church did not make them holy; but because they were holy, they forced the church to recognize them. They do not get their authority from the church, but from their own inherent power and sweep of truth! Holy men of old *spoke* and holy men *heard* and responded with their vote. If any book is found in the Old Testament, it is because it carries a sublime message to the world—a message far above and beyond its day. It is because it forms a link in God's great chain of progressive revelation of himself to humanity. Genesis is not included because Isaac and Jacob were good cattle-raisers, but because they followed that lone, shadowy figure, who from Ur of the Chaldees, went out by faith, not knowing whither he went. Exodus is not mentioned because a magician wielded a weird rod over rock and sea and people, but because Jehovah wishes to reveal his process of turning a race of slaves into a nation of intellectual and intelligent citizens. Leviticus is not a weary table of sacrificial formulas, but it is God's class in object lessons preparatory to the atonement, and even the book of Esther is not a misplaced monogram of revenge but it is a masterpiece of social and national unity, welding the nation together in its darkest hours and pointing to its divine mission for the world.

Again, a tree is judged by its fruit—not its leaves, or branches, or shape or age. And the fruit of the book is its matchless Christ. The culmination of the process is Jesus. The burden of prophecy, the hope

of history, the melody of psalm, the charm of symbol, type and shadow, all center in him. Judgment must not pass upon a process until completed. No man lays his hand upon the revolving potter's wheel—but upon the finished pitcher. If the urn is faultless, what matter if the rapid-flying wheel described a parabola instead of a circle?

"But," says the objector, "how do I know that the Book is authoritative? Perhaps these men who voted the canon in were mistaken. How do I know that these books are binding on me?" It is just this attitude of authority we wish now to consider. What is authority? How much more authority can a thing have than truth? If true, what more can authority do for it? If untrue what authority can make it true? Nothing is true because God says it, but he says things because they are true; and a true thing is no truer after than before he says it.

Religion and its Bible have three stages: (1) that of Popes and Councils. (2) That of Reform and Protest. (3) That of Freedom and Progress. The religions of the past have all been religions of authority—corresponding to the political government and industrial and economic conditions by which they were surrounded. An emperor over the state and a pope over the church were logical concomitants of an age of illiteracy, dependency and serfdom. The emperor makes the laws and interprets them for the state; the pope and council make and interpret laws for the church. The people were ignorant and superstitious and believed as much in the divine right of kings as that of popes and believed in both because the church *said so*. The Bible was held aloof as too sacred for the people; the priest handed down the decisions of the pope and councils and the people believed because they *did not know*.

Then came the Reformation when the fallacy of pope and divine right of kings was overthrown. The Bible was translated into the vernacular of the people—all had an open Bible and rejoiced. It was a forward step when Martin Luther protested against pope and council in behalf of the Book and the people. Then each man could read the Book for himself and not another. But in the final analysis it was the shifting of authority from pope to Book. But it was worth a great deal to shift authority from an inerrant, infallible pope to an inerrant infallible Book. This gave us Calvinism, Puritanism, the Pilgrims, the Commonwealth and the sway of Literalism. We are just now entering the final stage. The rise of scholarship and education, the wonderful advancement in inventions, discoveries and science, the downfall of monarchism and the prevalence of democratic ideas have shifted authority once more from pope back to Book and from an infallible book to an infallible Christ! No more have we a religion of a church, or book, tho

church and book still live, but it is a religion of a matchless person, an immaculate character, an imperial Christ. He is the way, the truth, the life! The Divine Revelation!

#### WHY DR. GRENFELL IS AGAINST LIQUOR.

DR. GRENFELL, a famous medical man among the Eskimos, says, concerning the use of liquor among those people in the far north: "Alcohol is not allowed to be sold on any part of the coast on which we are working; but so surely as it comes and an illicit sale begins, one sees its evil results as quickly as if, instead of alcohol, it had been the germ of diphtheria or smallpox. Lying at my anchors in Labrador harbors, women have come off to the ship after dark, secretly, for fear of being seen, to ask me for God's sake to try and prevent its being sold near them, as their sons and husbands were being debauched, and even their girls were in danger.

"I have seen it come among the Eskimos. It kills our natives as arsenic kills flies, and it robs them of everything that would differentiate them as human beings from the beasts.

"Why don't I want to see liquor used at sea? Because when I go down for a watch below, I want to feel that the man at the wheel sees only one light when there is only one light to see; that when the safety of the ship and all it carries depends on the cool head, the instant resolve and the steady hand of the helmsman, there is not standing there in the place of the man the poor, debased creature that all the world has seen alcohol create.

"I have seen ships lost through collision because the captain had been taking a 'little alcohol.' I have had to tell a woman that she was a widow, and that her children were fatherless, because her husband, gentle and loving and clean-living, had been tempted to take 'a drop of alcohol' at sea, and had fallen over the side, drunk, and gone out into a drunkard's eternity. I have had to clothe children and feed them when reduced to starvation, because alcohol had robbed them of a natural protector and all the necessities of life. I have had to visit in prisons the victims of crime, caused as directly *in honest men* by alcohol as a burn is caused by falling into fire.

"I have been doctoring sick men and women of every kind, and I have found that I can use other drugs of which we know the exact action and which we can control absolutely with greater accuracy in cases of necessity for stimulating the heart. I contend we can get just as good results without it, and I always fear its power to create a desire for itself. It is not necessary for happiness, for I have known no set of men happier and enjoying their lives more than the crews of my own vessel, and the many, many fishermen who, like ourselves, neither touch, taste nor handle it."—*Young People's Paper*.

# Echoes from Everywhere

Of thirty-four legislatures in session last year twenty passed laws unfavorable to the liquor traffic, while not a legislature has been in session the present year that has not had one or more temperance bills before it. In recent years no legislation favorable to the liquor traffic has been enacted.

Emanuel Mandel, one of the bulwarks of Chicago's commercial life, first vice-president of Mandel Brothers and widely known as one of the nation's most successful merchants, died Thursday night, Sept. 3, at Basle, Switzerland, as a result of concussion of the brain due to a fall at the railway station there.

The interior department announces that the President has signed the proclamation throwing open to settlement on Oct. 5 about 800,000 acres of the public domain now a part of the Rosebud Indian Agency, in South Dakota. All of this land is said to be good for agriculture, and some of the claims are valued at \$20,000 and a rush of settlers is anticipated.

It is rumored that when the Douma meets in November the Russian czar will issue a manifesto, giving it additional powers and making it a real legislative body. Already some of the most objectionable grand dukes are being removed from office and the signs are favorable for more freedom in Russia. If the czar's intentions are correctly reported he is wise. He may yet make Russia a great nation.

Turkey, Persia and Russia have been invited by Secretary Root to participate in the international opium conference to be held in Shanghai, China, next January. France, Germany the United States, China, Japan, Portugal and Great Britain already have named delegates. Mr. Root first suggested the conference, and now wants all nations concerned about opium to join in it. The opium traffic is to be discussed from economic, moral and scientific points of view, with the object of agreeing on a way to control it in the far East.

Fraudulent advertising has been increasing in Germany very rapidly during the past few years, and the government has now determined to put a stop to it. If a store advertises a bankrupt stock for sale, it must be prepared to prove that there is no misstatement as to the source whence the goods come. The new law is also intended to prevent a merchant from adding goods to his stock in order to increase sales, after he has announced that he is selling out and going out of business. The penalty of about \$1,200 which the law prescribes will probably deter a good many unscrupulous merchants from resorting to such frauds. America, too, has in some of the States laws to suppress dishonesty in advertising, but it is questionable whether they are enforced.

Dredging for gold is steadily increasing in California. Estimates of the yield of gold by this method in 1906 give a production of \$6,000,000, while the output of the following year is placed at \$7,000,000. In 1902 the production was only \$867,000, which was doubled the next year, and has increased steadily since. Improvements in the methods and machinery are important factors in the rapid development of this class of mining, and new placer beds are being discovered, which are quickly followed by an increase of the number of dredges already at work.

At Newport, R. I., people who have been divorced and who want to marry again must apply to the justices of the Superior Court, for the Ministers' Union has voted not to unite divorced pairs in the future. Newport, often called the Mecca for divorced persons bent on marrying, is now expected to lose that distinction, for the new laws of the State against divorce are so severe that those seeking divorces will hardly go to Rhode Island to obtain them.

Consul Albert Halstead, of Birmingham, Eng., states that the invention of a new British icemaking machine is reported which works on the principle that water will freeze when evaporated rapidly by a vacuum pump and a powerful absorbent, such as sulphuric acid. It is said that the machine can be worked by hand and will turn out carafes of iced water at the rate of one in three minutes and blocks of ice weighing about 1 pound in twenty minutes. The apparatus, consisting of the absorber and the carafe, or the ice mold, are rocked by means of a handwheel and crank, which serves also to create the vacuum. This apparatus is made at Reading, England.

Some ten years ago Sir Wm. Crookes, president of the British Association for the Advancement of Science, declared that, inasmuch as the production of wheat could not keep up with the increase of the world's population, by 1928 we should be in a state of starvation or at least be pinched for want of food. A writer in the Technical World does not agree with this prediction, as, he says, Sir Wm. Crookes did not take into consideration the vast ungathered harvests in the sea. In the great Sargasso Sea alone, he says, sufficient nutritious vegetation flourishes and decays to support the entire population of Europe, if it were harvested and prepared in a manne fitting it for human consumption. On the sea beaches of the United States, enough proteids are cast up by the waves, and allowed to decay and desiccate into their original elements, to take the place of the whole product of the Northwestern wheat fields. If the world's teeming millions ever face wholesale hunger, it will not be on account of any niggardliness on the part of nature, or any shortsightedness of Providence, but because mankind lacks the wit to utilize the food materials that exist in superabundance.

The Government has been taking a census of the horses of the country and reports that there are over 20,000,000 horses and nearly 4,000,000 mules in the United States. This is a greater number of horses by several hundred thousand than were before reported and indicates that the notion that we are about entering upon a horseless age is not justified by the returns.

Baltimore, Sept. 7.—Dr. William Osler, who attracted world-wide attention by jocularly advocating the chloroforming of aged persons, has been made lord rector of Edinburgh University, Scotland, according to private advices received here. Dr. Osler is regius professor of medicine at Oxford University, to which post he went from Johns Hopkins University here, where he still holds the title of honorary professor of medicine.

Though it has given away whole empires to settlers and railroads and has been robbed of millions of acres by land "grafters," the United States Government still holds 754,895,296 acres of public lands. This would give every man, woman and child in the country nearly ten acres apiece. However, nearly half of this land is in Alaska—368,021,509 acres of it—and probably will not be of great value for years to come. But enough of it remains in the western states to accommodate millions of settlers. The constant pressure of overpopulation is certain to force continuous immigration to this country until all our surplus land is taken up.

A portable blacksmith shop has been found very convenient and economical in the maintenance of way department of the Missouri Pacific Railway. It consists of two box cars, one for sleeping accommodations of the blacksmith and his helper, and the other for his shop. All necessary tools and duplicate parts are carried for repairing switches, frogs, hand cars, switch stands and similar railroad appurtenances. Frogs are taken from the track, repaired, and replaced where traffic is light, by protecting the point by flags, and where traffic is heavy, a duplicate frog is put in. The portable shop saves shipping the tools and equipment needing repairs, thus reducing cost and avoiding delay. It has been found that one day, according to the Railroad Gazette, is sufficient for cleaning up the repairs on an ordinary section.

The first congress of the International White Cross Association, which was founded last year with the object of grouping the efforts of the international societies engaged in fighting tuberculosis, cancer and other epidemic diseases, social scourges, such as alcoholism and the drug habit, as well as food adulteration, opened in Geneva, Switzerland, Sept. 8. The primary object of the congress at this sitting is to formulate plans for the repression of the adulteration of alimentary and pharmaceutical products and to consider the actual movements in this direction in America and Europe. More than 700 delegates, representing all countries and comprising producers, chemists and jurists, will endeavor, by a process of exhaustive discussion, to evolve a fair and reasonable definition of pure food which can serve as a basis for uniform international legislation against adulteration.

During the month of June 4,100 carloads of fruit were shipped out of California to Eastern markets. This is the best record of fruit shipping from California yet made. It required more than four thousand tons of ice to keep the fruit cool in the refrigerator cars.

The Government's financial policy, decided upon by the cabinet involves the curtailment of expenditures by \$100,000,000, of which 30 per cent will be taken from the army budget and 10 per cent from that of the navy. The postponement of the international exposition, Premier Matsura says, is not purely due to financial reasons, but it is owing to the fact that the work of preparation has been insufficient, and it will be quite impossible to make a creditable exposition within three years, on an appropriation of \$5,000,000. Hence, as the appropriation will be inconsistent with the economical plans of the cabinet for the next five years, it is wiser for the Government to admit that fact than to fail in making a complete success of the exposition, which, it has been decided, will be held in 1917, the anniversary of the accession of the emperor. In this manner Japan admits her financial stringency, but insists on the utmost economy and depends on foreign countries accepting the situation as an act of wise economy on the part of the nation.

A great new nation is forming in Siberia. One of the most gigantic migrations in history has been proceeding so quietly that the world generally has not noticed the movement. During the last twelve months more than 500,000 Russians have gone to Siberia, a number equal to half the number of immigrants the United States received during that period from the whole earth. Prince Vasiltchikoff, minister of agriculture, has furnished the Douma with the figures of the migration across the Ural mountains. For several years before 1906 it was 60,000 annually; in 1906 it was 180,000; in 1907 it was 400,000. In the first three months of this year it was 420,900, comprised in 70,000 families. The accounts of Siberia brought home by the soldiers returning from the Russo-Japanese war have impressed the poverty-stricken mujiks with glowing ideas of Siberia's vast natural wealth. The peasantry have little faith besides in the measures the grand council of the empire is taking to settle the burning agrarian question. The emigrants seldom go singly or even in families. They gather in colonies for the exodus.

R. E. Harrison, a farmer of Dunlap, Ia., has just invented an automatic electric rural mail delivery and has a model which is working successfully. By this one man at the postoffice can send out all the mail, and that rapidly. Not only is the mail delivered, but other mail is collected. The principle of the invention is described in the Postmasters' Advocate as follows: There are but two wires, all of the stations being on them. The mail clerk puts the letters for the first house in a little carrier and sends it out over the wire. It runs to the first house, stops there, releases one left there the day before, in which is any mail that the family wants to send, and this comes back on the return wire. In doing so it throws the switch open at the next house, so that the second box goes to the second house. If there is no mail for the house a carrier is sent anyway and opens the switch for the next and picks up any mail at the house.

## CREAM OF MAGAZINES

### THE EVERYDAY.

Oh, one might be like Socrates  
To lift the hemlock up,  
Pledge death with philosophic ease  
And drain the untrembling cup;  
But to be barefoot and be great,  
Most in desert and least in state,  
Servant of truth and lord of fate!  
Who does not marvel at the peak  
Trod daily by the steadfast Greek?

Oh, one might nerve himself to climb  
His cross and cruelly die,  
Forgiving his betrayers' crime  
With pity in his eye;  
But day by day and week by week  
To feel his power and yet be meek,  
Endure the curse and turn the cheek!  
How may one even hope to be  
As was the Jew of Galilee?

Oh, one might reach heroic heights  
By one strong burst of power;  
He might emblaze the whitest lights  
Of heaven for an hour;  
But harder is the daily drag,  
To smile at trials which fret and fag  
And not to murmur nor to lag.  
The test of greatness is the way  
One meets the eternal Everyday.  
—Edward Vance Cooke, in the Independent.

### THE MOULDING OF MEN.

So firmly fixed, so frequently flattered, has been our belief in the perfection of our public school system, that it comes as a shock to realize that this system, or rather its present condition, may be a source of devitalizing weakness.

Recently the president of a great university spoke of the evil that has been done the minds and ideals of the young men of our nation by the almost universal monopolization by women of the function of educating our masculine youth. Our young men during the most impressionable period of their lives are taught almost exclusively by women. The man teacher is slowly becoming extinct.

Up to the age of fourteen years the boy may be trained perhaps equally well by a man or woman. Beyond that age the boy usually becomes negative to the influence of the average schoolmistress; and the teacher's efforts are usually annulled. At this period the young and plastic nature of the man-to-be requires both in precept and example, the guidance of some strongly formative, virile mind, instruction, discipline, and advice by men of worth and culture from the schools of Life and Learning.

Well known is the usual boy's contempt for all that is effeminate. The records of boards of educa-

tion bristle with instances of the futile influence of one poor overworked, nerve-racked woman over a class of boisterous irrepressibles bent perversely upon the one idea of frustrating and antagonizing her. Apart from her routine duties and scheduled studies, the teacher, often a mere girl but little older than some of her pupils, has neither opportunity, desire, nor strength left to inculcate in her unruly charges those ideas of ethics, honor, and manliness that are more valuable to the youth of a nation than all the studies of all the schools. The formation of character is the first virtue of education.

Between the woman teacher and her older boy pupils lies an insuperable bar, not because of sex, but because of sex miscomprehension, eternally inherent in both, a lack of that closer knowledge, intimacy, and sympathy that the master must depend upon for his success. Without hesitation and without prejudice it may be averred that women are capable neither mentally nor physically of the arduous feat of ruling, teaching, and training several dozen young men. —Herman Scheffauer, in September Lippincott's.

### THE IDEAL FOR COMPENSATION.

There ought to be, and there can be, a system under which the injured employé will know exactly how much he deserves because of his accident, and will know also that he will receive exactly that amount promptly, automatically, in the ordinary course of business administration, without an appeal to the courts, without an appeal to the employer, without becoming a pirate and without becoming a beggar.

Mr. Francis H. McLean has recently presented to the New York Conference of Charities and Correction a report on 241 accident cases coming consecutively under the observation of himself and his friends. It was an official report, laboriously compiled.

In 47 cases out of the 241 there was a certain amount of compensation, paid by the employer to the injured workman. In the other 194 cases out of the 241 there was no compensation.

Our present law of employer's liability deprives the employé of justice without relieving the employer of expense. It is hideously cruel from one standpoint and frightfully expensive from the other. It cannot endure. Every other important country in the world has put it away in its museum of antiquities.

Every other important country in the world has made compensation for accidents an adjunct of business in place of a department of law. In every other important country in the world the burden of the accident, whether due to the fault of the employer, the fault of the employé, or the fault of nobody, is placed on the shoulders of the industry in which it happened.

Carelessness of employer and of employé is inevitable. Both these things, both imperfection of machinery and carelessness of human beings, may be diminished by wise laws, but they cannot be eradicated. Accidents must

happen. And therefore the compensation for the accident ought to be inevitable and automatic, like the accident itself.

Why shouldn't every industry carry the burden of its own killed and wounded? Why shouldn't compensation for disability be just as much a part of the cost of business as it is of the cost of war? Why shouldn't the workman who goes into his daily fight with modern machinery be assured that his injury will be regarded as an honorable wound, entitling him to decent consideration? Why shouldn't the industrial soldier, meeting his death in forms as terrible as those of any battle-field, die knowing that he will leave, if not glory, at least a few years' food to his family?—William Hard, in the September Everybody's.

### THE CZAR AS SUPERMAN.

Narrow as would appear to have been the most recent of the many escapes of Nicholas II. from assassination, it is quite certain to the St. Petersburg correspondent of the Paris *Matin* that his Majesty "never flinched, never felt panic, never lost that serene composure which covers him like a mantle." The details, we are told, might have appalled the bravest—there were bombs in the kitchen, conspirators among the valets, assassins on guard, and the usual elements of peril in this latest of the foiled cabals. Yet not once, if the world is to believe those correspondents of Western Europe dailies who, in St. Petersburg, make it their business to get information at first hand, did the Czar indicate to those about him that he was "upset." The fact is, notes the *Matin*, in the course of some comment upon these circumstances, that Nicholas II., popularly rated a weakling, a vacillator, and an incompetent, is one of the strongest characters of modern times. "The element of bluff is totally lacking in his make-up." He has been accused of love-affairs with one woman and another when as a matter of fact he is an exemplary husband and father:

"When the history of the reign comes to be compiled a generation or two hence from the letters and diaries of contemporary courtiers, the world will perceive that Nicholas II. belongs to that rare class of proud and yet humble spirits to whom duty is everything and reputation nothing. There is in him oceans of that silent pride to which detraction is nothing, nothing. To his subtle genius is due the course of one of the greatest revolutions in history. Reaction, whatever the world may think, has triumphed in Russia, and Nicholas II. personifies that triumph. Unadvised, unaided, untroubled, he has lived through the catastrophies of his reign, he has overcome the rebels, he has won his way to power as great as that of the Bourbons in their best days.

"What is his secret? The Czar's powerful weapon is his charming surrender of the shadow while he grips the substance with a giant's hand. He has given up nothing. He has seemed to surrender everything. His most dangerous weapon is his look of simplicity, his air of extreme dependence upon the men about him. He is supposed to be under the influence of the women about him only by those who have read about the man, not by those who have studied his character from personal observation. He is courteous, but his is the courtesy of the conqueror in the moment of victory. He knows men, he understands situations, and he grasps opportunities. The strong man in Russia today is the Czar. Events have proved it.

"Who would have predicted a few years ago that this slight and pale young man would be able, without the

help of great men, to survive the storm? But his reign has not produced in Russia any great man except himself. When all Europe was accusing him of infirmity of purpose he was silently, unobtrusively, pursuing his great aim, never halting, never losing courage. He has won. Nicholas II. is today the sole ruler of Russia; the men about him are his creatures. History will deem him the strongest personality of his age, the most astute, the most upright."

It can not be said that this estimate is eccentric or even unconfirmed, for there has ensued in the press of Continental Europe what might almost be termed a reaction from the first idea that Nicholas II. is insignificant personally and destitute of capacity. That somewhat critical daily in all that pertains to Russia, the Berlin *Kreuz Zeitung*, has found space recently for a eulogy of his Majesty which seems to echo the estimates of the Paris paper. "Nicholas II.," we read "is intellectually and morally closer to the general notion of superman than any living mortal." The reason is, it seems, that he conquers in the struggle he has to wage all the time and that he realizes himself through the attainment of personal power:

"Personal power; that is his ambition and that is what he gains. Each day cements this authority. Ministers come and go, each firmly determined to bring about what in Western Europe is called the constitutional system. But it may be doubted if Nicholas I. himself held greater personal sway than Nicholas II. The Czar of today is indifferent to the world's opinion of him. He sees all whom he desires to see. The popular impression that he lives a life of seclusion from mankind is a mistaken one. Nicholas II. is not the character to permit himself to be cooped up and surrounded by a camarilla. He meets the men whom he finds it useful to himself to meet. He uses men while they subserve his purposes. Then he lets them go. Nor is he ungrateful. No man who has served him well goes unrewarded. He speaks little, but he thinks much. He makes the plans that are carried out—the plans are not made for him. The truth is that Nicholas II. is in no forced sense of the word a genius.

"He has baffled the Douma at every step. He has made it what he meant it to be, a stepping-stone upon which to rise to a higher degree of power. The world has lost all faith in the Russian revolution. It has gained great faith in the Russian Czar."—Literary Digest.

### AN INDIAN LEGEND OF THE FLOOD.

To this day the great deluge recorded in the Bible is a mystery to the North American Indian. He will not be led to believe that the flood was brought about by the sins of man. He is equally unwilling to believe that it was the work of an angry God, as he could not see how the Almighty should be so unjust as to punish the Indians of America for the naughty things of a race of people across the ocean. Another reason which makes it still more difficult for the Indian to believe that the flood was a punishment to the world is the fact that with him there is no sin. In his language there is no such word, nor does he expect to be punished for any of his acts.

But though there is no equivalent to the word sin in the Indian language (nor in the Indian mind until the Christians came), the Indians have their

philosophy in regard to what is commonly so termed. Some of their teachers (most of whom claimed to have been taught the philosophy of life and its laws directly by disembodied spirits or by ethereal beings from other planets) taught that as man lives here so is his life hereafter. If he is quarrelsome or warlike here, so he will be in the more spiritual life. If he is serene and contented here, so he will be there, etc.

The deluge as described by the few who were miraculously saved, was the more grandly terrible in that it came on suddenly. From the highlands occupied by the Indians they saw the waves of the sea sweep in upon the land and recede, only to advance with immensely increased volume and stupendously huge breakers. Then there came a terrific storm that seemed to blow from all, and in all directions.

The storm caused huge waterspouts which appeared over the wild ocean as far as the eye could see. The terrified people fled to the mountains, but these were all soon to be submerged, with the exception of one. This mountain which alone remained uncovered by the flood is called Avee-hellah (Mountain of the Moon), yet today it is not a very high mountain.

For awhile before the mountains became submerged there was a great calm, and a dense fog covered the earth. Then suddenly a mighty boat appeared to the awed view of the Indians. It approached and stopped at the several mountains still uncovered by the waters, and at each point where it touched, as if guided by invisible intelligence, the Indians, as if obeying an unspoken but potent command, entered the boat.

The boat first rested at a place called Avee-qua-lul (mountain peak), now Pilot Knob, on the border of Mexico. There was a mesa on the top of this mountain, though at this day it does not exist, and on this mesa the Indians first celebrated their delivery. This they did by playing sacred games, chanting sacred songs, etc. On the rocks at the foot of this peak there are hieroglyphics in an unknown language, which some of the Indians believe were made by those who survived the flood.

Petrified driftwood is still to be seen two-thirds the distance up the sides of Avee-hellah, which drift, the Indians say, was deposited by the waves of the great flood.

The Indians, having rested for a time on the mountain peak, again entered the boat and were carried eastward, eventually to a small valley. Here they again rested, and then, leaving the boat, they wandered from one place to another, after a time returning to the valley. To their surprise the boat was gone. It could not have floated away, for the land was dry whereon they had left it, the flood having

subsided after a great calm of its waters. The boat could not have crumbled to pieces, for there had not been time for its decay. They could only conclude that the mysterious boat, having fulfilled its mission of preserving a few of their race, had disappeared as miraculously as it had appeared.

The spot where the mysterious boat, or ark had rested, was marked by the Indians placing there a huge log. They called the place Qual-jo-para (boat's resting place). This spot is held sacred by the Indians, who will seldom point it out to strangers.

Not many hundred years ago, it is said, some Indian warriors were passing the spot, and one of them to show his skepticism shot an arrow into the side of the great log. Immediately a stream of blood gushed from the spot pierced and the skeptic fell dead. The story of the event was carried to all the near tribes, and since then Indians passing the place fear to even look leisurely at the log.

A reason given by the Indians as the probable cause of the flood was that there was a tribe of Indians who, like Columbus, believed that the earth was not flat, but round, and to prove whether this theory were true thousands from the different tribes banded together and started out on a journey to find the edge of the earth if it was flat.

The flood occurred soon after the Indians started on this journey, so that they really believed that those adventurers had reached the edge of the earth and their weight had tipped the earth to such an extent as to cause the water to rush in on the land.—*Los Angeles Times*.

"No education is adequate to the needs of life which does not produce decision of character, courage, self-control and perseverance."

**NEFF'S CORNER**

I have lately come into possession of a quarter section of fine land here in Eastern New Mexico. It was under mortgage and by paying this, I got it at a bargain and would sell it at a bargain. It has a strong well of good water, 25 acres under cultivation and a two-room house. If you want to make an investment or want a home ½ mile from school and 3½ miles from railroad town, if you want to buy for cash, on time or have something to exchange, write me.

Address,

**JAMES M. NEFF,**  
Clovis, New Mexico.

P. S.—Don't forget our Investment Association. Dividend July 1 was 21 per cent. If you have money out that is making you less than 21 per cent, it will pay you to write me.

**The Saloon Under the Searchlight**

By George R. Stuart.

"A bright, breezy, thought-compelling little book with not a dull line in it. Full of suggestion and inspiration for one who would have a part in the fight against the saloon, a fight that grows in strength and popularity every day."

"Sledge hammer blows by Dr. Stuart on thirteen or more aspects of the saloon question. The arguments and illustrations are original, often unique, and always right to the point."

"I find the book one among the best I ever read on the subject. I can recommend it and wish it were possible to place a copy in every home in the land."  
—Eld. D. L. Miller.

"I have just finished reading that splendid little volume, 'The Saloon Under the Searchlight,' by Geo. R. Stuart. I find it interesting and valuable. It commends itself to me because of its simple, plain, practical and true statements. I solicit for it a wide circulation, and a careful perusal. It cannot fail to do good."—Eld. P. J. Blough, Member of Temperance Committee.

**Every Minister**

of the Gospel will have occasion to use some of the arguments presented by Mr. Stuart, who turns the light on in full force and lets the reader see what a monster evil the liquor traffic really is.

There is enough in the book, if people can be induced to read it, to drive the saloon out of every village town and city in the United States.

# BARGAINS IN BIBLES

## For Sunday-School Pupils

### Sunday-School Scholars' Bible

#### International Self-Pronouncing.

A very appropriate present to a boy or girl. A Bible arranged on the plan of a Teachers' Bible, except that the Aids to the study of the Scripture are in simple language and embrace subjects in which young students find interest. This Bible is printed from easily read large Minion type, with all proper names or "hard words" accented and divided in syllables, thereby facilitating pronunciation. An aid of supreme importance to young people. Thirty-two new pictures illuminate and explain the text. These illustrations are new and so appropriate that they cannot fail to be most instructive to young scholars. In addition to these features this Bible contains many other new and valuable helps.

**MINION TYPE, Six Maps. Size 4x6 $\frac{1}{4}$  inches.**

26590 French Morocco, divinity circuit, round corners, red under gold edges, silk headband and marker, extra grained lining. Indexed.

**Publishers' Price, .....\$2.05**  
**Our Price, ..... 1.55**

(Postage extra, 12 cents.)

### Nelson Handy Reference Bibles.

3257X, French Morocco, divinity circuit, silk-sewed, round corners, red under gold edges. Only  $\frac{3}{4}$  of an inch thick. India paper. Minion 16 mo. Thumb Index.

# A RARE OPPORTUNITY

## TO MAKE BIG MONEY

☐ We want to place the sale of our popular floral Wall Mottoes in the hands of an active agent in your community.

☐ Several hundred agents are now at work and report splendid success. One person ordering as many as 750 at one time.

☐ In appearance these mottoes come nearer to an oil painting, of the most expensive sort, than anything else. They possess a rich gloss that adds wonderfully to their attractiveness when in position upon the walls.

☐ The lettering is clear and distinct and can be read across the room.

☐ The size, 12x16, makes them suitable for use in any home. Unlike many pictures or mottoes they do not fade, and lose their bright and attractive colors. They can readily be dusted should they become a trifle soiled, or can be cleaned whenever desired with a damp cloth.

☐ These mottoes will last for years, and continue to give pleasure and good cheer to all.

### Ten Mottoes and Ten Designs

#### 1. Be Ye Followers of God as Dear Children.

A very attractive design with groups of children. The poem "Jesus Was a Little Child" neatly printed in one corner adds much to make this picture a very desirable one for the children.

#### 2. Be not Weary in Well Doing.

This design is composed of a beautiful scroll, two birds and their nest, and beautiful flowers, all in colors.

#### 3. Christ Is the Head of this House.

The flower on this motto is a large beautiful orchid, which gracefully overhangs the lettering.

#### 4. God Bless Our Home.

#### 5. In God We Trust.

The design used with these texts is pansies in natural coloring. The lettering is artistically shaded and beautifully harmonizes with the flowers.

#### 6. God Is Our Refuge and Strength.

#### 7. Home, Sweet Home.

This beautiful design is sure to be a good seller. No. 6 represents God as a refuge for the soul, and should be in every Christian home. No. 7 is one of the most popular mottoes known to the English speaking world. It is always in demand. Can be sold anywhere to anybody.

#### 8. Love One Another.

#### 9. The Lord Is my Shepherd.

The motto for these texts has a delightful arrangement of forget-me-nots and crimsen roses on a black background. Very artistic.

#### 10. What Is Home Without a Mother?

This has long been a favorite motto and is still in great demand. The beautiful scroll design, artistic lettering and delicate flowers make this an attractive motto and a good seller.

# ALBERTA

¶ Of Alberta a distinguished writer has said:

"North of the International boundary line and immediately east of the Rocky Mountains lies the Province of Alberta—a land blessed with all that is necessary to happiness and prosperity. Between the 49th and 60th parallels and between the 110th and 120th meridians lie 281,000 square miles of possibility. Here are mountains and plains, foothills and valleys, rolling prairies with wooded stretches between, dense forests and grassy meadows, clean, timber-girded lakes and winding brooks, cold mountain streams and navigable rivers, and a soil rich in the alluvial and vegetable accumulations of centuries. And as if not content with these outward signs of her favor, nature has hidden beneath the surface vast deposits of coal and other minerals; she has filled the subterranean reservoirs with gas and oil, and sprinkled the sands of the mountain streams with gold. That no living thing should go athirst, she gathered together the waters of the mountains and brought them to the plains, to be directed by the ingenuity of man to the use of the grazing herds and the planted fields. Then, to crown her efforts and leave nothing incomplete, she brought the chinook wind, warm with the breath of May, to temper the north wind."

¶ In the Medicine Hat District we have a gently undulating prairie. The soil is capable of producing generous yields of all small grains and vegetables in abundance.

¶ The city of Medicine Hat, situated on the Saskatchewan river and underlaid with gas and coal, is destined to be a great manufacturing center.

¶ Why not join the colonies already there and enjoy some of the material benefits as well as help build up one of the largest and best colonies in the Canadian West.

¶ We have excursions every first and third Tuesday of the month.

¶ For particulars and cheap rates apply to

## **5,000 Missionaries**

---

It would be difficult to secure enough ministers and lay missionaries to make weekly visits in the thousands of homes where their calls would be appreciated. But it should not be difficult to find 5,000 of our readers who will send us one or more subscriptions to the Gospel Messenger as per our

### **Two Trial Offers**

For the purpose of helping you introduce the Gospel Messenger in homes where it is not known, we announce the following very liberal terms to trial subscribers.

### **For 25 Cents**

We will send the Gospel Messenger to a new subscriber to Jan. '09 for 25 cents. By ordering now you secure four months for the price of two months. For \$1.00 you can send the Gospel Messenger into 4 homes for the remainder of the year. Try it.

### **For \$1.50**

We will send the Gospel Messenger to a new subscriber to Jan. 1910 for \$1.50. Order today and you will receive the paper for nearly 16 months for the regular yearly subscription price.

### **Act To-Day**

and you will extend the influence and circulation of the best religious journal published.

Macdoel, California, August 1, 1908.

Mr. D. C. Campbell,  
Colfax, Indiana.

Dear Sir:

For the benefit of those suffering from catarrh, I would like to have you say, through some of your advertising, that I was born and lived near Somerset, Pennsylvania, and almost ever since my birth have been troubled with a bad case of catarrh. I have lost much time and have suffered terribly. I have tried several of the best doctors in the East. They have all told me that change of climate was the only cure.

I saw some advertisements claiming that Butte Valley, California, was a good place to overcome this difficulty. I finally concluded to make a change of location and came to Butte Valley, March 8, 1908. I went to work and have worked hard right along and feel well. I have lost but one day on account of sickness. My appetite is good, and I am gaining rapidly in weight.

My wife can sleep soundly without a pillow under her side, a thing which she has not been able to do for six years on account of severe pain in her side and chest. We are all improving rapidly and enjoy good health. We are certainly delighted with the place because we feel so much better than in Pennsylvania.

Trusting that God will take care of all of us, I remain

Yours truly,

Henry H. Stahl.

# MISERABLE ALL THE TIME!

That is the way a man described his feelings. How many more are there not who feel the same way! A careful observer has estimated that nine out of ten people are not really well. Something is wrong all the time. Nobody wants to be sick just for the fun of it, and nearly everybody tries one thing and another in the vain hope that it will cure him, but in most cases he finds himself no better for the trial.

There is no good reason why such people cannot be cured if they go about it in the right way. But what is the right way? some one will ask! The only permanent and satisfactory remedy for most of the troubles of mankind is that which will invigorate and strengthens the entire system.

This can be done by getting at the cause of the trouble, the impure or weakened condition of the blood. No one whose blood is pure and vigorous can be sick. In this way we are able to assist nature in restoring the natural condition. When the blood has been cleansed and strengthened, disease cannot remain. There are many good medicines, let us hope, for this purpose, but the one that has been especially successful is **DR. PETER'S BLOOD VITALIZER**. Over a century's constant use has demonstrated its power.

## A BLESSING TO MANY.

Apple Creek, Ohio, July 2.

Dr. Peter Fahrney & Sons, Chicago, Ill.

Gentlemen:—I have to acknowledge that your Blood Vitalizer has proved to be a blessing to many. This is especially the case in our own family. We knew nothing about your Blood Vitalizer when our family was small, six in number. One winter we were all sick, but since keeping the Blood Vitalizer we have had no sickness in the house, although we are now eleven. We would never want to be without it in the house.

With heartfelt appreciation and many friendly greetings, I remain,

Very truly yours,

Peter Schmid.

## SAYS IT DID WONDERS.

St. Louis, Mo., Oct. 21.

Dr. Peter Fahrney & Sons, Chicago, Ill.

Gentlemen:—I should like to become an agent for your Blood Vitalizer. I know I can sell a great deal among my friends and relatives. Let me know how to become an agent and I shall send you an order right away. Your Blood Vitalizer has simply done wonders for me. It has cured me of a stomach trouble with which I have been suffering for over six years. No doctor nor medicine I have tried has helped me. I was bedfast weeks at a time. This disease seems to lie in our family and I want all of them to use it.

Please let me hear from you. Very gratefully,

6141 Ella Avenue.

Mrs. H. Herr.

## CURED A SCROFULOUS ERUPTION.

Rockville, Conn., Dec. 27.

Dr. Peter Fahrney & Sons, Chicago, Ill.

Dear Sirs:—Quite a while ago, I guess about 25 years, when I was still in Germany, I was taken sick and a scrofulous eruption broke out on my hands and the upper part of my body. I got so bad I was unable to follow my occupation of weaver. I tried doctors and medicines without end but nothing helped me. When I came to America, I saw an article in a paper about your Blood Vitalizer and made up my mind to try it, which I did. As my ailment was old and long standing it took some time before I noticed any improvement, but I kept on taking the Blood Vitalizer. Finally I saw I was getting better and in time I was completely cured. I would not think of being without your Blood Vitalizer in the family. Since keeping it on hand we have escaped sickness, for which I thank God.

Yours truly,

72 Grand Avenue.

Wm. Drechsler.

## A MERCHANT WRITES.

Le Mars, Iowa, April 16.

Dr. Peter Fahrney & Sons, Chicago, Ill.

Gentlemen:—Permit me to send you the happy message that my wife who has doctored for years and tried all kinds of medicines without avail is cured through the use of your Blood Vitalizer. It has brought a complete change in her. She is now so jolly and full of life, it does one good to see her. I am glad she is well at last and able to enjoy life. She is only sorry that she did not use your remarkable medicine sooner. I could tell you other wonders about your medicine.

With deepest respect,

Sixth Street.

Yours truly,

Paul Neubel.

General Merchant.

The writer of one of the above letters of testimonial, in referring to his wife and her cure through the use of **DR. PETER'S BLOOD VITALIZER**, says: "She is now so jolly and full of life that it does one good to see her." That is just as it should be. It is natural enough. When health returns there is no room for gloom and sadness. **DR. PETER'S BLOOD VITALIZER** has brought sunshine into many a home by relieving suffering and curing disease.

Unlike other medicines, it is not to be had in drugstores but is supplied by special agents. For further particulars address the sole proprietors,

**Dr. Peter Fahrney & Sons Co.**

112-118 South Hoyne Avenue

## Mr. World and Miss Churchmember

By W. S. Harris

It is a forcible allegory, somewhat after the style of Pilgrim's Progress, but in no sense an imitation of it. Fathers and mothers, it is the book that you should get for your son and daughter, and at the same time read it yourself. You will be stronger for the church after having read it. It illustrates vividly how Satan lures the church member, step by step, from the pure Gospel, till finally he is lost forever. Send in your order at once and you will never regret it. Cloth only.

Our Price, Prepaid .....\$0.75

Elgin, Illinois.

# OVER 200,000 ACRES

of land has been filed on under the CAREY ACT in the Twin Falls District, Idaho, since April, 1907.

¶ There is still a large amount of land waiting for the settler in the above district. Also great opportunities are offered at American Falls, at Gooding and other points along the OREGON SHORT LINE RAILROAD.

¶ The Payette-Boise Reclamation Project under the U. S. Government is about completed and will be ready to furnish water to about 300,000 acres of new land in the spring of 1909. These lands can now be bought at reasonable rates and terms, by the settler, and are situated where the country is already partly settled, near good towns, railroads and electric lines.

¶ Rural mail routes and telephone lines are already established. Good schools and churches. No storms or cyclones. Farming is done by irrigation. No failure of crops by reason of too much rain or drought. Fruit crop is abundant every year. The people are happy because they are prosperous.

## Wonderful Possibilities

for homeseekers and investors. Climate Mild. Soil Very Productive.

¶ Alfalfa, Sugar Beets, and grains of all kinds are among the products that yield abundantly. Farm hands, carpenters, mechanics and in fact all classes of workmen will find plenty of work at good wages.

¶ Arrange your plans to go and see Idaho as soon as possible and secure some of this fine land.

¶ HOMESEEEKERS ROUND TRIP EXCURSION RATES are on First and Third Tuesdays of each month in 1908.

¶ Colonist One-Way Cheap Rates to points in Idaho, Oregon and Washington in effect daily from Sept. 1st to Oct. 31, 1908 inclusive.

¶ WRITE NOW for printed matter and full particulars regarding this great country and how to get there.

## The Progress and Character of Democracy

J. W. Wayland, Ph. D., Instructor in History,  
University of Virginia.

### In Two Parts. Part One.

THE progress of democracy can hardly be compared to a river; for a river, under usual conditions, flows on continuously and unbroken from its source to its mouth, gaining volume and force constantly from one tributary after another; and throughout its whole course the stream is always active. That is, while the great volume of water at its mouth is pouring into the sea, the tiny rill at the source is still flowing, as it did a thousand years before; and at every point between the head and the mouth the stream remains constant. Water at any one place is evidence of water, more or less, at every place. The progress of democracy—indeed of anything that depends mainly upon mind rather than matter—can not be said to be so, except with very considerable modifications. It is true, perhaps, that democratic ideas have reached a force and volume in our day greater than in any preceding period in the history of the world; and yet their progress has been more like that of a wide-spreading and long-burning fire than that of a river.

In a land of wide prairies and great forests, of mountains and valleys in alternation, a fire might soon sweep without interruption over a broad area. As the flame would advance and spread it would linger longer at some places than others. Forest trees would burn longer, would cast the flames higher, and would produce a greater heat than would prairie grass. Moreover, while the fire would be blazing with great heat and light at some places, there would be only cold barrenness and black ruins at other places, where in a former period there had been both light and heat. If a barren waste, or desert, would now and then be encountered, the flames would be divided, to meet again beyond, perhaps, but leaving a wide expanse untouched in their circuit. The front of the fire might gather intensity and volume after sweeping on for a thousand miles; but where the fire began a new growth of vegetation might at the same time be springing up. In the course of years, if the flame were preserved so long, it might be driven back,

by the force of varying gales, and burn over again where it had passed and died out long before. Moreover, if in the meantime a sufficient period had elapsed for a forest of trees to take the place of the former grass of the prairie, the flame would find more and better fuel on its return than had been found at first.

But a single, unmixed figure is inadequate. Neither the fire nor the stream, nor both combined, nor any other familiar element or object in the material world will serve to illustrate fully the thought that must dwell in the mind alone, or the movement that must proceed by the actions of men and nations. Yet the crude comparisons may aid our thought. The progress of democracy has not been constant and unbroken, but has reached varying heights and depths from age to age, and from land to land. Now and then an age, and here and there a nation has been found in which democracy has risen with power; then have come stiflings and crushings, dark-nesses and silences, alternating and fluctuating despotism, oligarchy, feudalism, anarchy, with now and then liberty run wild. Ancient days in Greece perhaps furnish the purest sources and examples of democracy; yet modern times in the western nations show democracy at its best and in its widest extent and influence. The last hundred years, or perhaps one should say the last century and a half, have shown the most rapid development and the most general acceptance of democratic ideas. England affords the best example of development of democracy from small beginnings and through long periods of time. France has made the most and worst of democracy, and has done most to spread the flame with violence; but the United States has put democracy into the fullest and widest conservative practice, and is the leading world-teacher of democracy at the present day. It is mainly through the influence and example of the United States that the tide of democracy has turned back toward the East; and it is bidding fair to find more favorable and permanent conditions, both of reception and retention, as it circles the earth anew.

And now a few words about the term "democracy" and its various uses. It also came west from Greece, and with it a significant company. "Monarchy," government by one; "polarchy," government by many; "oligarchy," government by a few; "aristocracy," government by the best; all of these, as well as "democracy" and "tyranny," are Greek words, changed only a little in English dress. Democracy means, as every schoolboy knows, government by the people. Demagogues, leaders of the people, are very fond of blinding the people with the word democracy. The people like to hear it, especially when it is declared with orotund voice to be not only government by the people, but also "of the people and for the people." Corresponding to the Greek word democracy, we have the Roman word republic. Both mean almost exactly the same thing, and both are popular. That is perhaps the reason why the two great political parties in the United States have become known respectively as Democrats and Republicans. It may be observed, however, that of the two the word republic conveys the more readily the notion of a government by representatives; while democracy, pure and simple, means government by the people direct.

But modern times know very little of democracy in the latter sense, except in occasional instances of local government. And the term democracy is not always used to indicate government by the people direct. It may refer to a condition of society merely based on the principles of equality. It most frequently is used to mean just what the term republic means, and just what the United States is, a government by representatives chosen directly or indirectly by the people,—that is, some of the people: the voters.

A complete history of democracy would be a history of the world; but a brief historical review may be attempted without too great alarm, and must be attempted in a study of the subject.

The ancient world may be characterized as despotic; the medieval world, as chaotic; the modern world as tending toward democracy; and yet, remembering our introductory figures, we must be prepared to modify these generalities in many particular instances. A few countries have remained despotic to the present; and a few in ancient times were very democratic. Even among the Jews, whose government was so strongly patriarchal and theocratic, we find some elements of democracy occasionally. Once in a while the voice of the people is heard. This was true when the kingship in Israel was established: it was the voice of the people that clamored for a king; and it was the voice of the people that finally prevailed in the matter. This, however, is a rather singular instance of democracy. It is most frequently the case that democratic movements are efforts to get rid of kings, or at least to limit their

privileges; but in the case before us democracy was demanding monarchy.

It is in ancient Greece,—in Athens,—as already intimated, that we find the most notable example of democracy afforded by early times—perhaps by any time. When the light of history begins to steal across the waters of the Ægean Sea, and touch the Hellenic shores, practically all of the Greeks are found to be under kings; but as time goes on the fuller light reveals a progress towards democracy; and, in some of the city states, its full development. Sparta and the states allied to her never, perhaps, advanced beyond a government by a limited number: they appear to have remained oligarchies; but Athens and her allies passed beyond the facts as well as the forms of kingship, beyond the limitations of oligarchy, into a government of the people by the people at first hand.

It was during the age of Pericles, within the 5th century B. C., that the Athenian democracy reached its fullest development; and an Athenian of that day would not have considered America of this day very democratic. He would doubtless be as much mystified, could he be set down among us for awhile, as the Chinese brother who came to the United States to study Christianity. Pericles and his friends would probably have called England an oligarchy of a few hundred men (the members of Parliament, the ministers, and the king); and the United States as a whole, with several States separately, would doubtless have been put in the same category: Congress and the heads of departments at Washington, with the legislatures and heads of departments at the several State capitals, corresponding to the oligarchy at London.

To Pericles and his contemporaries democracy did not mean government in the interests of the people, nor government by the people indirectly through their representatives; but it meant actual, first-hand management of the government by the whole collective body of the citizens. This ideal was never fully realized even at Athens; for the routine business of government, especially administrative work, was done largely by committees or individuals; but the ideal was constantly aimed at, and was perhaps as nearly realized as any real ideal may ever be.

At Athens in the age of Pericles there were (1) Officials of the State; (2) The Council of Five Hundred; (3) The Ecclesia. The officials of the state administered the various departments of justice, finance, war, religion, public improvements, etc., according to prescribed forms; the council of five hundred was a standing committee, composed of an equal number of citizens chosen annually from each tribe, that came together every day; the ecclesia was the general assembly of all the citizens, who came together regularly four times a year, and oftener

upon special summons if emergencies demanded.

The council of five hundred had to prepare all business that was to be considered by the general assembly; to fix and preserve the order in which it was to be brought forward; and they appointed the chairman to preside for the day over the general assembly—usually a different man from the chairman of the council of five hundred. The latter had also to examine all candidates for office; to superintend the building of ships; to inspect public buildings; to manage a system of relief for poor and crippled citizens; and to receive ambassadors from foreign states. But with all these functions, and many more, the council of five hundred was merely a committee subordinate to the general assembly. The latter was the supreme power of the state: it was the state. Any Athenian citizen was at liberty to speak in the assembly, or to propose an amendment to any plan brought forward by the council of five hundred; but as the speaker mounted the platform he put on a wreath of myrtle, and the gods were asked to curse any man who spoke falsely for bribes. Voting was usually done by a show of hands; but in cases involving individuals a secret ballot was employed. From the decision of the ecclesia there was no appeal. The people thus assembled were constitution, parliament, and king. The council of five hundred and the officials of the state merely carried out the will of the popular assembly—the sovereign people.

But even in Athens democracy was not unmixed. Officers were generally elected, or chosen, by lot. In such an appeal to chance we see a serious conflict with the intelligence of real democracy; but no less an authority than Aristotle regarded the selection by lot as particularly democratic. In the second place, the democracy of Athens was merely the democracy of a class, not of all the people. Only Athenian citizens had a voice and a vote in the general assembly, a chance for a seat in the council, or the privilege of holding an office. In the Athenian state there were probably four slaves to every freeman. Many of these slaves were themselves Greeks and men of culture; but they were not citizens; they had no part nor lot in the government. In view of this fact, Athens was an oligarchy—an aristocracy. Moreover, the power of the orator often controlled the assembly. It is not an accident that demagogue is a Greek word. An orator of unusual ability often led the people to his will. Then Athens was in so much a monarchy, a government by the ablest citizen. Pericles was such a man; he was a demagogue; yet, fortunately, he was also a patriot, and led the people into intellectual, artistic, and moral excellence, if not into permanent political greatness.

It is doubtful whether modern times afford or have afforded a real parallel to the Athenian ecclesia,

or general popular assembly; but the town meeting of New England and the primary assembly of some of the cantons of Switzerland approach it in general character and functions. In the four cantons of Uri, Unterwalden, Glarus, and Appenzell primary assemblies, known as the *Landsgemeinden*, take the place of representative legislatures. In the *Landsgemeinden* all the voters of the canton take part. And yet we must remember that these assemblies are only local, and that they deal chiefly with local affairs. In such sense, every incorporated town and every county or magisterial district in the United States is in great measure purely and directly a democracy: the voters do certain things at first hand in the management of local affairs and in the election of local officials. And this leads us to the remark, which must be made, and to the fact, which sooner or later must be recognized, that pure and direct democracy, as a practical form in government, and not as a theory, must in the relentless logic of time and space always be and always remain local in character and activity. Popular sentiment may combine in such effect from the Atlantic to the Pacific and from the Gulf to the Lakes as to exert a single influence—an influence so definite that President, Cabinet, House, and Senate must obey it; but even then the actual work of framing laws, of executing them, and of hearing cases in court, as well as of dealing with foreign powers, must be done at second-hand. The sixteen millions of American voters could not get near enough together, even in a newspaper, to discuss a law and vote upon it; no single city could entertain them during a session of law-making; it would take 185 years for half of them to make a five-minute speech on a motion; and if all of them were to go into politics and attend every session of the legislature, half of them would have to borrow money to pay their traveling expenses and nobody would be left to run the trains. A small town or a small district may be a democracy pure and simple; but for any State of the United States, for a number of our largest cities, and for our country as a whole, democracy in the strict sense, or such even as Athens had, is an impossibility. Neither would it be economical or desirable if it were possible. For the States and for the Nation, representative government controlled by democratic sentiment and administered upon democratic principles, is more economical and more efficient, as well as more protective of pure democracy in the smaller circles.

The Romans excelled the Greeks in genius for government. Among the Romans, therefore, we should expect to find some practical applications of democracy; and we are not to be disappointed. First, the several classes at Rome joined their forces and drove out the Kings; then came the long struggle between the Patricians and the Plebeians. This was a series of efforts on the part of the latter to secure

economic rights, equal laws, and equal political privileges; on the part of the former, to preserve their ancient position of social and civil superiority; a struggle that ended in the triumph of the democratic principles in 367 B. C., when the Licinian Laws were passed, guaranteeing the final equality of the orders, and leading to a union of classes that enabled Rome to conquer not only Italy but also the Mediterranean world. Three hundred years later the same tendencies were in operation. Julius Caesar not only increased the number of senators, but also made the senate more representative: Spaniards, Gauls, military officers, sons of freedmen, and others were admitted to its halls. Caesar also extended the franchise to the people north of the Po, and to many cities in the provinces, especially in Transalpine Gaul and in Spain. All of his political reforms were in the direction of greater equality of classes and the enlargement of political privilege. A century and a half after the senseless murder of the great Julius, after the reality of empire had assumed also its forms and names, we still find the rights of the people respected by the more sagacious rulers. Trajan granted the provincials a large range of local freedom and self-government; under Hadrian, whose interests were cosmopolitan rather than Roman, the provinces felt more and more like parts of Rome; and every year the doors of citizenship swung wider open. Antoninus Pius was also careful of provincial interests, and Marcus Aurelius was charitable in public as well as in private affairs.

In time, however, the privileges of Roman citizens were shortened, the strength of their national life was sapped away, the bulwarks of their defense fell into decay, and the barbarians of the north swarmed in. Then came chaos. But even in the chaos were the struggling elements of order and the immortal spirit of democracy. Often was it stifled, but never was it dead. The destroyers of the empire were democrats at heart, though many centuries of struggle had to be passed through before they could realize here and there the fulness of their desires. Yes, the old Teutonic tribes were democratic in spirit, and so are the Teutonic races of today. Tacitus said, writing of the Germans before their invasion of the empire, "Kings are chosen for their noble birth; military leaders for their valor. But the authority of the king is not absolute, and the war-leaders command rather by example than by orders, winning the respect and the obedience of their troops by being always in the front of the battle . . . One evil result arising from their liberty is the fact that they never all come together at the time set, but consume two or three days in assembling." They met in general assembly not only for discussion of public questions and for legislation thereupon, but also for the trying and sentencing of criminals.

## HOME OF THE HONEY BEE.

D. J. BLOCHER.

### I. The Honey Bee.

THIS picture represents—in a rude way—the three bees that inhabit the hive. The largest bee is the male bee or drone. This bee comes on the stage of action usually in the spring and lives perhaps three months. But he is liable to be killed off the first honey dearth. And under no condition is he allowed to live longer than fall, in a normal swarm. Whenever stores are cut short he is killed as a matter of economy. They are seldom reared when there is a shortage of honey.

When the bees wish to get rid of the drones they go through the hive and uncap all drone brood and carry the unhatched drones out. The larval drones are also carried out. The general destruction of drones is then completed by dragging and chasing every drone out of the hive and either worrying them to death or keeping them out till starved. They are easily discouraged—all drones are—and soon die. The drone has no sting and so is as defenseless as a house fly. According to present theory and demonstration, the drone hatches from an unfertile egg. We never received but one order for drones.

The middle bee is the mother of the family of bees. She has a sting and uses it in self defense against her rival that may appear at any time for various reasons. I have never known her to sting a person or make any attempt in that direction. She lives as long as four years, but most of the queens live less than

two years. This can only be determined by having her wings clipped. (She should be nearly one-third longer than what she is in this picture. This is the fault of the man who prepared them for me. He had a second trial at the work and still failed in getting life size for her.) All the work inside the hive subserves to her special comfort and life. And when the swarm is perishing from any cause she is among the last to die and often the last. She also seems to have greater vitality than any other bee. This is partly proven by sending bees through the mails. Here she is also the last to perish.

The last and smallest bee is the worker. (The picture is rather that of an infant bee. The drone is the only life-size bee on the list). The worker is an imperfect female. There is only one kind of egg laid for the worker and the queen, the queen being developed by special feeding. The workers are out whenever it is fit to work and there is something to get. But when there is nothing to get they do not wear themselves out in search of nectar and pollen. During the working season the workers' life is about forty-six days, but when they have no work they may live six months or even longer. This little creature not only gathers honey for mankind, but is a great medium in pollenizing the various flowers and thereby increasing the general fruitage. This in turn adds to the commercial trade.

The flower invites the bee,  
The bee increases the fruit.  
Then commerce increases over the sea,  
All the world to suit.

*Pearl City, Ill.*

## WONDERS OF THE ROCKIES: IN COLORADO.

FRED V. KINZIE.

### III. Cheyenne Mountain and Cave of the Winds.

THE wonders of Colorado are mainly gathered around Colorado Springs and Manitou. Several weeks of profitable sight-seeing could have been spent at these points; but, our time being limited, we visited only those of the greatest importance.

One of the first places we heard of, and the first place we visited, was Cheyenne Mountain. This scenic wonder is located about four miles south of Colorado Springs. It is cleft by two yawning chasms, namely, North and South Cheyenne Cañon. The principal feature of the latter named is the celebrated cascades, known as Seven Falls.

A one-mile driveway leads from the entrance back to the falls, and the entire distance is a complete panorama of scenic wonders. We passed the Pillars of Hercules, two peaks, one on each side of the drive. They were forty feet apart; one rose to a height of nine hundred and forty feet, the other seven hundred and ninety. A little farther on is

the well-known gulch, cut in the solid rock, called "Devil's Slide."

We soon reached the falls, and there in front of us was that ribbon of silvery, glistening water, falling the full distance in seven leaps of from ten to fifty feet; each being dashed into fragments at every bound, regaining itself for the next downward leap. The beauty of the scene brought to mind the beautiful poem (The Brook) written by Tennyson:

"I come from haunts of coot and hern,  
I make a sudden sally,  
And sparkle out among the fern,  
To bicker down the valley.

"I steal by lawns and grassy plots;  
I slide by hazel covers;  
I move the sweet forget-me-nots,  
That grow for happy lovers.

"And out again I curve and flow  
To join the brimming river,  
For men may come and men may go,  
But I go on forever."

A stairway was constructed up the sides of the peak, near the path of the cascades, and by a little tiresome toil we mounted the top step and stood in awe and silence, viewing the surrounding peaks and the wonders of this realm of delight. Here each of our party hired a burro and these small, but faithful mountain climbers took us up several hundred feet farther. Here was found the grave of the well-known author, Helen Hunt. Another, still grander view was had from this lofty height of 7,000 feet. The greater part of an hour was spent viewing and exposing photographic plates on the surrounding scenery; also the burros and their burdens.

We safely made the descent and passed out of this true resort, so near to "Nature's Heart," with a throbbing heart of inexpressible gratitude to the Creator of all good.

Little time was lost the next morning in taking a car for Manitou. Having only till that night to spend in this section, we at once inquired as to the route to the Cave of the Winds. We soon found ourselves gazing at the sheer walls of Williams Cañon. This was a two-mile walk up a steady grade. The first mile is at the bottom of the cañon in the shadow of walls from two hundred to five hundred feet high; but the second mile climbs the cañon's west wall at an easy and regular grade, although carved and blasted from the rugged and precipitous height. It is protected its whole length by heavy timber railings and stone walls.

This short trip discloses the cream of Williams Cañon scenery. The Temple of Iris, Cathedral of Saint Peter, the Narrows, Rubicon Point, the Amphitheatre and Saint Peter's Gate placed in the Cathedral Dome, four hundred and fifty feet above the roadway. We left the roadway and climbed a trail

straight to the entrance of the cave, at the saving of about one-half mile walk, but it was much steeper than the drive; but thought perhaps we would find or see some "unusual" that we would not otherwise. We passed through an opening in the cliff on a stairway, and in the covered chasm a cool, thin, curious-feeling air blew up through the opening. We were afterwards told by the guide that this was their first trail and entrance to the cave. This continued breeze of light air is what gave the cave its name. We were soon on the veranda of the office at the entrance of the cave. After resting, registering and purchasing our tickets we waited a few moments in the reception room till several had gathered, making a party of about ten. A guide then took charge of the party and we marched through the entrance gate to receive our first "living object lesson" in geology. This is one of the great "geological miracles" of the mountains of Colorado.

The temperature varies but little—fifty-three degrees in summer; fifty-two in winter.

The following are some of the principal attractions in this "Nature Studio": Canopy Hall, a room over two hundred feet long; Boston Avenue, a long, narrow passage; the Vestibule; Old Maid's Kitchen; Finlay Hall; Chicago Avenue, similar to Boston Avenue; Gypsum Alcove, at the entrance of which you stand and view the entire length by the light of a powerful searchlight, which exposes its unbroken surface of those rare forms of whitest, virgin purity. As we gazed on this scene, speech was suppressed and admiration exalted. Next we came to Coral Dome, sometimes called Shredded Wheat Biscuit or Shredded Coconut; Curiosity Shop, where the law of gravitation is ignored and stalactites grow horizontally and upwards; the Wishing Well and the Fire Escape, one an opening in the floor, the other in the ceiling; Manitou Dome; Majestic Hall; Dante's Inferno; Curtain Hall, named from the great fluted curtain, twenty feet wide and twelve feet high, attached to the perpendicular wall; Elmore Grotto; Bridal Chamber, and others all intensely interesting. But of two attractions of special interest we wish to make special mention.

Diamond Hall, a room ninety feet long, leaves an impression never to be forgotten. The walls appear to have been powdered with diamond dust, and in the brilliant arc light, with which this phenomenon is illustrated, every inch of the walls sparkle, and scintillate each conceivable color and shade, giving perfectly the effect of the walls of diamond, mosaic work.

Crystal Palace, the other, is made up of four rooms. Here is found flowering alabaster in its perfection. Unlike the gravity stalactites, which grow from dripping water, this form crystallizes from the atmosphere. The walls and ceilings are closely mat-

ted or veneered with the purest white alabaster. The spurs or needles, from one to two and one-half inches long and in clusters resembling chrysanthemums or chestnut burrs, stand out from the surface in the most graceful profusion, and as thickly as grass upon a lawn.

After walking about three-fourths of a mile and spending over half an hour in this wonderful underground cavern, we silently walked out into daylight with the words on our lips that were first heralded by electricity over the telegraphic wire: "What hath God wrought?" (To be Continued.)

#### WOODS WHICH IRRITATE.

IN the course of the past year inquiry was made by the English factories and workshops department into the effect of irritant woods and the extent to which they are used in England. For example, in the case of satinwood, there was an inquiry into (1) the extent and class of work in which it was used; (2) the evidence there is as to its irritant action on the skin; (3) the precautions taken in its use.

East Indian satinwood possesses much more irritant properties than the West Indian variety. Satin walnut appears to be no more harmful than deal. The East Indian wood is used only in two shipyards. It causes an eruption on the skin of the worker exposed to the dust or shavings produced during manufacture, but some persons are much more susceptible to its effects than others. One man stated to the inspector that if he only placed a shaving of the wood on the back of his hand it caused a sore on the skin at that point. The injurious effects however appear to be only temporary.

Reference to occasional contact action on the skin is made as to teak by Inspector Wright (North London), who refers to reports of "swollen arms and eyes," by Mr. Shannin (Liverpool), and by Mr. Grant (Preston) as to teak and olive wood. The inspector in Sheffield states that: "In the manufacture of knife scales and tool handles the following woods are considered to be irritant—some of the ebonies, magenta rosewoods, West Indian box-wood, cocos-wood, and partridge-wood. Irritation of the eyes and nose is caused also by woods of the mahogany type. East Indian wood had to be discarded in the shuttle trade owing to its irritating action on the eyes.

Mr. Lewis (Manchester) states that salica-wood from Cuba was stated to give off "a fluff, dust under the machines and hand planes, the effect of which upon the workers is to cause a running of the eyes and nose, and a general feeling of cold in the head. The symptoms pass off in an hour or so after discontinuance of work." Eczematous eruptions are said to be produced by so called Borneo rosewood, a wood used owing to its brilliant color and exquisite grain in fret-saw work.—*Chicago Tribune*.

## Around the World Without a Cent

H. M. Spickler

### Chapter XXIV. In Switzerland.

GERMANY lies behind me. I am crossing the great bridge at Basle, over the green, swift waters of the Rhine, into Switzerland. Behind me a triumph. Before me, God's gloryland. For several weeks I am to ride through the sunny valleys and climb the white-snowed Alps, and eat cheese and drink milk, and fall in love with the sweetest people in all the world. You will go with me, tasting what I taste, seeing what I see, and living in the homes of the Swiss people.

On Sunday I went to church, or tried to, for I was a minute late, although only 9:30. The big doors were closed and locked, and a guard on the outside would not permit me to approach the doors, much less to try to gain an entrance. Not a single other man or woman or child came and stood with me. I was alone. I was the only late worshiper that morning at that Swiss church. It was a good lesson for me, and I wish I might bring it to others. Although I was in Switzerland I thought that I could do just as I did in my own country,—go to church at *our* hour, and when I *felt like it*. It was unfortunate for me, that I was so stupid, for here was a magnificent cathedral, where I might have sat, in one of its easy pews, and looked upon the glories of its stained windows, its high-arching frescoes, its splendor of pulpit, and heard the eloquent music from the great pipe-organ and the sweeter music of the trained choir, and the manly voice of the preacher,—in German. But I had come late. The doors were

shut. I hung around outside like a kid. I felt like a stray dog must feel. I kept my five pfennings in my pocket, but felt poorer with it. The Sunday had been lost to me. It was all because the Swiss people go to church all at once, honest about that as about making cheese or straining milk, and when they were once all in, they thought too much of the congregation to permit it to be interrupted by straggling visitors or lazy loafers. "The doors were shut."

I have ridden seven thousand miles on my bicycle, but the Swiss milk, Swiss cheese and Swiss butter

are worth it all. The Swiss are a brave little people, with tender hearts and an indomitable perseverance for personal liberty. The scenery is enchanting. You could not blame the Swiss for their love of country and liberty. No one will ever take away this country from them, for it is a part of them. The banks of their streams are high, for there has been flowing a torrent of crystal water for ages and it has

"Where the pretty Swiss chalets take me back to picture-card boyhood."

been leaping from scarry ledge and flowing over rocky bed, and flinging itself headlong with such passionate enthusiasm that the channel in which it now flows lies far below the general surface. The bridges across these streams are grandly massive, or picturesque in rustic beauty, sparkling with the reflections of shimmering water beneath them, water whose blueness, or greenness, in tint, tells of the great glacier from which it has come.

Now I glide into a beautiful valley,—never mind its name,—where the pretty Swiss chalets and country barns take me back to the time of picture-card boy-

hood. A man and his wife are making hay in a little field near the house, the man and wife first mowing, then raking, and finally piling it, all by hand, after which with oxen hauling it to the low-roofed barn.

The first thing you do in Switzerland is to *arrive*. You seem to *arrive* here as in no other country. You *know* you are *here*. You wouldn't be any place else on the earth for a fortune. Here is just where you have always wanted to be,—to stand and look upon these wonderful mountains, to breathe this inimitable air,—this clear, sweet fragrant air, this health-giving, holy air and to just *be here*. It is a shame that I must write about it. I may see more in doing so, and remember it better, but I can enjoy it best when I keep still and allow *it* to do the talking. The depots I ride past are models for quaint picturesque beauty, garlanded with fresh ivy and set in a garden, with a delightful look of cleanliness about

joy it. In every place I have yet been, the tourists seem uneasy. They want to go on. But here every one is satisfied,—not to sit down and rest in the valley, but to explore the wonderland all about them. They smile at you as if to say: "Yes, I'm here, too, and I'm mighty glad of it, and I don't care if I never get away from here, and if I die here, bury me any old place around here and I will be happy." In Turkey fear blanches the cheek. In Palestine the emotions are stirred by the sacred memories of our Lord, and the enthusiasm is thus calmed. The tigers and cobras of India are a menace to human life, and even as the tourist dines, he is swallowing germs of several fatal fevers, the natives in wretched health, crowding about him. In China I will be afraid of the Boxers and the queer customs of Dragonland. Japan is more safe and the people more pleasing, I suppose, but still they are foreigners. Switzerland has all the good qualities for the tourist and none of the bad. This is why the hotels

are always full of hungry, excited, happy, travelers. The world's greatest picture-gallery and wonderland is all around you here. When the polite waiter passes the big dish of fragrant mountain honey you take out twice as much as you would at home. Then you ask him to please pass the dish the second time.

I stopped at the Grand Hotel des Alpes, first-class, but very moderate in price, and good enough for anybody. Mr. Matti, the proprietor, was once the head-waiter. He knows how to put an American at ease. I think the readers of the INGLENOOK who have traveled much will agree with me that for good cooking these Swiss hotels beat the whole world. And it is as clean as the clear water that laughs in idiotic glee down the Matterhorn.

Here in the hotel garden you have a glimpse of fairy-land,—gold fishes in large globular tanks, fountains baptizing the sunlight and playing the Alpine streams over grass and tree and shrub and flower, hanging upon the foliage little broken rainbows. A glance out through this idyllic beauty is awarded by a still richer panorama of green valleys and snow-kissed mountains.

Every one admires Jungfrau, queen of the Alps, visible everywhere in Interlaken, looking out upon the valley from behind the surrounding peaks, shrinking away in their plainer forms as if to modestly reveal the chaste bosom and illuminated brow of their virgin queen to the enraptured thousands of adoring tourists gathered in nature's loveliest auditorium. Delicately draped in a thin veil of purple atmosphere, overhung and surrounded with heaven's royal blue, the small but enchanting hills of emerald pose in the foreground

"I stopped at Grand Hotel des Alpes, where Mr. Matti knows how to put an American at ease."

them, to cheer and educate the thousands of tourists that daily reach the bigger cities by train, auto and boat.

Probably the best place from which to make a mountain excursion in Switzerland is Interlaken. Once at your hotel you catch the Swiss appetite for solid and substantial food. The tables are long and a score or more may sit at one of them,—eager, excited, hungry sight-seers. Wasn't God good when he made such a beautiful earth, with such variety, and gave us so much wealth, and such ease to get it, that we could all of us find time and occasion in which we might become like his handiwork in material things? To the people who think that life is only to make money, and fight battles of daily scrimmaging for a few more acres or a few more houses, the inspiration of Switzerland has no entrance. The poor man, like me, can en-

that she may tower above them in all the splendor of bridal majesty.

There is a fullness of grandeur to the swelling form of Jungfrau for the tourist who after dinner takes a seat in the park, as I did, after each meal, in front of the hotel, to stroll later out in the cool fields, radiant in bloom beneath her feet. I saw this picture before, on canvas, or in an art photograph, but now I am close to it. I am heré. I have arrived. The noblest peak in the world gleams glowingly before me. I am in the Alps, the Alps! Think of it! And I have had a good dinner, and my wheel is oiled.

But with all this wonderful beauty, transcendent in glorious majesty of size and color and effect, the scene passes easily into the tragic. From the romantic it glides into the stern realistic. Those of us who have

"Every one admires Jungfrau looking out upon the valley from behind the enchanting hills of emerald."

ascended the higher mountains know that the novice is easily deceived by distance in rare atmospheres. What looks comparatively easy of access at a distance becomes on nearer approach rough and terrible. The calm beauty then passes into the harshness of terror. How easy it appears then for a climber to lose his way or make a misstep and be hurled into a slippery crevasse that yawns like a giant serpent-jaw beneath him. Once losing his foothold he is doomed to a sudden or lingering death. For no food grows from Alpine peaks and no Red Cross nurses are at hand. The cruel mountain is heedless of the daring soul who clings breathless to its fiendish slopes.

## PROCESS OF PRINTING.

JOHN H. NOWLAN.

I AM not a printer, though in my two decades of service as newspaper correspondent I have occasionally placed my own copy in type.

The first step in printing is setting the type, or "composing" as it is called in a printing office.

A type is a piece of metal with a letter or other character on it raised above the surface of the remainder of the metal, so that only that part will touch the paper in printing.

Type were first made from wood, but soon were cast from metal.

At first each printer made his own type, but as the business grew, foundries for type-making were established. A mold is made for each letter and melted metal is poured into it. The most important part is the matrix or part that makes the letter. A steel die is made the exact model of the letter wanted and this driven into a piece of copper. The matrix is then fitted to the mold and the machine simply opens and closes the mold, filling it each time with melted metal.

Each mold makes only one letter, so there must be as many molds as there are characters—which requires 225 to print the English language. This includes capitals, punctuation, etc.

Type metal is an alloy of lead and antimony, with sometimes a little tin, nickel and copper. This mixture melts easily, yet wears well.

Regardless of the size of the face all type are made the same height, which in the United States is practically one inch.

The groove on the bottom of the type is to insure a firm base, and the one on the back enables the compositor to place the type in the proper position without looking at the letter. As different fonts have different groovings, they also enable him to recognize a type that has gone astray.

There are many sizes of type, which for a long time had special names. Now American founders designate type by the number of points in the diameter of the letter, seventy-two points equaling one inch. The body of the INGLENOOK is about tenpoint or long primer.

Type are distributed for use in two trays or cases. Each case is divided into small compartments, each for a single character. As some letters are used more than others the compartments for them are made larger and are placed nearer to the hand of the compositor. This is a practical illustration of the value of saving small portions of time.

The cases are placed on a frame about breast high and the top sloping toward the compositor. The one containing the capitals is placed higher, hence is called the "upper case."

The type-setter has a small adjustable frame of steel or brass to hold the type. This frame, called a stick, has a bottom, back and ends, being left open in front. It is held in the left hand and the type picked up with the right. The first type is placed at the lower left hand corner, with the groove of the body turned from the "typo," and the next to the right of it, and so on till the line is filled. Usually

a thin strip of metal, called a lead, is placed between the lines and then the lines are said to be leaded.

When the stick is filled the type is lifted out and placed in a frame called a galley. The type is then arranged as it is to appear in the paper, and an iron frame placed around it and fastened by wedges.

While the type is in the galleys it is inked and a print, called a proof, is taken. This is read by the proofreader, and all needed corrections noted on the margin, each particular error having a special sign.

The press does the actual work of printing, which consists of inking the form and pressing blank paper over it. According to the method of years ago, after the form had been inked and the paper placed over it a plank, called a platen, was placed over it and pressed down by means of a screw.

The types were inked by using leather balls filled with wool or other soft material. The ink was spread on a flat stone and the balls rolled over it to distribute the ink. They were then rolled over the form till all was inked. This work was usually done by a boy and he sometimes happened to get ink on his hands and face, reminding the others of what they had been taught about the inhabitants of the lower regions. To this day a printer's apprentice is called the "devil."

For nearly three hundred years this was the principle employed, when the Earl of Stanhope invented a press that had what is known as a toggle joint to secure the pressure instead of by means of a screw. He had a spring to raise the platen, and an improved method of moving the forms.

The demand for greater speed led to the invention of the cylinder press by Friedrich Konig in 1814, which was able to make 1,800 impressions per hour. The paper was fed from a slanting table and caught by a clamp in the cylinder. As this revolved, carrying the paper on its circumference, the form moved forward and passed under the cylinder. As the paper passed out onto a table placed to receive it the form passed back under inked rollers, to be coated for the next impression.

An attempt to fasten the type to the cylinder was the next step, which, while successful, was too complicated and delicate for practical use.

The first successful one of this style was the invention of Col. Richard Hoe in 1840, and with many improvements, is the press much used today in large newspaper offices.

A press used by the New York *World* takes the paper from the roll, prints, cuts, folds, and counts 96,000 eight-page papers per hour, taking the paper through at the rate of 32½ miles per hour.

Such has been the growth of the humble invention of Europe, which, however, was perfected in America—*Mulberry Grove, Ill.*

#### THE MAGICAL KERNEL OF KORN.

A GRAIN of corn, found in the wrappings of an Egyptian mummy which had lain in the tomb for forty centuries, was planted and grew into a great corn-stalk, with spreading leaves and heavy golden ears. During that period of quiescence more than one hundred generations of men had lived and toiled and gone to their long rest, yet the life-spark in that kernel of corn survived, as by a miracle, and burst forth anew after four thousand years of slumber.

Scarcely less wonderful does it appear that the very paper this article is printed on may be imbued with corn-stalk fibers, the new material that is shortly to take the place of wood for paper-making. It is possible to conceive that the accompanying illustrations may be printed directly on the fibers of the corn-plants which are pictured—in fact, this would be less of a miracle than some of the astounding utilizations of corn that are essential to an up-to-date outfit for a vacation.

Are you going to the woods for sport? Ten to one the smokeless powder for your shotgun contains a cellulose nitrate made from corn. Thus it may happen that the ducks you blaze away at were fattened from the same field of corn that yields the power to drive the shot into them. If you carry a camera your films are probably coated with collodion that was made from corn-pith. If you are touring in an auto your lubricating oil is made from corn, if you have the kind that does not gum; and if you have the latest machine that explodes denatured alcohol instead of gasoline, your alcohol is practically certain to be made from corn.

Corn is the most omnipresent thing in the universe. Go where you will you cannot get away from it. As the moving-picture machine flashes its hundreds of thousands of films on the screen little do we think that these miles of picture-films would not operate without a sensitizing material based on cellulose, obtained mainly from the humble corn-stalk.

The average man, if asked if he could get along without corn, would unhesitatingly answer yes. He would bethink himself only of the hot johnny-cake or the corn-muffin, or corn in some form as a breakfast-food, or possibly of pop-corn. But how his mouth would lengthen at the corners if told that he must pay an extra cent or two for every starched shirt he wears if the laundry may not use corn-starch; that his soap would rise in price without corn-oil from the glucose factory; that cheap silk ties must be no more because the cellulose adulteration is based on corn-pith! Tell him that his mucilage-bottle will cost him ten cents instead of five if gum arabic is used instead of dextrin, made from corn. Remind him that he must go back to molasses for a table-syrup, and that candies will be both more costly and

less palatable if deprived of the grape-sugar or glucose content.

If this average man still thinks he can get along without corn, point out to him that the great navy of his country would be fatally weakened in battle but for the linings of corn-pith in the vessels' hulls. When a shot penetrates the armor and lets in the water the corn-pith swells and fills the hole. A navy without corn-pith would be as helpless as an old-fashioned Spanish armada in a modern sea fight. Remind the man also that the animals of the country rely principally on corn for food, and that beef, pork, poultry and dairy products would double in price but for cheap corn-feed.

Indian corn is as remarkable for the tremendous quantities in which it is grown as for its novel and peculiar uses. In 1906 there were actually three billion bushels grown in the United States—enough to feed the entire human population for three years if they were confined to a corn diet. Most of this corn went into pork, poultry, beef and, through the useful cow, into dairy products. The acreage planted in the year quoted was a hundred million, or more than an acre for each man, woman and child in the country. The money value of the crop was \$1,170,000,000, or more than sufficient to pay the national debt.

The corn crop of the United States is worth twelve times as much as the product of the gold mines; it is three times as large as the production of all the gold mines of the world. The entire capital and surplus of the six thousand and odd national banks in the United States exceeds the value of one year's corn crop by only about twelve per cent. The corn crop of the country is greater in value than all other agricultural crops combined. It is one-third greater than the total production of ores and minerals and one-third greater than that of metals.

The fact that we grow thirty-five bushels of corn per capita and perhaps one hundred bushels of corn-stalks and shucks indicates an amazing demand for corn and corn products. It would not be possible for us to consume so much corn unless it were used wastefully. We use ten pounds of corn to make a pound of beef, and then of a one-thousand-pound beef creature we eat only three hundred pounds of meat.

If we eat wheat-cakes for breakfast we really use twice as much corn as wheat, for the syrup is now made almost wholly from glucose, technically known as grape-sugar or corn-syrup. If we consume preserves or jam with our wheat-bread, to make it more palatable, again we consume corn, for the sweetmeats are based largely on this same corn-syrup. If we eat ice-cream in summer it is mostly made of corn-starch, and if we eat imitation oyster-patties in winter we are still consuming corn. If we eat Boston beans and brown bread again we get corn, as this bread is

two-thirds corn, darkened by corn-syrup!

The glucose factories buy corn by the trainload and convert it primarily into glucose and secondarily into a series of by-products so that none of it is wasted. Glucose (known also as corn-sugar, grape-sugar or corn-syrup) is really a valuable and wholesome food, and candies made half of corn-sugar, or glucose, and half of cane-sugar, ordinary sugar, are more palatable and nutritious than if made entirely from ordinary sugar. The sweet girl graduate of today can consume three times as much candy as the girl of 1880, just because it now contains so much good, wholesome glucose.

There are many curious and little-known facts about corn products. Over three hundred million pounds of starch are made annually in the United States, mostly from corn; this is the largest single product of the corn-kernel. That is three and a half pounds of starch for each one of us. Glucose or corn-sugar is nothing but corn-starch boiled down to a gum and treated with diluted sulphuric acid. The gummiest part is made into mucilage, and the least gummy into table-starch and laundry-starch.

The germ or life-spark in the center of a kernel of corn is comparatively soft and oily. It is squeezed to produce corn-oil, which goes mostly into soaps, though occasionally into artificial butter. The best of it is made into imitation olive-oil, as the real olive-oil is very scarce and dear.

Linoleum or oilcloth is surfaced with vulcanized corn-oil, which resembles rubber; in fact, it is the only satisfactory adulterant for rubber goods. If you buy a cheap hot-water bag to keep your feet warm on cold nights, and it bursts, with dire consequences, you may be pretty sure that it was made more of corn-oil than of rubber. The refuse of the corn-germ is made into what are called corn-oil cakes, which are highly prized for feeding sheep, and come back to our tables in the form of mutton. There are a lot of other feeds made from various sorts of corn-refuse, from green corn-stalks and other corn elements too numerous to mention.

A great future has been predicted for denatured alcohol. This untaxed cheap alcohol is made almost wholly from corn, and is expected to be in great demand as a fuel just as we now use kerosene; also for power purposes, as we employ gasoline in automobiles. The airship of the future will be driven by corn-power, the men who fly in it will be corn-fed, and the dynamite they drop into an enemy's camp will be mostly of corn-made nitro-glycerine. The three-day ship that is coming to reduce time across the Atlantic will use corn-made alcohol-fuel instead of coal. Finally, the newspapers and magazines of the future will be made from corn. We shall be living soon in the Corn Age; if we have not already entered that period.—*The Circle*.

# THE INGLENOOK

A WEEKLY MAGAZINE

PUBLISHED BY

BRETHREN PUBLISHING HOUSE, ELGIN, ILL.

Subscription price, \$1.00 per Annum, in Advance.

The Inglenook stands for material and spiritual progress. Its departments are: Literary, Editorial, Home, Cream of Magazines, World News.

Its qualities are: Good Sentiment, Moral Convictions, Inspiration.

Its purpose is: To safeguard home life by supplanting and counteracting bad literature.

Its scope of matter is: Scientific, Religious, Educational, Philanthropic, Economical, Sociological and Financial.

Its field is: The World.

Liberal commission given to agents. Sample copies are given upon request. When changing address give both old and new addresses.

Entered at the Postoffice at Elgin, Ill., as Second-class Matter.

## THE FRESH-AIR CHILDREN.

HAVING recently escorted a party of Chicago fresh-air children to and from the place where they spent a happy two weeks in the bright sunshine and pure air of country homes, we have been especially impressed with the noble work these charity organizations are doing. Any one who has any idea of the conditions of the poor in our large cities and then has the privilege of listening to the chatter of a returning party of fresh-air children can readily see that incalculable good may be done in this way. All of our party were looking forward already to next year's outing. One boy was returning home only to get the consent of his parents to go back and live with the farmer who had kept him for two weeks. Another boy was wishing he might do the same. A third boy of the party had a short visit with his sister who was staying in this neighborhood from a former fresh-air party.

But great as is the praise due these charity organizations in the city, greater praise belongs to the people on the farms and in the country towns who open their homes to these poor children. Many of these housewives are already overworked. And most of us know, that the supposition held by many city dwellers, that country people are all as well supplied with all the necessities of life as they are with pure, health-giving air, is a false one. Many country people live on the plainest fare and enjoy few luxuries, as we count luxuries. For these reasons their care of these children, who are in many ways a care, is a most commendable act.

In order that this good work may continue, and that those who so sorely need its benefits may not be deprived of them; our settlement workers in the city need to exercise their best judgment in passing on those who are to profit by these provisions. No charity organization of the city should be taken advantage of by those who are able to care for their children in the way of giving them an outing, and no rural

dweller who willingly opens his home to the needy should be imposed upon by those who enjoy many luxuries that he cannot afford. No one thing will so surely and so effectively shut up the country homes against the city children and thus put a stop to this noble work, as carelessness at this point on the part of the city workers. People are alike the world over in this, that when they have it in their heart to do a charitable deed, the recipient must be worthy. And there are many such in the world,—“the poor ye have with you always,”—and may there be no hindrance to the good work.

The fresh-air work had its beginning in 1849 when a minister in New York City sent the sick and poor of his parish to the country for a short period. In 1872 the *New York Times* took up the work and now most of the newspapers of the large cities are back of some work of this kind. The general fresh-air societies of thirty-eight cities give every year as high as a million days' outing to the poor and destitute children, and sectarian and individual societies add many more to this number. This means that not far from one hundred thousand children of the poor spend at least two weeks in the country when the country is at its best.

## OUR PAST.

OUR character is the sum of our past deeds, thoughts and desires, whether they were good, or evil. It is therefore impossible for us to separate ourselves from our past. It is the sole creator of what we now are and it is, in a way, prophetic of what we shall be in the future. But its supreme power and influence stop with the present. We are not bound to be in the future what we were in the past and what our past has made us. The making of the future is in our hands. While the past may exert a powerful influence upon us we can throw it aside with the result that the future may find in us a character altogether different from that which the past left us. Every moment that comes to us gives us an opportunity to make this change.

Every intelligent person feels that he possesses this power to change his character, but evidently he does not consider that every other person has the same power, or at least he does not give others credit for the desire to improve. When a man is advanced to a new position or lays claim to particular attention from us, we invariably go into a study of his past to see what he is and what he shall be. It may be well to find out his present standing by looking into his past, but we have no right to pass on what his future will be. That is at his disposal, and he may make it so different that what is now his past may come to have little influence upon him.

Let us be careful how we pass sentence on others, thereby putting an obstacle in their way. All around

us there are those who are struggling as we are to get away from the weaknesses and mistakes of the past. Let us help them.

#### "PROGRESS AND CHARACTER OF DEMOCRACY."

UNDER the above heading John W. Wayland discusses the subject of democracy in this and next week's issue of the INGLENOOK. Most of us need to know more than we do on the subject and here is an opportunity to add to our small store of knowledge. The articles are written in a very interesting style, and the duty of knowing what the author has to say becomes a pleasure also.

#### A PRAYER.

When joy and laughter rock the world  
And children laugh on every side,  
When selfishness has been forgot  
And hands and hearts are opened wide,  
And shoulders bend to help the weak,  
And hands reach out to guide along  
The feeble ones, and all are kin,  
And all the world is sweet with song—

When jealousies are pushed aside,  
And envy finds no dwelling place;  
When strong, and erst-aggressive ones,  
Lift up the feeble in the race,  
When beggars reap a harvest great  
That makes up for the year's scant dole,  
When men are moving heart to heart  
And standing soul to soul—

When it is joy to fare abroad,  
And it is pleasure just to live,  
And life's one bitter drop is that  
Alas! we have not more to give!  
We ask, O God, thy comfort for  
The hearts bereft that grieve and break,  
For those no open hands may help!  
Dear God! for the Redeemer's sake!

—Judd Mortimer Lewis.

#### MAN'S MARVELOUS POSSIBILITIES.

IN all this great universe there is only One who is able to bring out of man his almost infinite possibilities. There is an oft-repeated story told of Ole Bull, the violinist. He once happened into a jeering, jostling crowd of people, one of whom was trying to entertain the company with a violin. The old man recognized in the discordant music of the violin as it was being played, the pitiful sounds of one of his own instruments. Finally, when he could stand it no longer, he jumped up and asked that he might see what he could do with the violin, but so uncouth and repulsive was he in his appearance that his request was met with shouts of derision from the bystanders, and when he took the instrument and began carefully tuning each string, the uproar had become almost a pandemonium. But presently he drew the bow across the strings, and forthwith

came such sweet strains of music as those around him had never heard—soft and low at first, and then gradually swelling to a higher pitch of sweetness and grandeur. His hearers were astonished, then entranced, then completely subdued, and when at length he handed the instrument back to the one from whom he had received it, the protest against his parting with it was as pronounced as at first the contempt and jeers had been that he should receive it. "No, no; keep it!" said they. "You made it; it is yours. You alone know how to use it and to bring forth from it its sweetest strains."

Just so with man. In the hands of any but the One who made him, all his music is but as the jangling and broken voices of untuned strings. He was under the dominion of sin when the great Master came, but people did not recognize the Master, for while he was reclaiming his own, they laughed him to scorn and spat upon him and thrust him from their midst. But there were those whose ears caught the strain of a harmony that had never before been heard on earth, and gradually the anthem of the world's redeemed has risen higher and higher until today it is beginning to fill all the earth with the music of heaven, and blessed is he in whose soul the delicate touch of the master hand is permitted to execute its perfect work.—*Exchange*.

#### NOTES OF WOOD AND FORESTRY.

Mexico has from 20,000,000 to 25,000,000 acres of first class woods.

The salaries in the forest service are small, ranging from \$1,200 to \$2,700.

Forty graduates of forestry schools have been appointed as forest assistants in the western forest service. The demand is greater than the supply.

What is supposed to be the largest yellow pine tree in America grows about thirty miles southeast of Astoria, Ore. Four feet from the ground it is 12 feet 7 inches in diameter. The lowest branch is 100 feet from the ground.

The New Hampshire Forestry Association has issued a call for the protection of the White Mountain forests. A foreign corporation owns the greater part of the land and threatens to denude the mountains unless the property is bought en bloc.

A notable cherry tree grows on Samuel Cook's farm in Josephine county, Ore. It measures 102 inches in circumference and its limbs reach out over a surface of forty feet. It has never failed to bear fruit for fifty years. Cook also has a peach tree 45 inches in circumference which is 49 years old, and a grapevine which is as thick as a man's body and covers an eighth of an acre. It produces a ton of grapes each year.—*Selected*.

" We believe

" That home-making should be regarded as a profession.

" That health is the duty and business of the individual, illness of the physician.

" That the spending of the money is as important as the earning of the money.

" That the upbringing of the children demands more study than the raising of chickens.

" That the home-maker should be as alert to make progress in her life work as the business or professional man."

## Habit Forming

Catharine Beery Van Dyke

My brother is a horseman. Not only a horseman in the sense of owning and taking care of horses, but he has studied the subject in the light of a science and has reduced its principles to practice in the education of horses and their owners. One of the first lessons he gives to the horse is the one known as "poling." With a light pole about six feet long he approaches the colt and allows the animal to smell of it, as that is his way of examining things; then he rubs the pole firmly and gently over the side of the head, the ear, the shoulder, fore leg and so on until the entire surface of the body has become familiar with the touch of the pole. At first the colt trembles and shirks from it, but by repeated lessons he gets used to the treatment and is not at all alarmed when touched either by the pole or some other instruments. So with the lesson on "Whoa," teaching the horse to stop at command. It is repetition of application and teaching that educates the horse and modifies his temperament and establishes his character.

Habit, in the human being is getting used to things. Not all habits are bad, but the habit of parents to neglect the development of the best habits in their children is one of the worst habits I know. I wish in this paper to speak of the importance of forming good habits.

Beginning with the new-born child—and he is so completely at our mercy—what is our duty in regard to getting him used to things? When a hive of bees

is placed in a white clover field the honey has the flavor of white clover. When surrounded by other flowers it partakes of their flavor. When a little child is encompassed by an atmosphere of patience and love it will assimilate these elements. Alas, the atmosphere obtaining around too many babies is that of confusion and chance or luck. People are so apt to think the baby does not know and are prone to keep him in ignorance, so far as their directing him is concerned, until wrong habits inevitably fix themselves upon him and his subsequent training must be largely that of breaking them up. It takes thought, careful, prayerful, intelligent and constant thought as well as care, time and work to start the little fellows right and to keep them going right until proper habits have given them a good character. The physical care of the baby during its first few weeks and months may be compared with the poling of the colt. There is so little of intelligence in the babies at first and the way to this little intelligence lies through physical contact. It is, therefore, very important how the baby is poled. The one whose duty it is to handle the infant must, in the first place, be masterful—masterful in her very touch and look and tone of voice. The habit of obedience can be formed on the bath table, patience also and self-control, and *while* these habits are being shaped the mind and soul of your little one are receiving their first nurture, and this nurture must be intelligently applied else the vessel will be marred in the making.

Oh, when will we have schools for prospective parents—for prospective brides and grooms? When will we learn to know that right marriage and right parenthood are paramount to all human institutions and attainments?

Schools for these things? We have them now, not always well professoried, and *you*, young mother, and *you*, young father, are the teachers in these schools from the first moment you bend over your first new offspring even to all future time! You are the ones to equip that offspring (and it must be done early) to become in its turn an intelligent mate and a good parent.

With this ultimate object in view,—I mean the definite object of making of our own little babies, as the years go by, *good* husbands, *good* wives and consequently *good* parents,—the training of our children will seem less irksome to us and more interesting because of the well-defined plans for their future, which plans and the endeavor toward their execution will react upon us and make *us* better parents *now*.

It is well in the rush and hurry and work to stop betimes when we have little ones under our care and say: "Which really is the important thing for me to do today? Shall I hurry and toil and sweat to get a certain amount of fruit up, rooms cleaned, big meals cooked, or tucks and ruffles in my own or baby's clothes, or would it be better to live a more moderate life in things of matter and reserve a good share of my time to get my child used to some good way or teach him some new lesson in life?" I have not been able often, in my own strength, to answer these questions, but am many times driven to seek for guidance from on high.

"If any of you lack wisdom let him ask of God, that giveth to all men liberally, and upbraideth not; and it shall be given him." And the best part of the quotation is the last phrase, "and it shall be given him."

There is no higher opportunity given to man than that he may, in some good way, help another man. "Inasmuch as ye have done it unto the least of these my brethren, ye have done it unto me" cancels every shadow of right which we might seem to have to live to ourselves and for ourselves. This opportunity is worth more than the collection of dollars and cents, more than the attainment of a scholarly or social distinction. It is our passport to a higher life in this world and also in the world to come.

Let us, therefore, take pains to definitely lead our children into the formation of good habits.

I believe in a spade and an acre of good ground. Whoso cuts a straight path to his own living by the help of God, in the sun and rain and sprouting grain, seems to me a universal working man. He solves the problem of life not for one, but for all men of sound body.—*Emerson*.

## WORDS OF LOVE AND KINDNESS.

MARTHA SHEPARD LIPPINCOTT.

Little words of love and kindness,  
Cheer so much the aching heart,  
When tired souls are most discouraged,  
They, such comfort, will impart.  
Then be generous and give them  
Where we know they will do good.  
We should all rejoice in giving  
All the happiness we could.

Little acts of love and kindness  
Do not seem to cost us much,  
Yet how much their blessed power,  
Some poor, lonely heart, will touch.  
They will often call a sinner  
Back to thoughts of childhood days,  
Till his heart will feel repentance,  
While he for forgiveness, prays.

Little deeds of love and kindness  
Help so much to brighten life,  
While they throw sweet sunshine over  
All life's tiresome care and strife.  
Let us scatter them more freely,  
Trying, happiness, to give,  
So that others may be finding  
Greater joys for which to live.

Moorestown, N. Jersey.

## TRUSTWORTHINESS.

"You would not assert," said my friend to me, "that trustworthiness can be called a characteristic of infancy? Surely a child must have been developed until it can understand what is said to it, and until it has some powers of judgment of its own before it can be taught to be trustworthy."

In reply let me ask you a question. Would you assert that the child is not learning language during the period of its infancy when it is hearing words but is making no efforts to pronounce them? Would you wait until it is old enough to talk before you would talk to it or in its hearing?

In its very earliest infancy, the child may be learning lessons of trustworthiness. He must first learn to trust before learning to be trustworthy. The very regularity of his time of feeding gives him a feeling of assurance and of trust. If he learns by experience that food does not come regularly, and that he must cry or fret before he is cared for, he comes to have a feeling of uncertainty which must make him more or less unhappy.

All of his little experiences are educating him either in trustworthiness or in distrust. He feels a confidence in the strong arms that hold him, until some one—perhaps in mere playfulness—frightens him with a pretense of being about to drop him. He trusts all the implied promises of good care until repeated disappointments prove to him that they are not to be relied upon.

Mothers sometimes deceive their children by a pretense of going to bed with the child and then slipping away after he is asleep. Sometime he discovers her absence and becomes suspicious; distrust takes possession of his little heart, and the ruse is no longer successful. Perhaps the mother, finding that baby objects to her absence, deceives him by hiding her wraps and slipping away from him, it may be going so far as to say to him, "Mamma is not going anywhere; she is right here in the next room." Some day he discovers her absence; after that he is on the alert, and she has great difficulty in carrying out this deception. He is becoming distrustful, and through distrust is learning to be untrustworthy.

Parents very frequently make promises to the child which they do not fulfill. It may be mother purchases freedom to absent herself with the promise that she will bring something home for baby. That part of the contract slips her memory, and she returns empty handed. Baby discovers that the promise made to him has no value in her mind; therefore it will be only natural that he should attach no value to a promise made by himself in later years. Promises made to children should be kept to the very letter, even if it be a whipping that is promised. Children soon learn to rate at their proper valuation the threats made by angry parents. "If you do that again, I will whip you within an inch of your life," may at first frighten the child into obedience; but discovering that disobedience is not followed by so severe a punishment, and perhaps not by any punishment at all, he learns to disregard the threat and loses confidence in the parent.

It is a serious matter when the child doubts the truthfulness of the parent, even if the fulfilling of the promise which was made were better broken than kept, and would have been better still if never made.

A little child on a railway train was very restless. The mother said, "If you don't keep still, the conductor will come along and cut off your nose."

Seeing the conductor enter with his gleaming punch, the child shrank behind the bulwark of its mother's shoulder, waiting for what might come. The conductor came along punching the tickets, and paid no attention to the child. After he had gone, the little girl came out from her hiding place and looking into her mother's face, said "Mamma, you lied"; and the mother laughed as if it were something amusing; but it was a most terrible and truthful arraignment which should have overwhelmed the mother with shame and confusion.

A little girl of five was once left in my charge while her mother went on an errand. The child cried and would not be pacified.

"Your mother will be back soon," I said comfortingly.

"No she won't," said the little one stoutly.

"But she said she would," I asserted.

"Oh, I know her," said the little one faithlessly.

It is not a little thing when a child of five so distrusts the mother's word.

Long before the child can manifest untrustworthiness in himself he must have absorbed into his nature the idea from the conduct of others. If we would have our children worthy of trust, we must ourselves be worthy of their trust. They learn all of their first lessons of life through imitation. If those who are training them live up to the highest ideals; are truthful in the smallest matters, treating the most unimportant personages with scrupulous honesty, keeping all promises, even the most trivial, the idea of reliability and trustworthiness will become part of the fabric of the child's character; and even before he can talk, he will manifest that he can be trusted.—*American Motherhood*.

#### THE THREE-FANGED ARROW.

TALKING people down behind their backs is about as ingenious and far-reaching a kind of sin as the devil has yet invented. For such a missile kills three birds with one stone. It injures the one talked about, the one talking and the one talked to. A reputation is smirched every time we pass on an unnecessary criticism of a fellow being. Our character and self-control are weakened with every such word. And the mind of the listener is poisoned; he ought to be helped to see and think about the best in others but has been degraded, part way at least, toward the unworthiness of our own low level. Once in a while an almost knock-out blow is given to this unworthy and unfair kind of fighting by someone's quietly mentioning a good quality in the absent person who is being criticised. This almost invariably brings gossip to an abrupt close. We shall do well to end other's gossip by this means; and we shall do still better to end our own before it begins.—*Home Herald*.

#### TO REMOVE WARTS.

ONE of the best—really the only good way to remove warts is to tie them tightly with a silk thread. Warts often are burned off with acids or caustic, but they will surely grow again. If a white silk thread is tied tightly about the base of the wart—sufficiently close to stop circulation, but not tight enough to cut the skin—and allowed to remain a day or so, the wart will gradually die from lack of circulation. Great care must be used to see that no accidental movement brushes the wart off before the skin has entirely grown over beneath, or the growth is almost certain to appear again. The best dermatologists use nothing but this treatment. It is perfectly harmless and cheap.—*Pittsburg Gazette-Times*.

**FORCING LILIES.**

THE secret about having lilies bloom early during the winter months is to start them early. You cannot do this too soon. Use good drainage and rich soil, and place the bulb just so the crown may be seen at the surface. If the bulbs can be obtained, pot them early, then water and store in the dark, cool place till well rooted. When brought out they will be in condition to grow and bloom, and the flowers will appear early in December, or at least during the holidays. If the water used to moisten the soil is impregnated with some good liquid stimulant, it will improve the growth. Bulbs which fail to bloom the first winter will mature early, and bloom all the better the second season.—*Household Journal*.

**AMONG THE FLOWERS.**

WHEN taking up the dahlias, gladiolus and other summer flowering bulbs, it seems sometimes too much trouble in the rush of autumn work to label each, yet it pays in the end to at least mark a few for home use in an unmistakable manner. You think you can remember, but the chances are that when spring comes you have forgotten which is which, and if you wish to divide with a friend there is the chance of giving away all of some prized variety. If the bulbs are stored in paper sacks it takes but a minute to write the name on the outside of the sack; then any surplus can be freely given away without misgivings.

Seedling dahlias rarely mature bulbs of sufficient size and substance to keep through the winter unless started very early, yet the pleasure afforded by the rich blooms of the single season usually repays the cost and trouble.

Maderia vine bulbs cannot endure freezing and should be dried and kept in paper sacks through the winter. The tubers increase in size and strength from year to year, hence the quickness of next season's growth as well as the profusion depends upon saving the largest and strongest tubers of the present.

**WHAT THE FRECKLES SHOW.**

She's as sweet a little lass

As the clover in the grass.

And a group of saucy freckles mark her nose.

They are kisses of the sun.

And they stand out one by one

Like the stamens 'mid the petals of the rose.

All the freckles on her face

Are an alphabet to trace

Memoranda of vacation's wholesome play.

In their dotted lines one reads

Tales of merry thoughts and deeds.

That long hours of school life will not fade away.

Tales of healthful open air,

Hat hung for grass to wear,

Games of jolly "tag" or "Crusoe" on the lawn,

Hunts for birds in hidden nests,

Warm and weary berry quests

That have kept the small feet busy since the dawn—

All these do the freckles show

In each dusky, zigzag row,

And they give the little lass an added grace.

They're the rank marks of the sun

In a school of health and fun,

Who'd erase them from the merry, dimpled face?

—Congregationalist.

**GOLDEN RULE ARITHMETIC.**

"PHIL," whispered little Kenneth Brooks, "I've got a secret to tell you after school."

"Nice?" asked Phil.

"Yes," was the answer; "nice for me."

"Oh," said Phil, and his eyebrows fell. He followed Kenneth around behind the schoolhouse after school to hear the secret.

"My Uncle George," said Kenneth, "has given me a ticket to go and see the man that makes canary birds do comical tricks. Ever see them?"

"No," said Phil, hopelessly.

"Well, it's first rate, and my ticket will take me in twice," said Kenneth, cutting a little caper of delight.

"Same thing both times?" asked Phil.

"No, sir-ee, new tricks every time. I say, Phil," Kenneth continued, struck with the other's mournful look, "won't your Uncle George give you one?"

"I ain't got any Uncle George."

"That's a fact. How about your mother?"

"Can't afford it," answered Phil, with his eyes on the ground.

Kenneth took his ticket out of his pocket and looked at it. It certainly promised to admit the bearer into Mozart Hall two afternoons. Then he looked at Phil, and a secret wish stole into his heart that he hadn't said anything about his ticket; but after a few moments' struggle, "Phil," he cried, "I wonder if the man won't change this and give me two tickets that would take you and me in one time?"

Phil's eyes grew bright, and a happy smile crept over his broad little face.

"Do you think he would?" he asked, eagerly.

"Let's try," said Kenneth, and the two little boys started off for the office window.

"But, Kenneth," said Phil, stopping, "it isn't fair for me to take your ticket."

"It is, though," answered his friend, stoutly, "'cause I'll get more fun from going once with you than twice with myself."

This settled the matter and Phil gave in.

"So you want two tickets for one time?" said the agent.

"Yes, sir," said Kenneth, taking off his sailor hat; "one for Phil, you know."

"You do arithmetic by the Golden Rule down here, don't you?" asked the ticket man.—*Round Table.*

## For SUNDAY READING

### WHY CHRISTIANITY PREVAILS.

RICHARD BRAUNSTEIN.

(Extract of a sermon preached in New York by the author.)

Behold the world is gone after him! John 12: 19.

It is an aphorism in free governments that the people can be depended upon. The popular instinct is reliable. When the multitude follows its native impulses the politician in a republic discovers the safe path for his feet. Travelers tell us that "there are shoals of turtles that regularly swim from the Bay of Honduras to the Cayman Islands near Jamaica, a favorable spot for laying their eggs, and make this distance of four hundred and fifty miles with such precision that in thick weather ships can sail under the guidance of their rustling in the water." It is thus by the correct interpreting of the people's movements that statesmen have learned how to order their own courses.

The popular judgment is with Christ today, as it was in the days of his earthly career. The scribes and the Pharisees, the priests and the elders, whose interests seemed to be imperiled by the ministry of Jesus, sought to destroy him, but "the common people heard him gladly."

The rulers disconsolately said to one another, as they witnessed the enthusiasm of the people at Christ's triumphal entry into Jerusalem, "Perceive ye how ye prevail nothing? Behold the world is gone after him!" They expressed their discomfiture in an exaggeration of the truth, but they unconsciously made a prophetic utterance which is being fulfilled in our own times. Wherever Christ is clearly seen he is in almost unanimous demand. The pulpit which does not proclaim Christ as the hope of the world *has no grip upon the people.*

If we are honestly seeking the reasons which make Christ the center of attraction wherever he is disclosed in his real character, we have not far to go. They are not obscure or complex. In the first place, *he knows men*, and they recognize in him one who understands them with marvelous exactness and perfect sympathy.

John says of him, "He knew all men, and needed not that any should testify of man, for he knew what was in man." The basis of this knowledge was in his own complete human nature. *He was a kind of epitome of humanity.* He summed up in himself all there is in our human nature except sin, which is not native

to the race, but which was brought in from the outside, an alien admixture, more foreign to us than are the depressed populations of Europe to our nation. The old theologians used to say that Christ's human nature was "without excess or defect." He is all that any man is, and no more than any man is, *as a man*. He is not abnormal in what he is, or in what he is not, sin alone excepted. This makes him an inspiring personality. Men say when they read about his acts and read his words, and feel the influence of his life, "Here is a man who knows me better than I know myself." Margaret Fuller once expressed a desire to explore the entire cycle of human experience. Christ is the only person who can be said to have realized this vast ambition. It has made him an universal character. He is the one whole man. He has described the circumference of human possibilities. He expresses what humanity feels about sin and righteousness with a fullness which embraces the deepest moral consciousness of the race. The commandments of God are written upon the texture of the human soul. When Christ speaks, men hear a familiar voice. They recognize in him the prophet and seer of universal humanity. He thus becomes the articulate exponent of their greatest aims, their noblest feelings, their sublimest sentiments.

Again, Christ commands the attention—*because he knows God*. This knowledge is based on his divine nature, as his knowledge of men is based on his human nature. He is the expression of God in terms of human life. He is called the Word. He is the manifestation of God in the flesh. This makes him attractive, because the world is anxious to learn about God.

A great many people think that the masses are not concerned with Deity. He forms the most interesting theme in their thoughts from the cradle to the grave. What other subject could do this?

Places of amusement may claim its thousands, but the church has its millions who go to hear, and learn about God. Even the infidel lecturer secures his hearers by talking *against* God. There is no topic more current or compelling.

If we can find in anyone a sane and helpful idea about God we are ready to follow him—or her, anywhere. That explains the vogue of many a fantastic cult which today is imposing upon the credulity of the race. There is a subtle feeling that possibly the most grotesque religious leader may be able to make more obvious the intelligible character of God. Christ is the supreme revelation of God. Philip requests, "Show us the Father and it sufficeth us," and Christ answers, "He that hath seen me hath seen the Father, also." God comes forth into clear shining in the figure of Jesus Christ.

Moreover, Christ knows how to bring man and God together. This knowledge is based on his divine-

human nature. There is one God, and one Mediator between God and man, the man Jesus. By his cross he is perpetually reconciling men to God. "And I, if I be lifted up from the earth, will draw all men unto me," is his promise, and every hour since his exaltation upon Calvary has witnessed the fulfillment of that prediction.

The attractiveness of Christ makes it incumbent on Christians to give him the opportunity to manifest himself to the world in unclouded splendor. Let us insist that Christ be exhibited in the fullness of his being.

It is sometimes suggested that the Gospel is effete because the churches in some instances fail of accomplishing the salvation of society. The critics apparently forget that the custodians of Christ's teachings may themselves be at fault through lack of simple fidelity to their Master. The permanency of Christ's message to humanity is one of its greatest wonders. "Heaven and earth shall pass away," said Jesus, "but my words shall not pass away." Other men's words and works become obsolete or require emendation. The philosopher, the scientist, and critic change their positions and take new points of view. The author corrects the mistakes of his first edition in subsequent issues. But there are no amendments to the sermon on the Mount. Christ has not abated his utterances in the most trivial degree. No apology is needed for him. Paul needs an occasional defender. Luther requires an advocate from time to time; everybody does, but Jesus stands on his own merits. His Gospel has stood the test of time. It is an impertinence to explain him. He is still saying. "Which of you convinceth me of sin?" And the challenge is never taken up. Prof. Romanes says, "True or not, the entire story of the cross, from its commencement in prophetic aspiration to its culmination in the Gospel, is by far the most magnificent presentation in literature. And surely the fact of its having been lived does not detract from its poetic value." The person of Christ stands central to all this. If Christ is preached effectively his Gospel will not lose its hold upon the world. As of old, the people are "all waiting for him." The human heart is ever the same, in spite of the changing environment of life. The human heart sins, suffers, hungers, thirsts, dies. Christ forgives, eases pain, feeds, gives to drink, resurrects. The message of Christ is to the heart of man. It promotes fellowship. His words are spirit and they are life; he parts the veil which separates us from our dead and brings us face to face. The Gospel nourishes us into eternal strength. It is he, whom we must offer to the world, for it is he whom the world can receive into communion.

It is a principle in art that in the composition of a picture all the parts shall be so arranged as to lead the eye inevitably to the characteristic feature. Whatever prevents this is a capital defect. Accessories are

only important as they help this end. When Varelst, the Dutch painter, made his tulips so glorious that they drew the attention away from the face of James II, in whose portrait he had placed them, he violated this canon. So did Hayden when, in his picture of Christ's Triumphal Entry, he made the ass on which the Master rode more attractive than the figure of Christ. So does the theologian who fascinates by his metaphysics, or the preacher who charms by his rhetoric, while Christ is but dimly outlined. Worship itself may hinder the true apprehension of Christ. A liturgy is a fine thing if it leads to Christ and a bad thing if it leads away. Christ must be the central figure. He must always sit at the head of your table. He must always be the presiding genius of your ceremonies. It is the Christ and not the swaddling clothes of ceremonialism that the world longs to behold. Our ministry is weak in proportion as it obscures Christ. It is effective in the measure with which it brings him into open view. The Gospel is all right. It depends on those who have benefited by it, to pass it along.

#### TWENTY-FOUR BIBLE REVIVALS.

|                                        |                                              |
|----------------------------------------|----------------------------------------------|
| A Revival by the Book.....             | Gen. 32: 24-30                               |
| A Revival led by a Lawyer.....         | Exod. 33                                     |
| A Revival led by a Judge.....          | 1 Sam. 7: 1-14                               |
| A Revival led by a King... ..          | 2 Kings 34: 1-4 and 21-25                    |
| A Revival led by a Prophet.....        | 1 Kings 23: 21-39                            |
| A Revival of Bible Reading.....        | Neh. 8: 1-12                                 |
| A Revival of Sabbath Keeping.....      | Neh. 13: 15-22                               |
| The Baptist's Revival.....             | Matt. 3: 1-12                                |
| A Revival in the Streets.....          | Matt. 21: 1-17                               |
| A Personal Work Revival.....           | John 1: 35-51                                |
| A Woman's Revival.....                 | John 4: 28-42                                |
| A Revival in a Graveyard.....          | John 11: 30-45                               |
| A Revival in the City.....             | Acts 3: 1-4, 41-47                           |
| A Revival in the Church.....           | Acts 4: 23-37                                |
| A Revival Growing Out of Fear.....     | Acts 5: 1-14                                 |
| A Revival Growing Out of Persecution.. | Acts 8: 1-13                                 |
| A Revival in a Carriage.....           | Acts 8: 26-40                                |
| An Unlawful Revival.....               | Acts 10: 28-48                               |
| A Laymen's Revival.....                | Acts 11: 19-26                               |
| A Sabbath Day Revival.....             | Acts 13: 44-52                               |
| A Revival by the River Side.....       | Acts 16: 9-15                                |
| A Revival in a Jail.....               | Acts 16: 23-34                               |
| A Holy Ghost Revival.....              | Acts 19: 1-20                                |
| A Revival in Rome.....                 | .....Acts 28: 30-31; Philpp. 1: 12-14, 4: 22 |

—*Epworth Herald*.

It is only a poor sort of happiness that could ever come by caring very much about our own pleasure. We can only have the highest happiness, such as goes along with being a great man, by having wide thoughts and much feeling for the rest of the world as well as ourselves.—*George Eliot*.

# Echoes from Everywhere

The railroads of the United States employed 1,672,074 persons last year, most of them males and most of them voters. They constitute about 10 per cent of the total vote cast in a Presidential election.

An electric railway is being built on the Zugspitze, the highest peak in the Alps, on Bavarian territory. Its height is about 10,000 feet. The railway will run to the summit, while a hotel will be built at the 7,000-foot level.

The Canadian Pacific is the most gigantic railroad corporation in the world, which owns or controls 13,000 miles of tracks, has 5 fleets of steamers on 2 oceans, employs 74,000 people in 3 continents, and, besides having its own mines has nearly 12,000,000 acres of land in Canada.

The anti-saloon sentiment is spreading all through Canada. In Prince Edward Island prohibitory laws are absolute. Not a drink can be had for love or money. In Newfoundland the hotels keep no bar and serve no liquor.

St. Petersburg, Sept. 11.—An official statement of the cholera situation in St. Petersburg shows today there were fifty-eight new cases and eight deaths from the disease, and that there are 107 patients in hospitals ill with it. The disease already has gained a foothold in all quarters of the city.

The Suez canal is doing a prosperous business, according to a recently-issued report on the shipping during 1907. The British tonnage, as compared with 1906, increased more than 1,000,000 and the German nearly 100,000. Receipts during 1907 show an increase over the preceding year of more than \$1,500,000.

Through the efforts of the Rev. J. Alfred Sharp, secretary of the Wesleyan Temperance Society, a million signatures of Methodists have been secured to a petition to Parliament in favor of the licensing bill recently introduced by the government and which it is expected, if it becomes law, will close half the public houses in England.

Berlin, Sept. 11.—The announcement that there have been nineteen deaths from Asiatic cholera, in St. Petersburg has brought out a quieting declaration to the public from the Prussian ministry of health, in which it is said that every arrangement has been made for dealing with the cholera should it cross the German frontier.

The great manufacturing plant of the Pullman sleeping car company near Chicago is to be torn down to make way for a still larger set of shops for the express purpose of manufacturing steel palace cars. To accommodate the greatly enlarged shops and the new machinery to be installed, the area of ground occupied by the workshops of the company is to be increased to the extent of 60 acres.

The city attorney in San Francisco has rendered an opinion to the board of education respecting the Chinese school children in which he holds that the question of their nativity has no bearing on the matter of their admission to other schools than those established for them. Chinese children, he says, are Mongolians, without respect to birthplace, but if special schools of equal standing with those given the whites are not provided for them, they are entitled to attend any school.

It is reported that the Czar has ordered the expulsion from Russian universities of all female students. It is said that the order will affect no less than 22,000 women, many of whom are nearing graduation. Hereafter no women are to be admitted as students. The reason for this drastic action lies in the open encouragement of the revolutionary propaganda on the part of the women students. The edict will doubtless go into effect, but the result is yet to be seen.

It is reported that the Tolstoi Settlement founded at Christ Church, Hampshire, England, to carry out the philosopher's idea of life as based on "The Sermon on the Mount," has been eminently successful. It is largely self-supporting, food for its members being raised on the land, and industries such as shoemaking, beekeeping, bookbinding, bicycle manufacturing and poultry raising being pursued. The colony is a vivid exponent of the working out of the Golden Rule by which its members abide implicitly.

Arrangements have been completed for the importation of about 10,000 Mexican cotton pickers to Texas and Oklahoma. The contract labor law, which heretofore has prevented the bringing of Mexicans across the border, has been overcome by Juarez Gonzales, a wealthy land owner, of Monterey, who rose from the laboring class of Mexicans, paying the transportation of his countrymen from Mexico to Texas and Oklahoma. He is co-operating with the cotton planters and Texas banking interests in the undertaking. There are now more than 3,000 Mexicans picking cotton and they are rapidly replacing the negroes in some places in Texas.

The formal start toward building the railway to Hudson Bay was made on August 24, when two location parties left Winnipeg for the north in connection with the preliminary survey of the Hudson Bay railway. These parties comprised thirty men. They will travel over the Canadian Northern as far as Winnipegosis, where boats will be taken to the north side of the lakes. Both parties will work northward, one from the Pass and the other from a point about a hundred miles north of the present railway terminus. It was hoped to get further parties off by September 1, after which date the remaining parties were to leave. The Government will build the road and equip it. It is expected that all grain will be moved by this route within two years.

It is to the interest of any business to see that its employes are always in the best trim possible, as then more efficient service can be had and the business will move forward to greater success. Railroads have to be especially careful in this respect and they have long had their whisky clauses in their regulations. Now the Rock Island railway has gone a step further and issued a bulletin notifying all employes that cigarette smoking will not be permitted and that violators of this regulation will be discharged.

The celebrations Sept. 11 throughout Russia in honor of the 80th birthday of Count Tolstoi passed off quietly. No arrests were made anywhere. On the contrary the authorities at the last moment relaxed the severity of their orders prohibiting celebrations and permitted the people to give special theatrical performances of Tolstoi's plays on the promise that political demonstrations would not be attempted. The only repressive measure of importance in St. Petersburg was the suppression of the reactionary newspaper, *Znamya*, for an outrageous attack on Tolstoi.

Mining engineers say that the supply of tin is rapidly growing much smaller and is likely to be exhausted before very long, and, acting upon this hint, in some of the cities manufacturers are taking all the utilizable tin cans, buckets, etc., from the garbage heaps and working them over into something else. Some of the machines employed cut up the old tin cans into small tin caps which can be used for tacking on paper roofs, some of them using up as many as 35 cans a minute. In a Buffalo plant of this kind only citizens are employed and they get \$2 a day. Girls in the sorting department are paid \$1 a day.

Registration in the public schools of New York City shows that this year there will be an increase of about 20,000 pupils over last year. The estimated registration this year is 640,000, although official reports have not yet been made from the various schools. When the registration was finished a year ago there were 69,000 on part time and this year it is thought there will be about 55,000. Several new buildings and annexes have been opened, but not enough to keep pace with the rapidly increasing population in the foreign districts. The teaching force presents an increase of 1,000, making in all 17,000 teachers engaged in the city's schools.

The little republic of Moresnet, situated between Belgium and Prussia, is the first country to give official support to the study of Esperanto. The republic has a population of 4,000. In the school six hours a week are devoted to the universal language. The 70 children have two hours, 40 men who are anxious to learn the language have two hours, and the remaining two hours of the week are given to 25 women Esperanto students. In the same place the headquarters has been established of a society known as the International Commercial Travelers' Association. Every member of this organization is studying the language in order to make international commerce less difficult.

Two prominent New York physicians have made the startling statement that the execution of criminals by means of the electric chair is a failure. They give instances where unmistakable signs of life were observed after the body of the criminal was removed from the

chair. Where such a condition exists, the physician who performs the autopsy becomes the executioner and it is against this possibility that the physicians recoil. New York, New Jersey, Ohio, and several other States have adopted electrocution for their highest degree of punishment of criminals. In the light of the statement of these physicians, the method surely needs the most thorough investigation.

State Mineralogist Lewis Aubury gives the mineral production of California for the year 1907 as \$55,697,949, a gain of nearly \$9,000,000 over the previous year. Petroleum has advanced to first place on the list, surpassing in value the gold output for the first time in the history of the State. The production of gold and silver fell off over \$2,000,000 in 1907. The production of petroleum was more than 40,000,000 barrels, valued at \$16,783,945, and the gold production was worth \$16,727,928.

Japan continues each year to export more machinery than ever before, the total amount taken in for exported machinery in 1907 running up to more than \$1,000,000, an increase of 61 per cent over the preceding year and of nearly 250 per cent over the past five years. Cotton gins and printing machines make up the bulk of these exports, most of which go to China. The workshops are also turning out a variety of other machines, which in large part are mere copies of devices made in other countries. That the Japanese are inventive, though, is testified to by almost every manufactory in the country. At Nagoya in a violin factory which turns out 8,000 instruments a year, ranging in price from \$1 to \$70 apiece, a number of the machines used are labor-saving devices invented by the proprietor and his employes. The reports on exports show that some of the Japanese-made printing machines went to America; cotton gins go to China and British India; electric dynamos and motors go to China and Korea; spinning and weaving machines and scientific instruments go to the same countries. It is noteworthy that while exporting these machines to other countries, Japan has to import the steel for the making of them from Europe or America.

A Scotchman has produced a mixture of sea-weed, carpet dust, goat's hair, Irish moss, gums, and chemicals which he keeps secret and is using it in the place of leather in a great many cases. He says that his mixture is not equal to the best grades of leather, but that it makes an excellent substitute for the cheaper grades which are used in the manufacture of many articles. The product has already been made up into boots and shoes, and its durability successfully tested by policemen, postmen, and others whose duty involves a large amount of walking. Two or three thousand feet of belting in machine-shops is also in use at the present time, to which purpose it is said to be especially well adapted, as it is impervious to oils and acids, is non-inflammable, and does not shrink under the varying conditions of the atmosphere. In its hard state it is said to be a cheap and practical substitute for vulcanite, and can be purchased for less than one-fourth the price of the latter. Imitations of marble and wood are produced by hydraulic pressure, the seaweed suggesting the veins or grain. In its fluid state it can be applied to a floor, and when allowed to set it forms a perfect surface of linoleum. The seaweed is obtained from Devonshire, and the more expensive varieties, for the manufacture of marbles, from Japan.

## CREAM OF MAGAZINES

### THE SPIRITUAL THROUGH THE PHYSICAL.

There is no question but what the physical appeals to the normal boy stronger than does the spiritual. His intense enthusiasm and zeal in all kinds of athletic sports affirms this. But if rightly pursued one is not far from the other, and the well-developed healthy lad is far more certain to broaden into a moral, upright, Christian man, than is the puny, sickly, pampered boy, who is too weak to possess much zeal for anything, and who never becomes a power in any place. The crying need of the church today is more men who are physically and mentally attractive, that we may point our boys to them as examples of higher living in every direction. A physically attractive man has great power with youth, if he is moral, upright, and holy he easily becomes a leader. Too many of the men found in the average audiences are thin, scrawny, unattractive wrecks—fellows who have sowed seeds of dissipation in youth and early manhood, and who have settled down to respectable middle-age, limp and lifeless, with most of the juice of enthusiasm squeezed out. Or they are slow, easy-going, lazy creatures, who had not enough vim at any time in life to dissipate on, and who lack in maturity the energy to keep things on the move in either business or church life. Now boys do not admire either class. Most boys respect and honor Roosevelt, not so much because he is President, as because he is a robust, vigorous man, alive with force and energy; thrilling with the desire to do something, and not afraid to voice his convictions. Yet every school boy has heard and remembers that Roosevelt stands up in church and sings; and that, too, lustily. He also sometimes gives expression to pretty good moral lectures, to which, from such a man as he is, a boy will listen and give heed. A great responsibility therefore rests upon the man of splendid physique. He who is "the glass of fashion, and the mould of form" should realize his power with the growing youth in his community and should faithfully watch his daily life that he cause no boy to stumble and go astray. Let us urge our boys towards perfect physical development, and teach them that only by righteous and careful living can this come. Let us make them understand that our preachments against liquor, tobacco, and other vicious habits is not a policy pursued to make them the dreaded "sissies," but is only a campaign for perfect physical manhood, and we may rest assured that the spiritual will be an almost certain result.—Health.

### THE REAL RURAL PROBLEM.

The editor of Charities makes the wisest comments that we have anywhere seen upon the President's appointment of a commission to investigate the social economy of rural communities. He rightly says that, in spite of the good natured banter and some stupid ridicule that this project has called forth, the proposed inquiry in real importance takes precedence of almost all subjects now receiving serious study.

The rural communities of large portions of our Eastern States today are sadly lacking in cohesion. They complain that, as compared with manufacturing centers and the cities, they are not prosperous and that they are dull. It is next to impossible to obtain competent and trustworthy help on the farm or in the house. The boys and the girls are eager to get away to the "life" and opportunity of the town.

All sorts of "remedies" are cheerfully offered by statesmen and philosophers of all degrees and brands. Every few weeks the newspapers announce the invention, improvement or reform that is to bring back the good old times and make the young folk entirely willing to "stay on the farm." The trolley car, the free rural delivery of mail, the telephone, and so forth and so on, have all been hailed as the accredited saviors of the rural community; but in spite of them all the farmer sees the son who has been to the agricultural college and the son who hasn't equally impatient to get away, anywhere into the "life" of the big world, while he, worn and discouraged, advertises for any kind of a "hired man."

The editor of Charities drives his intellect straight thru all the wretched nonsense that has been written on this subject, and gets at the core of the problem when he says that the "real difficulty" is "the tendency toward a diminished population due to a marked decrease in the size of native families." That is the exact truth. The rural community of old had "life," energy, prosperity and happiness because it had big families. It was full of young folk who were happy, hopeful and busy together. There were plenty of them to do the work on the land and in the house, plenty of them to have good times together, and to seek and find mates within their own circle. Today the places of these native young folk are taken, so far as they are taken at all, by aliens and tramps, who render grudging and negligent service, and neither feel themselves to be nor are regarded by their employers as any real part of the community.

It will be said by a certain kind of social philosopher that we are explaining cause by effect; that the size of the average family has diminished because the farms could not support the big families of other days. We have no patience with this nonsense, for nonsense it is. The soil of America has possibilities within it that have not been touched. The inventiveness of the American mind has transformed the possibilities of farm labor. What is needed is intelligent, interested, willing workers, not incompetent, uninterested hirelings. And what is needed to make "life" in the rural communities is a normal birth rate.

We are glad that the President has appointed his commission. We hope that it will tell us a lot of things worth knowing. But its report won't solve the rural problem, nor will anything solve it, until American farmers and their wives make up their minds to breed children as well as corn and cattle.—The Independent.

### SCIENCE AS AN ALLY OF RELIGION.

Altho a large part of the Christian Church still views the doctrines and spirit of modern science with suspicion, if not with alarm, in many quarters the scientific spirit is beginning to be recognized as a strong ally of religion. This statement is enlarged upon editorially in the *Biblical World* (Chicago), which claims that "the assimilation of the scientific spirit in the realm of theology and religion unifies the spiritual life" and "furnishes religion with a new and powerful weapon for its own distinctive purposes." To quote further:

"Many devoted preachers of the Gospel not only discover in their scientific study illustrations of theological truth, but in the conviction which such study imparts to them, that neither truth nor life has anything to fear, but everything to gain, from the most thorough investigation and the most resolute thinking, find warrant and courage for such thinking and for courageous doing. The historical study of the Bible especially, which is the product of the scientific spirit working in the field of Biblical literature and history, long viewed as a foe to pure religion, has become for many a man a powerful incentive and a most efficient aid to preaching. . . .

"Very recently, a representative of the China Inland Mission, that most intensely evangelistic of all modern mission movements, has discovered that his most effective implement for religious work is a biological and electrical laboratory.

"By many this situation is still viewed with alarm. Yet in fact nothing is more calculated to give us hope and courage. For, in the first place, the assimilation of the scientific spirit in the realm of theology and religion unifies the spiritual life. A house divided against itself is ever in danger of collapse. To think scientifically in one chamber of the mind, and then to abandon this way of thinking, to bow the knee to authority the moment one crosses the threshold into another chamber, is to make one's mental life an internal contradiction, and one's mental progress hesitating and ineffective. It is only when, with full confidence that what is true is good, the thinker faces the facts in every realm with equal openness of mind and equally cordial welcome to truth new or old, that he really comes to the stature of intellectual manhood and marshals all his spiritual forces on the same side of the battle."

Returning to the claim that the scientific spirit is a new and powerful ally in the service of religion, the writer says:

"This is especially true in two realms, that of the schools and colleges at home, that of aggressive propaganda in non-Christian lands. The scientific spirit is more and more permeating the life of the colleges. No student can escape its influence. It is a matter of congratulation that it is so. But this makes it imperative that religion shall not set itself in antagonism to science; more than this, that it shall itself be permeated with the scientific spirit. Doing this, frankly accepting all that science proves, frankly adopting the scientific attitude in all its apologetic, it makes an appeal to the student mind which dogmatism can never make. And in non-Christian lands, on the other hand, nothing can so enforce the presentation of the message of Christianity as a genuinely scientific spirit. The laboratory experiment will attract attention and undermine superstition. But the handling of spiritual things with a reverence for truth that forbids either prejudiced denunciation of other men's religious convictions or the unsupported dogmatic assertion of one's own favorite type of Christian thought, in other words

the spontaneous manifestation of that confidence in truth and regard for it which is the essence of the scientific spirit, will itself command confidence and win faith in one's message as nothing else can do. Such a spirit is not only not inimical to religion; it is an essential element of the religion of Jesus. For tho Jesus brought to men not primarily a principle of knowledge but of conduct, told them not only how to find truth, but what was the truth by which life was to be lived, thus doing for the world what science itself could not have done, yet his whole teaching is permeated by that sense for reality and that recognition of the right of truth to command, whatever the past may have affirmed, which is essentially the spirit of science."—*Literary Digest*.

### THE PRESIDENT AND THE SQUARE DEAL.

When I say I believe in a square deal I do not mean, and nobody who speaks the truth can mean, that he believes it possible to give every man the best hand. If the cards do not come to any man, or if they do come, and he has not got the power to play them, that is his affair. All I mean is that there shall not be any crookedness in the dealing. In other words, it is not in the power of any human being to devise legislation or administration by which each man shall achieve success and have happiness; it not only is not in the power of any man to do that, but if any man says that he can do it, distrust him as a quack. If the hand of the Lord is heavy upon any man, if misfortune comes upon him, he may be unable to win; or even if fortune favors him and he lacks the courage, the nerve, the common sense, the ability, to do the best with the chance given him, then he will fail. All any of us can pretend to do is to come as near as our imperfect abilities will allow to securing through governmental agencies an equal opportunity for each man to show the stuff that is in him; and that must be done with no more intention of discrimination against the rich man than the poor man, or against the poor man than the rich man; with the intention of safeguarding each man, rich or poor, poor or rich, in his rights, and giving him as nearly as may be a fair chance to do what his powers permit him to do; always provided he does not wrong his neighbor.

This is not in the least a partisan question. It is one of those questions that affect all our citizens, a question that goes to the root of our citizenship; and when it comes to a question like that you citizens of this country have the right to expect your representatives in public life to join hands and work for the common good and without regard to any mere party differences. As to the details of carrying out those general principles we can not expect everybody to agree. My own views are pretty definite. . . .

I have advocated giving the Interstate Commerce Commission increased power; power that will enable it to work effectively and quickly. I should not do that for one moment if I believed that there would be injustice done to the railroads by the Interstate Commerce Commission. I wish it understood definitely that if I find any subordinate of mine doing an injustice against a railroad, or doing an injustice for it, I will cinch him just as quickly in one case as in the other. I shall expect him to do the square thing, both by the railroad and by the public. If the railroad wants more than it is entitled to have, then he must decide against it; if the public ignorantly demands that the railroad shall do more than it can with

propriety do, then just as fearlessly he must antagonize public sentiment.

These are general principles. It is much easier to lay down general principles than it is to work out those principles in detail. But I have told you substantially what are, as I regard them, the main features of the platform upon which I stand, and I think that you agree with me that it is a pretty straight American platform.—The Circle, From an address by President Roosevelt, reprinted by permission.

#### WAR AGAINST THE PRAIRIE DOGS.

THE government is after the prairie dog. It is determined to exterminate him from the great plains. He is destroying the great pasture lands of the West with such certainty that the complete destruction of the range is predicted unless the efforts of the department of agriculture are encouraged. Tests are being made in some national forest reservations to demonstrate the theory of the government that the dogs can be exterminated by poison. A dog town of some seventy thousand of acres was selected in Colorado and from 80 to 90 per cent of the dogs were killed with the first distribution of the poison. It will be necessary to go over the ground a second time and by "spotting" the occupied holes the remaining dogs will easily be killed. The average cost per acre for the poisoning material was only one and one-half cents, and even then it was found that more material had been used than was necessary.

The poison is prepared by coating wheat with a preparation of strychnine, cyanide of potassium, anise oil and molasses. When a sufficient quantity is ready, the poisoned wheat is carried to the field of operations. There the stockmen supply men and horses, the wheat is given out to the riders, and distribution begins.

Each rider carries the wheat in a tin pail supported by a gunny sack slung across his right shoulder and hanging at his left side. His left hand is free for the reins. With his right hand he uses a tablespoon to measure out the poison and drop it near the entrance of the holes. A little practice enables the men to drop the wheat while keeping their horses at a sharp trot. By crossing the town, to and fro, like a man sowing grain, they can cover a large area in a surprisingly short time.

The action of the poison is almost instantaneous. Most of the prairie dogs in a town are dead within an hour or two after the bait is dropped.

The work is considered to have demonstrated the entire feasibility of fighting the prairie dogs in this way. It was found, however, that to be successful the poison must be scattered in the spring, when the dogs first come out from their winter quarters and before the green grass is offered to appease their hungry appetites. Next spring the poisoning will be undertaken much more extensively.

Provision is made by the forest service division

of the department, according to a letter to *The Eagle*, for stockmen and others to try the formula on their own account for which they can secure full information as to its preparation and use. It would be a good idea for the farmers and ranchmen of Kansas, Oklahoma, the Panhandle and New Mexico to interest themselves in the matter.—*The Wichita Eagle*.

THE frowns of the world would not disquiet us as they do, if we did not foolishly flatter ourselves with the hope of its smiles and covet them too much.—*Matthew Henry*.

#### Between Whiles

Visitor—What are you crying about, my little man?  
Little Willie—All my brothers hez got a holiday, and I hain't got none.

Visitor—Why, that's too bad! How is that?  
Little Willie—(between sobs)—I—I—don't go—to school yet.

#### A HIGH-HANDED ACTION.

The Bible-class teacher in a certain Sunday school was extremely annoyed at the noise made by pupils in the next room. At last, unable to stand it any longer, he looked over the partition and, seeing one boy talking louder than the others, he leaned over and hoisted him over the partition, and banging him into a chair, said, "Now be quiet."

Some minutes later a small head appeared over the partition and a meek voice said:

"Please, sir, you've got our teacher."

—Lippincott's.

Still Faithful.—Captain—"What's all this about? I thought you were a Christian Scientist."

Seasick Passenger—"So I am. I've just been giving my dinner absent treatment."—*Brooklyn Life*.

Irish Army Surgeon—"Two of your wounds are fatal. But the third you need have no fear about. A month's good nursing will cure it."

## The Saloon Under the Searchlight

By George R. Stuart.

"A bright, breezy, thought-compelling little book with not a dull line in it. Full of suggestion and inspiration for one who would have a part in the fight against the saloon, a fight that grows in strength and popularity every day."

"Sledge hammer blows by Dr. Stuart on thirteen or more aspects of the saloon question. The arguments and illustrations are original, often unique, and always right to the point."

"I find the book one among the best I ever read on the subject. I can recommend it and wish it were possible to place a copy in every home in the land."  
—Eld. D. L. Miller.

"I have just finished reading that splendid little volume, 'The Saloon Under the Searchlight,' by Geo. R. Stuart. I find it interesting and valuable. It commends itself to me because of its simple, plain, practical and true statements. I solicit for it a wide circulation, and a careful perusal. It cannot fail to do good."—Eld. P. J. Blough, Member of Temperance Committee.

### Every Minister

of the Gospel will have occasion to use some of the arguments presented by Mr. Stuart, who turns the light on in full force and lets the reader see what a monster evil the liquor traffic really is.

There is enough in the book, if people can be induced to read it, to drive the saloon out of every village town and city in the United States.

# CHURCH MEMBERSHIP RECORD

The most unique, simple and practical system of record today is the card system.

There has been a demand for a complete practical and simple record system to be used by church clerks in keeping the membership of the local congregation. This demand has caused Annual Meeting to ask the Publishing House to arrange such a system. After investigating various systems of keeping church membership records, and getting the advice of many of our church clerks as well as pastors, we are now ready to offer what we consider the best outfit that can be furnished. This system provides for one card for each member and when filled out gives a complete record.

## Church Clerks

send for one of these sets and the question will ever be settled as far as a system of keeping your membership is concerned. It costs no more to start with than in book form and will last a lifetime with the exception of new cards, for new members, which will only cost you a trifle.

### No. 1. Church Membership Record.

A neat cloth-bound box, size 5x6 inches.  
A complete Index.  
100 Membership Cards.

This outfit is ample for a membership to the number of 150. More cards will be needed when membership is above 100.

Price prepaid, .....\$1.25

### No. 2. Church Membership Record.

A neat cloth-bound box, size 5x9 inches.  
A complete Index.  
200 Membership Cards.

This outfit is ample for a membership of 150 to 400. More cards will be needed when membership is above 200.

Price prepaid, .....\$1.75

Extra cards furnished for 50c per hundred prepaid.

A circular explaining how this record system can be utilized to the best advantage furnished with each outfit. Send your order today. If more information is desired write us.

**BRETHREN PUBLISHING HOUSE, ELGIN, ILL.**

A TIMELY  
BOOK!

# The Unfolding Life

A Study of Development with reference  
to Religious Training by

**Antoinette Abernethy Lamoreaux.**

The latest and best book on child study. Highly endorsed by many prominent Sunday-school workers. This book endeavors to meet the need of the busy parent or Sunday-school teacher who desires to nurture intelligently a developing life. Some of the great facts which Child Study and Psychology have revealed concerning growth and development from early childhood to maturity are discussed in untechnical language, and their practical bearing upon work in the home and Sunday school made clear. Although nurture, physically and intellectually, is not overlooked, the underlying purpose of the book is to make sane and effective the religious nurture of unfolding life.

"Read with great interest and pleasure"

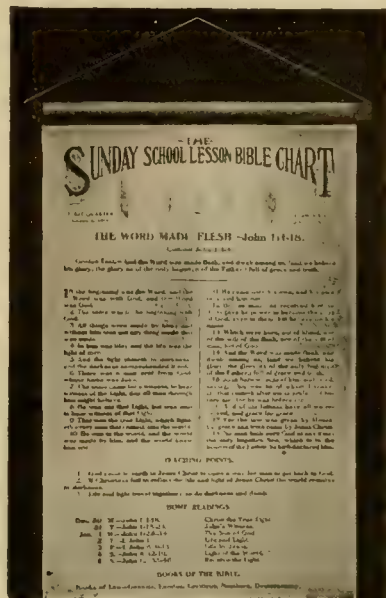

*I have read Mrs. Lamoreaux's book, "The Unfolding Life," with great interest and pleasure. It is a splendid and scholarly presentation of the subject, and I consider it the best book I have read on the subject.—M. G. Brumbaugh, Superintendent Public Schools, Philadelphia.*

*I have read The Unfolding Life, written by Mrs. Lamoreaux, and pronounce it the best treatise on the development of the human life that is has ever been my good fortune to read. Every Sunday-school teacher and parent should read and re-read it at the earliest possible date. It will add new joy to the work of child training.—I. B. Trout, Sunday-school Editor, Brethren Publishing House, Elgin, Illinois.*

A book we cannot recommend too highly  
Price, Postpaid, 75 cents

**BRETHREN PUBLISHING HOUSE, Elgin, Illinois.**

# SUNDAY SCHOOL LESSON BIBLE CHART for 1908

The accompanying cut shows a reduced facsimile of one page of our 1908 SUNDAY SCHOOL LESSON CHART. Size 13 x 20 inches, 26 pages. When hung on the wall the large print can be read at a distance of 10 to 15 feet.

The Golden Text, Memory Verses, and some of the headings are printed in red—the rest in blue.

It contains all of the Sunday School Lessons for 1908.

Each page contains the full text of one of the lessons—The Golden Text, The Home Readings, Three Teaching Points, Subject and Scripture Reference.

The Books of the Bible are arranged in Groups, for memorizing.

## Reasons Why You Want It.

1. It keeps the lesson before you the entire week.
2. The Teaching Points are suggestive and will start you to think about what the lesson is to teach you and others.
3. It is attractive to old and young, and gives you a decidedly favorable impression of the lesson.
4. If hung in the dining room it will lead you to talk about the lesson while you eat.
5. It will awaken a relish for further study.
6. It presents the lesson through the eyegate.

## Remember the Price, Fifteen Cents

In order to introduce these charts among our workers we have decided to dispose of 150 charts for 1908 at 15 cents each. Think of it, a 50 cent chart for 15 cents, postpaid. Order one for your office, schoolroom, Sunday School, or the home.

**BRETHREN PUBLISHING HOUSE,**  
Elgin, Illinois.

## Charlie Newcomer

By  
Elder Wilbur B. Stover

Five editions of this little volume have been printed. It is an inspiration to any child and will lead many of them to think of serving the Lord while young. Boys and girls enjoy reading it, and we do not know of a book which we can more heartily recommend, for it can have only a good influence over those who read it. It is the story of the life of a boy of our own day, though perhaps of a boy whose heart turned to the Lord earlier than is usually the case. Give it to the children to read, and you will do them good. Sixty-nine pages bound in cloth.

Our Price, .....17 cents  
(Postage extra, 4 cents.)

**BRETHREN PUBLISHING HOUSE,**  
Elgin, Illinois.

## Paul the Herald of the Cross

By  
J. W. Wayland

The story of Paul's life is told in an interesting and instructive way. It will appeal to boys and girls, and older persons, too, and will leave them the better for reading it. Brother Wayland follows the Great Missionary from youth to death, and all the way he holds the attention. One cannot read the book without feeling a desire to help in spreading the Gospel. 105 pages.

Our Price, .....30 cents  
(Postage extra, 6 cents.)

**BRETHREN PUBLISHING HOUSE,**  
Elgin, Illinois.

# Two Centuries of the Church of the Brethren

## Or the Beginnings of the Brotherhood

The book contains 400 pages of reading matter and 25 full page illustrations. These illustrations consist for the most part of portraits of the speakers who delivered the Bicentennial addresses at the Des Moines Annual Conference. The frontispiece presents a splendid likeness of the five men composing the Bicentennial Program Committee.

### The Addresses.

**The Church in the Fatherland:** (1) The Conditions in Germany about 1708.—M. G. Brumbaugh, Pennsylvania. (2) The Birth of the Schwarzenau Congregation and its Activities.—T. T. Myers, Pennsylvania.

A Sample of the Oat Fields in the Nanton District.

# Harvest Time

The prosperous settlers in Sunny Southern Alberta have just finished harvesting a bountiful crop. It is now **THRESHING TIME** and their yields are enormous.

Some fields are yielding as high as fifty bushels of wheat per acre. And oats are yielding as high as one hundred and thirty bushels per acre. The crop on one acre brings enough money to buy two acres! Could you want anything better?

We have just secured, and are now offering for sale, 50,000 acres in the Nanton District where already there is established a large and prosperous settlement of the Brethren.

Our prices are \$9.00 per acre and up, on easy terms—ten years to pay for land when the purchaser settles on the land. Excursions every week. Cheap rates and railroad fare refunded to purchasers of 320 acres or more.

For particulars, address,

# "Doings Around Town"

The new two-story block of Messick & Son is nearing completion.

The whistle of the thresher is heard in the land.

School opens with an increased enrollment.

Mr. Brower, wife and four children just arrived from Iowa to make this their home.

Mrs. I. B. Harter will begin work at once on six new residences on Montezuma Ave., West.

D. D. Hufford has purchased an entire block east and south of public square and will erect several residences as soon as possible.

Some of the cattle-men think 20,000 cattle will be shipped from this vicinity this fall. Well, the yards are now ready at Macdoel.

Road commissioners are working on the road

from Macdoel to Red Rock County. These people are glad to trade at a good town.

John Boyer of Washington says the Valley looks good to him. Why not? He's seen fruit countries before.

D. B. George landed 16 fine salmon the other day in a little while. The eight-pound kind.

Thousands of ducks and geese are now on the lakes and—well, you know the rest.

The plans are completed for a fine two-story block to be built on the corner of Montezuma and Railroad avenues and to contain a well-furnished hotel, bank, offices, etc.

Charley Short opens his blacksmith shop this week in Macdoel.

In case you have any desire to get a good home in a delightful country on very easy terms, address,

# The Twentieth Century Sunday=School Record System

Recommends itself to every wide-awake worker because it; Enlarges the Enrollment. Places a Premium on Punctuality. Begets Bible Bringing. Increases Attendance. Encourages Systematic Giving. Relieves the Teacher of Keeping Class Books. Provides for Offering at Entrance Rather Than in Class During Recitation Period. Makes Possible the Keeping of Accurate Records. Without Unnecessary Effort.

Twentieth Century Collection Box.

Twentieth Century Card File.

The Twentieth Century Record Board.

This system provides for the recognition of the scholar's faithful work by an attractive way of recording the same. The necessary equipment to install the system is (1) a record board, containing the names of all the enrolled scholars of the school, placed at a convenient point near the entrance; (2) a collection box, to receive the collection; (3) a card file containing the enrollment card of each scholar, on which his record for each Sunday may be entered for the entire school year; (4) someone in charge who is systematic and accurate in keeping a careful record of the school.

## A Unique, Original and Thoroughly Practical System.

If you want a thorough record of your school,—a line on every scholar,—at a central point,—try the Twentieth Century System. No other like it.

If you are interested, write for catalogue and price list.

# OVER 200,000 ACRES

of land has been filed on under the CAREY ACT in the Twin Falls District, Idaho, since April, 1907.

¶ There is still a large amount of land waiting for the settler in the above district. Also great opportunities are offered at American Falls, at Gooding and other points along the OREGON SHORT LINE RAILROAD.

¶ The Payette-Boise Reclamation Project under the U. S. Government is about completed and will be ready to furnish water to about 300,000 acres of new land in the spring of 1909. These lands can now be bought at reasonable rates and terms, by the settler, and are situated where the country is already partly settled, near good towns, railroads and electric lines.

¶ Rural mail routes and telephone lines are already established. Good schools and churches. No storms or cyclones. Farming is done by irrigation. No failure of crops by reason of too much rain or drought. Fruit crop is abundant every year. The people are happy because they are prosperous.

## Wonderful Possibilities

for homeseekers and investors. Climate Mild. Soil Very Productive.

¶ Alfalfa, Sugar Beets, and grains of all kinds are among the products that yield abundantly. Farm hands, carpenters, mechanics and in fact all classes of workmen will find plenty of work at good wages.

¶ Arrange your plans to go and see Idaho as soon as possible and secure some of this fine land.

¶ HOMESEEEKERS ROUND TRIP EXCURSION RATES are on First and Third Tuesdays of each month in 1908.

¶ Colonist One-Way Cheap Rates to points in Idaho, Oregon and Washington in effect daily from Sept. 1st to Oct. 31, 1908 inclusive.

¶ WRITE NOW for printed matter and full particulars regarding this great country and how to get there.

### In Two Parts. Part Two.

FROM what Tacitus says of the Germans, it is an easy inference, and history proves, that from uneducated and undirected democracy it is but an easy step to anarchy. After the barbarian invasions and the fall of the empire in the West in 476 A. D., there was no community of interest strong enough to weld the democratic forces into unity of action; neither was there any external power strong enough to compel order and harmony. The Germans had what is known as personal law, in contrast with the territorial law of the Romans. The latter was uniform over a district, but the former varied according to the different families, clans, and tribes. Moreover, the Germans exalted personal courage, and espoused personal quarrels, the son avenging an injury to his father or other of his kinsmen. And so this turbulent democracy in small circles, without a comprehending and controlling force, without intelligent coöperation among the different tribes and classes, fell largely into anarchy, as it is always prone to do. For a century or more Europe was a seething caldron. Visigoths, Ostrogoths, Vandals, Alamanni, Franks, Burgundians, Jutes, Saxons, and Angles were all in fierce motion, contending with each other and with the Romans for possession of the lands they coveted. The restless Huns pressed down upon them from the inexhaustible North; the ancient forms of power were swept away from Rome, and destroying hands laid hold of her long-kept treasures; and soon the powers at Constantinople were scarcely able to be maintained against the mobs within and enemies without. After the tribes had found a resting place—the Vandals in Africa, the Goths in Italy and Spain, the Franks in the northwest, the Jutes, Saxons, and Angles in Britain, the others here and there—conditions in respect to orderly government were scarcely improved. Not only was there no coöperation among the different tribes, but even within each tribe there was chronic strife and lawlessness. Each man was a law unto him-

self, and did what was right in his own eyes—that is, as far as he was able; for might made right; the strong robbed the weak, and the weak either suffered or died or took refuge in hiding or flight. This condition of things gave rise to feudalism, a poor substitute for government, in which men who were not able to defend themselves surrendered themselves and their property to some knight or baron and he in return promised them protection.

Feudalism served its time and purpose through several centuries; and then the chains that feudal lords had forged began to be broken, and democracy, now more intelligent and somewhat organized, began again to lift its head. During the eleventh and twelfth centuries and thereabouts the cities of Italy, France, and other parts of Europe grew strong by skilled labor, manufactures, and trade. Along with wealth came intelligence and organized power. Charters of self-government were bought or wrested from the feudal lords, and "that young and splendid force which marks the birth of modernism in history, the *commune*," took form. The commune was the organized will of the free inhabitants of a city. It was not a pure democracy or an all-inclusive democracy; but it was strong enough to stand and popular enough to lead; and although hundreds of years were yet to pass in turmoil and blood before democracy gained its rightful place among the nations, the communes lifted up a standard and people began to see the way.

England, as already remarked, affords a notable example of the progress of democracy through long periods of time. The English people in their national composition as well as in their name, are fundamentally German; hence, and for other reasons also, they have strong democratic instincts. These instincts have been insisted upon in various ways from time to time, until England today has reached a position in democratic government and institutions scarcely less advanced than that of the United States.

Although William of Normandy, who conquered

England in 1066, ruled with an iron hand, and centered the feudal ties within himself, he nevertheless allowed himself to be elected king in the old English fashion. In 1100 Henry I, upon his election and coronation, issued to the nation a charter, wherein he bound himself to abide by "the laws of Edward the Confessor,"—that is, the ancient customs of England. In 1215 the Great Charter was wrested from John; in 1265 Simon de Montfort founded the House of Commons, by summoning thereto representatives of the boroughs and towns; and from that day to this that branch of Parliament has been growing both in power and in scope of representation, until the people of England today rule England through the House of Commons and the power of public sentiment. From 1642 to 1649 the king was fighting to maintain, the people to overthrow, what was called the "divine right of kings"; and in the end of the struggle the party of the people cut off Charles I's head with less misgiving than the people in the thirteenth century had witnessed the temporary restraints put upon Henry III. In 1688 the ideas of democracy had prevailed so far that the despotic James II was forced out of London without a fight, and England experienced a bloodless revolution, in which William and Mary swore to observe the Declaration of Rights—the "ancient and undoubted rights of the English people"—afterward confirmed and made permanent in the Bill of Rights (1689), which ranks with *Magna Charta*. In 1832 the famous Reform Bill marked a permanent and far-reaching triumph of democratic principles. By the provisions of this bill 143 seats in Parliament were distributed among districts that had too little representation or none at all; the franchise was made regular all over England; the franchise in Ireland was assimilated to that in England; and in Scotland it was still more liberalized. As yet, however, the privilege of voting was limited upon certain qualifications, particularly the owning of property. Two years later (1834) slavery was abolished throughout the English colonies, and owners were paid a fair compensation. The right to vote was extended in England, Scotland, and Ireland by reform bills in 1867. In 1870 the secret ballot at parliamentary elections was introduced with most helpful results against bribery and intimidation of voters; and in 1884 Mr. Gladstone got through Parliament another important reform bill, whereby the franchise was conferred upon the agricultural laborers, the last considerable class in the country who still lacked the vote. By this measure, which has proved excellent in effect, the number of voters in England was increased from about three millions to about five millions.

The most notable and violent struggle of democratic instincts, combined with the instincts of self-preservation, as well as with many of the baser passions, was witnessed in France during the half dozen years be-

ginning with 1789. The clergy and the nobles of France, numbering only one per cent of the population owned 40 per cent of the land; and by the time of which we speak neither the nobles nor the clergy paid any appreciable part of the taxes. The king, moreover, lived in luxurious style, entertained the privileged classes at his court, and encouraged them in their extravagance. In short, it took the bread out of the peasants' mouths—the very blood out of their veins—to pay the taxes that the clergy and nobles should have paid, and to feed the vampires of Versailles. But at last the storm burst—the deluge came. The storming and capture of the Bastille on July 14, 1789, was the signal of destruction. The Parisian rabble rose; the representative of the people seized power and passed sweeping acts; feudal burdens were abolished in a night; the king's palace was attacked and pillaged, and the Swiss guards slain. The jails were filled with supposed friends of royalty and emptied by massacre; the king and his wife, with thousands of others, lost their heads at the guillotine, a newly-invented instrument of death; atheism was declared the truth, and the calendar was framed anew; the reign of terror ran its course, until even the most hardened monsters of crime revolted at the scenes of blood; the armies of France went forth upon Europe till the whole map was changed.

The French Revolution in its beginning was a frantic gasp of the populace for life; next it was an orgy of vengeance and crime; then it became a war of defence; for the crowns of Europe were shaking, and armies were sent upon Paris to put down this menace to kings. Finally, the revolution not only made Paris and France over anew, but went forth to do the same for the surrounding nations. And the influence went afar and with power; for the French armies carried not only bayonets but also ideas at their points. It was the doctrine of "liberty, equality, fraternity," that made France the firebrand of Europe, threatening every ancient throne and crumbling palace. Many crimes were done in the name of liberty; and many good citizens suffered unjustly for the "public safety," but yet many permanent benefits were finally secured, and the spirit as well as the forms of world-democracy was strengthened. One of the enduring things accomplished was the abolition of the old feudal privileges of nobles and clergy; and France as well as all Europe learned to listen more to the voice of the people, especially if that voice was lifted in a cry of pain.

In 1830 and again in 1848 France gave the signal for popular uprisings in Europe; and although in many instances these attempts to secure greater liberty or to redress oppressive grievances were quickly suppressed, the moral effect was not lost; and in the long run there was a steady gain in intelligent democracy. By the last quarter of the nineteenth century both
